NEW YORK, THURSDAY, JANUARY 2, 1873.

The Week.

MR. BOUTWELL has appeared before the Committee of Ways and Means to explain his dealings with the Syndicate, and obtain from it an expression of opinion as to the propriety of his disposing of the remainder of the five per cent. loan on the same terms and through the same machinery. His account added little or nothing to what was already known; he made no attempt to deny that he had broken the law, but pleaded the necessity of the case. He at first appointed a great number of bankers, including the whole of the national banks in this country, as agents for the sale of the loan at the legal commission of a quarter per cent.; but none of them except the national banks did anything, and they only took sixty millions, which Mr. Boutwell says was largely due to "a feeling of patriotism," but no "patriotism" could get them beyond this amount without more inducement in the shape of filthy lucre. He, therefore, tried what he called the "new system," or in plain English disregarded the Act of Congress, and offered terms to the Syndicate which he had not offered to the banks. He gave the Syndicate new bonds in exchange for old ones—but the old ones were not deliverable for three months after the subscription of the new ones, and during these three months interest amounting in all to eleven per cent. per annum ran against the Government on both bonds; in other words, the Syndicate got one and a half per cent. commission for placing the loan in the shape of interest in the first instance, then one-eighth commission, besides whatever remained out of the one-half per cent. allowed by law, after the expenses, such as the printing and engraving and advertising of the whole loan of $200,000,000, had been paid, and what was left of the commission which *might* have been paid, but was not, on the $60,000,000. The question, of course, will suggest itself to everybody's mind, now that he proposes to repeat this process—why does he not go into the market, and offer to the whole world the terms he offers the Syndicate? He has never tried this; why not try it now?

Mr. Boutwell has offered his resignation, and Judge Richardson bids fair to succeed him, though Mr. E. D. Morgan, of this city, is talked of; and some people say there is a strong probability that the State Department will be offered to Mr. Adams, as a sort of concession to the Liberals. Mr. Morgan would bring to the Treasury the strong common sense and experience of a successful business man, whose head has never been ravaged by political nostrums, but even he is unfit to "move the crops." Mr. Adams's appointment would be very valuable to the country, if his advice were taken on matters outside his own office, in which there is at present nothing very important going on. Judge Hoar is talked of for the same place, and with some probability. Mr. Boutwell's administration of his office is admitted on all hands to have been eminently honest; but he has been one of those honest men who, in this world, prepare the way for thieves. His views of the civil service, of the force of law, and of the value of human experience, and of statistics, are those in which thieves delight, as they afford the fullest play to their ingenuity. Nothing has, however, more amused and excited all the loose fishes of the community than his views on the subject of "moving the crops." Since he has revealed his opinion of the duty of the Treasury in this particular, his place has become an object of passionate longing to thousands of "financiers," who never cared a cent for it before. The idea of being able to issue greenbacks every fall "for the relief of the community," is one that fills their imaginations as no earthly dream has ever done before. Hundreds of men in Wall Street would give ten years of life to be allowed "to move the crops" for even one year, and look on Judge Richardson as one of the luckiest dogs that ever drew a check.

The Louisiana Committee have published an address to the people of the United States describing the recent occurrences at New Orleans. It is on the whole a clear and temperate document, and its statement of facts leaves, in our opinion, nothing to be desired. The facts are these—and we commend them to the earnest attention of our readers. There was an election on the 4th of November of Governor, Lieutenant-Governor, and members of the State Legislature, besides the Federal officers. The candidates for the governorship and lieutenant-governorship were Kellogg and Antoine on one side, and McHenry and Penn on the other. It passed off quietly, and the returns were duly made to the Board of Canvassers. This Board consisted, under the State law, of the Governor (Warmoth), Lieutenant-Governor, Secretary of State, and two other persons named Lynch and Anderson. The Secretary of State was then a person named Heron, who had been put in the place by Warmoth in place of one Bovee, removed several months before, and the legality of this removal was in litigation before the State courts. When the Board met, the majority resolved that Pinchback, the Lieutenant-Governor, and Anderson were disqualified, as being themselves candidates for office, and Warmoth removed Heron, the Secretary of State, "as a defaulter," and appointed one Wharton in his place. The Board then consisted of Warmoth and Wharton and Lynch, Lynch forming a hostile minority. The excuse Warmoth made for removing Heron was that he had detected him in a plot to falsify the returns, which may or may not have been true; but it was true, and looks suspicious, that Heron had got a duplicate of the great seal of the State engraved several days before in preparation for a possible removal. The majority then proceeded to fill up the vacancies by electing Hatch and Dupont; but Lynch, allying himself with Heron, also proceeded to fill the same vacancies by electing Longstreet and Hawkins. There were then two boards—one presided over by the Governor and in possession of the returns, and the other composed of Lynch, Heron, Longstreet, and Hawkins. Things were in this position when the State Court decided that the removal of Bovee and appointment of Heron to the Secretaryship of State by Warmoth were illegal. This brought Bovee back into office and into Board No. 1, and left Heron "out in the cold." The state of things was now pretty bad, but it was one with which the State law was abundantly competent to deal.

Now comes the usurpation complained of: Kellogg and Antoine, the two candidates on one ticket, without *waiting for either Board of Canvassers to make its count or announce its decision*, rushed into the Federal Circuit Court and filed a bill in equity under the Enforcement Act, making Board No. 1 defendants, alleging that they had a majority at the polls, that 10,000 of their voters had been prevented from voting, and praying to have Warmoth's Board restrained from acting. Pending the suit, an *ex-parte* order was granted in Kellogg's suit based on the charge that Warmoth's Board had improperly made a proclamation and return, directing the United States Marshal to seize and hold the State House, and prevent all persons assembling there under or by virtue of the Warmoth canvass, but to permit the entry of such persons as he (the Marshal) thought entitled to it; in other words, a United States Judge directed the Marshal to seize the State House and pass himself on the qualifications of all persons presenting themselves at the door and professing to be State legislators. Another order issued in Antoine's suit enjoined the Governor of the State from counting the State votes except in the presence of officers appointed by the Court, or from organizing the State Legislature or the Senate, or from interfering in any way with the returns of the Bovee Board; forbid-

ding twenty persons by name from taking seats in the Senate unless they were returned by the Bovee Board, and one hundred persons in like manner from taking seats in the Lower House; forbidding the clerks and officers of both Houses and the Secretary of State from recognizing as members any persons whose names were not on Bovee's list; forbidding the Metropolitan Police from interfering with the assembling of persons returned on Bovee's list; and forbidding the Governor's Board from acting in any manner. Under these orders, the Marshal, in command of a body of United States troops, took and held the State House as directed. All comment on this is unnecessary; but it must be borne in mind that all this was done under that little clause of the Enforcement Act which gives persons the right to sue for the recovery of an office of which they allege themselves to have been deprived by reason of the denial to some person or persons of the right to vote by reason of race, color, or previous condition of servitude. The State government thus set up was promptly recognized by telegraph by the President.

The only answer to the address of the Louisiana Committee from the friends of the Administration appears in the New York *Times*, in the shape of a "dissection" of that document, in two anonymous letters. The main points the writer makes against the committee is an allegation of the moral badness of the Warmoth party, which we suppose there is no denying, and the somewhat sophistical statement that, as Judge Durell's injunctions were levelled against certain individuals by name, they could not be said to be directed against the State Government. "The bill," he says, "was drawn by one of the most experienced chancery lawyers in Louisiana, and the proceedings were in all respects in conformity with the law and practice of the court"; and he evidently thinks that with these securities the people of the United States ought to be fully satisfied. All that Judge Durell has done, it appears, is "to decide that the returns of the election should be deposited in his court with the clerk thereof, that they might be counted by the legal returning officers." Unfortunately, as the Judge decided himself who were the legal returning officers, and employed armed force to prevent the meeting of any legislators not returned by these officers, he may be said to have organized the whole State Government himself, and he did this because some one swore before him that he believed that a wrong was *going to be committed* against him by a board which had not yet acted. Under this "chancery practice," Judge Blatchford could take charge of the entire election machinery of this State on the morning of the election every year, for there are hundreds who would "file bills" declaring their belief that somebody was going to cheat him out of an office or vote. At the pace at which we are now travelling, every District Judge in the country will be converted into a French prefect in about five years, and his "law" would be the queerest mixture ever administered.

We have received a letter from an advocate of the Postal Telegraph who is disappointed that, in our discussion of the subject lately, we both admitted that the Government could cheapen messages and showed that this could not be done by reducing tariffs. He professes to have read Sir James Anderson, and admits his authority; but his recollections of the work differ from our statements. He also calls attention to errors in estimates made some years ago as to the number of messages transmitted in this country. We need only say that we took pains to get at the facts, and have ascertained our own figures to be correct; that in quoting Sir James we spoke from the book, which emphasizes by capitals, italics, and separate paragraphs the *résumé* of principles to which we referred; and that only a very hasty reading could have led him into his error. The *Nation* is trying to give its readers the material for an impartial and intelligent judgment on this subject, and our correspondent will probably be better pleased when we examine wherein a Government telegraph is cheap.

After a brief period of calm following on Mr. Greeley's death, "journalistic circles" are again agitated by wars and rumors of wars. The recovery of the editor of the *World* from what the *Times* believed to be a fatal illness appears to have exasperated the latter paper exceedingly, and he had hardly begun to show himself once more in public when it called him "Mantilini Marble," and accused him of accepting a house on Fifth Avenue as a bribe from the Ring. To which the *World* responded by calling the editor of the *Times* "Jennings" and an "unconscionable ass," and accusing him of ceasing his attacks on the Dock Commissioners in consideration of the appointment of his father-in-law to an office. This seems to have staggered the *Times* a little, but "it came up smiling," and acknowledged the appointment of the father-in-law, but denied that it was made at its request or with its knowledge or approval. Whereupon the *World* uttered a whoop of triumph, and called for the name of "Jennings's" uncle, in order that he too might have an office. To which the *Times* made answer by reproducing a letter of the editor of the *World*, published some months ago in his own paper, as that of "a lunatic," and announced that the author was "off to Bloomingdale." On the other hand, a treaty of peace and amity has been concluded between the *Times* and *Sun*, the latter having been moved by the spectacle of the *Times's* efforts in behalf of "the poor children"; and the two editors, each of whom has repeatedly within a year made public proclamation of his belief that the other was a frightful scoundrel, are now supposed to be co-operating in works of philanthropy. The *Tribune*, in the meantime, maintains its attitude of decorous calm, and surveys the field with "rapt prophetic gaze." But it must often feel, as it hears the rattle of the mud and stones on the tin armor of the combatants, like the pious young man who exclaimed, on his return from his travels, "Ah! what a good time I might have had in Paris if I had never experienced a change of heart."

The snow-storm which followed upon the heels of Christmas promises to give character to the season, of whose severity, indeed, we had unmistakable premonitions in November. The obstructions to travel, however, have not been in proportion to the magnitude and vast extent of the storm—embracing the eastern half of the Mississippi Valley, and the coast—except in the large cities, where a heavy snow-fall has always about the same effect as the horse-distemper for corresponding periods; and except on our suburban lines of railroad, whose managers seem to regard the snow-plough either as an invention of the adversary, or else as an instrument very convenient in the West or in Canada, but not worth keeping on hand in this part of the world. Their superstitious dread of the telegraph, too, in such emergencies as overtook them on Thursday last, is equally noticeable. They permit the suburban resident doing business in New York to cross a great river full of floating ice, in a dense fog, and to spend half a day in a close and crowded waiting-room, without making any effort to inform him of what is being done to clear the road, when the first train will start, or what his chances are of getting home that night. All this might be posted conspicuously for his benefit on a blackboard this side the ferry, with a great saving of his time and peace of mind. But such forethought would be almost miraculous.

Somebody is writing in the New York *Times* about the Erie-Gould transaction in a state of gross ignorance, to which we beg to call the attention of the editor. To talk as he talks about the Erie directors "compounding a felony," in accepting Gould's money, is to make a sad display of mental darkness. The suit of the Erie directors against Gould was a *civil suit*—and had the Erie directors prosecuted it to the last extremity, and got a verdict, they could not have obtained from Gould anything but a sum of money, no larger at the outside than $9,726,541 26 and costs. A few minutes' reading of the New York Code, or a few minutes' conversation with any lawyer, would therefore have prevented the *Times* from indulging in the "moral" blatherskite to which it has been treating its readers on this subject for the last fortnight. The Erie directors have got all from Gould they could have hoped to get by their suit;

whether they ought to have him indicted is another matter, which has not yet come up for discussion.

The stokers of the Gas Company in London recently struck, not for any dispute about wages or hours, but simply because a "union man" had been dismissed, and they hoped to succeed by leaving the city in sudden darkness. The movement was, however, a total failure. Light was supplied in a sufficient degree for three nights by the help of candles, lamps, and calcium lights, and on the fourth the company had filled the places of the strikers completely and were doing full work, and refused to take back any of the old hands. As this strike was followed within a few days by a partial strike among the city police, the question is being vigorously discussed in England whether men filling places in the public service or in the service of companies supplying a public want under a practical monopoly, should not be held under semi-military rules, and be denied permission to resign without a month's notice. The classes of laborers whom the discussion affects more immediately are municipal police, gas stokers, letter-carriers, engine-drivers, and firemen. It is one of the points in the labor question which the continued massing of population on small areas, and in total dependence on little knots of men for certain conditions of safety and sustenance, must bring into greater and greater prominence. A strike of police, or gasmen, or telegraphers, or firemen begins to assume somewhat the character of a strike of the crew of a ship at sea, or of an army in the presence of the enemy. But it is recognized in England that if any class of laborers be required to give up the privilege of striking, they must be compensated for it either by increased wages or increased security, or by pensions.

It is admitted that we shall probably hear within a few weeks of the capture of Khiva by the Russian forces now advancing on it, and this will bring the Czar's frontier close to that of the British in India, and will give them the navigation of the Amu River, and the range called Bolor Dagh in which it takes its rise, and along the base of which a pass leads directly to the Indus north of Cashmere. There is consequently the liveliest discussion going on in the English and Continental papers as to the possible effect that this "rapprochement" will have on English rule in India, but it would appear that a good deal of the talk on the subject is wasted, and that the only effect which the Russian advance is likely to have on Indian politics, for a great many years at least, is a pacific one. The Russian force at Khiva will at best be a small one. An enormous desert lies, and will for ever lie, between it and home; and even after Russia becomes possessor of all Central Asia, as it is to be hoped, in the interests of civilization, she will be before long, it would take a generation to make it a basis for operations against so well organized a military empire as British India now is, even if it is to be believed that the barbarous view of the relations of civilized powers to each other is to be indefinitely maintained. That the approach of the Russians must excite the Hindoos in some degree there is little doubt; but against this must be set the fact that it will probably dishearten the Mussulman Crescentaders, of whom we gave some account a few weeks ago, and who have given the British more trouble of late years than all the Hindoos put together.

One hundred and five members of the "Left," in the French Assembly, almost the entire number of this wing, have published an address to the French people, in which they declare the moderation of their sentiments, their horror of violence in any form, their desire for peaceful reform, and urge once more the lawfulness and expediency of a dissolution of the Assembly, and an appeal to the country. What the programme of the Right is does not yet appear, and it seems as if they did not know themselves. The work of the committee which is engaged in defining the relations of the Executive to the Assembly will clearly amount to nothing permanent, as it will not in any way quiet the radical agitation or render the position of the Right more logical. The leaders of the latter say that whatever the indications of popular sentiment afforded by the election, they are determined to resist, inasmuch as a Radical majority might, under present auspices, be sent back to the next Assembly, and then the Commune would be set up legally by the regular government, and property put in peril. So they will probably wait "for something to turn up"—Thiers to die or resign, for instance—and then, with a man of their own way of thinking in the Presidency, they will order an election, and produce a sweeping Conservative majority, and frame a constitution that will answer their purpose. Whatever the real merits of this programme, nobody who remembers the result of the Napoleonic "plébiscites" can call it a wild one.

Kamehameha V., whose death in Honolulu, on the 11th of last month, is announced, was the elder brother of his predecessor in the miniature sovereignty of the Hawaiian Islands. He and his brother were the sons of Kekuanaoa, the late Governor of the island of Oahu. Their mother, the Governor's wife, had been in her youth the queen, or rather the mistress, of the first Kamehameha, the founder of the line of kings that have borne his name. An old legal maxim intimates, in quaint Latinity, that it is easier to name a man's mother than his father. This principle held in determining the succession of the Hawaiian kings, the noble mother ennobling her progeny. The last two Kamehamehas, though they were not the sons of a king, thus succeeded to the throne on account of the rank which their mother had held. The elder of the two, lately dead, came last to the throne on account of the greater popularity of his predecessor, the younger brother, who was a man of education, and even of culture, in certain departments of English literature. The late king displayed, upon his accession to the throne, not a little of the tyrannical bent, curtailing some important privileges which his people had enjoyed under their constitution of 1840. He was to the last a Hawaiian in all his sympathies, and even in his religion: unlike his younger predecessor, he was unfriendly to the foreign influence in his kingdom; and of the two largest classes of foreigners there, he disliked the Americans rather more than the English—having been, while travelling in this country, grossly insulted on account of his color. He died without naming a successor, and the islands remain at present, and until the reassembling of their honorary representatives, without a ruler. Whether native or foreign influences are to gain the ascendancy in their government, it is at present impossible to say.

Forefathers' Day was celebrated at Peking by the assumption of government by the Emperor in person, with formal ceremonies in the Chinese fashion. The Dowager Empresses relinquished the reins of power in a proclamation issued shortly after the youth's marriage (he is only sixteen), which took place on October 16. All that the public was allowed to see of the wedding pageant was the procession despatched from the Imperial palace to fetch the bride, and which, though not long nor having far to go, made a magnificent show of rich uniforms, banners, horses, trappings, lamps, fans, and umbrellas. Previous to the coming and going of this escort, for several days in fact, there was an open transfer of Imperial furniture to the palace, including some of the wedding presents. While ambassadors from Corea, Annam, and Loochoo were admitted intimately to the ceremony, the resident foreign ministers were excluded, owing to their well-known reluctance to *kotow—i.e.*, to get down on their knees and knock their foreheads against the ground. In the programme of the festivities which commenced immediately after the wedding day, as minutely set forth in an official pamphlet-guide, a place was indeed reserved for the ministers in the balcony at the grand banquet; and if this may be taken to imply a conciliatory disposition on the part of the Emperor as concerns the vexed audience question, his accession to the head of affairs is already an event of some significance for foreign nations having intercourse with China. The anti-foreign influence among his counsellors would have delayed still longer his marriage, which is therefore regarded in itself as a happy omen.

THE MODE OF ELECTING THE PRESIDENT.

THE Convention which assembled at Philadelphia on the 14th day of May, 1787, and adjourned on the 17th of September, consisting of fifty-five members, representing twelve States, is generally conceded to have done its work well. Considering that in those four months it not only solved the most difficult problem that was ever given to a constitutional convention—the problem of devising a new form of government to be adapted to what were essentially new elements of nationality, under conditions in the highest degree perplexing and involved—and that it not only accomplished this chief end of its task, but that it performed its work with such exactitude of detail as to require no subsequent revision, and withal in such clearness and simplicity of language that the modern schoolboy may study the instrument understandingly, its labors seem Titanic when compared with those of recent conventions and legislatures. It is true that immediately after the adoption of the Constitution, certain addenda in the nature of "declaratory and restrictive clauses" were adopted, but these in no manner affect the general plan of government, and it can hardly be doubted now that the government would have gone on substantially as it has gone if the first ten amendments had never been proposed. The men of that day, indeed, had but two ideas of a government, which were an absolute and a limited monarchy; and although their new government was established by themselves, and each Executive head was limited to the brief period of four years, they still could not but look upon government as a power distinct from the people, and to be watched with the same suspicion that their fathers had shown to an hereditary monarchy. It was really sixteen years, October, 1803, before the first amendment in the nature of an alteration was proposed by Congress, and it related to a provision which it is now proposed to alter again—the election of the President.

This amendment of 1803 was, strange to say, little more than a matter of form. As the Constitution originally stood, the electoral colleges, then supposed to be deliberative bodies acting upon their own judgment and exercising discretion in the matter of choosing a President, voted for two persons, not designating either. When all of the electoral votes were counted by the Senate, the person who received the largest number was declared President, and the person receiving the next number Vice-President, provided, however, that each was voted for by a majority of the electors. If two persons received an equal number of votes, the House of Representatives was to select one of them for President, and the other was to become Vice-President. If no one was voted for by a majority of the electors, then the election was to go into the House of Representatives substantially as at present. The operation under the old provision in our late canvass would have been this: all of the Grant and Wilson electors would have voted for Grant, and all but one for Wilson. Grant, thereupon, having the highest number of votes cast, would have been elected President; and Wilson, having the next highest, would have been elected Vice-President. If by some misunderstanding all of the electors had voted for Wilson, so that his number would have equalled Grant's, then the House voting by States would have selected, of the two, Grant as President; and Wilson would become Vice-President in virtue of the votes he received. Apparently for no other reason than to prevent this chance of the two candidates of the victorious party receiving precisely the same number of votes, the amendment known as the twelfth was adopted. In these days of party organization and telegraphic communication, it would probably have been thought a needless precaution.

Two amendments, as we understand the newspaper statements, are now proposed for the election of the President. The first is designed merely to do away with the work of the electors. But as the vote is still to be cast by States, and the proportion which each State is to contribute toward a result is still to include its Senatorial representation, the amendment will leave it still possible that a decided minority of the people of the United States can elect the President—an assertion that will be better appreciated when we remind our readers that a minority of the population is now represented in the Senate by fifty-eight members, and a majority by only sixteen. There is, therefore, no substantial alteration to be effected by this amendment. The electoral colleges have proved a harmless and not expensive part of the machinery, composed generally of respectable gentlemen not in quest of more lucrative offices, and duly submissive to the decree of the party convention which designated the candidate for whom they vote. Such an amendment at this time is indeed chiefly noticeable as an illustration of the manner in which some minds take hold of trivial matters of form, and seem incapable of comprehending that real and substantial improvement may be needed.

But a second and much more important proposition is to extend not only the form of directly electing the President to the people, but to have the President elected by a majority of the people at large, irrespective of State representation; in other words, to throw down all State lines, and to have a majority of the people of the United States elect their executive without regard to States, just as the people of a State now elect the Governor without regard to counties. Apart from the element of what we have termed Senatorial representation, it is apparent that a minority of the people reckoned *per capita* may still elect the President. That is to say, if we should reduce the electoral colleges by striking off the two electors who are generally termed electors at large, and leave the number equal to that of our representatives in the Lower of the two Houses of Congress, it would not follow that a majority of all the voters in the United States could elect a President. This is apparent, if we reflect that in a number of States the electors may receive an almost unanimous vote, while in others they may be chosen by a bare majority. In such a case, every vote cast beyond the necessary majority is a vote thrown away. Fifty thousand majority for A in Massachusetts would not neutralize five thousand majority for B in Connecticut. Under our present system it is possible for less than one-fourth of the voters in the United States to elect their candidate against nearly four-fifths of the votes thrown solidly against him; and if the Senatorial representation were taken away from the electoral colleges, it would still be possible for less than one-third to effect the same result. Thus, if the nine largest States, with Maine, representing a population of 21,175,450, had voted unanimously for Grant, while the remainder, representing a population of only 13,029,503, had given small majorities for Greeley, the latter would have been elected against the expressed intent of more than three-fourths of the people of the United States.

Something may also be said in favor of a direct vote by the whole people from the historic point of view. When the question of choosing the President first came before the Convention, the general opinion seems to have been favorable to his election by the National Legislature, and but two States, Pennsylvania and Maryland, voted in favor of an election by the people. When, however, the Convention came to annex to the office the veto and appointing powers, it was seen that the President should not be the creature of the Legislature, but an independent officer, or rather department, of the Government. The question of his appointment was therefore reconsidered, and it was soon determined that it must proceed, directly or indirectly, from the people. But here the Convention was met by that diversity of suffrage which existed and continued to exist until the "Fifteenth Amendment" came to establish manhood suffrage. The property qualification in one State, the absence of it in another, and the disproportion of slaves in the South, were insuperable difficulties to a direct vote of the people. The Convention therefore determined to do two things: first, to resort to a special representative body which should embrace both the representation of States and the representation of population; second, to leave the method of the appointment of these representatives to be determined by each State for itself. The commonly received notion, that the object of resorting to electors was to secure a deliberative body, was not

the primary idea, nor the controlling reason for establishing the system.

By the adoption of the Fifteenth Amendment, and the system of leaving the choice of candidates to the deliberation of two political conventions, about every reason which originally existed for the intervention of electors has been swept away. So far as State rights and State representation are concerned, it is also manifest that with the downfall of the rebellion those ideas have been relinquished by even their old advocates. The growing tendency of the public mind is against them, and our greater means of intercommunication, and closer business and social relations, lead people to regard State diversities if not State lines as inconveniences. Nevertheless, there remains the fact that our country is to a certain extent sectional, having still a South, an East, and a West, with a marked diversity of products, interests, and ideas, and something of sectional pride, prejudice, and jealousy; and that every political incident of the day warns us that the independence of the States has more to do with the maintenance of free government on this continent than some of us have for the last fifteen years been allowing ourselves to believe. It is well for those who value it most, however, to beware of subjecting it to too great a strain, and the present system of Presidential election constitutes a very serious strain.

"THE CARNIVAL OF CRIME."

THERE are said to be about twenty prisoners in the Tombs awaiting or undergoing trial for murder, and every day adds to the list of homicides of greater or less atrocity and audacity, for which there is a general feeling that a number of persons ought to be hanged. This has of course revived the old discussion as to the morality and expediency of the death penalty; in fact, this discussion is renewed every five years, apparently without producing much impression on the public mind, or adding much to our knowledge of the best mode of dealing with crime. There is this that is striking in the present discussion, however—that those of the opponents of the death penalty who take part in it clamor, above all things, for *certainty* in punishment, and are, it would seem, willing, for the sake of certainty, that murderers now in custody should be hanged, leaving the general question of the lawfulness of hanging open for future consideration. This, we think, exhibits a considerable advance upon previous states of mind, and will help, whenever the public turns its attention seriously to the subject of criminal jurisprudence, in bringing it down to the kernel of the whole controversy. We have evidently gone far towards getting rid of the influence of one phrase which has done a good deal to surround the question with a fog, viz., "the sacredness of human life"—a phrase to which probably the great majority of those who use it never attach any definite meaning, and which yet has had a good deal to do with hindering the administration of justice in criminal cases. There is probably not one man in a million who considers life "sacred"—that is, a thing never under any circumstances to be destroyed, or who would not gladly take life to save his own or the lives of his family, or to save female relatives from insult, or to save his country from invasion or conquest. One never hears of it except when society proposes to kill a man as a means of preventing murder, and we hear of it then owing to the deep impression made on the nerves by the spectacle of killing in cold blood, which, with people of sensitive organization, is so strong as to overpower completely all large considerations of remote effects or of general interests. It ought to be observed, however, that this hostility to judicial killing is found most widely diffused in communities in which the horror of assassination is very slight. The Italian dislike of capital punishment is always strongest in districts in which the knife plays the largest part in settling quarrels, and in which the manslayer has least to fear from public opinion. It shows itself also in communities in which, owing to education or circumstances, the manners are gentle, the temptations to violence few, and murder rarely heard of. No American State, so far as our knowledge goes, can at present boast that any such Arcadian peace prevails within its borders, or pretend that it is likely to do so. This country now contains, or is likely for half a century at least in every part of it to contain, the most enterprising and audacious men of the most enterprising and audacious breeds of men on earth—men whom opinion influences little, on whom habits sit lightly, whose roots strike slowly into any soil or society, and whose fierce will finds a ready minister in a strong and cruel hand. There are thousands of such in every city in the Union; and there will be thousands on thousands of them whom we cannot reach by school, or church, or any other civilizing influence, and who will plague us until a change has come over the country which nobody now living will ever see. We could not give their fierce passions a stronger stimulus, or do more to rouse their unbridled imagination, than by making formal proclamation that they might kill their enemies, and kill all who in any way gainsaid them, without any fear of being killed in turn, and without exposure to worse consequences than temporary imprisonment.

The arguments against this view of the matter would fill anybody with astonishment who was not familiar with the working of the Sentimentalist mind and its views as to the nature of proof. One of them is that the fear of being hanged does not deter a man of low moral organization from committing murder, because when he commits the crime he is so intent on the business in hand that he never thinks of the penalty. But, then, if he never thinks of being hanged, he will never think of being imprisoned either; so that, if this doctrine be sound, there is no use in affixing any penalty at all to the commission of crime, and we should occupy ourselves solely in removing all temptation to murder out of everybody's way. This little task, however, we must remind our Sentimentalist friends, is one of those to which nobody but the Supreme Being is equal. To keep a man out of temptation, you have to know the secrets of his heart and to be able to govern his will. In the meantime, it is a fact palpable to the human eye that the attaching of penalties to the commission of certain acts does make people afraid to commit them, inasmuch as most crimes are committed in secret in law-governed communities, and the perpetrators run away and hide themselves immediately afterwards. In short, criminals, like honest men, govern themselves by a consideration of consequences. This is not a novel doctrine certainly, but every little while one has to produce it with as much parade as if it were a new and valuable discovery. Whether hanging impresses the criminal imagination as much as other penalties for the commission of murder is a question about which good men differ, but we believe there is a perfect agreement on the subject among the criminal population. If you ask any criminal whether he would sooner be hanged or be imprisoned, even for life, he will joyfully choose the latter, and it is to be presumed that on this subject he knows his own mind. If we are told, in answer to this, that hanging does not prevent murder, we reply that no penalty would put a stop to any species of crime, and that this argument, if good, would lead to the abolition of jails and police. The efficacy of a penalty is question of more or less, simply. There is some uncertainty in all human justice, and this uncertainty would of itself, even if no men were ever overpowered by their passions, prevent the total disappearance of crime. The question is whether hanging will not wear in the eyes of the criminal a greater look of certainty and irrevocableness than any other punishment; and we think that there can be no doubt that it does. You would have to change human nature to rob it of its terrors. You cannot by any solemnities or enactments make imprisonment anything like as terrible in any country; and in this country, in which governors change, public opinion is forgiving, and the longest terms of imprisonment notoriously short, it is useless to talk of it.

Moreover, even if we resolved to-morrow that imprisonment for life was an adequate penalty for deliberate murder, the question of the educating influence of criminal justice would still stare us in the face, and have to be met. That is, we should still have to consider the effect on persons criminally disposed of affixing to the slaughter

of a human being the same consequences that we affix to highway robbery, arson, rape, and forgery. This was the great and crying defect of the English system of hanging people both for petty theft and for murder. Society is bound to announce its estimate of the gravity of offences in some way, and the only distinct and efficacious way is in the enactment of penalties for various crimes. With what face can it say to a man: "If any person breaks into your dwelling-house in the night, and gags you while he packs up and carries off your valuables, we shall lock him up for life, or until he grows sorry; if, however, he cuts your throat, so as to destroy your evidence, we shall serve him in precisely the same manner"? Or to a criminal: "It makes no difference to us whether, when you commit a robbery, you murder the victim or not. You ought not to do so; but if you do, as we have given up torture in all its forms, and estimate human life very highly, we shall treat you simply as a robber. No matter for which offence you are convicted, your term of imprisonment will probably be the same"? The fact is, that after turning the question over in every light, we are drawn to the conclusion that the very best thing to be done with a deliberate murderer is to remove him from the earth, and that the great problem we have to solve at this moment is not the provision of a new penalty for murder, but the accomplishment of such improvements in criminal procedure as shall make murder trials speedy and conviction certain. The first step in this is to improve the jury law, and the second is to have cases of murder tried before a sufficient number of judges to make appeals unnecessary, and the third is to make trials speedy. If every case of homicide came before the full bench, it would be entailing no hardship on the prisoner to make their rulings on points of law final, or at all events to leave the allowing of a writ of error to their discretion; and if trials were prompt, criminals would not get the benefit of the indifference or pity which takes possession of the public when a long interval elapses between the commission of the offence and the arraignment of the prisoner. Mr. Clinton, a leading criminal lawyer of this city, announces his intention of bringing two bills before the Legislature this winter—one improving the classification of homicides, and the other hastening the trial of appeals—which will be valuable changes, if he secures consideration for them.

THE MORALS AND MANNERS OF THE KITCHEN.

MR. FROUDE'S attempt to secure from the American public a favorable judgment on the dealings of England with Ireland has had one good result—though we fear only one—in leading to a little closer examination of the real state of American opinion about Irish grievances than it has yet received. He will go back to England with the knowledge—which he evidently did not possess when he came here—that the great body of intelligent Americans care very little about the history of "the six hundred years of wrong," and know even less than they care, and could not be induced, except by a land-grant, or a bounty, or a drawback, to acquaint themselves with it; that those of them who have ever tried to form an opinion on the Anglo-Irish controversy have hardly ever got further than a loose notion that England had most likely behaved like a bully all through, but that her victim was beyond all question an obstreperous and irreclaimable ruffian, whose ill-treatment must be severely condemned by the moralist, but whom no sensible man can be expected to weep over or sympathize with. The agencies which have helped to form the popular idea of the English political character are well known; those which have helped to deprive the Irish of American sympathy—and which, if Mr. Froude had judiciously confined himself to describing the efforts made by England to promote Irish well-being *now*, would probably have made his lectures very successful—are more obscure. We ourselves pointed out one of the most prominent, and probably most powerful—the conduct of the Irish servant-girl in the American kitchen. To this must, of course, be added the specimen of "home rule" to which the country has been treated in this city; but we doubt if this latter has really exercised as much influence on American opinion as some writers try to make out. A community which has produced Butler, Banks, Parker, Bullock, Tweed, Tom Fields, Oakey Hall, Fernando Wood, Barnard, and scores of others whom we might name, as the results of good Protestant and Anglo-Saxon breeding, cannot really be greatly shocked by the bad workings of Celtic blood and Catholic theology in the persons of Peter B. Sweeny, Billy McMullen, Jimmy O'Brien, Reddy the Blacksmith, or Judge McCunn. Let us give the devil his due, and refrain from all sham and hypocrisy. It is in the kitchen that the Irish iron has entered into the American soul; and it is in the kitchen that a great triumph was prepared for Mr. Froude had he been a judicious man. The memory of burnt steaks, of hard-boiled potatoes, of smoked milk, would have done for him what no state-papers, or records, or correspondence of the illustrious dead can ever do; it had prepared the American mind to believe the very worst he could say of Irish turbulence and disorder. Not one of his auditors but could find in his own experience of Irish cooking circumstances which would probably have led him to accept without question the execution of Silken Thomas, the massacre of Drogheda, or even the Penal Laws, as perfectly justifiable exercises of authority, and would certainly have made it easy for him to believe that English rule in Ireland at the present day is beneficent beyond example.

Nevertheless, we are constrained to say that in our opinion a great deal of the odium which surrounds Bridget, and which has excited so much prejudice not only against her countrymen, but against her ancestors, in American eyes, has a very insufficient foundation in reason. There are three characters in which she is the object of public suspicion and dislike—(1) as a cook; (2) as a party to a contract; (3) as a member of a household. The charges made against her in all of these have been summed up in a recent attack on her in the *Atlantic Monthly*, as "a lack of every quality which makes service endurable to the employer, or a wholesome life for the servant." And the same article charges her with "proving herself, in obedience, fidelity, care, and accuracy, the inferior of every kind of servant known to modern society." Of course, there is hardly a family in the country which has not had, in its own experience, illustrations of the extravagance of these charges. There is probably nobody who has long kept servants who has not had Irish servants who were obedient, faithful, careful, and even accurate in a remarkable degree. But then it must be admitted that this indictment is a tolerably fair rendering, if not of the actual facts of the case, at least of the impression the facts have left on the mind of the average employer. This impression, however, needs correction, as a few not very recondite considerations will show.

As a cook, Bridget is an admitted failure. But cooking is, it is now generally acknowledged, very much an affair of instinct, and this instinct seems to be very strong in some races and very weak in others, though why the French should have it highly developed and the Irish be almost altogether deprived of it, is a question which would require an essay to itself. No amount of teaching will make a person a good cook who is not himself fond of good food and has not a delicate palate, for it is the palate which must test the value of rules. We may deduce from this the conclusion, which experience justifies, that women are not naturally good cooks. They have had the cookery of the world in their hands for several thousand years, but all the marked advances in the art, and indeed all that can be called the cultivation of it, have been the work of men. Whatever zeal women have displayed in it, and whatever excellence they have achieved in it, have been the result of influences in no way gastronomic, and which we might perhaps call emotional, such as devotion to male relatives or a desire to minister to the pleasure of men in general. Few or no women cook a dinner in an artistic spirit, and their success in doing it is nearly always the result of affection or loyalty—which is of course tantamount to saying that female cookery as a whole is, and always has been, comparatively poor. As a proof of this, we may mention the fact—for fact we think it is—that the art of cooking among women has declined at any given time or place—in the Northern States of the Union, for instance—*pari passu* with the growth of female independence. That is, as the habit or love of ministering to men's tastes has become weaker, the interest in cookery has fallen off. There are no such cooks among native American women now as there were fifty years ago; and passages in foreign cookery books which assume the existence among women of strong interest in their husbands' and brothers' likings, and strong desire to gratify them, furnish food for merriment in American households. Bridget, therefore, can plead, first of all, the general incapacity of women as cooks; and, secondly, the general falling off in the art under the influence of the new ideas. It may be that she *ought* to cultivate assiduously or with enthusiasm a calling which all the other women of the country ostentatiously despise, but she would be more than human if she did so. She imitates American women as closely as she can, and cannot live on the same soil without imbibing their ideas; and unhappily, as in all cases of imitation, vices are more easily and earlier caught than virtues.

She can make, too, an economical defence of the most powerful kind to the attacks on her in this line, and it is this: that whether her cooking be bad or good, she offers it without deception or subterfuge, at a fair rate, and without compulsion; that nobody who does not like her dishes need eat

them; and that her defects of taste or training can only be fairly made a cause of hatred and abuse when she does work badly which somebody else is waiting to do better, if she would get out of the way. She has undertaken the task of cooking for the American nation, not of her own motion, but simply and solely because the American nation could find nobody else to do it. She does not, therefore, occupy the position of a broken-down or incompetent artist, but of a volunteer at a fire, or a passer-by when you are lying in the ditch with your leg broken. The plain truth of the matter is, that the whole native population of the United States has almost suddenly and with one accord refused to perform for hire any of the services usually called "menial" or indoor. The men have found other more productive fields of industry, and the women, under the influence of the prevailing theory of life, have resolved to accept any employment at any wages sooner than do other people's house-work. The result has been a demand for trained servants which the whole European continent could not supply if it would, and which has proved so intense that it has drawn the peasantry out of the fields *en masse* from the one European country in which the peasantry was sufficiently poor to be tempted, and spoke or understood the American language. No such phenomenon has ever been witnessed before. No country before has ever refused to do its own "chores," and called in an army of foreigners for the purpose. To complain bitterly of their want of skill is therefore, under the circumstances, almost puerile, from an economical point of view; while, to any one who looks at the matter as a moralist, it is hard to see why Bridget, doing the work badly in the kitchen, is any more a contemptible object than the American sewing-girl killing herself in a garret at $3 a week, out of devotion to "the principle of equality."

As a party to a contract, Bridget's defects are very strongly marked. Her sense of the obligation of contracts is feeble. The reason why this particular vice excites so much odium in her case is, that the inconveniencies of her breaches of contract are greater than those of almost any other member of the community. They touch us in our most intimate social relations, and cause us an amount of mental anguish out of all proportion to their real importance. But her spirit about contracts is really that of the entire community in which she lives. Her way of looking at her employer is, we sincerely believe, about the way of looking at him common among all employees. The only real restraint on laborers of any class among us nowadays is the difficulty of finding another place. Whenever it becomes as easy for clerks, draughtsmen, mechanics, and the like to "suit themselves" as it is for cooks or housemaids, we find them as faithless. Native mechanics and seamstresses are just as perfidious as Bridget, but incur less obloquy, because their faithlessness causes less annoyance; but they have no more regard in making their plans for the interest or wishes of their employer than she has, and they all take the "modern view" of the matter. What makes her so fond of change is that she lives in a singularly restless society, in which everybody is engaged in a continual struggle to "better himself"—her master, in nine cases out of ten, setting her an example of dislike to steady industry and slow gains. Moreover, domestic service is a kind of employment which, if not sweetened by personal affection, is extraordinarily full of wear and tear. In it there is no real end to the day; and in small households, the pursuit and oversight, and often the "nagging," of the employer, or, in other words, the presence of an exacting, semi-hostile, and slightly contemptuous person is constant. This and confinement in a half-dark kitchen produce that nervous crisis which sends male mechanics and other male laborers engaged in monotonous callings off "on a spree." In Bridget's case it works itself off by a change of place, with a few days of squalid repose among "her own people" in a tenement-house.

As regards her general bearing as a member of a household, she has to contend with three great difficulties—ignorance of civilized domestic life, for which she is no more to blame than Russian mouzhiks; difference of race and creed on the part of her employer (and this is one which the servants of no other country have to contend with); and lastly, the strong contempt for domestic service felt and manifested by all that portion of the American population with which she comes in contact, and to which it is her great ambition to assimilate herself. Those who have ever tried the experiment of late years of employing a native American as a servant, have, we believe, before it was over, generally come to look on Bridget as the personification of repose, if not of comfort; and those who have to call on native Americans, even occasionally, for services of a quasi-personal character, such as those of expressmen, hotel clerks, plumbers, we believe are anxious to make their intercourse with these gentlemen as brief as possible. Most expressmen are natives, and are freemen of intelligence and capacity, but they carry your trunk into your hall with the air of convicts doing forced labor for a tyrannical jailer. If the spirit in which they discharge their duties—and they are specimens of a large class—were to make its way into our kitchens, society would go to pieces.

In short, Bridget is the legitimate product of our economical, political, and moral condition. We have called her, in our extremity, to do duties for which she is not trained, and having got her here have surrounded her with influences and ideas which American society has busied itself for fifty years in fostering and spreading, and which taking hold of persons in her stage of development work mental and moral ruin. The things which American life and manners preach to her are not patience, sober-mindedness, faithfulness, diligence, and honesty, but self-assertion, discontent, hatred of superiority of all kinds, and eagerness for physical enjoyment. Whenever the sound of the new gospel which is to win the natives back to the ancient and noble ways is heard in the land, it is fair to expect that it will not find her ears wholly closed, and that when the altar of duty is again set up by her employers, she will lay on it attractive beefsteaks, potatoes done to a turn, make libations of delicious soup, and will display remarkable fertility in "sweets" and an extreme fondness for washing, and learn to grow old in one family.

PHOTOGRAPHY IN ENGLAND.

London, Nov. 16, 1872.

AMONGST the scientific advances of the year which fall within my proper line of notice are two shown in the annual exhibition of the Photographic Society. The first and most gratifying is an improvement in the heliotype process, by which a delicacy and brilliancy rivalling the silver print is obtained. I am not enabled to say in what the improvement consists, or whether it be a mechanical or chemical discovery on which it depends. Whichever it may be, it is due to Lieutenant Abney of the Royal Engineers, who has charge of the photographic instruction at Woolwich, one of the best of the non-professional photographers of the day, as well as the most accomplished chemist amongst the practical photographers; an indefatigable experimenter; and, by the intelligence of his Government, placed in a position to make his tastes and talents available for public interests. A little landscape of his in heliotype hangs with the silver prints, and scarcely the most careful scrutiny can detect any difference. Its shadows are as rich and transparent and its gradation as delicate as silver work, and the subject is such an one as has hitherto been found to present the greatest difficulty to callographic rendering. I do not know if I stated in a former letter on photography what I will in any case briefly restate, that the main and only important difference between the heliotype and the Albert-type is that the printing film, which in either case is of chromatized gelatine exposed under a negative and then washed until it forms a relief of the subject, is in the latter attached to a plate of glass, and in the former is made so substantial that it is removable from the support. The laboratory under the charge of Lieut. Abney works under license from the Heliotype Company, but in several prints exhibited this year has attained results which are not equalled by the original workers of the process; and for the first time since I have been acquainted with its results, we see work which promises to supplant the slow, uncertain, and by the common method unstable photo-print. In the copying of engravings, maps, and drawings, in line or grain, it has long been equal to the older methods; and if the new attainment marks a standard of work and is not a single happy hit, we may soon hope to see a purely mechanical reproduction of photographic impressions; but a happy hit, even, must depend on a principle, whose application once made makes absolute success quite feasible. The difficulty in all the results I have hitherto seen (with the exception of some few prints by Albert of subjects of peculiar character), has been a granulation too visible and too little under control to be pleasant, compared to the subtle gradation of the photo-print; and this little print of Lieut. Abney's is like a sign of land to men who had begun to fear they had missed the aim of their voyage.

The other result I allude to is one which will be more generally appreciable and popular, the enlargement by the Autotype Company of small negatives of a suitable character to large ones, from which prints are made in carbon, which are absolutely indistinguishable from prints from an original negative, the minutest details in a negative 8 by 10 inches being reproduced in a print 24 by 30, with a delicacy which the naked eye cannot analyze. In a pictorial point of view this is a great advantage, enabling the tourist photographer to carry with him a suitable apparatus of great delicacy, whose work shall be enlarged to rival the results of the ponderous apparatus of the photographer-in-large, who travels with a van and assistants. Size is not a merit *per se*, but for certain purposes the power to enlarge the little negative of 5 by 4 inches to one 25 by 20 is of unquestionable value, as for instance for educational uses, and to supplant the huge direct views of the great monuments of the Old World which have attained a certain popularity even in America.

The autotype mechanical process has also some notable press-work, by a modification of the Albert-type, particularly one interior of Norwich Cathedral, which, though it has not the richness and depth of a silver print, seems quite as satisfactory in its rendering of gradations. On the whole, therefore, the year's photographic results are full of promise of mercantile usefulness. As to the artistic results, there are some examples of landscape, portraiture, and of the combination printing in which Messrs. Robinson & Cherrill have so long led the way, which it were well worth while to see in our own atmosphere. There are two landscapes by Mr. Hudson of Ventnor, of a large size (as nearly as I can guess, about 20 by 25 inches), which are absolute marvels of exquisite rendering of landscape details in a broad, tasteful manner, with a perfection of manipulation which leaves no apparent room for advance beyond, and, as *pure* photography, as near the standard of perfection as anything I can conceive.

What, perhaps, would interest the general art public, not technically artistic, is the array of dry-plate work, of which there are samples of several kinds of plates sold commercially, and of which it may be said, that though the results are short of the best wet-collodion work, they are better than the average, and but little behind the best, dry-plate work of men who exercise their utmost skill and experience in the preparation of their plates.

In the progress of photography this is a most notable fact, that a hurried and round-the-world voyager may carry with him from his point of departure a stock of prepared plates, and, without any previous training beyond that necessary to enable him to judge of the intensity of light and its effect on a sensitive preparation of standard quality, photograph any objects on his way which may strike his attention, repack and keep his plates until his return to civilization, and hand them over to a practical photographer to be developed, and secure nearly as good (and quite as valuable) results as if he had been an experienced photographer. I have in a previous letter alluded to this fact, but the display in this year's exhibition of the Photographic Society of the fruits of these commercial preparations can but strike any one in the least conversant with such subjects with the importance in an illustrative point of view of this new facility.

In point of fact, photography is in England reaching a commercial importance and productiveness well merited by the care and enterprise devoted to it. Numbers of intelligent amateurs give a large portion of their time to it; many of the public educational institutions have chairs of lecture devoted to it, whose occupants, accomplished photographic chemists, elaborate and employ the formulas and make the discoveries which have laid the basis of this mercantile success. Photography is as essential a part of a complete technical education for an engineer or surveyor as drawing; no scientific expedition is complete now without a photographer, and the recent improvements in mechanical and chemical appliances make his work far more certain and far less laborious than it has been hitherto. I don't know what has been done in America in late years, but I presume that we manage as we do in the civil service—take the first sufficiently well-recommended applicant and trust to his finding out the business if he is able, and trust equally to the chance of his being able.

Across the Channel there have been some interesting discoveries made; one of which, a printing process by the aid of a plate photographically impressed and exposed to the vapor of mercury, seems to have a basis of practical utility, but has not thus far attained it; but another, which depends on the power of certain metals of decomposing nitrate of silver by contact, even when dry, has a minor value of a positive character, especially in printing complicated and delicate patterns on cloth; but neither has yet come fairly into the field of artistic cognizance. On the whole, therefore, we may say that photography has kept pace in advance with the sciences, rather than lagged behind with the arts.

W. J. Stillman.

Correspondence.

THE GREENBACK MYSTERY.

To the Editor of the Nation:

Sir: Will the *Nation* oblige a very old reader by answering the following questions? I think it will be conceded that the points raised are worthy of intelligent discussion:

1. What would be the effect of making greenbacks and United States bonds convertible, the one form of indebtedness into the other, at the pleasure of the holder of either? Would such an arrangement cause a rise in the value of greenbacks or a fall in the value of bonds, or would there be an advance in the one and a decline in the other to a common and intermediate level?

2. What effect would such mutual convertibility of greenbacks and bonds immediately have on the National Bank note currency?

3. Is there anything wrong morally or economically in the Government's allowing its creditors to choose whether the evidences of its indebtedness to them shall be in the form of bonds with interest or greenbacks without interest?

4. If the option to convert greenbacks into bonds, and *vice versa*, should result in making greenbacks as valuable as gold, would or would not this be equivalent substantially to a resumption of specie payments, and with less disturbance than any other mode of resuming?

5. If such option should cause a decline in the value of the bonds below par, could they be restored to par by an increase in the rate of interest?

6. What advantage does the Government derive from endorsing the National Bank notes in preference to issuing its own notes directly?

7. What advantage do the people derive from the issue and use of National Bank note currency in preference to greenbacks so-called?

8. What advantages would the banks lose if the existing privilege of issuing the National currency or any kind of credit currency were withdrawn, provided the Government should agree to furnish convertible greenbacks, in lieu of all existing credit currency; and provided that all other interference on the part of Government in their internal affairs should cease? In other words, that banking should hereafter be free except in the matter of issuing currency?

H. M. F.

Bay City, Dec. 25, 1872.

[1. If you mean convertible at par, it would after all amount simply to an offer of the Treasury to sell U. S. bonds at about 88, and it is upon the probable effect of this you must speculate. The bonds would doubtless go off rapidly, and if payment in greenbacks was insisted on, and the greenbacks so paid were withheld from circulation or destroyed, the remainder would undoubtedly rise in value; that is, there would be a contraction of the currency with its usual consequences. Conversion above par is already within everybody's reach who chooses to buy or sell bonds in Wall Street.

2. The effect would be the effect of a contraction of the currency; that is, the purchasing power of all money would be increased.

3. None that we know of; its creditors already possess this option.

4. No; greenbacks might have as much purchasing power as gold, and yet specie payments be a long way off. To resume specie payments, the community has to *buy* specie with commodities, and either add it to or substitute it for the existing currency. Nothing is "equivalent to specie payments" which leaves paper money irredeemable on demand.

5. Most likely; but the rate of interest is only one element in the public credit.

6. It got rid of a certain amount of its bonds without having to increase the volume of legal tenders.

7. None that we know of. Irredeemable paper issued by the Government, and irredeemable paper of other people that the Government agrees to see paid in its own irredeemable paper, are, humanly speaking, the same thing to all holders.

8. It would depend on what the banks gave for the "convertible greenbacks," or, in other words, on what terms the Government furnished them. It is to be presumed that the Government would not supply money to banks for the asking.—Ed. Nation.]

WHAT SHOULD WE PAY FOR LIFE INSURANCE?

To the Editor of the Nation:

Sir: On the 30th day of November last the Mutual Life Insurance Company, the largest life insurance company on this continent, if not in the world, announced officially its purpose to reduce the premiums for its policies by from 11 to 22 per cent., according to the class of insurance. This announcement kindled a blaze of discussion in the public prints which has, for the mass of the people, thrown much valuable light into the dark places of life insurance, its theories, its foundations, its mathematics.

The controversy was begun and continued by twenty-two other mutual life insurance companies, which contended that such a reduction was unsafe, a proposition the maintenance of which was an unequivocal confession of their own inability to make a similar reduction. But the failure to show that

the Mutual could not safely do business at the proposed rates was as conspicuous as the attempt to show it was desperate.

The contending companies further argued that the reduction would be unjust to the present policy-holders or co-partners in the Mutual. This was, for reasons which I shall presently give, true; and they succeeded on *this* issue in arousing so formidable an opposition that the Mutual abandoned its project, at the same time reiterating its ability to carry out the plan of reduced premiums.

It is supposed by the contending parties that the question is thus settled and further discussion stopped. But the intense interest and enquiry which were awakened cannot be so easily satisfied and dismissed. Life insurance our people must have. Life is a venture upon which all men stake their entire capital, of whatsoever that capital consists. To the average man it is a venture on which are staked, not alone *his* capital, but the security, the comfort, and the hopes of those dependent upon him. That venture should be protected, as other and less important ones are protected, by insurance. It is, therefore, a question of vital consequence to the individual and to the community whether life insurance can be furnished at a lower premium than has heretofore been exacted by the majority of companies. This question is now, for the first time, fairly sprung upon our people, and they sadly mistake the temper of mankind who believe that discussion of it can be silenced by any such cowardly truce as that now declared by the late contending companies.

Whatever the Mutual Life may do, or agree *not* to do, it cannot blot out its own record, and that record proves beyond dispute or cavil that the company, in common with other mutual companies, has been charging for its policies from twenty to twenty-five per cent. more than under a prudent management its policies need have cost. Strenuous efforts are being made to close the controversy provoked by the Mutual; but it has already gone far enough to prove to the public that the experience of mutual life insurance companies flatly contradicts their theories; that high premiums are justified by no consideration either of safety or equity. Why, then, shall we continue to pay them?

It is alleged that to make its policies secure against all the possible adverse contingencies of the future, it was necessary to make the false assumptions of mortality and interest from which have resulted the excessively high premiums charged by the Mutual, and, indeed, the laws of certain States now compel life insurance companies to make extravagant provision against extraordinary and almost impossible contingencies. In so doing, the business and the beneficence of life insurance have been greatly circumscribed, for here, as elsewhere, it is the first step that costs, and the exaction of these unnecessarily high premiums has put life insurance out of the reach of those who most need it.

There should, no doubt, be provision made for a greater mortality and a less rate of interest than have been experienced, for "assurance" here should be made "doubly sure." But who shall make that provision?

In a mutual company it is made by the insured. They are virtually co-partners who invest all their overpayments in the conduct of their business. Thus it is that none but capitalists—those who can afford to pay more than the cost of life insurance—can under the mutual system avail themselves of its benefits.

In a stock life insurance company there is charged only the premium necessary to meet all the probable contingencies of the business, and, for those dangers which are imagined to exist somewhere on the shadowy boundary between the remotely possible and the utterly impossible, ample provision is made by the pledge of capital stock.

The injustice which defeated the purpose of the Mutual Life to reduce its rates, which it could safely have done, was the injustice of withholding the overpayments of its present policy-holders and capitalizing them for the security of new entrants. Low premiums are incompatible with mutual life insurance—the theory of which is that its patrons shall act the double part of insurers and insured.

The disadvantages of the mutual plan of life insurance are thus apparent:

1. It is *uncertain*. If you pay a fixed premium, you get a variable insurance. If you buy a fixed amount of insurance, you pay a variable premium, always too large, and always yourself supplying the capital to which you pay tribute.

2. It is *expensive*. It is a business where thousands or tens of thousands of copartners are represented by agents whose fidelity no one watches because no one can afford to watch it, and whose extravagance no one rebukes because no one has sufficient interest to detect it, or, if he has detected it, finds it impossible to awaken his copartners to the fact.

3. It is *dangerous*. Because the immunity from inspection and criticism enjoyed by its officers, together with the opportunity for unsafe expenditure which its extravagant premiums afford, are temptations to which the custodians of trust funds ought never to be exposed.

4. It is *delusive*. Because, although it promises to afford insurance at cost by returning to the insured their overpayments, it does not and cannot do this. Under the best management, the expenses must bear a constant ratio to the premiums paid, for the chief outlay is in procuring the business. Take the case of the Mutual Life. It has received cash premiums of $64,677,770, to procure which it has paid on the average a commission of 9.25 per cent., or $5,984,789. If the lower premium had been charged, it would have received about $50,500,000, a commission of 9.25 per cent. upon which would have been $4,671,250. Thus in the single item of commissions the policy-holders of the Mutual have paid out at least $1,300,000 unnecessary expenses to support the high-rate mutual plan. And all mutual policy-holders, in addition to these unnecessary expenditures which go to make up that fictitious "cost" at which they are promised their insurance, if they suffer their policies to lapse (as, disgusted by the false promises and sorry performances of such companies in the matter of dividends, seven-tenths of them do), lose the sum of their several overpayments also—that is, they not only furnish the capital which gives them security, paying liberally for the privilege, but also in certain contingencies which often arise, sink the capital they have loaned beyond hope of recovery. The annual loss to the policy-holders in the mutual life insurance companies of this country from this cause alone is not less than $5,000,000.

If any business is worth doing, it is worth doing in a business way. The business way of doing life insurance is, to charge a rational price, give a clear contract and a definite amount of insurance. This is done only by the low-rate stock companies, which have these advantages:

1. The stock system is *economical*. Capital is invested, and those who invested it are sure to enforce care in the selection of risks, prudence in the making of investments, and economy in expenditures. Every dollar handled is their own dollar, and not the money of a careless client. It will by this token be hazarded, invested, or expended with the utmost caution. In point of fact, the stock life insurance companies have for some years past been furnishing insurance from twenty to twenty-five per cent. cheaper than the mutuals, for many of the latter have made no returns whatever to their customers, and cannot hope to make any while their present management continues. The silent influence of this fact has created a wholesome public opinion which the Mutual Life was shrewd enough to detect, but was precluded from obeying because of the inherent weakness and injustice of its system.

2. Stock life insurance is *safe*. If the Mutual, without a capital, could safely reduce its rates, how much more are those companies safe which have pledged to the protection of their clients in extremities hundreds of thousands of dollars in the shape of capital stock? As a class these, the stock companies, have to-day a standing and a record, achieved by years of honorable dealing, which put their safety as much beyond doubt or peradventure as the safety of the Mutual itself.

The Mutual Life failed in its proposed reduction of rates, because it could not abandon the false theory which makes a false premium necessary. But the reform is not stayed by the surrender of the Mutual. It will not stop for theories or theorems. It must continue until life insurance is founded on the solid rock of actual experience, and is offered to men in a plain, straightforward way and at a reasonable price.

A Business Man.

JOHNSON AND JOHNSTONE.

To the Editor of the Nation:

Sir: Unless I am greatly mistaken, not only is *Johnson* an English and *Johnston* a Scotch name, but they are entirely different names with a different meaning. *Johnson* is an ordinary patronymic, *John's son; Johnston, Johnstone,* or, in old Scotch, *Johnstoun,* is a Gentile name (if that be the proper technical adjective), and means *John's Town.*

Carl Benson.

December 28.

Notes.

Holt & Williams have made arrangements to republish in this country the *Fortnightly Review*, at $6 per annum, or 50 cents a number—one-half the price at which it has heretofore been sold here.

—It would seem as if the new birth of the American Ethnological Society a couple of years ago, when it became the Anthropological Institute of New York, had spent itself in the publication of the first number of the journal of

the Institute, containing the transactions of two or three meetings. In November last, some of the members of the parent society, wishing to revive the memories of it, called a social meeting in this city, at which there was so much interest manifested that it was resolved to revive the Ethnological Society under its old title. This has been done, and the society, retaining its collections and records, will doubtless soon resume its activity. We think it a pity that there must be two societies instead of one, and cannot say that we anticipate a very brilliant career for either of them.

—One of the most useful departments of that excellent paper, the *Railroad Gazette*, is its monthly record of train accidents, a record giving all the essential particulars of cause and effect, together with the amount of injury to life and limb. That for November is the latest published, and shows 103 accidents, of which nearly one-half were collisions, and less than a dozen not preventible by human foresight, and which brought death to 37 persons, and various degrees of injury to 114. The summary of accidents since February exhibits a steady increase beginning with July. Before that month they numbered successively 21, 27, 22, 27, 44; then 31, 63, 71, 90, 103—a total in ten months of 499, or more than $1\frac{3}{5}$ a day, including Sundays. In the same time 246 persons were killed and 809 injured—or between 3 and 4 every day; and the dreadful accidents last month will swell these figures considerably. We may point out to the *Gazette* its omission to take for its summary the corrected statistics for August as given on p. 416 of its issue of September 21. Owing to this circumstance, its totals are too small for the ten months ending November 30. As these are the only records kept for the whole United States, the greatest possible accuracy is desirable; especially since the returns are not official, and at best must fall short of the truth.

—We print the following as a specimen of a kind of work of which the New York *Times* does a great deal; it must be remembered in reading it that the proceeding against Jay Gould was a civil suit, not a criminal prosecution.

[*The "Nation," Dec.* 26.]

"The suit of the Erie Railroad against Jay Gould for $9,000,000 has had a singular termination, in the restitution by Gould of property valued at $6,000,000, if forced to sale, but at $9,000,000 if properly handled. The proposition came from Gould himself, and was promptly accepted by the directors, and the proceedings abandoned. The newspapers denounce the Board fiercely for sacrificing the interests of justice to the interests of the road, and accuse them of 'compounding a felony,' and declare that Gould has made enough by the rise in stock to compensate him for his display of virtue. This last theory, however, is absurd; he could only have made comparatively a small sum by the rise in the stock. His motives it is difficult to speculate about profitably. They were, probably, as usual, mixed. Nobody who has watched a long and heavy litigation can believe that he had much to fear from the results of the lawsuit; but he is cowardly, fickle, and impressionable, and was probably sick of the Erie game, and intent on some other field of action. The conduct of the directors is not so easily passed on as it seems. They *might* have punished Gould severely in the courts, but the chances were against them, and they have now certainly fined him in an enormous sum."

[*Rendering of the above by the New York "Times," Dec.* 26.]

"If we had defended the recent little transaction between Jay Gould and the Erie directors, the *Nation* would certainly have opposed it. As we opposed it, the *Nation*, of course, defends it, and it does so on the following 'high moral grounds,' to wit: Mr. Gould could not have made 'enough by the rise in stock to compensate him for his display of virtue.' Thus, we see that the principle involved goes for nothing—everything turns on the question, how much did Jay Gould make? Again, the *Nation* pleads in behalf of Gould that his motives in making the 'restitution' were 'mixed,' and that the Erie directors could not have brought Gould to justice without great difficulty. Therefore, if you cannot bring a criminal to justice easily, let him go. Gould has now the *Nation* and the *Tribune* on his side, so we are inclined to think those people must be wrong who say that Gould is a swindler, and that it is a public scandal to see the corporation which he has plundered making terms with him."

["*Times*," *Dec.* 28.]

". . . We have found those eminent authorities, S. L. M. Barlow, Esq., the *Tribune*, and the *Nation*, to be *of opinion that to assist a swindler to escape justice is quite right.*"

The italics in the above are ours. The indulgence of the public for this sort of thing, provided it be done in the name of "reform," or some other good cause, explains in part how it is that reform movements so often end, in morals, by substituting one form of knavery for another, and in politics by substituting one set of rascals for another.

—Among those who did not see the close of the year now past, we regret to count John F. Kensett, one of our most refined landscape artists. Mr. Kensett died suddenly of heart disease on the 14th of December, at the untimely age of fifty-four years. He leaves his peculiar sphere of art entirely unoccupied, having had no rival in a certain delicate, purified, luminous representation of nature of which he kept and carried away the secret. His early apprenticeship as an engraver to his uncle, Alfred Daggett, taught him a clear and accurate touch; but his subsequent labors in color show no trace of that pedantry of drawing which sometimes gives unpleasant hardness to scenery of the kind he selected for his special work. He learned a graceful, capricious pencilling with the brush, which imprints upon all his outdoor compositions a singular airy charm. Most people who buy pictures at all possess one or more of these green mysteries of Kensett's, where there treating perspective of a forest is blotted with lights and tangled leaves, and the course of a transparent stream is effaced under curtains of interpenetrating boughs. Kensett never measured himself with solemn or tragical landscape; the faint reticulation of tossing leaves in a woodland distance, and the light push and resiliency of soft growths battling for the open sun, were the forms that Kensett sympathized with and never tired of describing. He hunted very keenly for the real effects of natural light and hue, and in his chosen thicket scenes he would represent the evanescent flutter among the branches in the true way by the *taches* and gleams of color rather than by any ineffectual attempts at drawing and after-tinting. Another very successful line of Mr. Kensett's was his representation of the ocean; he never committed himself to true marine, but he was very happy in studies of rocks where the ocean filled the distance as a tint or breadth of relief. In such compositions his keen truth of values and colors made the baldest scenery appear rich with the fragrance of nature; the air seemed salt and fresh, and the rocks pure with the simplicity and solitude of the shore. A sense of free ventilation was singularly apparent in all his pictures. The history of so-called panoramic art in this country swept over Mr. Kensett's career without affecting it in the smallest degree. He confined himself loyally to his chosen vignettes and perspectives, where the range never exceeds what can be taken in by the pupil of the eye without moving. Altogether, Mr. Kensett was a pastoral artist, who contrived to impress his own moral refinement upon his work. He was greatly beloved by young artists, whom he praised before crowds and criticised in dialogue. His action among his fellow-academicians was dictated by the urbanity and conciliatory delicacy of his temperament; what was reactionary in his counsels was due to a natural sanity and sense of balance that he had. He was a working member, and his practical guidance will be missed by the idler men. He died President of the Artists' Fund Charitable Society. His birth, March 22, 1818, was at Chester, Connecticut. He travelled in Europe from 1845 to 1850, and of late painted alternately in this city and in his studio near Darien, Connecticut. The sole public charge reported to have been confided to him was the superintendence of the ornamentation of the Capitol, as a member of the National Art Committee. His death, as a bereavement to the art-world for the year, must be added to that of Sully, who died at a great age in Philadelphia, after having portrayed two or three generations of his fellow-men in shadowy, Lawrence-like portraits, and to that of Catlin, whose hand has left conscientious documents of a great many Indian customs soon to be as obsolete as those of the Druids.

—Mr. Boughton's pictures have been attracting attention at Knoedler's gallery in this city, after a good deal of generous admiration spared for them in London. He calls them "The Idyl of the Birds," and shows in them the nest-builder, the migrating bird, and the songster dead, like Otway, in the cold. Appropriate human figures, watching the stages of the trilogy, extend the sympathies of the several compositions. The paintings are three in number. Mr. Boughton, when his conception first visited him, imagined a single picture, to be called "Summer is gone on Swallows' Wings," and now, indeed, seen as the central composition; but the thought has been enlarged to its advantage, and the figures of maidens on either side are very beautiful supporters. The pictures exhibit Mr. Boughton's success with an order of painted types which he has created, and which he needs to carry out his peculiar kind of thoughts. He almost calls up the illusion that we see his disembodied idea. His large-eyed women, slender and almost translucent, wrapped in reverie, clothed in robes that have forgotten fashion and are worn into softness of drapery and tenderness of color, seem less like women than like thoughts. They are carefully kept between real life and dreamland. It is the very special ability of Mr. Boughton to represent a class of figures which perfectly clothe his throng of delicate ideas, without reminding us of what is eccentric in humanity, or, on the other hand, wearying us with the high claims and tiresome perfections of allegory. In the principal of these pictures, the two forms that watch the migrating birds are in Mr. Boughton's well-known vein of intellectual, restrained, but profound emotion. They cling together as orphan sisters might do, the sitting figure leaning with homelike familiarity against the knees of the standing figure, the faces touched with desolation gathered from the dark sea, the barren broom, and the departing flocks. The distinction of their countenances, their family look, their simplicity and nobility, make them companions for

the best moments of a thoughtful man; at the same time, there is no temptation to criticise the idealization of their forms, or to wonder rudely at their throwing themselves into the attitudes of a parable. A painter or a poet, so long as he can imagine so beautiful and adequate a language, as it were, in which to express his fancies, need not fear that he will lose his hold on the public regard. Mr. Boughton claims our admiration, again, when he renders so subtly and intellectually the aspects of landscape. The backgrounds in the central picture and in the final one are, as pieces of nature, admirably painted, while they strengthen and nourish the beauty of the fable in a way unattainable to a mere landscapist. Mr. Boughton, like Mr. Vedder and some others of our painters, excites question among his old public and compeers by choosing to live in London instead of New York or his native Albany. If we think it hardly flattering when our more cultivated painters decline our company and prefer painfully to assimilate themselves with other civilizations, our remedy probably is to prepare as swiftly as we can the atmosphere in which the refinements of art can bloom, and the order of things in which atelier-study can be prosecuted.

—Under date of December 8, Mr. Sutton F. Corkran writes us as follows about the Cesnola collection of antiquities, then about to be shipped from London to New York, to be finally deposited in our Metropolitan Museum. It contains, says our correspondent, specimens of an art which, though often quoted, has as yet been little known. What may be the early Phœnician style is a question which will be answered practically by direct reference to the antiquities brought over from Cyprus by the indefatigable discoverer of the remains of the ancient city of Idalium and of the temple of Venus at Golgoi. Cyprus gave to the Grecian worship two divinities, Aphroditê, the Phœnician Astarte, and Heraklês, the Goddess of Love and the Ideal of Strength. Among the statues belonging to the Cesnola collection, special mention must be made of a life-size Heraklês, wearing the lion's skin head-dress, which covers at the same time his shoulders, and holding in his right hand a small knotted club, in his left the famous quiver of poisoned arrows which freed Dejaneira from the grasp of Nessus. From this rude art we see at once from whence sprang the later Hellenic art. We have now the Heraklês of a people not as yet fettered by the laws of design, but who represent their idea in all its roughness. We see no massive limbs, no awe-inspiring muscles; but we do find the tranquil appearance which Greek art took as a model from its Assyrian, Egyptian, and Phœnician masters. The chief interest in this collection is that it brings back to the memory the monuments which preceded, and it forms the missing link between the ancient Phœnician and what may be termed the Phidian art, and thus, thanks to General di Cesnola, another step has been added to the literature of sculpture. A small fresco, which General Cesnola caused to be sawn away from the base of the statue, is perhaps a better specimen of what might be termed Assyrian-Greek art than any possessed by the European museums. The total absence of perspective which, in the Nineveh marbles, causes the animals to walk over each other's backs, is here very remarkable, but at the same time we find the figure of Heraklês to be the same as that found on the earliest coins of Cyprus. "Perrupit Acheronta Herculeus labor" is the subject represented. A series of life-size figures represents the priests of Aphroditê, draped and bearded, wearing the curious Phœnician head-dress, under which appears the curled hair; they hold in their hands the dove, sacred to Cypris, the Phœnician Venus.

—The workmanship of these remarkable remains can only be determined after the most careful study. Their recovery furnishes a field of enquiry for years to come—ancient art, religion, and customs will each demand a careful investigation. The inscriptions do not as yet help by any means towards the elucidation of the subject, for who as yet can decipher them? Cuneiform, Phœnician, and Greek characters appear mixed together in what seems a hopeless jumble, more especially as the formation of the letters is not characteristic of any of the above types. The Duc de Luynes, M. de Vogüé, and others have attempted to decipher the Cyprian alphabet, but with but small satisfaction to themselves. It would take too much space to enumerate the many articles now being forwarded by Gen. di Cesnola and M. Feuardent to New York; but special mention may be made of the collection of iridescent glass, which radiates in colors only to be produced by centuries of interment; also of the many curious terra-cotta figures, not the least interesting being the bearded Venus, an hermaphrodite representation of the early worship of the Cyprian Goddess of Love. Gen. di Cesnola received lately a letter from Mr. Layard of Assyrian reputation, in which Mr. Layard states that he believes the discovery of this collection to be equal in value to that made by himself. Such a voucher will naturally have great weight with the New York public; and General di Cesnola himself must feel that his labors are appreciated, and his enthusiasm shared, by those who really love the study of archæology for its own sake, and not as a means of gaining popular applause. Another gentleman who has interested himself in the most untiring and zealous manner must also be mentioned. M. Feuardent, the eminent coin dealer, 61 Great Russell street, London, has made himself many American friends, since this collection has been under his roof, by his courteous readiness to answer all enquiries, and to facilitate the inspection of the antiquities placed by Gen. di Cesnola under his charge. M. Feuardent takes so much interest in the collection that he will offer, when the collection is finally unpacked, to help in the arrangement, and to place his services at the disposition of the Trustees of the Metropolitan Museum at New York. We learn from the *Athenæum* that Mr. S. Thompson, who prepared the extensive series of photographs from objects in the British Museum, to which we have already referred once or twice, has undertaken to illustrate in a similar manner these antiquities from Cyprus. The accompanying letterpress will be from the pen of Mr. Sidney Colvin.

—The London Society of Biblical Archæology listened, on December 2, to a paper by Mr. George Smith on certain fragmentary stone tablets from Nineveh preserved in the British Museum, dating from the reign of Assurbanipal, King of Assyria, B.C. 668, and containing the text of the Deluge, lately deciphered by him. They are copies of still more ancient tablets, which Mr. Smith refers to the year 1600 B.C., and the Deluge text is but part of a series concerning the reign of a king named (apparently) Izdubar. It states of him that, falling ill, he went to see Sisit, who was supposed to have been translated, and who, in answer to a question from Izdubar, repeats the story of the Flood; how the gods warned him of its coming, and bade him build a ship, and put his family and all the seed of life into it, and then launch it in the sea. There is a break of fifteen lines, in which the particulars of its construction were probably described, and, when the narrative is resumed, Sisit is finishing the ark and coating it with bitumen, and places inside his family, his servants, and his treasures, and the beasts of the field; then enters it himself and closes the door on the commencement of the Flood. This is next described, and also the part which several deities had in bringing it about.

> "I was carried through the sea. The doer of evil,
> and the whole of mankind who turned to sin,
> like reeds their corpses floated."

The storm lasted six days and nights. The ship is stranded on a mountain in Nizir, east of Assyria, and Sisit sends out first a dove, next a swallow, and, lastly, a raven. Then follows the sending of the animals out of the ship, when Sisit builds an altar and offers sacrifices. His story told, Sisit rewards his listener with directions for curing himself of his malady; and, after carrying them out, Izdubar returns to his city, Erech. Sir H. C. Rawlinson, president of the society, in a letter to the *Athenæum*, written after the reading of Mr. Smith's paper, states his conviction that the twelve tablets of Izdubar represent the tewlve months, and all together constitute a "local rendering of the old universal solar myth"; and that each tablet will be found to embody a legend especially connected with the month, or zodiacal sign, to which it refers." The eleventh tablet treats of the Deluge, and the eleventh month is called in Babylonian "the rainy," corresponding to Aquarius of the Zodiac.

—A Shanghae reader of the *Nation*, writing at the close of the summer, requested of us an article on polar exploration as being appropriate to the season. When his letter reached us, however, the winter was already in sight, and our space prevented any extended account of the expeditions actually at work in the polar regions. Nor have we more space now than merely to enumerate them. In the Old World, the Swedish expedition under Prof. Nordenskjöld is to explore the sea to the east of Spitzbergen, winter in a portable cabin on one of the Seven Islands, and in the spring of next year push for the North Pole with reindeer and sledges. The Austrian expedition under Lieuts. Weyprecht and Payer will explore in a steamship the waters between Spitzbergen and Nova Zembla, and winter in the Gulf of Timour, spend a second year in the waters between Cape Severo-Vostotchnoy and the islands of New Siberia, and in the third year attempt to penetrate to the Pacific *via* Behring's Straits. This is the best equipped and the most promising of all the expeditions. The American are the U. S. exploration under Capt. C. F. Hall, which is striving to reach the Pole by the way of Baffin's Bay and Smith's Sound; and the private rubber-raft adventure of M. Octave Pavy, by the way of Behring's Straits and Wrangell's Land. Concerning both these, pains have been taken to deceive the public with false information. Last summer the N. Y. *Times* was hoaxed with pretended correspondence from St. Pierre, Newfoundland, bringing news of the *Polaris* as late as Feb. 8, 1872, and asserting that Capt. Hall had encountered many evidences of "a genial atmosphere and open seas in the extreme

and undiscovered North," including vegetable drift from hot climates, and a whale with a harpoon in him like those used in the South Pacific. The latest reports from Capt. Hall received at the Navy Department were dated at Tessiusak, the most Northern Danish settlement in Greenland, August 25, 1871. M. Pavy was given a reception by the California Academy of Sciences on June 5th, and left San Francisco for Petropaulovski about the middle of the month. Nevertheless we have a forged despatch to the French Geographical Society, representing him to have landed on the northern shore of Siberia, in Kuliutchin Bay, on June 18th, to have reached Wrangell's Land at the mouth of a large stream flowing from the N. W., "not laid down in the charts" of course, and "establishing the explorer's theory of a polar continent reaching far to the north, and warm enough to melt snow." The ocean currents, also, were just what M. Pavy expected to find them, the forger of the despatch being too good-natured to deny him anything, although both on this point and as to Wrangell's Land being a continent instead of a cluster of islands, Prof. Davidson (of the U. S. Coast Survey) frankly opposed M. Pavy at the reception referred to above, and with great show of reason.

A NEW SORT OF UNITY.*

THE first copy of this nicely printed volume which fell into our hands was accompanied by a printed notice showing it to have been presented to some one by the American Iron and Steel Association. The idea of an association with a name suggestive of nothing more scholastic than metallurgy, or more philosophical than a trip-hammer, engaging in the dissemination of a philosophy so elevated and abstract as that of "the unity of law," by the gratuitous distribution of goodly octavos, is certainly a little comical. Whether the love of learning thus displayed is or is not entirely disinterested, our readers can judge as well as we when they know that the basis of the work is a recast and abridgment of the author's 'Principles of Social Science.' It appears, however, that since the publication of the latter, Mr. Carey, studying the works of the great physicists, has been so struck by the unity between the law of the conservation of force and the orderly operation of a properly arranged galvanic battery in physics, and the philosophy and working of a protective tariff in social science, that he had to rewrite his book to provide a proper setting for the new idea. So he describes the structure and operation of the galvanic battery in a manner which does not at all encourage the belief that he would prove a valuable assistant in a telegraph office, and proceeds to show that the community "constitutes a great electric battery, to which each individual contributes his pair of plates." With a protective tariff these "human plates" arrange themselves in the proper manner for the production of the current, while every evil the human race has experienced happens to the "societary positives and negatives" if the free-trader is allowed to introduce himself among them.

The titles of the chapters after the first give the work an air of systematic and profound research. We have, in orderly succession, Science and its Methods, Man, the Subject of Social Science, the Physical and Social Laws, the Societary Organization, Matter and Mind, etc. But the text dashes the hopes founded on the titles. For instance, the chapter on Science and its Methods is a succession of platitudes in which nothing but the quotations from Comte and others would suggest a new and definite idea to any one intelligent enough to read the newspapers. The readers for whom the work is intended may be edified to learn that "the multiplication table enables the ploughman to determine the number of days contained in a given number of weeks," that "the sounding line enables the sailor," etc. But what will the thinker say to the opening proposition of the chapter, that the first man, after seeing the sun rise for a week, could not conceive of its rising again without being accompanied by light?

If we wished to expose only the amusing side of Mr. Carey's philosophy, we might confine ourselves to quotations descriptive of the operations of his societary battery. But the grave side of the question is worth looking at, for the reason that he uses a mode of reasoning which is very fascinating to a certain class of minds, and that class by no means low in the intellectual scale. It consists in drawing broad generalizations respecting the causes of national greatness, and the progress of nations in wealth and power, from the circumstances by which they were surrounded, the direction of their activity, or the statistics of their industry, without any enquiry into the sufficiency of these causes to produce the observed effects, or into the manner in which they may be supposed to operate. As an example, we may allude to the recent statement attributed to one of our most honored statesmen, that Mr. Seward was led to the purchase of Alaska by the thought that "the grandest achievements of man had been associated with the shores of the world's seas." "It was along the borders of the Mediterranean that the Byzantine empire flourished and was destroyed; that Rome attained her supremacy and fell," etc. Hence the United States must secure the largest possible foothold on the Pacific, the possible sea of the future. The complete fallacy of this mode of reasoning may be seen by comparing these views of Mr. Seward with those of Mr. Carey on the same subject. The former attributes the greatness of the maritime nations of the past to their having control of seas to trade upon, and thus holds them up as examples for our imitation. The latter attributes their downfall to their having made this use of their seas, and holds up their fate as terrible examples for us to avoid. The fact is that, splendid as this mode of investigation looks, it is one by which any one can prove anything he pleases, for the reason that the causes are so complex and so numerous, and the results so varied, that a seemingly ample support for any theory can be found by a proper co-ordination of the facts.

If this is the case when the utmost care is taken of the facts, how is it when a writer is so careless of them as Mr. Carey seems to be? Here we shall, to do him justice, begin with his strongest point. He and his followers look upon his law of the occupation of the earth as his greatest discovery, and it is perhaps that in which he has most strongly supported his case. The law in question is that the work of cultivation "invariably" commences on the poorer soils, and passes to those which are more rich as wealth and population increase. Let us begin by seeing exactly how far this general fact has been established, and on what ground it rests. To begin with the latter, it is quite clear that if the richer soils are swampy and require drainage, or are covered with heavy timber, or in any way offer obstacles to cultivation, to overcome which requires more labor than the early settler has to bestow, the latter must commence on some poorer soil which he can reclaim. Now, what Mr. Carey has done has been to search the history of all lands and examine the physical geography of all countries during the past two or three thousand years to find instances in which this condition was fulfilled. But this does not prove the law, nor can it be proved until he shows that by a universal and necessary rule soils are everywhere difficult to reclaim in exact proportion to their fertility, and this he cannot do, and, what is curious, does not directly attempt to do. It is certainly interesting to read his eloquent attempt to show that all the countries of the Old World were first settled in the least fertile portions, and that population gradually moved to those which were more fertile. The uncritical reader, confiding in the author's facts, must admire his seeming depth of historical research. But it will be different if he reflects that he is reading most circumstantial accounts of the movements of population during a period of which, by the common testimony of historians, we have no authentic record, presented with as much confidence as if the author had complete census tables before him. When he reads, "The Samnite hills were peopled, Etruria occupied, and Veii and Alba built before Romulus gathered together his adventurers on the banks of the Tiber," he must remember that not only is there no credible evidence that Romulus ever lived, but that we have nothing like an authentic record of Roman history for centuries after the time of that mythical personage. When he reads that "the mountainous Crete was occupied from a period when the Delta of the Nile was a wilderness," he must remember that the civilization of the fertile valley of the Nile is among the most ancient of which we have knowledge, while the whole of Grecian history, and of course that of Crete, becomes mythical a very few centuries before the Christian era. When he reads how India and Persia were settled, he must remember that the four great civilizations of the ancient world were those along the valleys of the Hoang-Ho, the Ganges, the Euphrates, and the Nile, and that it is to the fertility of the valleys of these rivers that historians attribute their early occupation. If, in addition to this, he will remember that it would require a vast amount of geographical research to judge exactly what spots were fertile and what were not in those times, that the "peaked islands" probably had fertile valleys in which population was thickest, and that Mr. Carey is quite unknown either in the literary world as a historian or in the scientific world as a geographer, he may well conclude that his brilliant and impressive descriptions of the constant movement of population from poor to rich soils are in large part the products of a poetical fancy.

It is easy to look with complacency on such liberties with ancient history. But Mr. Carey's attempts to deceive his countrymen with regard to the present state of European society are of a kind we can hardly trust ourselves to characterize. They are not the less inexcusable that they are made not so much by direct and specific statements as by implication and vague generalities. One of the principal objects of this treatise on the "unity of law" is to make its readers believe that English laborers are oppressed by their "masters" and degraded by the policy of their Government more than those of any other country, and that English society is generally in a deplorable state, owing to the free-trade policy of the country. This he does by searching the whole English literature of the century, and culling out odd paragraphs,

* 'The Unity of Law, as Exhibited in the Relations of Physical, Social, Mental, and Moral Science. By H. C. Carey.' Philadelphia: H. C. Baird. 1872. pp. xxiv.-433, 8vo.

sentences, and parts of sentences which favor his views, and then commenting on them as if they expressed the publicly avowed policy of the British Government. He has very judiciously scattered these through the entire book, so that one can hardly open it without finding the most dismal comments on a "wretched proletariat," "a dance of death," "a hundred hours a week," "power of matter over mind," "trading," "warfare," "arrest of civilization everywhere," and everything else bad which a diseased imagination could suggest. The men of England have so deteriorated that "throughout the whole realm of England there would now be found few, if any, capable of drawing to their heads those terrific shafts which, down even to the day of Flodden (1513), constituted the essential element of English warfare." Her missions to the benighted heathen have totally failed because so few have seemed to appreciate the idea that the blessed Gospel of work lay at the root of all morals.

For what class of readers such "unity of law" could have been written it is hard to say. Every man of wide intelligence knows that English laborers, as a class, are better provided for than those of any other country in Europe, that they are physically more powerful, as Mr. Brassey has recently shown by numerous examples, and that they are rather better fed and fully as well housed as the average of those on the Continent; that they have been continually improving during the last thirty years, and that that improvement was never so rapid as now. To compare them with the laborers of Russia, from any point of view, would be simply ludicrous. How amusing, then, to contrast Mr. Carey's descriptions of Russia with those of England! The former "carries steadily up the apex of her edifice," "Moscow will be the grand centre of commerce." Germany and Russia have been engaged in the effort at bringing into orderly arrangement their hundred millions of human positives and negatives. "Russia will make demands on Central Europe for its surplus population," etc. If our free-trade wits have never attempted to parody Mr. Carey's style of reasoning, it must be because they have found themselves unable to invent anything more ridiculous than the original. It would certainly require no mean talent to do it.

HENRI REGNAULT.*

THERE are no more striking works in the Luxembourg Museum than two large pictures recently placed there, side by side: one an immense equestrian portrait of General Prim, the Spanish revolutionist; the other a Moorish executioner, wiping on the hem of his garment the scimetar with which he has just dissevered the head and body which lie gushing blood at his feet. The pictures arrest attention by the singular brilliancy and audacity of their coloring, their massive breadth of execution, and, above all, a certain unmistakable glow of youth and genius. They are signed by Henri Regnault, a name already a little known in America, where one of the artist's few finished works—the "Automedon"—is owned, but deserving of a wider knowledge now that the volume whose title we have transcribed has established the record of his rapid, brilliant, and touching career. The portrait of Prim was painted in his twenty-sixth, and its companion in his twenty-seventh year. Six months later, on the 19th of January, 1871, Regnault fell at Buzenval, before the walls of Paris, victim of the last shot possibly fired before the surrender of the city. It could hardly have extinguished a life of greater promise. During the previous months of national distress he had written these lines:

"We have lost many men; we must supply their places with better and stronger ones. We must learn the lesson. We must cease to be relaxed by facile pleasures. We have no longer the right to live for ourselves alone. It was the fashion not long since to believe in nothing but enjoyment and in all the bad passions. Selfishness must depart, and take with it that fatal bravado of contempt for all that is honest and good. . . . The Republic now demands of us a pure, honorable, serious life, and we must all pay to our country, and beyond our country to free humanity, our debt of body and soul. We owe them what both these may produce together. All our energies must concur to the well-being of the great family, through the practice for ourselves, and the example for others, of the feelings of honor and the love of work."

In spite of its brevity, there is something singularly complete in Regnault's career, and we may almost expect that, as time goes on, it will become poetized and etherealized, and assume a sort of legendary hue. He had almost every gift, and his talent with the brush was but the finest of a dozen accomplishments. He was an excellent musician, and his beautiful voice was the delight of his friends. He relates in one of his letters from Rome that M. Hébert, the director of the French Academy there, giving a sort of official dinner to a company of princesses and duchesses, and having engaged for their entertainment certain operatic artists, who broke their contract at the eleventh hour, came to him in distress and begged him to furnish the whole musical diversion. Regnault consented modestly, but successfully. He was a devoted horseman, and an impassioned observer and painter of the animal. He was an accomplished gymnast, and not the least picturesque episode of his picturesque residence in Spain is his story of having *épaté* (flattened out) a company of Madrid *gitanos* by walking on his hands and leaping five chairs in a row. As a writer he is admirable, and even if his paintings were of much less value, his delightful letters would amply serve to keep his memory sweet. He made the utmost of his life while it lasted, for though at moments he bitterly accuses himself of recklessness and waste of time, yet he *lived* incessantly in a way altogether foreign to characters of a less generous temper—with an intensity of perception and enjoyment, and a rapidity of development, which make a kind of breathless effort of the perusal of his letters. He succeeded from the first, and made a brilliant impression. He travelled much, and when he had fairly got command of his talent, struck blow upon blow. He made innumerable friends, who speak of the charm of his talent as second only to that of his character. The reader receives from the volume before us an irresistible impression of both. At last, so that no touching and appealing point should be wanting in his history, he becomes engaged to a young girl whom he had long loved, and while waiting for a brighter day to marry receives a bullet through his brain for his country. One of his many friends has here collected his letters, which reflect his well-filled days with admirable vividness. The reader will thank us for allowing him to speak for himself.

In 1866 Regnault received a *prix de Rome* from the *Ecole des Beaux Arts*, and early in the following year took up his residence at that Villa Medici on the Pincian, a chance, however remote, of being promoted to whose academic shades ought to stand nowadays, it seems to us, against many prospective tribulations of *la jeune France*. His letters begin with his journey and are admirable from the first—full of observation and expression, alacrity and energy. Rome disappoints him—especially the churches and the small scale of certain famous buildings and ruins, the Capitol, the Forum, and the Arch of Titus, which he thinks altogether below the reputation of the Ancient Romans. He has a good word for the Coliseum, however, and many admiring ones for Michael Angelo.

"I'm back from the Vatican. I got on my knees to the paintings of the 'Sistine Chapel' and the 'Stanze.' I'm crushed. That giant of a Michael Angelo has left me half dead. That ceiling is a thunder-stroke. It's above everything conceivable by the imagination of a painter, a sculptor, and a poet, and can never lose its fascination. I confess that in the presence of this ceiling, the wonder of wonders, I was unable to look at the 'Last Judgment.'"

It was some time before he got to work. In reply to some remarks from his father on the subject of his delay, he declares that he is intentionally idle; that he wishes to take a general view, to absorb impressions, to prepare his mind. He makes innumerable excursions, takes long rides on the Campagna, talks music with the Abbé Liszt, pays a flying visit to Naples, and, on his return, decides to make a visit to Paris, where the great Exhibition of 1867 had just opened. Up to this point, if Regnault were not a real genius, we might almost fancy him an imitation, but in Paris he begins his first important work—the portrait of a lady in red velvet on a red background. He took his picture back to Rome with him, finished it laboriously, and, sending it to the Salon of 1868, found himself suddenly almost famous.

Théophile Gautier, as if in prevision of Regnault's brief harvest of laurels, blew the trumpet of praise with magnificent resonance, and published the first of those articles, not less rich in color than the pictures themselves, with which he did honor to each of the young painter's successive performances. On his return to Rome Regnault made a second excursion to Naples to see Vesuvius in eruption; but from this moment he begins to work in earnest, and till he enters upon his military duties during the siege of Paris the brush is hardly out of his hand. He begins two ambitious pictures: a "Judith and Holofernes" and an "Automedon" with the horses of Achilles. The latter is his first *envoi* to the annual exhibition in Paris of the works of the pupils at Rome, and his description of his design is worth quoting:

"It's a free translation; Automedon may be anything you want, and I have aimed, in my horses, not at the cut of the mane of the Thessalian horses, but at whatever there is most noble and most frightful in the horse—at what might make the historical horse, the horse that spoke, the horse that foresaw the death of his master Achilles. . . . The sky is overladen with clouds; a leaden sea begins to toss, dumbly, though on the surface it still seems to sleep. A ray of melancholy sunshine casts a pallid light along the horizon upon a naked, rocky shore. The horses, knowing that their master is leading them to battle, that this battle will be his last, and will cost him his life, wrestle and struggle against the servant who has come to fetch them from pasture. One of them, a dark bay, rears like a great dark phantom in relief against the sky. I have tried to express in the picture a foreboding of calamity. But have I expressed all I wished?"

* 'Correspondance de Henri Regnault, recueillie et annotée par M. Arthur Duparc.' Paris: Charpentier; New York: F. W. Christern. 1872.

The conception is somewhat boyish, and the picture (judging by an engraving) is even more so; but both are sufficiently imaginative and vigorous to promise better things. Regnault defines himself from the first a *picturesque* painter. He was a born draughtsman, and with his pencil felt his strength; but what he consciously sought and ardently studied was color and its infinite mysteries and suggestions. It is characteristic and significant that, at the same time that he protests of his boundless admiration for Michael Angelo, he holds off stoutly from him and contents himself with worshipping at a distance:

"What would you have a man do when he finds himself staring point-blank at that formidable giant of the Sistine Chapel? . . . Michael Angelo is a god whom one is afraid to touch, lest fire should issue from him. For the time, at any rate, I haven't the courage to approach him; I foresee that he would do me more harm than good, and I'm satisfied with paying him a contemplative worship. I confess that I don't feel as if I had the strength to attack him with my arms in my hand."

Regnault had strength enough and the sense of strength; the truth, as we take it, was that Michael Angelo was, in a single word, too *austere*. To copy a figure from the Sistine roof is an eminently chastening process, and Regnault's tendency was altogether toward license. It had begun to be true of him that, as a discriminating critic (M. Paul de Saint-Victor) wrote of him two years later, *apropos* of his masterpiece, the "Salome," "we may admire but we must mistrust, also, such a *rouerie de pinceau* in so young a man." The term *rouerie de pinceau* is severe, but Regnault, with all his generous breadth of talent, was too essentially a Parisian not to have incurred it, at least as a caution. In the early summer of 1868, Regnault was thrown by a vicious horse with a violence which nearly proved fatal. His recovery was slow; to hasten it a change of climate was recommended, and he accordingly started with alacrity for Spain, which, much more than Italy, had always been the land of his imagination. He came back to the Villa Medici again; but intellectually he had turned his back upon Rome; prematurely, we should have perhaps said, had he lived. For the long run Rome would have had much to teach him; but the prodigious impulse he received in Spain more than served him for his crowded remnant of life. In Spain he found color in something of the strength he had dreamed of, and he found, too, Velasquez, a master after his own heart. His attitude toward the great Spaniard is very different from the respectful reluctance with which he honored Michael Angelo. Not only he began with ardor to copy the "Surrender of Breda"; but his portrait of Prim is almost an imitation of Velasquez. His letters from Madrid are numerous and of really enchanting interest; extracts more copious than we have space for could alone do them justice. The expulsion of Isabella took place during his stay there, and he describes the revolution, as he saw it in the streets, with admirable humor and intelligence. His observation was not confined to the streets, for he was introduced to several of the leaders and men of the day. Prim, he writes, has been very gracious, and he has undertaken his portrait—without sittings as yet—but with the hope of *one* for the face. Prim, unhappily, was not gracious to the end; if he was a good revolutionist, at least he was a poor critic. The portrait is really in the grand manner, and any model however exalted might be proud of making such an appearance before posterity. But Prim perceived only an "*homme indécent*, who hadn't washed his face, and who looked very absurd without his cap." The General's bare head is half the beauty of the picture. Regnault would make no alterations, and he foresaw that if he surrendered his work Prim would consign it to the garret. "Garret for garret," he writes, "I prefer my own," and he sends a respectful note to his illustrious model politely expressing this preference. Thus it is that Regnault's garret has become the Luxembourg Museum. He had depended on the price of the portrait to pay his Madrid color-man and carry him back to Rome; but in the end he had to make the journey "like a pauper, regretting that there was no sixth-class on the railways and steamboats, and obliged to content myself with the third." Yet in spite of these tribulations his winter in Madrid, if he had lived, would have remained delightfully memorable. His time was richly occupied.

"To-morrow," he writes, "I sha'n't have a minute to myself. At a quarter to eight, a beggar to finish, a study begun to-day; at half-past eleven, a visit to the Fomento, to see a fine Goya; at one, a sitting for the little portrait I'm painting of Madame de B. in a Spanish dress of pink and black—which, by the way, becomes her vastly; at four o'clock, dusk, errand at the *Calle di Toledo* to see an old *gitano* mantle, and buy it, doubtless; at five, my guitar lesson, so that I can scratch tolerably a *jaleo* or a *malaguena* of some sort; dinner at six; at seven, model again in the studio. So it is every day, and so ought it always to have been every day. *Si jeunesse savait!*"

He describes in several charming pages, which deepen one's impression of his rare personal attractiveness, the success with which he fraternized with the *gitanos* of Madrid. Of the natural amenity and capacity of these people, and of the Spaniards generally, he formed the highest opinion:

"I confess that Italy, after Spain," he writes on his return to Rome, "seems to me very dull, very commonplace, very *exploitée*. The Italians' male and female, bore me; their dresses look black, colorless, or glaring, always inharmonious. What a difference from Spain, which yet is but a stepping-stone! It is the East I call for, I demand, I insist on! There only, I believe, I shall feel that I am something."

Elsewhere he says that Rome seems to him lit by a night-light (*une veilleuse*). His "Prim" appeared at the Paris Salon of 1869, and made a great sensation. Théophile Gautier blew a louder blast than before, and Paul de Saint-Victor multiplied his strictures. The present editor gives the articles of each critic, and it is interesting to see how they correct and amend each other. The truth is between them; but it little mattered to Regnault how they shared it, for he remained in Rome, working hard, in obedience to an impulse altogether original. He was rapidly finishing his "Judith" and his "Salome," and preparing for a return to Spain and a further excursion to Morocco. To the artist who, at twenty-six, had achieved these two extraordinary performances in colors, our Western world had surely little more to offer. The shining East alone could yield to him "motives" intense enough. The month of September found him established with a friend at Granada, spending busy, rapturous days in the Alhambra. His admiration for the Moorish architecture knew no bounds; it affected him like a revelation:

"Let the earth stop turning," he writes, "let the stars fall, let cities crumble, let the mountains become valleys—it will matter little, so long as the Alhambra is saved and our friends can see it. . . . I am plunging for the moment into water-colors of the most fantastic difficulty. You must know what I think of Granada, the beauty of beauties, Granada with its sky of lapis, its rosy towers and fortresses, its Alhambra of gold, of silver, of diamonds—of the richest things in the world. I was for several days unable to work; I saw nothing but fire."

He adds later in the same letter strangely: "Clairin [his companion] and I are destined to be short-lived. We lead a life *trop vagabonde*, we strive too hard, we have too much ambition, too many desires, to live long."

His doubts were transient, however, in the joy of such visions as these:

"Every morning we go a few steps off, to the Alcazar, to the divine Alhambra, where the walls in the morning are a lace-work of amethysts and roses, of diamonds at noon, and of green gold and red copper at sunset. We stay there till the moon comes to see us, and when she has sent us a few kisses and put to sleep the shadows of the fairies and genies who chiselled this wondrous palace, we go sadly away turning back at every step, unable to tear our eyes from the columns of rosy marble which take at moments the pearly hues of the lustrous body of a goddess, and are at once our bliss and our despair."

On this visit to Spain Regnault seemed to enter into full possession of his genius, and even more of his ambition. His letters give an irresistible impression of the concentrated ardor and passionate ferment of youthful genius. Promise is stamped on every line. Every hour during these months was a golden lesson; every glance and pencil stroke a forward stride. The more he saw, the more he wished to see; his imagination outstripped experience, and he dreamed restlessly of the uttermost East. In describing to a friend an immense Moorish subject which he had determined to paint:

"The doors open," he writes, "on a gallery whose steps are bathed by a river or a lake, on whose edge my palace is built. I evade criticism in making neither the Alhambra nor the Alcazar, *but a palace not surrounded by water is no palace for me.*"

He had already become superbly fastidious. In December he went to Gibraltar and crossed to Tangiers, where he found a splendor of light approaching his ideal—approaching, but not realizing it, however. He adds, in the letter from which we have just quoted, still speaking of his picture:

"In short, it must be a *work*. Then I can take up my bag and go and adore Brahma and Siva! . . . Don't forget India; it's from there we must come back men. Till now, I have learned only to walk, to eat. . . . Be ready for the autumn of 1871. We must start *young* to be moved, to assimilate and drink the sun, to endure the dazzle of marbles and stuffs; and we must come back *young* to create with force."

He established himself at Tangiers for the winter and following summer, in the most picturesque and oriental of studios, and worked ardently and happily. The "Moorish Execution" at the Luxembourg was painted here, and served as his third "Envoi de Rome" (the "Judith" having been the second); the "Salome," too, carried everything before it at the Salon of 1870. Happily, we have said, Regnault worked; toward the end his happiness was fatally overshadowed by the disasters of his country in the field. When the investment of Paris began, he hurried home and enrolled himself in the National Guard. He remained in the ranks to the end, in spite of urgent offers of promotion, doing a soldier's utmost duty, and sharing the common lot of darkness and danger, cold, sleet, and sordid circumstance of every kind. Brahma and Siva had forgotten their worshipper! Close upon the end and

the hour of release he fell, with but a tithe of his secrets told. His death, as the climax of the narrative formed by his letters, is terribly, ineffably touching, and will always deepen the vivid interest of his works. These, with various limitations, have the supreme merit of a sort of immeasurable strength. Regnault would not have stopped half way. He had the artistic temperament in very much the same degree as the great Italian masters of the Renaissance. He might not have equalled the greatest of these, but he would have recalled them; and, indeed, we may say that, like them, he is already historical.

Memoirs of a Huguenot Family. Translated and compiled from the original autobiography of the Rev. James Fontaine, and other family manuscripts, comprising an original journal of travels in Virginia, New York, etc., in 1715–16. By Ann Maury. With an appendix, containing a translation of the Edict of Nantes, the Edict of Revocation, and other interesting historical documents. (New York: G. P. Putnam & Sons.)—Among the Huguenot refugees whom the Revocation of the Edict of Nantes compelled to seek a home in exile was James Fontaine, the son of a Protestant minister, and himself, at the time of his exile, a candidate for ordination. Fontaine found a home in Ireland for himself and for his family. But in the year 1714–15, his son John, for whom a commission had been obtained in the British army, came to America on a tour of observation and of exploration. He turned out to be the pioneer of his family, several of his brothers and sisters presently following him and finding homes for themselves in Virginia. One of the Virginia descendants of this James Fontaine has collected in this volume the autobiography of the Huguenot exile, the diary of John in his Virginia expedition, and a few more or less interesting family letters and papers. To these are added a few historical papers, among them a translation of the Edict of Nantes and of the Revocation of that Edict, with certain supplementary matter. These documents are not wholly inaccessible even to the ordinary English student, and yet they are not so common as documents so often referred to in popular literature, especially in popular literature of a religious or controversial sort, might naturally be expected to be. The volume has, therefore, a certain general and popular value beyond the local and personal interest which attaches to it. And, indeed, the story of the old Huguenot exile, as he tells it in his own devout fashion, has in it much to interest the general reader. He was a man such as that stormy time was fitted to produce, who could pray and preach when the occasion served, but who could also show himself a shrewd and energetic merchant, a skilful and thrifty manufacturer, a brave and sturdy fighter, when there was need of service in such various ways. It was good stock to come from; and it is easy to excuse the editor of this volume for the frequency of her self-gratulation on her pious ancestry, although it would have been in somewhat better taste if, when the volume was made public, allusions of this sort had been judiciously repressed. The fine old Huguenot could have spoken for himself quite as well if this commentary of felicitation, on the part of his descendant, had not been quite so audible. It is surely no crime for any one not to have had a Huguenot for a great-grandfather.

But, on the whole, the book is a good one. The story is unquestionably authentic, the spirit in which the compilation has been made is earnest and devout, and the style of the translated autobiography (which occupies the greater part of the volume) is sufficiently readable.

Aventures de Trois Russes et de Trois Anglais. Par Jules Verne. Deuxième édition. (New York: F. W. Christern. 1872.)—A more prosaic subject than the measuring of an arc of the earth's meridian could hardly be imagined, but our author has nearly invested it with the interest of a sensational novel, some of the incidents falling by no means short of the standard of such works (as in the chapters "Trianguler ou Mourir," and "Où Nicolas Palander s'emporte"), and a sort of plot being effected by dividing the Russian and English savants into two rival and quasi-hostile parties, on their learning of the outbreak of the Crimean war. The story opens upon the banks of the Orange River, and ends upon the Zambesi; and a diligent study of Livingstone, Gordon Cumming, and other South African explorers has enabled M. Verne to fill naturally with local color the dry outline of an official report. For a truthful and agreeable description of the country and its inhabitants, and for a clear account of the methods employed in the delicate operation of triangulation, these adventures may be recommended with small reserve. The author's mode of popularizing science in this as in his other works—'Adventures of Captain Hatteras,' 'The Children of Captain Grant,' 'Five Weeks in a Balloon,' 'Trip to the Earth's Centre,' etc., etc.—may, we suppose, be open to criticism.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices*	
Ames (Mary C.), Memorial of Alice and Phœbe Cary	(Hurd & Houghton)	
Brockett (Dr. L. P.), Walter Powell	(Geo. Routledge & Sons)	
Carlen (Emily F.), Lavinia; or, One Year	(James Miller)	
Cohn (Prof. F.), Ueber Bacterien, swd	(L. W. Schmidt)	
Darwin (C.), Expression of the Emotions in Man and Animals	(D. Appleton & Co.)	
Emma's Engagement	(J. B. Lippincott & Co.)	
Faber (F.), Lehrbegriff des Confucius, swd	(Hongkong)	
Fiske (J.), Myths and Myth-makers	(J. R. Osgood & Co.)	$2 00
Goldsmith (O.), The Traveller, Deserted Village, Hermit	(S. R. Wells)	1 00
Hale (Rev. E. E.), His Level Best, and Other Stories	(J. R. Osgood & Co.)	1 50
Hutchins (Rev. C. L.), Annotations of the Hymnal	(M. H. Mallo y & Co.)	
Livingstone and his African Explorations	(Adams, Victor & Co.)	
MacKellar (T.), Rhymes Atween-Times	(J. B. Lippincott & Co.)	

We will send THE WEEK for one Year

With

THE FORTNIGHTLY REVIEW (which we have made arrangements to republish in America at Six Dollars a Year, or Fifty Cents a Number), for $9. The same to Teachers or Clergymen for $8.

With our new edition of

TAINE'S ENGLISH LITERATURE. 2 vols. Retail price, $7 50; both for $7 75. The same to Teachers or Clergymen for $6 75.

With

DANA'S CORALS AND CORAL ISLANDS. Retail price, $6; both for $7. The same to Teachers or Clergymen, $6.

With

ANDREWS'S LATIN LEXICON. Retail price, $6; both for $7 75. The same to Teachers or Clergymen, $6 75.

LIDDELL & SCOTT'S GREEK LEXICON. Retail price, $6; both for $7 75. The same to Teachers or Clergymen, $6 75.

☞ Remittances by P. O. order, draft, or registered letter, should in all cases accompany the subscription.

For free specimen copy of *THE WEEK*, address

HOLT & WILLIAMS, Publishers,

25 Bond Street, New York.

CASSELL'S PRACTICAL DRAWING BOOKS.

1. LINEAR DRAWING. 150 Engravings. Price $1.
2. PROJECTION. The Development of Surfaces and Penetration of Solids. 40 Engravings. Price $1.
3. SYSTEMATIC DRAWING AND SHADING. 38 Engravings. Price $1.
4. BUILDING CONSTRUCTION AND ARCHITECTURAL DRAWING. 130 Engravings. Price $1.
5. DRAWING FOR CARPENTERS AND JOINERS. 250 Engravings. Price $1 75.
6. PRACTICAL PERSPECTIVE. 64 Engravings. $1 50.
7. DRAWING FOR MACHINISTS. 140 Engravings. $2.
8. DRAWING FOR STONEMASONS. Price $1 50.
9. MODEL DRAWING. Price $1 50.
10. GOTHIC STONEWORK. Price $1 50.
11. DRAWING FOR CABINETMAKERS. $1 50.
12. ARMS AND AMMUNITION. $1 25.
13. DRAWING FOR METAL-PLATE WORKERS. $1 50.
14. COLOR. By Professor Church. $1 25.

CASSELL, PETTER & GALPIN,

596 Broadway, New York.

NEW AND OLD BOOKS.

PRICED CATALOGUE, No. 26.

Containing many scarce books in American History; Old English Literature; Voyages and Travels; Poetry and the Drama; Facetiæ; Scarce Old Trials, etc., etc.

Just published, and will be sent to any address free.

DAVID G. FRANCIS,

17 Astor Place,

DEALER IN NEW AND OLD BOOKS.

CO PARTNERSHIP NOTICE.

The partnership heretofore existing between George P. Putnam, George Haven Putnam, and Jno. Bishop Putnam, all of New York, under the firm name of G. P. Putnam & Sons, was dissolved on the 20th of December, by the death of George P. Putnam.

The business of the firm will be continued without change or interruption at its present location, 308 Fourth Avenue, and 54 E. 23d Street, by the undersigned, under the firm name of G. P. Putnam's Sons.

GEORGE HAVEN PUTNAM,
JNO. BISHOP PUTNAM.

Dated DECEMBER 21 1872.

Just Published.

A NEW WORK ON MORALS.

FOUR PHASES OF MORALS. Socrates, Aristotle, Christianity, Utilitarianism. By John Stuart Blackie, F.R.S.E., Professor of Greek in the University of Edinburgh. One vol. 12mo, $1 50.

From the Boston Daily Advertiser.

"The Professor succeeds in bringing out with great perspicacity the salient and distinguishing features of the four most remarkable phases or schools of moral science which have had and still have influence in determining the speculative opinions and practical conduct of the present civilized peoples. The style of these lectures is for the most part plain and always directed to the thought."

Sent, post-paid, on receipt of price by

SCRIBNER, ARMSTRONG & CO.,

654 Broadway, New York.

THE WEEK IN TRADE AND FINANCE.

DEC. 30, 1872.

THE past month throughout the country has been more severe for borrowers of money than during the corresponding period of twenty-five previous years. This increased stringency was caused by the action of the Treasury Department. In October, previous to the State elections in Pennsylvania, Ohio, and Indiana, money in Wall Street had been made artificially tight by the locking up of a large amount of greenbacks by a clique of speculators, who were operating for a decline in the stock market. For the purpose of relieving this stringency, the Treasury Department made an extra purchase on the 7th of October of $5,000,000 5-20's, and sold an extra $5,000,000 gold. The purchasers of the gold were allowed to deposit the amount of currency due the Treasury in payment for the gold in two of the national banks of this city instead of paying it directly into the Treasury. To pay for bonds purchased, the Secretary reissued $5,000,000 of the $44,000,000 legal tenders retired by Secretary McCulloch, which Congress authorized him to withdraw and cancel April 12, 1866. The effect of all this was to put in circulation $5,000,000 new legal-tender notes, and $5,000,000 gold, which gave $10,000,000 additional reserve to the banks. Immediate relief was experienced in the money market, prices of stocks advanced, and appearances for a time bore a very cheerful aspect as far as borrowers of money were concerned. But the new legal tenders were not allowed to remain long in circulation, for Mr. Boutwell very soon commenced their withdrawal, and by the 1st of December they were no longer in circulation. The currency that had been placed in the national banks was called for by instalments. At the present writing, but $1,350,000 remain with them.

It was not surprising that the legal tenders should have been withdrawn from circulation, grave doubts having existed in the minds of many as to the right of the Secretary of the Treasury to issue them at all; but, with the money deposited in the banks, it was thought that in the midst of the usual fall drain of currency to the West and South to "move the crops," it would not be called for until the movement was over, and the return of the money to this city would not make its loss felt. Thus the relief afforded by the Treasury in October was but temporary; but, though temporary, it was seized upon by stock speculators as a basis upon which to advance prices. The inflation in stocks was soon sufficient to absorb, by the increased amount of money required to carry them, all of the amount contributed by the Treasury; consequently, the withdrawal of the legal tenders, and calling in of the money from the banks, without a corresponding decline in the prices of stocks, caused a very sharp demand from borrowers on call. The Treasury, in its regular weekly bond purchases, has so construed the meaning of paying par in gold for them, that it has considered the *lowest* price of gold on the day upon which purchases of bonds were made as the market price, and purchased only those bonds that were offered at or under that price. The large Government dealers have been holding off from offering bonds to the Treasury in consequence of this construction, and on several occasions the offerings fell short of the amount advertised for, the result being that most of the money received from the proceeds of the weekly sales of gold remained in the vaults of the Treasury, and was an additional loss of capital to the Street. During the month of December the rates of interest upon call loans have ranged between 7 per cent. per annum and ⅜ per cent. per diem, the latter rate being equal to 136⅞ per cent. per annum. Speculators in stocks have been able to pay these rates, but so long as they could be obtained upon call loans in the Street the sales of commercial paper have been nearly stopped, and merchants put to the most serious inconvenience in consequence. The rates upon call loans above quoted are absurdly high; but so long as the usury law remains unrepealed, there is no help for such a state of affairs.

By reason of the different corporations preparing for the payment of their regular January dividends, money during the past week has been more stringent than at any previous time within the month. After the commencement of the new year, however, this money will gradually return and be available for business purposes. In spite of the discouragements of the money market, prices have been kept up at the Stock Exchange, the large holders being content to hold on to their stocks, knowing that the new year will bring about an entirely different state of affairs, and that the usual demand from investors will tend to carry up prices.

The Bank Statement for the week is favorable, notwithstanding a large loss of legal tenders, which is more than made up by a gain in specie; the loss in legal tenders is accounted for by their shipment to the South and West, and by the money locked up by the Treasury in selling $1,000,000 gold and purchasing only $417,950 bonds. The national banks by law are required to hold in legal tenders and specie 25 per cent. of their liabilities; on Saturday, December 21, the excess of legal reserve was but $663,175 over the required 25 per cent. On Saturday the 28th it was $1,835,750, showing a net gain for the week of $1,172,575. It is proper to state that the bank statement includes that of the larger State banks of the city, which are not required to keep on hand the same reserve as the national banks, and consequently do not do so in many instances. The following is the statement in detail:

	Dec. 21.	Dec. 28.	Differences.
Specie	12,773,100	17,241,800	Inc....4,468,700
Legal tenders	44,626,700	41,119,600	Dec...3,507,100
Total reserve	57,399,800	58,361,400	Inc... 961,600
Circulation	27,522,700	27,573,000	Inc... 50,300
Deposits	199,423,800	198,529,600	Dec... 894,200
Total liabilities	226,946,500	226,102,600	Dec.. 843,900
25 per cent. reserve	56,736,625	56,525,560	
Excess over legal reserve	663,175	1,835,750	Inc....1,172,575

Meantime, dulness pervades the stock market, and the week has passed without any special feature.

On Saturday, notice was given to the Stock Exchange by the Milwaukee and St. Paul Railway Company that it had purchased the new line of railway between Milwaukee and Chicago, in part payment for which they are to pay $2,000,000 in their common stock, and the Company will issue the 20,000 shares of their common stock, at the expiration of thirty days; also, the scrip preferred stock will after thirty days be increased 25,000 shares, or $2,500,000, to accompany the like amount of bonds issued by the company in part payment of the new line, and for the purchase of depot grounds and depot buildings in the city of Chicago and of steel rails and equipments for the general uses of the Company. The new line of road was built by a construction company, which included some of the officers of the Milwaukee and St. Paul Railway Company, therefore we presume that the construction company acted entirely in the interests of all the stockholders in the former company.

During the week the Government bond market has developed remarkable strength. Prices have advanced from 1 to 1½ per cent. The demand from savings-banks and other corporations has been considerable, and has been instrumental in advancing prices. The Treasury purchase of bonds on Thursday amounted to $417,950, at 111¾ and under. The total amount offered was $924,750, all under 112. Mr. Boutwell, as usual, construed 111¾ as the market price for gold, that being the lowest price of the day, and bought only the above amount, whereas there were no sales of gold under 112 after 10.30 A.M. on the day of purchase.

State bonds have been dull; those of the Southern States generally constitute the bulk of the dealings, which are of a speculative nature, owing to the glorious state of uncertainty attending the payment of interest—the payment of the principal never entering the minds of the most sanguine. The news comes from Montgomery, Ala., that the Legislature has authorized the issue of $2,000,000 bonds. The legality of this issue is seriously questioned by the Democrats, who warn capitalists against investing in them. Even the Republicans give a most gloomy description of the finances of the State, and represent that State bonds to the amount of nearly $900,000 have been sold by financial agents, and the proceeds unaccounted for; that a large amount of bonds have been hypothecated, and are about to be lost for want of means to redeem them; that outstanding claims, amounting to nearly $1,000,000, have been left for the present administration to meet; the treasury is empty, and the State is on the verge of bankruptcy.

With such statements as these, we can well imagine that investors will look well into the matter before taking any of the bonds, although "a financial agent will leave for the North in a few days, to negotiate the sale of them."

Railroad bonds are strong, with a good demand for the standard bonds quoted at the Stock Exchange. Bankers engaged in selling the bonds of new railroads report a better demand for them, but we suspect that only those marketing the best of them are meeting with much success.

In the gold market there has been no special feature. During the week, shipments to the amount of $1,980,324 have been made to Europe, making a total for the year shipped of $70,550,393, which, with the exception of the shipments during the year 1868, when they amounted to $70,718,781, are the largest ever made in any one year from this port.

The Nation.

NEW YORK, THURSDAY, JANUARY 9, 1873.

The Week.

SERIOUS disturbance, and even bloodshed, were anticipated in New Orleans on Monday, owing to the meeting of two Legislatures —one organized under the Warmoth Board of Canvassers and the other under the Bovee Board. Pinchback, the "acting Governor," issued a proclamation denouncing the Warmoth Legislature as "a riotous and disturbing condition," and intimating his intention to disperse it by force; but he seems to have thought better of it, and at the last moment announced that he would let the Warmoth Legislature alone as long as "it did not attempt to execute laws against or interfere with the legal government," and the Administration papers are explaining away the proclamation. The Warmoth Legislature seems to have failed to get a quorum on Monday, members being doubtless deterred from attending through fear of an armed attack—the remembrance of the Convention of 1866 being still strong in New Orleans. Pinchback's position is one of the curiosities of Southern politics. He is a fine specimen of the rising colored politician of that region. His term of office in the State Senate expired in November, but the Lieutenant-Governor having died before adjournment, he was elected President of the Senate and acting Lieutenant-Governor; and being acting Lieutenant-Governor, he has now become acting Governor, in which position he has commissioned himself as Congressman at large, claiming election on the ticket recognized by Judge Durell. It will be thus seen that he has literally nothing under him but Federal bayonets and an injunction in a "chancery suit."

The Cabinet rumors which were current last week turn out to be without much foundation. Mr. Boutwell, it appears, has not resigned, but expects to go to the Senate from Massachusetts, and the President, it is said, inclines to Judge Richardson as his successor. Judge Richardson's accession would mean the continuance of the present policy in the Treasury Department; that is, it is fair to presume he would endeavor to carry out Mr. Boutwell's ideas as to funding and taxation, which he doubtless shares. The talk about the annexation of the Sandwich Islands which has sprung up since the death of the king, appears to have very little foundation, but it has a little. A United States cruiser was ordered to go there to look after American interests when the news of the king's death arrived, and it so happened that about the same time General Schofield's health needed recruiting, so he asked and obtained the President's permission to go out in the ship. Should he, when he is out there, feel inclined to examine the Islands with reference to their capacity for being annexed to the United States, and we think it likely he will, and feel disposed to make a report to the President when he gets home, which is also probable, the President, we are told, will receive the report and read it. The London *Standard* seems to think that if the United States annex the Islands it will be "a menace to Australia," and recommends the annexation of the Fiji Islands by England as a counterpoise. One of the strangest things in the relations of modern civilized nations is, that when they approach each other at any point they are held to endanger each other.

Several bills relating to the currency have been introduced into the House of Representatives—how much strength they have it is impossible to say. Mr. Hooper, of Massachusetts, has introduced one providing for a return to specie payments on the part of the Government in 1874. We think something will be done for the solution of this problem when the public gets to understand that the raising of greenbacks to the value of gold does not bring specie payments sensibly nearer. The notion that gold will come into circulation without any further trouble when this point is reached has been diffused widely by some of Mr. Boutwell's reports, but it is a delusion. To bring gold into circulation again will cost the country some hundreds of millions of dollars—in other words, it must be bought with *commodities*, and not with greenbacks. If the greenbacks are left in circulation after gold has been bought with them, the gold would go away as before; if they were destroyed, the sellers of gold would suffer a dead loss. There are some ways of getting back to a specie basis easier than others, but there is no way that does not involve an immediate sacrifice. It appears, by the way, and we are very sorry to hear it, that the President authorized or directed Assistant-Secretary Richardson to issue the $5,000,000 greenbacks in October, and that Mr. Henry Clews counselled him in the matter. We are not aware that General Grant has any special knowledge of finance, and Mr. Clews is an unfortunate adviser in such a matter, as he is an active Wall-Street operator. We trust Congress will take this matter up at once, and make the law so clear that nobody will hereafter venture to violate it.

Mr. Hooper's bill proposes to issue 3.65 per cent. certificates to the amount of $100,000,000, to be exchanged for greenbacks, the certificates to be usable by the banks as half their legal reserve, and to permit duties to be paid in paper, and to allow the Secretary to provide himself with gold for redemption by the sale of $250,000,000 six per cent. bonds. The tendency towards further issues of paper and the eagerness "to move the crops" are becoming so great, that any measure which promises to take currency out of the hands of the politicians deserves careful attention. This one has the capital merit of recognizing the duty of the nation to get coin somehow even to pay its demand notes, and of disregarding the Boutwell theory—that we can drift into specie payments. Nobody ever yet drifted into the payment of his debts.

The scandal of conducting the Crédit Mobilier investigation in secret has proved too great to be persisted in, and the House ordered the doors to be opened on Monday, only seven voting in the negative. The reporters thereupon got hold of the testimony already taken, which is in many respects rather surprising. We pointed out to Mr. Ames, when he published his address to his constituents in reply to these charges when they were first made, that his answer was too vague and declamatory, and that he ought to have at least explained what his letters to McComb meant, even if they did not mean what McComb said they meant. Had he done so the evidence now taken would have had less effect than it has, which is, however, not very great. Mr. McComb has testified in substance, and has to some extent supported his testimony with letters, that 375 shares of the Crédit Mobilier were handed over to Oakes Ames as trustee, to be by him used for distribution among members of Congress. That a considerable quantity of stock was so distributed there appears to be no question, and it appears from Mr. Ames's letters that the object in distributing was to "produce good" to the corporation. "We want more friends in Congress," he says in one letter; "and if a man will look into the law, and it is difficult to get them to do so unless they have an interest to do so, he cannot help being convinced that we should not be interfered with." McComb's theory is that the stock was accordingly used in bribes pure and simple. There is another theory, to which we referred some weeks ago in these columns, viz., that the persons receiving the stock paid for it the par value, but almost immediately after received enormous dividends in bonds, and that it was in this dividend, or the anticipation of it, and not in the sale of the stock itself, that the corruption lay.

Mr. Ames, on the other hand, acknowledges that he from the beginning sought to distribute the stock of the road as widely as possible, in order to diffuse interest in it and get support for it—it being at first a very arduous undertaking, and that he continued to offer shares to members of Congress after it became a success. He went over the names mentioned by McComb—Colfax, Wilson, Blaine, Boutwell, Garfield, Patterson, Dawes, Bingham, Grimes, Kelley, Eliot—and declared that in every one of these cases he had offered or recommended the stock as a simple investment; that in some he had "carried" the stock for them till they were able to pay for it; in others, they had given him the money on the spot; in others, they had refused to take any; and in some, they had backed out, or sold off, or rescinded their contracts; in short, that there was very little actual transfer of stock to members of Congress at all, and what there was was perfectly innocent; and that his reasons for urging it on them was to increase their interest in a large and arduous enterprise, which needed all the support it could get. His account of his dealings with Mr. Colfax is the only cloudy part of his statement. Mr. Brooks is positively accused by McComb of having solicited and received 50 shares from Mr. Alley, one of the promoters of the road, as a consideration for "taking care of the Democratic side of the House"; but on this point there is a vigorous "conflict of veracity" between McComb and Alley.

The contest for the Massachusetts Senatorship is going on with a good deal of activity, and people who ought to be able to judge profess to believe that Mr. Boutwell, despite his being the most magnificent finance minister on this planet, may after all fail to secure the prize. The alleged reason for this clouding over of his prospects is a little curious. It is neither more nor less than that he has touched the unclean thing, and has become anathema. In other words, and not to speak metaphorically, there is a certain Massachusetts gentleman now consorting with Mr. Boutwell whose reputation for truth, veracity, honesty, honor, guilelessness, simple faith, and general respectability of walk and conversation is such that for anybody to be suspected of having anything whatever to do with him is highly disastrous. But this unseemly gentleman is known to cherish a great desire to be the Governor of Massachusetts, and this for the reason that the Governor of Massachusetts can, if he likes, enjoy and employ peculiar facilities for buying up and variously corrupting other gentlemen who want offices, and that then having thus debauched a certain number of his fellow-citizens, he can by these means get into the United States Senate, and do various other things. And the rumor is, that in exchange for this prospective Governor's assistance in securing the Senatorship for Mr. Boutwell, Mr. Boutwell has agreed to assist our friend in reaching the Governorship when the time comes. In short, Mr. Boutwell and Mr. B. F. Butler are understood to be now in the same boat, and to be "as thick as two thieves." But Mr. Butler has many bitter enemies, and some who despise him still more than they hate him, and who are resolved that, however long he may disgrace the Essex District, he never shall disgrace the Commonwealth itself by appearing among the Governors of Massachusetts; and they loudly threaten Mr. Boutwell with vengeance. Meantime, it looks to the outside observer as if Mr. Dawes might have a chance as against the Secretary, although Butler's friends deeply regret now to learn that Mr. Dawes has been mixed up with the Crédit Mobilier business, while Mr. Dawes's friends are savage in their attacks on Butler.

Mr. Dawes, last summer, contented himself with a general denial that Mr. McComb's charges, as far as they connected his name with the Crédit Mobilier scandal, had any truth in them; but under the stress of the Senatorial contest he has felt compelled to speak out, or to authorize his friends to speak out for him, and this is what he says: Some years ago, Mr. Dawes, having a thousand dollars to invest, went to Governor Washburn, then a fellow-member of Congress, and asked him how it would best be invested. Mr. Washburn advised the purchase of a bond of the Cedar Rapids Railway. Mr. Dawes thereupon went to Mr. Oakes Ames, and asked for such a bond, but was told by Mr. Ames that they were all gone, but that Crédit Mobilier stock was good for ten per cent. at least, and that he had better put his thousand dollars into that; upon which Mr. Dawes purchased ten shares. Shortly afterward he went home to Pittsfield, and there was told by a friend that the Crédit Mobilier Company had trouble in store for it, and that he had better keep out of it. Hearing this, Mr. Dawes went to Mr. Ames, said that he did not wish to buy into a lawsuit, and asked Mr. Ames to release him, which Mr. Ames consented to do. As everybody now knows, the accusation framed against the Congressmen was that they had bought shares in an enterprise on which they would be compelled to vote; and, secondly, they paid, if they paid at all, the *market* price of a stock on which there was about to be declared a large dividend, the amount of which would pay the original cost of the stock. One of these dividends it is not denied that Mr. Dawes received in the brief period during which he redeemed his ten shares, and it is this little transaction, involving perhaps a thousand dollars, which is now causing Mr. Dawes so much trouble. It is a valuable lesson and one worthy all the attention it is getting. Mr. Dawes had made for himself a long record of honorable service. For years he has been the leading member of the House; his capacity has been more than profitable. But for want of a constant recollection of the maxim that a legislator's honesty, like a woman's, must be protected by honor of the most susceptible sort, he has got himself into a position the reverse of dignified or agreeable. He is, however, just one million times better than Mr. Benjamin Franklin Butler as governor would be, and, if rumor is telling the truth about the Butler and Boutwell league and covenant, we suppose respectable people may very heartily wish for Mr. Dawes's victory over Mr. Boutwell. But for the matter of that, Massachusetts was never yet without the requisite timber for half a dozen senators, and was never restricted to choosing one of any given two men.

The attention of Congressmen will shortly be called to a petition more numerously signed by gentlemen representing our seats of learning than any petition that has yet been presented to the House. It relates to the "Japanese Indemnity Fund," a sum of money about which we take the general public to be ignorant. We got it in this way: in 1863 a minor Japanese Daimio fired on an American vessel called the *Wyoming*, which returned his fire, and a brisk little engagement followed, "with considerable damage to the smoke-stack and rigging of the *Wyoming*." The Navy Department estimated the cost of the repairs at $5,000, and the cost of the powder and shot expended on the heathen was about $5,169. The total, then, was $10,169. A year and three months later, in September, 1864, there was a combined English, French, and Dutch expedition to punish some of the Daimios, and the American Minister not having a ship of war to send along with the others, chartered a steamer with one Parrott gun, paying for it at the rate of $9,500 a month, and during the hostilities she fired $260 worth of shot and shell. Our total bill against the Japanese, then, was $19,929. In October, 1864, the Japanese Government agreed to pay the foreign powers involved in the affair an indemnity of $3,000,000, which was to be and was equally divided among the combatants, and was to be paid in instalments, of which three, amounting in all to $1,500,000, have been paid. So out of all proportion to the losses which we sustained was our share of the money that, a year ago, the House of Representatives passed a bill which released the Japanese Government from the obligation to pay any more, and it was passed unanimously. Indeed one cannot see what other disposition could be made of it. There is now a proposal, which we hope to see backed by the press and speedily successful, that we should take the seven hundred and fifty-odd thousand dollars, which is our share of the fund and which is invested in United States

bonds, and for the sake of our own dignity should restore it to the Japanese Government without conditions. This we may well be the readier to do, because the gentlemen engaged in promoting the education of the Japanese in our civilization are assured that if the money is restored it will be faithfully devoted to the education of Japanese women.

There is another San Domingo scheme on foot—a body of New York capitalists having despatched commissioners to lease the Bay of Samana from the Dominican Government as some sort of commercial station, and Dr. S. G. Howe writes to the New York *Tribune* expressing his admiration of the scheme in the most extravagant terms. The West Indies, he thinks, are to be the home of the choicest races of the earth. It may be so, but it is pretty certain that no race which makes them its home stays "choice" very long. It is sad that Man should run down among their palm-trees, and their perfumes, and their clear and ever-flowing brooks, and "their ever-blooming flowers," and "their ever-tepid crystal seas," but he does, and, what is worse, Woman too. Perhaps the world ought to have been arranged differently, so that fine scenery and warm breezes should produce noble natures, but such is not the case.

The disturbance in "journalistic circles" continues. The Brooklyn *Union* has resorted to the "interviewing" process for setting afloat a "story" that it was Jay Gould who had supplied the money for the recent purchase of a controlling interest in the *Tribune* from Mr. William Orton, and that this gentleman was led to sell out by discovering that the circulation of the paper had fallen off and was still falling. The construction of a "story" in this way is very ingenious and somewhat entertaining. The reporter waits on some gentleman who "knows all about" the matter in hand personally, but "prefers that his name should not be mentioned," and questions him with regard to "the facts," and "the story" is then thrown into the form of a dialogue, which is always more readable, as well as more probable-looking, than a bare narrative, and is frequently enlivened by little jokes. The procuring and printing of such things, to be sure, is an occupation worthy of a mock auctioneer or a junk-dealer; but then everything has to give way to the "necessities of journalism." The *Tribune* denies flatly both the main allegations of the story, and, in preference to filling its columns for the next three months with wild abuse of them, has sued the *Union* for making the libel, and the *Times* for reproducing it—a course for which we think the public will feel grateful. But we can suggest a more excellent way than the libel suit for the conspicuous refutation of "the story," viz., the reference of the whole matter to two or three arbitrators, within the next ten days, each side putting up a sum of money, say, $5,000, to be given to the Children's Aid Society in case of defeat. Libel suits, in the present state of the legal calendar, do not "mean business," because they cannot be brought to trial for two or three years. A reference of the kind we describe could not be refused by the most barefaced newspaper libeller, and would answer all the ends of the verdict of a jury.

In the meantime, the *Tribune* seems to be making an honest effort to give us a decent morning paper, and, if the conductors hold out, it is quite safe to predict for their paper a position such as Horace Greeley never gave it. But they must bear in mind that their reputation touching the libel and "stories" is bad, and that confidence is a plant of slow growth. We cordially wish them success, however, and think they ought to have the hearty support, at least, of all that portion of the public which whines about "the condition of our press." One great cause of the low "condition of our press" is, that even respectable and intelligent men are never shocked by ruffianism as long as "the other side" is the object of it, and think that if "stories" and abuse are directed only against those whom they consider bad men, they can do no harm. But if you breed and foster ruffians, you never can tell which side they will take, and they are sure to be found on both; and it is the good side—the side of honesty, and truth, and justice—which is in the long run likely to suffer most from them, no matter in which direction they may fire their shots.

The second trial of Stokes, who killed Fisk, has ended in a verdict of murder in the first degree, and although he has made up a bill of exceptions, and will doubtless get a stay of proceedings, which is necessary to make the exceptions of any use to him, there is little expectation that he will gain anything by an appeal, and still less that he will obtain pardon or commutation. There is luckily nothing in the man's character or career to excite pity or sympathy, and his own theory that Fisk threatened his life is deprived of most of its value by the relations in which he lived with Fisk. Men who go down among ruffians, and follow their ways, and engage with them in the game of life, as ruffians play it, can hardly be allowed to escape the penalty of the law by the plea that they had been living outside the law. Of course, Stokes fancies, as every murderer in the Tombs fancies, that he is going to be sacrificed to popular indignation, caused by the late frequency of murder. This feeling among the criminal classes, which produces a good many murders, is due largely to the way in which some newspapers and orators discuss the capital-punishment question. By painting executions in ordinary times as simply displays of brutality, and throwing all sorts of doubts over the right of "society" to punish anybody for anything, and then clamoring fiercely for vigorous hanging when this maudlin talk has produced its natural fruit, they lead a ruffian to believe that if he can only kill his man "in a dry time," when there is not much other murdering going on, or stave off trial till the popular indignation has subsided, he will be sure to escape.

The scene at the close of the trial when the verdict was brought in, in which the Assistant District-Attorney Fellowes apologized pathetically to the prisoner, addressing him familiarly as "Ed," for the part he had taken in convicting him, was a striking illustration of the conditions under which criminal justice is administered in this city. The fact is that Fisk and Stokes belonged to a social circle which included a large proportion of members of the city government—two or three of the judges, the sheriff, the heads of departments, being all in it, and along with them a considerable number of pugilists, and professional gamblers, and blacklegs, and rascally Bohemians of the low newspaper press, living in close intimacy, calling each other "Ed," and "Dick," and "Tom," and "Harry,' and "Nick," and "Bob," and "Bill." Fisk was the most notorious and audacious of the gang, but they were all under obligations to him, and enjoyed his society, and a considerable remnant of them still linger round the City Hall, and will, we fear, linger long.

The news from Europe is unimportant. There is no change in the state of affairs in France. M. Thiers has finally accepted the situation, though what the situation is it would be hard to say, except that everybody is waiting for something to turn up. The adverse vote on the question of dissolution has not disheartened the Radicals, who are going vigorously to work getting up petitions, a process rendered all the more easy for them by the fact that their strength lies mainly in the great towns. M. Thiers still advocates a Second Chamber, insisting that until such a body is provided a dissolution would be unsafe, while some of the Radicals are prepared to accept a renewal of the Chamber by thirds. M. Thiers also admits that there need be no trouble about the Ministry, as he and his colleagues are quite willing to resign whenever the Assembly is dissatisfied with them. The Committee of Thirty, on the other hand, which carries on the negotiations with him, is very conciliatory, and has possibly admitted to him through the Duc d'Audriffet-Pasquier that the Monarchists no longer hope for a monarchy, at least not at present; they simply fear the Radicals. A large area of the country has been desolated by floods, to the great damage of the winter crops.

THE NEW YEAR IN POLITICS.

THE opening of the New Year is now well recognized as the proper time for turning over a new leaf in things political as well as in things personal. Almost everybody under forty makes a few "resolutions" about New Year's Day, which if carried out faithfully would greatly mend his ways, and although the world in January and February is not usually strikingly different from the world in November and December, it is fair to presume that some of the improvement which really does take place has its beginnings in the spasm of remorse which overtakes so many of our fellow-creatures towards the close of the year; for the progress of the world is after all made up in the main of the progress of individuals. Accordingly, although Thanksgiving is the day on which the preachers are apt to "examine our condition as a nation," the lay moralists or politicians usually make their retrospects and indulge in their prognostications about the first of January. During the past fortnight there has been a great deal of retrospect and prognostication, and with the usual difference of opinion. Opposition papers think things wear a very bad look, while Administration papers are amazed at the happiness of our present and the brilliancy of our future; and this difference of view may be said to prevail through the whole country. The nation is divided into the despondent and the hopeful—the hopeful having a great advantage in numbers, though decidedly inferior to the despondent in thoughtfulness and experience. When we state this fact, we describe the great difficulty of the political situation, and it is one which the authors of various plans of political reform, of which a considerable number lie on our table at this moment, do not sufficiently take into account. Here, for instance, is Dr. C. P. Clark, of Oswego, a man who has been a "practical politician" in his day, but who is more of a philosopher than a politician, and has just produced an ingenious device for the reform of our political system, of which we may have something to say hereafter. Listen to his account of the actual condition of our affairs:

> "Intelligent Americans are agreed that the present condition of public affairs in this country gives cause for great dissatisfaction and anxiety. High integrity and capacity are becoming almost unknown in the affairs of government, and venality and incompetency have taken their place. We are ruled by political organizations. The people are in effect voiceless and powerless. Their interests are misunderstood, or neglected, or sacrificed. Private gain has become the chief motive power in public life. Our legislatures are incapable and corrupt, our executive officers too often inefficient and mercenary, our judiciary, even, not always above suspicion. Our legislation, State and national, is a heap of confusion, most unlike the work of intelligent art. No means of security to public interests anywhere appears. Accounting has become a trick, responsibility a sham, and investigation a farce. The unnumbered multitude of investigations into official conduct in every part of the country with which of late the public curiosity has been entertained, is a measure of the prevalence of official crime, while the immunity of the criminals is an index of the weakness of public justice. All the anchors by which popular faith in the republic has heretofore held are loosening from their ground, and a profound anxiety possesses every intelligent man who participates in the perils and hopes of the country.
>
> "This bad aspect of affairs grows daily darker. No man will pretend that the public service is now as pure as it was thirty years ago. Something of this increase of venality and fraud we know from the public prints, which are filled with instances of it, but by far the greater part never sees the light; for to rob the people and the treasury under the forms of law and in the garb of power, without detection, has become an art."

He elucidates all this at considerable length as an introduction to his remedy, and we have no doubt that nine-tenths of the better educated and more intelligent members of the community would, if pushed to the wall, yield a reluctant assent to his assertions. A large proportion of them would, however, get out of the difficulty by declaring that, dark as things look, they still rely with unshaken confidence on "the good sense and virtue of the American people," a phrase which always indicates that the man who uses it is intellectually puzzled, but seeks relief in vague hopefulness. Now, this vague hopefulness is at once the cause of much of the prevailing corruption and the great impediment in the way of reform, but it is also the great safeguard against ruin. It is, in other words, a great political force, which theoretical reformers do not sufficiently take into account and study. In other words, as long as the mass of people are as hopeful as they are now no great reform will be possible, but neither will ruin be possible. The force which prevents your repairing the machine also makes it go in spite of its defects. Moreover, it must not be forgotten that not only does this hopefulness exist, but it is deliberately and sedulously cultivated by a large proportion of the best men of the community—the most moral, religious, and generally conscientious. It has indeed come to be in the eyes of a great many of them a sign of moral soundness, and its absence is taken as an indication of a greater or less degree of baseness—as, for instance, an indication of want of faith in man or God. Now, hopefulness is only kept up in all the affairs of life by a steady and persistent refusal to look much at details or be much affected by them, or, in other words, by constantly taking long or "large views" of society and politics. Nevertheless, it is only through attention to details that abuses are reformed, for it is in details that all abuses lie. One result, therefore, and a pretty formidable one, of the working of the great and on the whole beneficent influence of hopefulness is that nearly all our reformers and philanthropists deal in generalities and declamation, while the rascals work diligently and make their fortune among the small facts. They care nothing about "the great movements of society," and are only too glad to leave them altogether to "the good men."

In short, the great difficulty in the way of reform is not so much the want of intellectual perception of abuses on the part of the people as want of moral sensitiveness about them, and all the circumstances of the time help to strengthen this apathy. It would be difficult, for instance, to imagine a worse plight than that in which the country found itself after the first battle of Bull Run. The prospect was of the gloomiest kind, and when the "uprising" came, it was rather that of men who were determined to do their duty than that of men who were at all confident of their game. During the ensuing four years the difficulties the Government had to contend with were of the most appalling kind, and yet it came safely through them all. Then again the sequelæ of the war, though very bad in the eyes of the "thoughtful man," are not by any means bad in the eyes of the "average man." What the Average Man was afraid of, and what the Thoughtful Man predicted, was a period of great poverty and accompanying simplicity of manners, opening with a great "financial crash." We have passed through no such period. There has been no simplification of manners, and no financial crash, or much likelihood of one, and this in spite of what everybody admits to have been grave financial errors. It is hardly to be wondered at if this easy solution of one of the most serious political problems ever presented to any people should have begot general indifference about political tendencies and dangers. We are still only ten years from the war, and every man's head is still filled with the exultation of the war.

But this is not all. It is a matter of familiar history that nearly all the great political revolutions, and particularly all the great political reforms, have been prefaced by physical privation or suffering on the part of the great body of the people. It is through their appetites that the great majority of men judge of the goodness or badness of a government. It requires considerable intellectual culture and the habit of abstract thought to get excited over political evils, when one is well clothed and well fed, and has no anxiety about one's future. It is consequently very difficult to persuade the bulk of the population, when work is plenty, wages good, and the material resources of the country visibly growing at an enormous rate, not only that the Government is badly administered, but that it makes any very great difference after all how it is administered. At such times all agitation about centralization, disregard of the law, corruption in office, wasteful expenditure, and so forth, is apt to wear, in the eyes of the Average Man, the appearance of much ado about nothing. Nothing is going wrong with *him*, as far as he sees. He has money in the savings-bank, plenty to eat and drink and wear, and finds all his little ventures turn out well. Moreover, he cannot get over the large picturesque facts of contemporaneous history—the increase in the revenue, the reduction of the public debt, the growth of population and products

and the railroads, the settlement of the Alabama claims and of the San Juan difficulty. In the presence of these things, the abuses of which you tell him look small and insignificant. If you try to point out their possible consequences to him, you are forced to admit that the worst you fear can hardly come to pass under, say, fifty years, and the Average Man has long ceased to look fifty years ahead. He is too much of a philosopher to trouble himself so long in advance about anything, and the great danger of American politics is, that the prodigious material prosperity which breeds this dulness shows no sign of abating; on the contrary, there is every indication that it is only just beginning, and that the remainder of the century has greater wonders in store for us, in the way of money-making, than any we have yet seen or even imagined.

The peculiar nature of these difficulties in the way of reform rendered great care and judgment all the more necessary on the part of those who made the first attempt, after the close of the war, to rouse the country into its old habits of watchfulness about the beginnings or symptoms of decline. But here again, as ill-luck would have it, this very attempt was so managed as to increase the popular apathy. The result was so ludicrous as to bring odium and contempt on the very name of reform, and furnish the Average Man with stronger reasons than ever for eating, drinking, and making merry, and treating reformers as "charlatans" or dreamers. A vigorous canvass for Charles Francis Adams might and would probably, whatever the result, have roused the conscience of the country, and led men to look in good earnest below the surface of their affairs. The canvass which actually took place, with its "proclamations" from Theodore Tilton, John Cochrane, and "Jim" Scovel, threw an atmosphere of buffoonery over all complaints against the Administration, and lent an air of wisdom to stolid content, and gave the tricksters and ruffians a firmer seat in the public saddle than ever.

All this makes the new year look a little dismal to those who know that no people has ever yet been saved by gold, and that even riches, to be permanent, have to be guarded by grace, wisdom, and understanding. But reformers of all parties and sections, to accomplish anything, must understand the difficulties in their way. They must understand, above all things, that there is little use in simply preaching about abuses or abusing this man or that man. The remedies they propose must be such as to strike the torpid popular conscience and imagination, and the men they offer for popular acceptance must be something else than old dogs with a new set of tricks.

"CUSTOM-HOUSE PARTIES."

THE President has arrived at a very sensible conclusion with regard to the Warmoth Legislature in Louisiana, and that is, not to meddle with it unless it "obstructs the recognized government of the State." Pinchback, the "recognized" Governor, however, does not concur in this view, and has at this writing announced that he will prevent by force any "pretended general assembly" from "convening and disturbing the public peace," and that such "parties participating" in any such meeting are "wrong-doers," and should be "promptly dealt with as such." Should he meet with any resistance, he will probably treat it as a case of "invasion" or "domestic violence," and ask for Federal assistance in breaking the meeting up. Indeed, it is very hard to say what limits he would put to his prerogatives as "executive," as he declares that it is not only his duty to "quell mobs and insurrections," but to prevent, by "the prompt and vigorous execution of the law," "the inception of such riotous and disturbed conditions." What this last phrase means we do not pretend to know with accuracy. It is not a phrase known to Anglo-Saxon jurisprudence, but it would, we imagine, sound very familiarly in South America or in France, and is of the kind constantly heard there in the mouths of prefects and commanding officers. Indeed, we could not desire a better illustration of that assimilation of Southern politics to that of Spanish America, of which we spoke two weeks ago, than this proclamation affords. It has the true vague, resonant, Latin ring so often heard in "pronunciamientos," and displays that devotion to general principles and to abstract virtue, and that horror of the vicious and their "guilty designs," which have shone out so vividly in all the public papers of so many Latin functionaries, from the Pope down to the village mayor.

It ought to be borne in mind steadily, however, by the sober-minded part of the community North and South, that there is no such thing known to American jurisprudence as "the inception of riotous and disturbed conditions," and if either Pinchback or the General Government use force for the prevention of anything of the kind, they will be guilty of maltreating a number of inoffensive citizens. The only "riotous" or "disturbed" things known to the American law are riot and disturbance, or, in other words, breaches of the peace; and the holding of a meeting by a body of men in any hall or room with the consent of the owner, is not a riot or disturbance, no matter what they call themselves. It is not an offence against the law for any body of persons to meet together and declare themselves a constitutional convention, assembly, legislature, or council, or parliament, provided they are entitled to the use of the place of meeting. They may issue as many decrees or pass as many acts as they please, provided they make no attempt to carry them into force. In short, the worst charge which could be brought against such a body would be that of folly, and neither the State nor General Government is charged with the duty of putting down folly. This point came up once before in Louisiana in 1866, when Mr. Johnson denounced the meeting of a body calling itself a constitutional convention as a "usurpation," and called it an "illegal assembly"; and the mayor, acting on the hints received from Washington, attacked it at the head of the police force, and murdered a large number of persons in the foulest way. The affair made a tremendous uproar at the North, and it was then, we believe, pretty well settled, to the satisfaction of the public at all events, that there is no such thing known in America as an "illegal assembly" for purposes of discussion, and calling a meeting an "inception of riotous and disturbed conditions" will not make it illegal.

The matter is worth urging on the attention of the Government again, because the probabilities are that we shall for some time have a crop of these double governments all over the South. The President will be obliged to recognize one of them, but it does not follow that he must help to punish the other for keeping up the harmless pretence of an official character, or for meeting to spout in large rooms. If every rattle-brained carpet-bagger or adventurer who gets at the head of any Southern State for the next ten years finds himself able to command the services of the United States troops to suppress whatever he pleases to call "an inception of riotous and disturbed conditions," we shall have incessant disorders in that region, and such frequent interference of the military as almost to destroy whatever reverence may be left among the citizens down there for the slow and cumbrous processes of the law. We are glad to say, however, that the President has taken one step in anticipation of such interferences which will hereafter deprive them of a portion of their scandal, by forbidding all Federal officials to hold office under the State government. One great cause of the trouble in Louisiana has lain in the fact that the gang of politicians known in New Orleans and other great ports as the Custom-house party, and headed by the United States Marshal Packard, and the celebrated Casey, the collector, also played the part of active and fierce partisans in the State quarrels, and fought lustily for their share of the State spoils, and were able to bring to the help of their side the United States troops. On one occasion they had the Republican Convention held in the Custom-house, and made the delegates prove their qualifications to Federal sentries at the door, and Federal troops garrisoned the building during the session. Casey's use of the United States revenue-cutter to help one party in the State Senate to escape from the sergeant-at-arms, so as to prevent a quorum, we have often referred to. All these things were due to the fact that

the United States officers were also active State politicians. We have, it is true, the same phenomenon at the North, but the Government has not yet got into the habit of interfering in State quarrels at the North. The collector at New York or Boston could not have used United States soldiers to bring the Greeleyites to confusion, nor have Northern legislatures got into the habit of submitting local disputes to the United States Attorney-General. As the President is exercising the functions of an arbiter at the South, he must, in order to interfere with any moral weight, keep his own personal followers out of the fray.

But we think the sober second thought of the country is more than ever in favor of his not interfering at all, except at the last extremity and to prevent armed conflicts. It is still not too late to return to the ancient ways. Not only should "the Custom-house party" in every State be broken up, and the Federal officials be forbidden to hold State offices, but they should be forbidden to "work" in State politics. As long as their co-operation gives any set of State politicians at the South reason to believe that if they are driven to the wall they can get help from Washington, we shall never see the restoration of healthy political life at the South—and by healthy political life we mean the administration of the local government through open discussion and honest voting. As long as we raise local politicians above dependence on local opinion for their success, they are sure to be and remain incurable cheats, intriguers, and bullies, and to threaten us at every election with sieges, and fights, and riots, and arrests, and double boards, and assemblies, and mock governors, and sham returns, and false counts, and all the other excesses of knaves struggling to get possession of honest men's money.

ENGLAND.—OXFORD AND RUGBY.

London, Dec. 13, 1872.

In the general absence of any exciting political questions, a little ecclesiastical dispute at Oxford has excited unusual attention. The duty of preaching before the University is confided to persons nominated by a board, subject to the approval of the Convention, that is to say, of the whole body of Masters of Arts. The board has just nominated Dean Stanley—to the horror, as it appears, of a large number of orthodox persons. An angry correspondence took place between Mr. Burgon, who is the head of one section of the Church party at Oxford, and the Vice-Chancellor, who presided over the nominating board. Though the Convention generally approves of all names submitted to it, it was invited on this occasion to reject so dangerous a person as the Dean of Westminster. The voting took place on Wednesday last, and Oxford was in a state of excitement for several hours. The country clergy poured in from neighboring districts to support the cause of orthodoxy. Special trains from London brought down crowds of young barristers resolved to administer a rebuke to bigotry. The result was favorable to the liberal cause. Dean Stanley's nomination was confirmed by a majority of 62, and great is the triumph and the disgust. The chief reason of the success of a party which, as a rule, is in a minority, was the absence of Dr. Pusey and his followers from the poll. Perhaps they remembered how the same weapons had been used against them in former days, and were conscious that such futile attempts to suppress the utterance of particular opinions do more harm than good. The University has within the last generation passed votes of censure in different forms upon Bishop Hampden, whose mild rationalism is now pretty well forgotten, upon Drs. Newman and Ward, then verging towards Romanism, and upon Dr. Jowett, whose influence has now shown itself in the support afforded to his disciple. Those censures were barren enough of any practical result, and the protest against Dean Stanley was likely to be even more futile. If his opponents had succeeded, they would not even have excluded him from the University pulpit, except upon certain special occasions. So far as their action had had any result at all, it would simply have given an additional advertisement (not that any advertisement was much needed), to the undergraduates that Dean Stanley was suspected of heresy. Of course the result would have been to increase his audience whenever he was invited to preach. Under any circumstances, it would have been stopping a very insignificant hole in a very wide sieve.

Dean Stanley is the object of very lively disapprobation on the part of a large body of the clergy, and I cannot say that the disapprobation is unnatural. It is almost his avowed purpose to show that the Thirty-nine Articles enforce no restriction upon the expression of the most advanced opinions by any man who chooses to evade them. The Church of England, according to him, is so liberal a body that doctrines indistinguishable from Romanism or indistinguishable from Positivism may be preached in it with equal facility. Whether this doctrine can be practically carried out, or whether, as I confess that I think myself, it is really hopeless permanently to combine in one body sects divided by so wide and deep a gulf, Dean Stanley is naturally an irritating phenomenon to the orthodox. They can understand a thoroughgoing friend or an avowed enemy, but they fail to understand a traitor in the camp, who avows and justifies his treachery on principle. They feel that he is eluding them by an unworthy artifice. He cannot be condemned by the courts, because he uses the orthodox language; and yet he uses it to express ideas which are in vital opposition to the orthodox interpretation. And, therefore, though Dean Stanley enjoys a very wide personal popularity, he is perhaps the man most keenly hated as the representative of a principle by High and Low Churchmen of all varieties. Dean Goulburn, formerly head-master of Rugby, and more recently a popular preacher in London, has written to the Vice-Chancellor of Oxford to resign his own select prætorship, which he cannot hold in common with such a colleague. Such a mode of protest is rather surprising, as it would apparently leave the youth of Oxford to be seduced by their rationalist teacher, without any counter-attraction; but Dean Goulburn is not very good at reasoning. Meanwhile, the whole quarrel is absurd enough from any practical point of view. The recent act has secularized Oxford by removing all tests, and the authorities of the university may within a short time be Jews, Romanists, Mohammedans, or infidels of any variety. The attempt to retain the old position of the University as a bulwark of orthodoxy is simply futile; and, indeed, Oxford, which has been the great centre of religious movement in England for the last half-century, is now as remarkable for producing Positivists as it once was for producing Puseyites. Dean Stanley may be dangerous to those who are still within the pale by softening the transition from orthodoxy to infidelity, but those to whom he could be dangerous are already a small minority. The men who sat at his feet and Dr. Jowett's have broken the leading-strings of the church. The ducklings have long since taken to water, and the poor old hen is vainly cackling to them from the bank. Whether she keeps to dry land, or tries to conciliate her brood by affecting to swim, whilst she all the time has one foot on the ground, matters little; they have struck out into the deeps, and are far beyond her influence.

Another personal matter has been exciting a good deal of interest lately. I presume that I have already written to you upon former occasions of the great war which is raging at Rugby. It has just entered a new and rather singular phase. When Dr. Temple became Bishop of Exeter, the trustees of Rugby appointed Dr. Hayman as his successor. Now, Dr. Temple had been a singularly successful master, and old Rugbians held that the mantle of Dr. Arnold had descended upon his shoulders. The Rugbian differs from the member of any other public school by the worship which he pays to that celebrated teacher of Tom Brown. We the profane outsiders, who have been educated at less sacred places, are apt to accuse the Rugbian of priggishness and massive solemnity. We do not precisely object to his having a moral sense; but we fancy that he has not an exclusive right to that faculty, and should not be so fond of flourishing it in our faces. That mantle of Dr. Arnold gives a certain pomposity of behavior to all who wear it, and they shake from its folds an amount of condescension to the rest of the human race which is at times a little trying. Now Dr. Temple had collected and left behind him a very excellent body of assistant masters, whose only blemish was that they had imbibed a double portion of this exalted spirit. They consequently resented the appointment of Dr. Hayman as almost a personal insult to themselves, and certainly an insult to the memory of Dr. Arnold. In fact, the trustees, who were a conservative body, appear to have chosen Dr. Hayman in preference to men of far greater qualifications, precisely with a view to counteracting the supposed influence of Dr. Temple, who was not only a pupil of Arnold's but a contributor to 'Essays and Reviews.' It was therefore not surprising that there should be a very unpleasant feeling between the new head-master and his old subordinates. It was as though Mr. Greeley had taken General Grant's place without the power of dismissing the Cabinet. It matters little who was most to blame for the hostilities which were carried on from that time. Had the old board of trustees continued they would doubtless have supported their nominee and got rid of the assistants. But unluckily for Dr. Hayman a new board had just been constituted by act of Parliament, and the new board sympathized with the assistants. One of these, a Mr. Scott, was particularly obnoxious to Dr. Hayman, who did his best to get rid of him. The head-master suspected Mr. Scott of abusing him behind his back, of writing letters of accusation against him, and generally of being a disloyal assistant. I should imagine it to be highly probable that Mr. Scott had, in fact, no very lively feelings

of affection for his superior. Dr. Hayman, however, seems to have attacked him in a most unscrupulous manner. Not being able to dismiss him, he tried by underhand means to obtain evidence against him; he founded various accusations upon the evidence as obtained; and when Mr. Scott conclusively proved the accusations to be groundless he refused to withdraw them or to apologize. The whole matter thus came before the new trustees; their investigations produced a result most unfavorable to Dr. Hayman, and they expressed their opinions in a letter containing a severe rebuke to the head-master. The letter has been published and has made matters far worse than before. The board, in fact, has solemnly declared that Dr. Hayman has been guilty of dishonorable conduct, and that, unless he changes his ways, he ought to resign. But then they fail to draw the obvious inference. It was proposed to dismiss Dr. Hayman immediately, and I believe that the board was equally divided upon a motion for that purpose. As it is, they allow him to remain in his post and yet declare publicly that he is quite unfit for it. Of course Dr. Hayman takes refuge in silence. It is probably the best thing he can do. To resign would be to admit the justice of the accusation, besides which it would amount to almost complete professional ruin. Dr. Hayman naturally prefers to keep to a good place, and to act the part of martyr. Meanwhile such a state of things is simply ruinous to the school. Who would send his son to a place where the head-master is declared on good authority to have behaved so badly that he ought to reform or to retire; for which it is generally said that he is in all ways incompetent, and where he is at daggers drawn with all his assistants? Obviously the position is intolerable. Dr. Hayman should retire or should get rid of his subordinates; and few people will doubt which is the best alternative. The only thing in his favor is his feeling that he has hardly received a fair hearing; but, whoever is to blame, the result is equally prejudicial to the welfare of what has hitherto been one of our most highly esteemed schools.

Perhaps I ought not to detain your readers so long on a mere school squabble. My only apology is that, rightly or wrongly, the British public takes an intense interest in such questions. The scandal at Winchester, of which I had recently to speak, seems to excite the public mind far more than the French crisis, or than any political question of the day. On the same principle, the rights and wrongs of the Rugby warfare are eagerly canvassed, not only by Rugby people, but by all manner of persons to whom Rugby is little more than a name. Perhaps it is merely because anything like a personal scandal is always interesting to corrupt human nature; or perhaps the extraordinary interest taken in the school once presided over by Dr. Arnold, and attended by Tom Brown, is, in its way, a characteristic natural phenomenon. The session is rapidly approaching, and then I shall be able to be as grave, statistical, and politico-economical as your readers will allow.

THE PARISIAN STAGE.

FROM AN OCCASIONAL CORRESPONDENT.

PARIS, December 7, 1872.

IT is impossible to spend many weeks in Paris without observing that the theatre plays a very important part in French civilization; and it is impossible to go much to the theatre without finding it a copious source of instruction as to French ideas, manners, and characters. I supposed that I had a certain acquaintance with these complex phenomena, but during the last couple of months I have occupied a great many *fauteuils d'orchestre*, and in the merciless glare of the footlights I have read a great many of my old convictions with a new distinctness. I have had at the same time one of the greatest attainable pleasures; for, surely, among the pleasures that one deliberately seeks and pays for, none beguiles the heavy human consciousness so totally as a first-rate evening at the Théâtre Français or the Gymnase. It was the poet Gray, I believe, who said that his idea of heaven was to lie all day on a sofa and read novels. He, poor man, spoke while 'Clarissa Harlowe' was still the fashion and a novel was synonymous with an eternity. A much better heaven, I think, would be to sit all night in a *fauteuil* (if they were only a little better stuffed) listening to Delaunay, watching Got, or falling in love with Mlle. Desclée. An acted play is a novel intensified; it realizes what the novel suggests, and, by paying a liberal tribute to the senses, anticipates your possible complaint that your entertainment is of the meagre sort styled "intellectual." The stage throws into relief the best gifts of the French mind, and the Théâtre Français is not only the most amiable but the most characteristic of French institutions. I often think of the inevitable first sensations there of the "cultivated foreigner," let him be as stuffed with hostile prejudice as you please. He leaves the theatre an ardent Gallomaniac. This, he cries, is the civilized nation *par excellence*. Such art, such finish, such grace, such taste, such a marvellous exhibition of applied science, are the mark of a chosen people, and these delightful talents imply the existence of every virtue. His enthusiasm may be short and make few converts; but certainly during his stay in Paris, whatever may be his mind in the intervals, he never listens to the traditional *toc—toc—toc* which sounds up the curtain in the Rue Richelieu, without murmuring, as he squares himself in his chair and grasps his *lorgnette*, that after all the French are prodigiously great!

I shall never forget a certain evening in the early summer when, after a busy, dusty, weary day in the streets, staring at charred ruins and finding in all things a vague aftertaste of gunpowder, I repaired to the Théâtre Français to listen to Molière's "Mariage Forcé," and Alfred de Musset's "Il ne Faut Jurer de Rien." The entertainment seemed to my travel-tired brain what a perfumed bath is to one's weary limbs, and I sat in a sort of languid ecstasy of contemplation and wonder—wonder that the tender flower of poetry and art should bloom again so bravely over blood-stained garments and fresh-made graves. Molière is played at the Théâtre Français as he deserves to be—one can hardly say more—with the most ungrudging breadth, exuberance, and *entrain*, and yet with a kind of academic harmony and solemnity. Molière, if he ever drops a kindly glance on MM. Got and Coquelin, must be the happiest of the immortals. To be read two hundred years after your death is something; but to be acted is better—at least when your name doesn't happen to be Shakespeare and your interpreter the great American (or, indeed, the great British) tragedian. Such powerful, natural, wholesome comedy as that of the creator of *Sganarelle* certainly never was conceived, and the actors I have just named give it its utmost force. I have often wondered that in the keen and lucid atmosphere which Molière casts about him, some of the effusions of his modern successors should live for an hour. Alfred de Musset, however, need fear no neighborhood, and his "Il ne Faut Jurer," after Molière's tremendous farce, was like fine sherry after strong ale. Got plays in it a small part, which he makes a great one, and Delaunay, the silver-tongued, the ever-young, and that plain robust person and admirable artist, Madame Nathalie, and that divinely ingenuous *ingénue*, Mlle. Reichemberg. It would be a poor compliment to the performance to say that it might have been mistaken for real life. If real life were a tithe as charming it would be a merry world. De Musset's plays, which, in general, were not written for the stage, are of so ethereal a quality that they lose more than they gain by the interpretation, refined and sympathetic as it is, which they receive at the Théâtre Français. The most artistic acting is coarser than the poet's intention.

The play in question, however, is an exception and keeps its silvery tone even in the glare of the footlights. The second act, at the rising of the curtain, represents a drawing-room in the country; a stout, eccentric *baronne* sits with her tapestry making distracted small talk while she counts her points with a deliciously rustic abbé; on the other side, her daughter, in white muslin and blue ribbons, is primly taking her dancing lesson from a venerable choregraphic pedagogue in a wig and tights. The exquisite art with which, for the following ten minutes, the tone of random accidental conversation is preserved, while the *baronne* loses her glasses and miscounts her stitches, and the daughter recommences her step for the thirtieth time, must simply, as the saying is, be seen to be appreciated. The acting is full of charming detail—detail of a kind we not only do not find but do not even look for on the English stage. The way in which, in a subsequent scene, the young girl, listening at evening in the park to the passionate whisperings of the hero, drops her arms half awkwardly along her sides in fascinated self-surrender, is a touch quite foreign to English invention. Unhappily for us as actors, we are not a gesticulating people. Mlle. Reichemberg's movement here is an intonation in gesture as eloquent as if she had spoken it. The incomparable Got has but a dozen short speeches to make, but he distils them with magical neatness. He sits down to piquet with the *baronne*. "You risk nothing, M. l'abbé?" she soon demands. The concentrated timorous prudence of the abbé's "*Oh! non!*" is a master-stroke; it depicts a lifetime. Where Delaunay plays, however, it is hard not to call him the first. To say that he *satisfies* may at first seem small praise; but it may content us when we remember what a very loose fit in the poet's vision is the usual *jeune premier* of the sentimental drama. He has at best a vast deal of fustian to utter, and he has a perilous balance to preserve between the degree of romantic expression expected in a gentleman whose trade is love-making and the degree tolerated in a gentleman who wears a better or worse made black coat and carries the hat of the period. Delaunay is fifty years old, and his person and physiognomy are meagre; but his taste is so unerring, his touch so light and true, his careless grace so free and so elegant, that in his hands the *jeune premier* becomes a creation as fresh and natural as the unfolding rose. He has a voice of extraordinary sweetness and flexibility, and a delivery which makes the commonest phrases musical, but when as *Valentin*, as *Perdican*, or as *Fortunio*, he embarks on one of De

Musset's melodious *tirades*, and his utterance melts and swells in trembling cadence and ringing emphasis, there is really little to choose between the performance, as a mere vocal exhibition, and an *aria* by a first-rate tenor.

An actor equally noted for his elegance, now attested by forty years of triumphs, is Bressant, whose name, with old Parisians, is a synonym for *la distinction*. "Distingué comme Bressant" is an accepted formula of praise. A few years ago comedians were denied Christian burial; such are the revenges of history. Bressant's gentility is certainly a remarkable piece of art, but he always seems to me too conscious that an immense supply of the commodity is expected from him. Nevertheless, the Théâtre Français offers nothing more effective and suggestive than certain little comedies (the "Post Scriptum," for instance, by Emile Augier), in which he receives the *réplique* from that venerable *grande coquette*, Mme. Plessy, the direct successor, in certain parts, of Mlle. Mars. I find these illustrious veterans, on such occasions, more interesting even than they aspire to be, and the really picturesque figures are not the Comte or the Marquise, but the grim and battered old comedians, with a life's length of footlights making strange shadows on their impenetrable masks. As a really august exhibition of experience, I recommend a *tête-à-tête* between these artists. The orchestra of the Théâtre Français is haunted by a number of old gentlemen, classic playgoers, who look as if they took snuff from boxes adorned with portraits of the fashionable beauty of 1820. I caught an echo of my impressions from one of them the other evening, when, as the curtain fell on Bressant and Plessy, he murmured ecstatically to his neighbor, "*Quelle connaissance de la scène . . . et de la vie!*"

The audience at the Parisian theatres is indeed often as interesting to me as the play. It is, of course, composed of heterogeneous elements. There are a great many ladies with red wigs in the boxes, and a great many bald young gentlemen staring at them from the orchestra. But *les honnêtes gens* of every class are largely represented, and it is clear that even people of serious tastes look upon the theatre not as one of the "extras," but as one of the necessities, of life—a periodical necessity hardly less frequent and urgent than their evening paper and their *demi-tasse*. I am always struck with the number of elderly men, decorated, grizzled, and grave, for whom the stage has kept its mysteries. You may see them at the Palais Royal, listening complacently to the carnival of *grivoiseries* nightly enacted there, and at the Variétiés, levelling their glasses paternally at the lightly-clad heroines of Offenbach. The truth is that in the theatre the French mind *se reconnait*, according to its own idiom, more vividly than elsewhere. Its supreme faculty, the art of form, of arrangement and presentation, is preeminently effective on the stage, and I suppose many a good citizen has before this consoled himself for his country's woes by reflecting that if the Germans *have* a Gravelotte in their records, they have not a "Rabagas," and if they possess a Bismarck and a Moltke, they have neither a Dumas *fils* nor a Schneider. A good French play is an admirable work of art, of which it behooves patrons of the contemporary English drama, at any rate, to speak with respect. It serves its purpose to perfection, and French dramatists, as far as I can see, have no more secrets to learn. The first half-dozen a foreign spectator listens to seem to him among the choicest productions of the human mind, and it is only little by little that he becomes conscious of the extraordinary meagreness of their material. The *substance* of the plays I have lately seen seems to me, when I think them over, something really amazing, and it is what I had chiefly in mind in speaking just now of the stage as an index of social character. Prime material was evidently long ago exhausted, and the best that can be done now is to rearrange old situations with a kind of desperate ingenuity. The field looks terribly narrow, but it is still cleverly worked. "An old theme—but with a difference," the workman claims; and he makes the most of his difference—for laughter if he is an *amateur* pure and simple; for tears, if he is a moralist.

Do not for a moment imagine that moralists are wanting. Alexandre Dumas *fils* is one—he is a dozen, indeed, in his single self. M. Pailleron (whose "Hélène" is the last novelty at the Théâtre Français) is another; and I am not sure that, since "Rabagas," M. Sardou is not a third. The great dogma of M. Dumas *fils* is, that if your wife is persistently unfaithful to you, you must kill her. He leaves you, I suppose, the choice of weapons; but that the thing must somehow be done, he has written a famous pamphlet, now reaching its fortieth edition, to prove. M. Pailleron holds, on the other hand, that if it was before your marriage, and before she had ever heard of you, and with her cousin, when she was a child and knew no better, you must—after terrific vituperation, indeed, and imminent suicide on the lady's part—press her relentingly to your bosom. M. Pailleron enforces this moral in capitally turned verse, and with Delaunay's magical aid; but as I sat through his piece the other evening, I racked my brain to discover what heinous offence Delicacy has ever committed that she should have to do such cruel penance. I am afraid that she has worse things in store for her, for the event of the winter (if a *coup d'état* does not carry off the honors) is to be the new play of Dumas *fils*, "La Femme de Claude." Whatever becomes of the state, I shall go early to see the play, for it is to have the services of the first actress in the world. I have not the smallest hesitation in so qualifying Mademoiselle Desclée. She has just been sustaining by her sole strength the weight of a ponderous drama called "La Gueule du Loup," in which her acting seemed to me a revelation of the capacity of the art. I have never seen nature grasped so in its essence, and rendered with a more amazing mastery of the fine shades of expression. Just as the light drama in France is a tissue of fantastic indecencies, the serious drama is an agglomeration of horrors. I had supped so full of these that, before seeing the "Gueule du Loup," I had quite made up my mind to regard as an offence against civilization every new piece, whether light or serious, of which the main idea should not be *pleasing*. To do anything so pleasant as to please is the last thing that M. Dumas and his school think of. But Mlle. Desclée renders the chief situation of M. Laya's drama—that of a woman who has fancied herself not as other women are, coming to her senses at the bottom of a moral abyss, and measuring the length of her fall—with a verity so penetrating that I could not but ask myself whether, to become a wholesome and grateful spectacle, even the ugliest possibilities of life need anything more than rigorous exactness of presentation. Mlle. Desclée, at any rate, was for half-an-hour the most powerful of moralists. M. Laya, her author, on the other hand, is an atrocious one. His trivial *dénouement*, treading on the heels of the sombre episode I have mentioned, is an insult to the spectator's sympathies. Even Mlle. Desclée's acting fails to give it dignity. Here, as everywhere, an inexpressible want of moral intelligence is the striking point. Novel and drama alike betray an incredibly superficial perception of the moral side of life. It is not only that adultery is their only theme, but that the treatment of it is so monstrously vicious and arid. It has been used now for so many years as a mere pigment, a source of dramatic color, a *ficelle*, as they say, that it has ceased to have any apparent moral bearings. It is turned inside out by hungering poetasters in search of a new "effect" as freely as an old glove by some thrifty dame intent on placing a prudent stitch. I might cite some striking examples, if I had space; some are too detestable. I do not know that I have found anything more suggestive than the revival, at the Gymnase, of that too familiar drama of the younger (the then very youthful) Dumas, the "Dame aux Camélias." Mlle. Pierson plays the heroine—Mlle. Pierson the history of whose *embonpoint* is one of the topics of the day. She was formerly almost corpulent—fatally so for that beauty which even her rivals admitted to be greater than her talent. She devoted herself bravely to a diet of raw meat and other delicacies recommended by Banting, and she has recently emerged from the ordeal in sylphlike slenderness. This result, I believe, "draws" powerfully, though it seemed to me, I confess, that even raw meat had not made Mlle. Pierson an actress. I went to the play because I had read in the weekly *feuilleton* of that very sound and sensible critic, M. Francisque Sarcey, that even in its old age it bore itself like a masterpiece, and produced an immense effect. If I could speak with the authority of Dr. Johnson, I should be tempted to qualify it with that vigorous brevity which he sometimes used so well. In the *entr'actes* I took refuge in the street to laugh at my ease over its colossal flimsiness. But I should be sorry to linger on the sombre side of the question, and my intention, indeed, was to make a note of none but pleasant impressions. I have, after all, received so many of these in Paris play-houses that my stricture seems gracelessly cynical. I bear the actors, at least, no grudge; they are better than the authors. Molière and De Musset, moreover, have not yet lost favor, and Corneille's "Cid" was recently revived with splendor and success. Here is a store of imperishable examples. What I shall think of regretfully when I have parted with the opportunity is not the *tragédies bourgeoises* of MM. Dumas, Feuillet, and Pailleron, but the inimitable Got strutting about as the *podestà* in the "Caprices de Marianne," and twitching his magisterial train from the nerveless grasp of that delicious idiot, his valet: and Delaunay murmuring his love notes like a summer breeze in the ear of the blonde Cécile, and Coquelin as *Mascarille*, looking like an old Venetian print, and playing as if the author of the "Etourdi" were in the *coulisse*, prompting him; and M. Mannet-Sully (the ardent young *débutant* of the "Cid") shouting with the most picturesque fury possible the famous sortie:

"Paraissez Navarrins, Maures, Castillans!"

To an ingenuous American the Théâtre Français may yet offer an æsthetic education.

ITALY.—THE SCHOOL LAW—THE INCOME TAX.

FLORENCE, Dec. 15, 1872.

AMONG the numerous interpellations which have assailed the Italian ministry since the Deputies have returned to Monte Citorio, there has been one which, although possessing small importance in itself, is calculated

to interest American readers on account of the nationality of the person who gave rise to it. An American residing in Rome somehow or other found his rest disturbed by the laurels acquired by fashionable English missionaries, who have in latter years undertaken to lead the benighted Italians from the darkness of Popery to the sunlight of true Protestant Christianity. Whether there be much chance of success for attempts such as these, or whether success be even desirable were it possible to turn the bright, heathenish offspring of this sunny clime into stern, gloomy Puritans, such as the cloudy atmosphere of England produced in the time of Oliver Cromwell, is a question your correspondent does not feel himself competent or called upon to decide. Nay, he even owns to a strange distrust and scepticism with regard to Italian converts, which is the result of a long personal experience and that of several of his friends, and confesses that whenever a mendicant or a servant contrives to enter his house on the plea of being a Protestant neophyte, he feels a great inclination to get him out of it as soon as he can, and takes very good care to secure his door well behind his brother in religion. Conversion, in fact, for the greater part of Italian new-made Protestants means nothing more nor less than a mere speculation on the purses of those wealthy zealots whom America and England daily despatch to Italy, and I have seen more than one of these converts find the dodge answer so well that as soon as the novelty of it had worn off he turned Catholic again, and turned his new belief to the best possible account by applying to England's nobles of the old religion who annually pay a visit to Rome to kiss the Pope's toe. It is even by no means rare for these elastic individuals to undergo a third course and turn Calvinists anew.

Be this as it may, however, the fact remains that the rich and benevolent American who succeeded in engrossing the debates of Parliament for a whole day last week had founded four public schools at his own expense, to which many Roman parents, accustomed to live upon priests and the religious zeal of dupes, sent their children. One fine day, however, the police took it into their heads to close them all four; whereupon their American founder, after vehemently protesting against so unjust and tyrannical a proceeding, applied for assistance and support to the American Minister, who, it is said, after enquiring into the facts of the case, declined sanctioning by his protection so flagrant a breach of the laws of the country, however absurd or unjust they might appear to a freeborn republican ignorant of all preventive formalities, and refused to interfere in behalf of his countryman. I leave you to imagine what a splendid field for oratorical display on the part of the Italian Radicals this affair became; how they railed against the pusillanimity of a vile and corrupt ministry, flattering his Holiness the Pope by closing Protestant educational establishments, in order thereby to obtain pardon for their offences against the Church; how vehemently they took up the cause of a Republican and a Protestant against a bigoted monarchical government presiding over the destinies of young Italy. The able and much respected Minister of Public Instruction, Signor Scialoja, had nevertheless little trouble in reducing all these high-sounding accusations to their real value, and did so, moreover, with an amount of simplicity and good taste, and in a business-like way which gave additional force to his irresistible irony, when he showed how ridiculous were the attacks to which he had been exposed.

He began by stating that he had had occasion to close two Catholic ecclesiastical schools, maintained by the Vatican, about a week before he had the American Protestant schools shut, and asked whether he could be supposed to have adopted this measure with a view to flattering the Curia. Only yesterday he had again occasion to close two colleges, founded by the bishop himself, at Pavia, for not having complied with the requirements of the law in announcing their opening. He then went on to say that the somewhat overzealous republican who had established the Protestant schools in question ought to have understood better the fundamental principle of government in his own country, and indeed the main condition of all free government, *i.e.*, respect for the laws, whatever they be: *dura lex, sed lex*. With this, Signor Scialoja set to work to demonstrate that the law which had been thus infringed was not unjust by any means, and enumerated the different breaches of it which had occurred, all which would have had very slight importance had the person guilty of them simply submitted to the law as soon as he became acquainted with it. The Italian law requires a formal authorization on the part of the Government previously to the opening of any school, and this formality had not been complied with by the American gentleman, who had not even thought of announcing to the Government either his intention or the fact of his having actually opened the schools. In the second place, he had employed unqualified teachers in them, *i.e.*, such as did not possess a regular diploma, had passed no public examination, and, in a word, had no legal right to teach in public schools in Italy, because they offered none of those guarantees as to their moral and intellectual capacity which the Italian law requires. Royal school inspectors have the right to enter any public school in the realm at any hour of the day by the Italian laws; now, one of them was refused admittance by one of the masters at the American schools. Moreover, the hall in which one of the schools was held, and which, according to the Government regulations, ought not to hold more than 50 children at a time, was used for double that number; while another school-room was found to be cold, damp, unpaved, admitted the noxious odors peculiar to certain quarters of Rome, in short, was thoroughly unwholesome, and was pronounced dangerous to the health of children who would have to spend several hours of the day in it. Finally, the Italian laws, whether rightly or wrongly, at any rate in conformity with Italian customs and prejudices and with the Italian character, prohibit the promiscuous education of the two sexes even at so early an age as seven years. Now, in the schools in question boys and girls of twelve years of age were taught together, and this was not only scandalous in the impure eyes of immoral Italians—whereas in America, Germany, and England it would hardly have been noticed—but was entirely at variance with the habits and customs of the country, and in fact really dangerous to morality. Having thus simply laid the facts of the case before the House, the Minister made a moderate allusion to the unseemly and ill-judged resistance which had been opposed to the law by the foreigner who had broken it, and sat down amid the cheers of the whole Assembly. He has since met with approval on all sides, as well from the Italian as the European press in general.

The most important parliamentary debate of the week certainly was that upon the income-tax, out of which nevertheless the Ministry came forth as victorious as out of the rest of the skirmishes and outpost fights it has undergone hitherto in anticipation of the great pitched battle upon the religious corporations of Rome, now in process of discussion by the private committee, and doubtless to form the chief object of interest during the present session. The income-tax debate was called forth by the discussion of the budget, which gives ample opportunity on the Continent for speaking *de rebus omnibus et quibusdam aliis*. For instead of simply approving without further discussion the entries and expenditure of the past budget, and confining themselves to a discussion of the new sums, the changes, the extraordinary expenses or new taxes proposed by the Chancellor of the Exchequer, as is the custom in the English Parliament, the Italians discuss every single point over and over again every year. Now, as there are three budgets here every year, it is easy to imagine what a time this must take. First comes the *bilancio di prima previsione*—the one now under discussion. This must be voted before the year expires, and although it gives rise to a considerable display of oratorical powers, the figures are hardly looked at, the House consoling itself with the thought that the budget will have to be discussed a second time in the *bilancio definitivo*, on which occasion it again deems itself free to dispense with a closer scrutiny because it is conscious of having already looked into it. Finally comes the third discussion, *i.e.*, that of the *bilancio rettificato*, which is always sure to pass undiscussed, because it takes place at a time when the expenses have already been made and a change is no longer possible.

Here we are, then, discussing the *bilancio di prima previsione* for 1873, every chapter of which presents an opportunity for attacking the Ministry, which is but feebly supported by the Conservatives, by whom it is disliked, for reasons which I shall have occasion to explain to you more closely another time. The most violent of these attacks took place on account of the income-tax, a singularly unpopular tax, by the way, here as everywhere—more here perhaps than elsewhere even—and which gives rise to quite as much complaint on the part of the Conservatives as of the Radicals. For weeks, nay, months, the columns of papers representing every shade of opinion were crammed with protests and complaints. The point had been more than once discussed in popular assemblies, and it seemed as though Signor Sella, the Minister, stood in imminent danger of being crushed by the weight of the discussion as soon as this question should be brought up. Yet the result has been far different from what had been anticipated, and, in fact, we may even say that his speeches of the 11th and 12th inst. were not only a decided triumph, but a well-merited triumph.

Sella is no great orator certainly, but he is, beyond a doubt, the greatest statesman Italy has produced since Cavour, and, moreover, manages the House more skilfully than Rattazi himself, that old parliamentary athlete of five-and-twenty years' standing. Thus he had no difficulty in persuading the Assembly last Thursday that he had done nothing but his duty; that were another minister to be found able to manage the financial department better than himself, he would be only too glad to resign in his favor; that he had accepted his portfolio with a deficit of 300,000 millions, which he had reduced to twenty millions; that if any one knew of a better tax, and would propose it, he was quite ready to adopt any useful suggestion; but that, as long as the tax exists, it ought to be rendered as productive as possible. He

cared little for popularity, and was fully aware that the only way for a financial minister to attain it was to apply the principle: Let him pay that likes; whereas his own principle would on the contrary be: Let him pay who owes. At the present time, who in Italy paid what he owed?

And indeed it is interesting for the observer of Italian manners and characteristics to follow the explanation given. In a population of 25,000,000, for instance, we are told that, if we are to believe the statements of the people themselves, there would not be a dozen doctors who earned more than 2,000 lire ($400) a year by their profession! There would be only about 70 lawyers, only 100 engineers and architects, only 1,380 tradesmen. Were his agents so much to be blamed if they occasionally doubted these evidently false statements? A great many taxpayers complain of arbitrary assessments, but Signor Sella quoted several examples of men who had declared their income at 5,000 lire, and who were glad to accept the official estimate doubling and trebling the sum declared. What, in fact, is the amount of the entire income thus taxed? It is 473 millions of lire, of which 180 millions are the interest of capital, 200 the revenue of working capital, and 95 the revenue of labor alone! By this it is clear that it is the holder of Government bonds on whose interests the exchequer lays its hand, and the official whose salary is curtailed by 13.20 per cent., who alone really pay the tax, and that the Minister must be allowed full power to take all necessary steps to prevent the state from being cheated by wholesale. Whenever Sella has proposed new taxes, the invariable answer was: First collect those which already exist. If he does his best to attain that end he is called a despot, his agents are the servile instruments of his tyranny, the taxpayers his victims. Had there been merely petty fraud, he would have simply repressed it. As it is, however, there can be but one means for Italy to recover her credit, her power, and her influence, and that is by paying her debts; and in order to do this she must pay the existing taxes.

Correspondence.

"THE GREENBACK MYSTERY."

To the Editor of the Nation:

Sir: If it be your intention to open your columns to a discussion of this important subject, I wish to say that "the Government" does now "supply money to the banks for the asking," so far as the banks are privileged to draw currency, guaranteed by the nation, on their deposits of United States bonds, while the interest on the latter still accrues to their benefit. Why the people should continue this profitable monopoly to the banks is "what no fellow can find out."

If the banks must still be the medium through which the credit of the nation shall be supplied to the people, let them receive greenbacks to the full amount of the bonds they may deposit; stop the interest on the bonds so deposited, abolish all bank taxation based on circulation, and relieve the banks from the necessity of keeping the currency reserve now required.

(N. B.—This does not affect the reserve on deposits.)

The adoption of the measure proposed by your correspondent, H. M. F.—viz., the inter-convertibility at par of United States bonds and greenbacks, at the option of individual holders, might be an improvement upon the present system, even as above modified, but it is by no means certain that the removal of the buffer now interposed by the national banks between the currency and its basis would not be a more than compensating disadvantage. S.

January 6, 1873.

Notes.

THE correspondent who asks to what writing of Dr. W. B. Carpenter we alluded in our late review of Owen's 'Debatable Land,' Vol. XVI., p. 269, is informed that we had in mind an article in the *London Quarterly* for October, 1871, on "Spiritualism and its Recent Converts," which was attributed to Dr. Carpenter, and, we believe, correctly, though it has been denied that he wrote it.——It is a sign of the times that the London *Athenæum*, which annually reviews *in extenso* the literature for the year of the principal nations, and which has for three years given in this manner an article on the literature of the United States, now announces a discontinuance of the practice, "having preferred during the past twelve months to devote the same attention to American as to English books, and to notice them as they appear." This is probably the chief reason, but another may be the difficulty of procuring a competent person to review the literature of this country. At least, those who have heretofore served the *Athenæum* in this capacity have not particularly distinguished themselves; in saying which, we do not mean to overlook the difficulties of the task.——At the monthly meeting of the New York Genealogical and Biographical Society, on Saturday, December 28, a biographical sketch of the late Mr. George P. Putnam was read by the president, and an anonymous donation of $250 was announced, to cover the expenses of copying the records of old churches of New York—Dutch, Presbyterian, or French.

—Mr. John Priestley, who died last week, was not connected prominently in any way with literature, science, or art, and to the great majority of our readers his name was entirely unknown, and yet his death comes home as a personal loss to a very large proportion of the men of intellectual pursuits in this city. He has for nearly twenty years been Treasurer of the Century Club, and there was probably nobody who was so closely associated in the mind of its members with that well-loved fireside in Fifteenth Street, around which so many distinguished men of all countries have gathered within the last quarter of a century, and so many of the best men of this city have spent some of their happiest hours. Mr. Priestley was a clubbable man in the best sense of the word, a sympathetic talker, to whom every man's pursuits were interesting, and he talked with unusual attractiveness of face and manner, with strong sense and fine tastes. He was a native of Ireland, but was brought to this country in his infancy, and was a grandnephew of the famous Dr. Priestley, the English theologian and natural philosopher, who emigrated in 1794. He was at one time the publisher of the *Whig Review*, but passed the greater part of his life as a manufacturer of paper, and in that capacity lent a helping hand to more than one literary enterprise which perished untimely. But he was in business as in society, above all things, an honest gentleman, modest, unassuming, unselfish, to whom the society of his friends was the greatest prize and comfort of life.

—We said two weeks ago that although a certain body of persons in this country, commonly designated as "high-tariff men," were in the habit of sneering at what is commonly called "political economy"—that is, the political economy of Turgot and Smith and Say and Mill—and denying that there was any such science, they were all devout believers in a political economy of their own invented by Mr. Henry C. Carey, "for the generalizations of which they have a reverence which, we think, nobody has ever accorded to those of the other writers we have named." This may have seemed at the time strong language, but we find in the Chicago *Journal of Commerce*, of Dec. 26, ample verification of it. Replying to our article on Mr. Boutwell's Political Economy, it says, what no free-trader who knew the meaning of the word "science," or was in his right mind, would say of Adam Smith's political economy:

"We are told of a political economy *invented* by Henry C. Carey. As well might we be told of a motion of the earth *invented* by Galileo, or of a principle of gravitation *invented* by Sir Isaac Newton, or of a system of astronomy *invented* by Copernicus. Mr. Carey lays no claim to invention, but to discovery. By employing the inductive method in a long course of diligent investigation, he found that certain phenomena were in harmony with certain rules of action. Next, during years of patient study, he applied these rules to a multitude of facts, carefully exploring the field of research, without meeting with exceptions. Then alone did he feel justified in claiming these rules to be natural laws. To sneer at his conclusions as inventions does not prove them to be incorrect. Sneers were plentifully bestowed upon Harvey when he announced his discovery of the circulation of the blood; yet the sneerers are well-nigh forgotten, while Harvey has won imperishable fame."

Here we see there is absolutely no difference between the demonstrations of Newton and Kepler in the field of pure science, and Mr. Carey's generalizations on a number of facts picked out by him from all sorts of "histories" and "biographies" and romances, ancient and modern, such as the foundation of Rome by Romulus.

—The following, which appears in the Washington *Republican*, in an article of which Mr. Boutwell is said to approve warmly as a defence of his policy, is too good to be confined to any one circle of readers:

"The *Nation* lays down as one of its maxims that 'man, being by nature a producing and trading animal, the freer play you give his faculties, the more rapidly will he create wealth.' We deny that man, for the purposes of American statesmanship, is an *animal at all;* on the contrary, he is a co-ruler, a sovereign, and must therefore be an intelligent, educated, morally responsible and self-thinking being, or the republic cannot stand.

"We deny *in toto* the above specious, deceitful, and even immoral maxim laid down as a fundamental principle by English writers and repeated by the *Nation*. It has been put forth, precisely as the justification from the Bible of American slavery in times past, to create a public opinion favorable to the unlimited rule of wealth, against whose sway the individual has no rights whatever."

—The good people of Wilmington, Delaware, were lately exercised over the naming of a new hotel. An evening paper, remembering the movement to consolidate in one State Delaware, Maryland, and Virginia, which it was proposed to dub *Delmarvia*, favored this name, composed of the first syllables of the names of the three States, for the hotel. Better counsels prevailed, however, and Clayton House it became. "Unique and musical" was the recommendation of *Delmarvia*, which no doubt fairly represents the class of names that please the American ear. Passengers on the Pennsylvania Central must have been struck with the names of certain stations as having a corresponding euphony, of which *Altoona* and *Renŏvo* may stand as examples. They were named by the present President of the road, Mr. J. Edgar Thomson. *Altoona* is of Indian origin, and has been translated "the fat of the mountain." *Renŏvo* is the seat of the railroad repair-shops, as the name was designed to indicate; but the American ear could not be satisfied with the short Latin quantity of the penult. Mr. Thomson also invented *Tiōna* (a station on the Pennsylvania and Erie Road), contracting it from Tionesta, the name of the creek on which the place is situated, inasmuch as the creek had already furnished a name to another settlement. Still another name, of national and even world-wide fame, *Atlanta*, connects itself with the engineering days of Mr. Thomson. *Marthasville* was what it was first called by the chief-engineer of the Western and Atlantic Railroad, in honor of the daughter of Governor Lumpkin, of Georgia; but Mr. Thomson, foreseeing the importance of this terminus, overruled his colleague, and named the station *Atlanta*, from the circumstance that the railways approaching it from the West there first encountered the waters of the Atlantic slope. *Marthasville* reminds us that the Pennsylvania and Erie Road practised, if it did not originate, the sensible custom of doing honor to individuals without tacking after their names *-ville*, *-ton*, or *-bury;* whence the stations *Wetmore*, *Sergeant*, *Keating*, *Sterling*, *Hyner*, etc. *Royston* is only an apparent exception, the name of the landowner on which the station is situated being Roy Stone. *Kinzua*, *Dahoga*, and *Schahonda* are not instances of euphonius invention like some of the foregoing, but are tolerably pure Indian. According to Gen. T. L. Kane, the Senecas pronounced the first name *Kinjua*—one of the rare cases in which that tribe sounded the *j*. *Schahonda* is short for *Dagoosgahonda*, or Wildcat Creek; the whites of the region commonly call the full name *Doggyschahonda*, with a slight confusion of the natural history.

—In the bound volume of the Ninth Census which has just been distributed, the eye is at once arrested by the shaded and colored maps of which we gave, in anticipation, a general description about a year ago (*Nation*, Feb. 8, 1872). They are nine in number, reckoning them by sheets, and represent (1) the density of the total population; (2) the distribution of the colored population; (3) the foreign population; (4) the Irish; (5) the German; (6) the English and Welsh, British American, Swedish and Norwegian, and Chinese population—all on one sheet; (7) degrees of illiteracy; (8) distribution of wealth; (9) the acquisition and transfer of United States territory, from 1780 to 1870. Many curious and some startling reflections suggest themselves on a mere glance at these charts, but we have no room here to indulge in them. We barely remark that, while we are accustomed to deplore the flood of ignorance poured upon our shores from the Old World, we may see here that the home of illiteracy on this continent is in that section, the South, which appears all but blank on the map of foreign population; in other words, that the most unenlightened portion of our population is the most purely American. Of course this includes the late slaves, but they are none the less natives, and are all now citizens and voters. On the other hand, regions in which the Irish population is found in a density varying from 1 to 15 to the square mile often appear blank on the chart of illiteracy; as, for instance, Western New York, Northeastern Ohio, Southern Michigan, Eastern Iowa, and Northern Illinois. The region of greatest wealth is, for all practical purposes, identical with that of the greatest foreign population, for reasons with which we are all familiar.

—These charts show the present status of the country under the various aspects enumerated; similar ones prepared on the census of 1880 will graphically portray our progress, or, to use a neutral word, development. Had we had such thirty, twenty, or even ten years ago, what light they would have shed on movements and tendencies, territorial, political, racial, moral, and social! To take a local example: the influx of Canadians into New England is of comparatively recent date, and its extent, as mapped on one of these sheets, will surprise those who have paid no attention to it. It is really an element of no small value in calculating the future of the New England character—a character which is still, we presume, the one whose transformation is watched with the most interest, not to say with the most concern. The agricultural, the manufacturing, the political physiognomy, so to speak, of New England, is affected by the presence of these French Canadians, who are in such force in Vermont (28,304) that a French paper was not long since published expressly for them. In Essex County, Mass., they have supplanted a significant part of the native American constituency of that district as represented in Congress, and on this side their colonizing has a national bearing. Now, however much of the tendency on their part to cross the border was shown in former censuses, it could easily have escaped notice; whereas maps like these would have fixed the fact in memory, and if used in our schools among the regular aids to instruction would have made this and every other movement of population a matter of common notoriety. Possibly, too, the knowledge that Canada was coming over to us would have cooled the ardor of some of our northward-looking annexationists, and given them patience to wait till a sort of human endosmosis had made a homogeneous people on both sides of the line. What effect on the general desire for annexation the publication of such maps as No. 9 in the above list would have had, we will not undertake to say. We wish the Commissioner had been or had felt authorized to analyze this map by means of others, in the same manner that he has analyzed the foreign population map. American history, as taught in our schools, or as studied in private, would be much more clearly comprehended if for every important stage of extension or alteration of boundaries—State and national—a separate map, on however reduced a scale, could be referred to. These are now left to be laboriously worked out by means of No. 9 alone and the "Historical Notes" on pp. 573–587 of the Census.

—In former times, writers of Greek grammars contented themselves with exhibiting the principles of inflection and syntax, their object being to enable the student to enter upon the study of the language with as little delay as possible. But in this age of progress, when philology has been raised to the ranks of an exact science, the grammarian must not confine himself to a mere exhibition of the phenomena of the language as it exists in the authors that have come down to us. He is expected to describe accurately the forms which ought to have been used before the Greek peninsula was inhabited by any human beings; he must descant upon the inherent qualities of fricatives, surds, factitives, and sonants, as also upon the psychological tendencies of the paulo-post future; he must invent new names for old things, and give a satisfactory account of the Greek pronunciation which prevailed in the days of Phoroneus, Inachus, Sinis, Sciron, and Procrustes; otherwise he will not be considered as having duly executed his task. Further, he must embellish his pages with long notes and excursuses about Sanskrit and Slavic affinities, and Lithuanian and Chinese analogies, not forgetting the curiously developed dialects of Caffraria, which are probably related to the language of the Cabiri. All which he can accomplish without even knowing the alphabets of those languages. The science of the nineteenth century has established the important truth that all races of men, ancient and modern, put their vocal organs in motion for the purpose of embodying in articulate sounds the operations of their minds; always excepting the Cynocephali and the Sciapodes, who express their sentiments by barking and cackling, respectively. Grammar now has ceased to be a means—it is an end. The numerous references to numerous grammars in all our Greek text-books show that the language is to be studied not for its authors but for its roots, stems, affixes, prefixes, and numerals; and always with reference to Sanskrit, Welsh, and Lithuanian. Those who have a taste for Greek literature should use translations; for who would prefer walking to riding?

—Something that translators, reviewers, and foreign correspondents cannot at all keep pace with is the wonderfully active discussion in Germany, since the war, of all sorts of social, political, and economical questions relating to the new Empire. The productiveness of the press on these subjects is not only remarkable in itself as being greater than at any previous epoch in German history, but is in the strongest contrast with what is going on in France. There one might count on his fingers the number of works that have appeared in the last two years touching the reconstitution of France, and showing profound or even patient study of the great problems which rest upon that country for solution. What might we not expect of her, for her own regeneration and for her influence upon the rest of the world, if she were manifesting as great indifference to revenge as her late conquerors to further conquests; if home topics occupied as much of her serious thought; if, to offer a practical illustration, the joint product of all her presses could in any way compare with that of a single German publishing house in matters affecting the national welfare? Carl Habel's list, for example, in Berlin, it would be difficult for all France to match. 'The German State Governments and the Catholic Church of To-day,' by Prof. Dr. Hermann Wasserschleben, of Giessen; 'The New Gold Coinage and the German Mark as a Unit of Reckoning,' by H. F. Kameke; 'On Jury-Courts and Sheriff's Courts,' by Dr. Richard Ed. Jonh,

of Lübeck, are some of the titles taken at random of the pamphlets which this house is constantly issuing, over and above the two series called 'Deutsche Zeit- und Streit-Fragen,' and 'Sammlung gemeinverständlicher Vorträge,' which already almost form a library in themselves. The former series is edited by Prof. Dr. F. von Holtzendorff and W. Oncken, and, as its title imports, is devoted to the discussion of live and knotty issues, some of which we enumerate, premising that each pamphlet (or number, as we are really dealing with a periodical) consists of from 40 to 80 pages duodecimo: 'Rome and the Germans,' by J. C. Bluntschli, of Heidelberg; 'The Later Catholic Orders and Congregations, particularly in Germany,' by Prof. Dr. J. F. von Schulte; 'Protestantism as a Political Principle in the German Empire,' by Prof. Dr. M. Baumgarten, of Rostock; 'German Railroad Policy,' by F. Perrot, also of Rostock; 'The Question of the Standard in the Reform of the German Coinage,' by Prof. Dr. Wilhelm Roscher, of Leipzig; 'The Labor Question of Old and of To-day,' by Prof. Dr. Fr. Wilhelm Stahl; 'The Novel of the Nineteenth Century,' by Professor J. Mähly; 'The Quack Medicine and Immorality Industry in the Daily Press,' by Dr. H. Beta, of Berlin; 'The Fundamental Evil in the Modern Education of the Young,' by Prof. Dr. F. A. Beck, of Giessen, etc., etc.

—Dr. von Holtzendorff also appears as editor, in conjunction with Prof. Virchow, of the second series, the 'Collection of Popular Scientific Treatises,' to which he himself contributes 'Conquests and the Right of Conquest,' and which contains besides such papers as: 'The Social Question,' by Max Wirth; 'The Idea of Love in some Ancient and Modern Languages,' by Dr. Carl Abel; 'Honor, in the Mirror of Time,' by Edward Osenbrüggen; 'Mental Disorders and Disease,' by Dr. C. F. Flemming, of Schwerin; 'The Circulation of the Blood,' by Prof. Dr. A. Fick, of Würzburg; 'Meteorites and their Relation to the Earth,' by Prof. C. Rammelsberg; 'Sea Waves and their Geologic Significance,' by K. von Seebach; 'The Oracles,' by Dr. Edward Doehler, of Brandenburg; 'Petroleum,' by Prof. Dr. Franz Buchenau, of Bremen; 'Graphite and its Chief Uses,' by Prof. Dr. Heinrich Weger, of Nürnberg, etc., etc. We desist, not because we have exhausted the list, but for want of room to give further specimens. This popular-science series has already passed the 150th number, and may well be endless, as it is composed of choice selections from ephemeral literature in all parts of the Empire. As if, however, the oversight of these periodicals were not enough to occupy him, we find the indefatigable Dr. von Holtzendorff editing the 'Materialien der Deutschen Reichs-Verfassung,' a collection of documents and reports of debates relating to the Government of the new Empire, its origin and powers, and especially to the constituent North-German Reichstag of 1867—in short, a species of German "Madison Papers," with all the modern improvements; and also, with the help of numerous learned co-laborers, the 'Handbuch des Deutschen Strafrechts,' or Handbook of German Penal Law, which is now in the middle of its third volume. These works again, like the foregoing, are published by Habel.

MR. FORSTER'S 'LIFE OF DICKENS,' VOL. II.*

THE old saying, which used to be stereotyped in the Lives of the Poets and similar works, written by our fathers, that the biographies of men of letters must necessarily be brief because the lives of such men usually passed without incident and their history was best found in their works, appears to have gone out of fashion. Mr. Forster, at all events, who may be called the British Biographer Laureate, is no believer in it now, whatever he was when he wrote his 'Goldsmith'—as witness the big book about Landor, and this voluminous 'Dickens.' But we doubt if it will be found that his apostleship of the new creed will bring over many disciples. His 'Dickens,' of which the second volume is now published, was somewhat tedious in the first volume, although the great novelist's recent death gave it temporarily a peculiar interest, and although the early years of a distinguished man—his making up, so to speak, and his apprenticeship to the business in which he excelled—necessarily made a highly attractive theme. But in this second volume neither of these sources of interest any longer serves, and average readers of it will be inclined to think that the despised wisdom of our ancestors, which left the novelists' novels and the poets' poems to do duty as a good part of their biographies, was wisdom after all. With certain other readers the case may be different. If one has eaten mutton chops with Dickens upon the very day on which the fifth part of 'Dombey & Son' came out; or has borne him company in a salt-water bath after a consultation with him as to whether 'David Copperfield' should or should not be called 'David Mag'; or has been informed while reading, by the author's request, the proof of a chapter of 'Chuzzlewit,' that the author is "a small fortune in beer and cold punch" to the country inn where he is writing his story; or has gone over to Belgium to meet him on his return from his first tour in Italy; or has been one of a party of amateur actors of which Dickens was manager; or has stood godfather to one of Dickens's children—why then it is easily understood that one may be interested in the contents of Mr. Forster's second volume, which, whatever else there is in it, gives plenty of dates of mutton-chop eatings, and brief notes of salt-water baths, and diary-entries of the time of setting out on pedestrian tours. Not very much that is of a much higher character than these things will be found in the volume. At first sight the reason why this should be so is not apparent, and indeed we do not know that long looking for it would find it. Mr. Forster became Dickens's trusted friend at the very beginning of Dickens's literary life. Dickens went to him for advice on all topics whatsoever, literary and domestic, great and small, and followed his advice very much more, we should say, than so much good advice was ever followed before. For thirty-odd years, the two men walked together, rode together, talked together, in short, lived together in the utmost amity, intimacy, and mutual trust, and one would say that either might well have made of the other a really admirable biographer were it not that experience teaches us that even among rare things good biographers are rare. In this case, for example, much of the knowledge of Dickens that is Mr. Forster's exclusive possession the very intimacy of their relations to each other debars him from revealing. Then again this intimacy has apparently led Mr. Forster into the error of supposing that his Dickens is the Dickens about whom the public in general cares, and that it cares as much about him as Mr. Forster does, which is a natural and amiable delusion, but a delusion. And, finally, Mr. Forster, thinking that the best way of making the real Dickens known to us—thinking that for him, at least, it is the best way—has far too thoroughly lost sight of everybody but Dickens and himself, and by so doing has fallen a prey to a danger which only great skill would have enabled him to avoid, and makes everybody say as he puts down the book that it is more than half about Mr. John Forster, whose biography everybody hopes it may be long before anybody shall be called on to read.

In consequence of this series of mishaps, we have an authentic book which will be of great use to the bibliopolist who wishes to know what were the exact profits of the first three editions of the 'Christmas Carol,' and to the cyclopædia maker who wishes to know in what year Dickens first visited Italy and how many children he had. Furthermore, it will be of interest to many who wrote for *Household Words*, or who dined at Gadshill, or who otherwise were of the author's friendship or acquaintance. But we have not a book which gives us really a picture of Dickens at work and at play, though it does give us Dickens's opinions of Swiss scenery; and very numerous specimens of Dickens's letters asking Mr. Forster to go and dine with him; to meet him in Paris; to tell him what was the best name for the new periodical; to ask whether or not he should put off a dinner party for which the invitations were already out; to give an opinion as to Mrs. Gamp; to make one of an excursion party to Cornwall; to go with him to buy some graveyard ground; to instruct him or advise with him about this and that and a thousand other things which it is proper for Mr. Forster to recollect but which will weary most people in the perusal. And all this, as we imagine, because Mr. Forster overrates the importance of his subject, and in particular overrates the attractiveness of what he himself peculiarly and privately knows and is at liberty to tell. A couple of volumes of biography with an appendix of bibliography, and a couple of volumes of Dickens's best letters and other of his unpublished performances, would appear to us a far surer memorial of the man than this 'Life' of Mr. Forster's promises to be; and indisputably it would have been a much more workmanlike and enjoyable literary performance.

We find very little that is quotable, but Mr. Forster's and Mr. Dickens's skill in the reproduction of the American citizen is fairly exemplified in this passage:

"Then, in a confusion between the two rival packets for Genoa, he unwillingly detained one of them more than an hour from sailing, and only managed at last to get to her just as she was moving out of harbor. As he went up the side he saw a strange sensation among the angry travellers whom he had detained so long; heard a voice exclaim, 'I am blarmed if it ain't DICKENS!' and stood in the centre of a group of *Five Americans!* But the pleasantest part of the story is, that they were, one and all, glad to see him; that their chief man, or leader, who had met him in New York, at once introduced them all around, with the remark, 'Personally, our countrymen and you can fix it friendly, sir, I do expectuate'; and that through the stormy passage to Genoa which followed, they were excellent friends."

This last is probably explained by what follows:

"For the greater part of the time, it is true, Dickens had to keep to his cabin."

* 'The Life of Charles Dickens. Vol. II. By John Forster.' Philadelphia: J. B. Lippincott & Co. 1872.

Otherwise we may be sure that the "blarmed" Americans would have surreptitiously set him afloat amid the billows on a hencoop, without food, for ruining their country so utterly as it is well known that he did.

Another passage will be found amusing, and worth all the Swiss scene-painting put together:

"From Strassburg they went by rail on the 8th to Bâle, from which they started for Lausanne next day in three coaches, two horses to each, taking three days for the journey, its only enlivening incident being an uproar between the landlord of an inn on the road and one of the voituriers, who had libelled Boniface's establishment by complaining of the food. After various defiances on both sides, the landlord said, 'Scélérat! mécréant! je vous boaxerai!' To which the voiturier replied, 'Comment dites-vous? voulez-vous boxer? Eh? Voulez-vous? Ah! Boxez-moi, donc!'—at the same time accompanying these retorts with gestures of violent significance, which explained that this new verb-active was founded on the well-known English verb to boax, or box. If they used it once, they used it a hundred times, and goaded each other to madness with it always."

We may remark, in closing this notice, that Mr. Forster appears to think he has disposed of a charge of inaccuracy brought against his biography by Mr. George Cruikshank, who has asserted certain things in reference to 'Oliver Twist'; and, also, that he has atoned for a piece of bad manners of which he was guilty in substantially calling Dr. Shelton Mackenzie the inventor and promulgator of a lie. In this volume he is compelled to admit that Dr. Mackenzie did not invent a lie; but he seems to have forgotten that, in common decency, he owed that gentleman amends for flinging such an accusation at him. As for the Cruikshank matter, Mr. Forster does not meet the point in issue, but evades it in a fashion which is curious rather than laudable or sagacious. Cruikshank said in substance this: that he was the inventor of 'Oliver Twist'; that Dickens saw in his workroom some pictures of Sykes, Nancy, Fagin, and others of the characters in that story, which caused him to alter the story which he had then begun writing, and to alter it in such a direction that the artist, rather than the author, may be considered the originator of 'Oliver Twist' as we have it. In reply to this, Mr. Forster, some year or so ago, came out in a letter denying that Mr. Cruikshank's claim was at all to be allowed; and this was his argument: Dickens came to town on one occasion when 'Oliver Twist' was far advanced in publication, and seeing that his artist, Mr. Cruikshank, had made two plates which to Mr. Dickens seemed quite unsatisfactory, he wrote Mr. Cruikshank a note saying so, and requesting Mr. Cruikshank to set to work and make two more, which Mr. Cruikshank did. Now, says Mr. Forster, this note decides the controversy; no man who is working subordinately to an artist writes to the artist a note like that. Upon the appearance of this argument of Mr. Forster's, Mr. Cruikshank came to the front again; reiterated his assertion; made it plain as a pikestaff (always supposing that Mr. Cruikshank is a credible witness) that he was not indeed in any admissible sense the originator of 'Oliver Twist,' as we know the novel, and that he was very hasty to make such a claim; but nevertheless that it is perfectly true that he did invent a Fagin, a Sykes, and the general plan of the story (the adventures of a good boy among London thieves); and that Dickens did in fact modify his own plan, and did, to some extent, adopt Cruikshank's notion. Now, how does Mr. Forster meet this? Not, in our judgment, and so far as we know the facts, with candor; and not with cogency and conclusiveness by any means. What he does is to print a facsimile of the letter which the author wrote to the artist about the plates above mentioned, which nobody ever contended were not perfectly under his control, and which Mr. Cruikshank has since said, if we recollect right, were made in accordance with Dickens's wish and against the artist's judgment. If any one had denied the existence of Dickens's letter, Mr. Forster's action in this second volume would have been pertinent. As the case stands, however, we should say it is very like an evasion of a difficulty, or a singular misapprehension of it.

HAZEN'S SCHOOL AND ARMY IN GERMANY AND FRANCE.*

GENERAL HAZEN'S book is replete with matter of great interest and value both to the soldier and the statesman. The information it contains respecting the military and the educational institutions of North Germany and of France is as full and as detailed as can be desired. After reading it, no one will be surprised at the overwhelming defeat of the French armies in 1870. The author speaks mostly from personal observation, especially in regard to Prussia. Besides visits made by him to both countries, in which he evidently neglected no reliable source of information, during the latter part of the Franco-Prussian campaign he was at the headquarters of the Prussian forces under such auspices as to insure him all the means of informing himself that he required. If he seems to look at the country of his hosts through rose-colored glasses, his answer is, "I have written what I found to be *true*." In his comparative observations on the United States army he clearly points out certain vital defects in our own military establishment, the sad truth of which will come home to every one of our officers who has served in the field.

The book makes us clearly understand the present greatness of Prussia as a military power, by a complete exposition of her military organization and administration in all their details, and these are traced back to their first establishment by Frederic William the First, King of Prussia, father of Frederic the Great. The most important element of this military greatness is universal conscription, in which no substitutes are allowed, and which compels every youth in the kingdom, from the royal princes down to the lowest peasants, on arriving at the age of twenty, actually to serve in the regular army long enough to make him a thorough soldier, and after that for a certain time in the reserves, which, in war, are instantly brought into the field as a part of the regular forces. Thus Prussia is literally a nation of soldiers—the modern Sparta; and with Spartan hardihood the Prussians campaign without tents or blankets. This makes an enormous saving in transportation, and consequently in the cost of carrying on war, and, above all, in time, which is everything in military operations. Neither does their health suffer from the exposure, as shown by their army reports; and the army reports of our late Confederates testify to the same effect.

The present organization and field administration of the North German Army are explained to us in all their details. Each corps commander is clothed with the fullest powers for "setting his squadrons in the field," and providing for all their wants, without being hampered by the red tape of a distant central administration. This system of plenary powers, combined with a strict personal responsibility which checks their abuse, includes the regimental commanders, each of whom is virtually the paymaster, the quartermaster, and the commissary of his own regiment. One result is that the soldiers' clothing is always of the best material and well made, "shoddy" being never heard of. Besides their admirably effective system of administration, the Prussian armies are distinguished by their perfect discipline. General Hazen saw no stragglers and no drunken soldiers, and he testifies to their humane treatment of the vanquished—a sure index of superior civilization. In view of what we learn from his book as to the highly efficient administration of the Prussian forces, we are not surprised at General Hazen's statement respecting their rapid mobilization in time of war. In 1866, he says, it required only two weeks to put 600,000 men into the field; and in 1870, within four days after the signal for mobilization was given, forty trains were daily running to the Rhine, and in two weeks the whole of the great North German army was in line.

General Hazen states his opinion of the Prussian army as follows:

"If called upon to give a summary of the special characteristics which make the Prussian army pre-eminent, I should enumerate the absence of exemptions and substitutes, which secures for the army the best men, and makes service even and acceptable; a thorough knowledge of duty; general education of soldiers and officers; high character of non-commissioned officers; an effective system of keeping the ranks full; superior training, and careful selection for merit alone of the higher staff; a decentralized administration; impartial justice; the certainty of recognition and reward for enterprise and industry, and intolerance of sloth and indolence; a strict but not harsh discipline throughout all grades, and a rigid economy in all things."

A full account is given both of the military and the civil schools in France and in Prussia. The exposition of the condition of education in these countries shows France to be vastly inferior in this respect to Prussia. In fact, the chief difference between the two peoples is in those essential elements of civilization—education, intelligence, and morality. In Prussia education is compulsory upon all, and in all the schools religious teachings are blended with the regular instruction. In France, on the other hand, school attendance is not compulsory; the peasantry, who number 25,000,000 of the nation, are grossly ignorant and stupid; and of the entire population, as shown by official reports, only one third can read and write.

Then, as to the French army, of which and of its tactics General Hazen gives us the history and present condition, it is evidently greatly inferior to the Prussian army, both in composition and efficiency. Though conscription has been draining France of her very life-blood from the beginning of the century, it has failed to make of the French a nation of soldiers, from being coupled with the vicious system of substitutes; the necessary result of which is to keep nearly all the worth and intelligence of the nation out of the army. And the infantry, the great and decisive arm of the service, is the mere dregs of the recruitment, being only what remains after all the best and most intelligent men have been taken out to fill up the numerous *corps d'élite*. Its sad want of discipline has been publicly lamented by its

* 'The School and the Army in Germany and France, with a Diary of Siege Life at Versailles. By Bvt. Maj.-Gen. W. B. Hazen, U.S.A., Colonel Sixth Infantry.' New York: Harper & Bros. 1872.

best officers; and the loose and partisan habits of warfare acquired in its African experiences have unfitted it for success in grand operations on the field.

Nevertheless, the desperate valor often shown by the French troops against great odds—for they were everywhere outnumbered by the Prussians in the field—proves that they have by no means lost their fighting qualities. This leaves, to our mind, no theory but that of the most astounding incompetency of their commanders to account for the fact that, not to speak of the surrender of 200,000 men at Metz, an army of 400,000 Frenchmen, including 30,000 cavalry—a force amply sufficient if properly used to decide the war—were shut up in Paris, where they could do nothing but use up the supplies, and thus make the surrender of the city a fact sure to be accomplished.

THE MAGAZINES FOR JANUARY.

THE January magazines are not as full of Christmas as usual, but otherwise they are not particularly noticeable. The *Galaxy* has a very readable article by Mr. Justin McCarthy, who cleverly reviews the career of Earl Russell, and comes to conclusions not different from those to which the historical record of "Lord John" long since brought everybody. An historical record it has to be called, however much too dignified the term may seem when one thinks of Earl Russell's character and of his personal achievements; for whether or not the reality of greatness was his, the rôle of greatness, at least, was thrust upon him in a way which makes him the very spoiled child of English politics. Mr. De Forest's "Wetherel Affair" proceeds to the eighth chapter in this month's instalment, and continues interesting; Mrs. Edwards gives three chapters of a new story, which promises well; Mr. Anthony Trollope's very long-drawn "Eustace Diamonds" comes to an end; Mr. Richard Grant White argues with his accustomed intelligence and instructiveness, and with his accustomed warmth, against several sorts of sins in speech; Mr. John Durand has a second article on "French Scenes, Customs, and Characters," and sets the writers who deal with such subjects the good example of not being absolutely omniscient in his knowledge of the foreigner; Lady Blanche Murphy begins a serial piece of chatty personal reminiscence entitled "Wanderings," in which she will talk about various people whom she has met and various sights she has seen; Mr. Philip Quilibet discourses on the good resolutions of the New Year's season, the demagogism of the Labor Reform men, and the disastrous failure of the velocipede to take the place of the distempered horse; there is some poetry by Mr. Charles Carroll and Mr. William Winter, and the other articles are of the usual good quality.

The *Atlantic* begins the new volume with an article which has much freshness, and to which most magazine readers will give a hearty welcome. It is the beginning of an autobiography of Mr. Robert Dale Owen, and is in several ways very pleasant reading. Very much more pleasant than the kind of writing to which Mrs. Harding Davis has accustomed us is her "Faded Leaf of History," which narrates a little vaguely, but still with effectiveness, the story of some white people who wandered among our Indians some two hundred years ago. Mr. Howells, reintroducing some of the characters who made their first appearance in 'Our Wedding Journey,' begins a story which will be watched with interest as being, if we are not mistaken, his maiden effort in novel-writing; Caroline Chesebro, one of our most conscientious, thoughtful, and uncommonplace of story-writers, but who is apt to exhibit life as a thing a little too hard and unjoyful to be endurable, writes a characteristic tale called "Barbara's Duty"; "The Kitchen Common Sense," by Mr. J. E. Babson, talks agreeably of the days when the stove began to supplant the hearth and the brick oven as an engine of cookery and housewifery; Mr. Parton is as vivacious and ready as usual in his account of Washington's first cabinet, its difficulties and labors; Dr. Holmes has some verses about the great fire of November last; there is other poetry by Miss Lucy Larcom, Mrs. Celia Thaxter, Mr. Marshall Oliver—a new man and a good one—Mr. Paul Hayne, and Mr. T. B. Aldrich—Mr. Aldrich's being perhaps the most striking, but all being rather better than is common; there is an article from Mrs. Agassiz, who was with the *Hassler* expedition; and there is the usual amount of criticism—musical, literary, scientific, political, and artistic. The political critic has something to say about the relations of this country to England—"A Better Understanding with England, and the Use of It"—which seems to us well judged and likely to be of service both at home and abroad.

Scribner's Monthly certainly merits its second title of "an illustrated magazine for the people," for it is very well illustrated, and its table of contents is excellently adapted for people in general. "New Ways in the Old Dominion" is the opening article—continued from December—and it is an article capable of astonishing those of us in whose minds remains the image of the old South—the South of the days before the war and before emancipation. The subject is a new railroad which is opening up a vast range of country in Virginia, and is to connect that State with the West, and the writer and artist deal with their theme very attractively. It is curious to note that Washington, who a hundred and odd years ago was practising his profession of surveying in this region, marked for his own some of the lands which are to-day most valuable for their coal and other minerals.

The article which we have found most readable in the January *Scribner's* is one by Mr. Philip Hamerton, who prints a letter which he some time since wrote to a friend who announced that he had given up reading the newspapers. Mr. Hamerton replied to this announcement by discussing the good and the bad of newspaper reading, and decided that while much might be said on each side of the question, it was, on the whole, better to read than to refrain. It is rather idle, to be sure, to be seeking reasons pro and con as regards a matter which settles itself, but what Mr. Hamerton says may be read with profit. A remark that he makes about books is worthy of consideration by those numerous people to whom—

> "A book's a book though there is nothing in 't,"

and a thing to be venerated. So, too, is a remark about "standard authors." "The writers of Queen Anne's time," says Mr. Hamerton, "could educate an Englishman of Queen Anne's time, but they can only partially educate an Englishman of Queen Victoria's time." This is no complete answer to the view which Mr. Hamerton is combating, and which is suggested in the question of Mr. Emerson's which Mr. Hamerton quotes: "Suppose you should transfer the amount of your reading day by day from the newspapers to the standard authors?" But though it is not complete nor an exhaustive and conclusive discussion of the subject, it nevertheless has a truth in it which should be pondered. We suppose a clear gain is made when it is perceived that the books are extremely few which need be taken as final in regard to their subject, and that authors are, as a rule, human beings, and human beings who would be all the better for knowing more, and thinking more justly, and feeling more acutely and truly than most of them can be said to do.

The contributors' list of *Scribner's* is this month abnormally rich in well-known names—or normally rich, we may say, if we bethink ourselves of the January devices of publishers. Its poetry is by Mr. William Morris, Mr. George Macdonald, Mr. C. S. Calverley, Mr. Bret Harte, Miss Christina Rossetti, and Mr. Bryant. Mr. Bryant's piece is a translation from the French. Of the rest, nothing is of any particular importance, except Mr. Calverley's "Cuckoo," which indeed is itself not of any particular importance perhaps, but it is in its author's own excellent vein, and is entirely enjoyable. We mention hastily as among the other contributors to *Scribner's Monthly* Col. T. W. Higginson, Dr. Holland, Miss Charlotte F. Bates, Mr. Edward King (who is now travelling in the South in the interest of the magazine), Mr. E. C. Stedman, Mr. Edward Eggleston, Mr. C. D. Warner, and Mr. Augustus Hoppin. This, it will be seen, is a very good list of names for a magazine to show, and if the work to which the names are attached is not in all cases of the quality which the best friends of the ladies and gentlemen in question might desire or expect, why, that is another matter. Colonel Higginson's essay is perhaps as good as any of its companions. It recommends "intercollegiate scholarships." That is to say, Colonel Higginson would have undergraduates of various colleges compete for a sum of money, which the winner should afterwards use for his support at any college of his choice in this country or in Europe. We do not know why the plan would not be a good enough one, though exactly what benefit, and how much, would be derived from it, we do not clearly see. Colonel Higginson's object, we think, would not be ours. In his opinion, the winning of an intercollegiate scholarship would secure for the winner so much credit and honor that he would be fully on a level with the winner in an intercollegiate regatta. As things now stand, the boating man is in the ascendant, Colonel Higginson thinks; muscles overbear minds; physical prowess is honored to the prejudice of mental ability and scholastic acquirements and literary skill. This is a view commonly urged, and against which it is unusual to hear anything said, but, as we suppose, it is an entirely false view. A crowd of healthy young men collected at one of our places of learning will of course have a healthy admiration for physical strength; they will also rejoice greatly in the young fellows who, on any conspicuous theatre, set their college ahead of other colleges. But so far as we know, the most admired type of man in our undergraduate communities is not the athlete and the stroke oar in the university boat; it is, on the contrary, the man of mental ability, the man of attainments and of literary skill or aptitude. We have even been in the habit of thinking that this type is very unduly exalted.

In *Lippincott's* we have Miss Chesebro again, who begins a novel called

"Probationer Leonhard." "A Visit to the King of Aurora" describes a singular German colony established near Portland in Oregon; "My Charge on the Life Guards" chronicles the discomfiture of many Britishers by a sharp Yankee; Mr. Reginald Wynford writes of Dublin in a way to make a New Yorker eager to emigrate to that cheap and well-governed land of plenty; "The Southern Planter," by Mr. W. W. Harney, is a fairly good sketch of one variety of a much misunderstood character; there is some good book-noticing and other matter in quality and quantity as of old—the distinctive flavor of *Lippincott's*, which has always contrived to be good in a way of its own, being as well preserved as ever.

Harper's does a good deal of the regulation Christmas business of all varieties, and will please the recondite reader who likes to be informed, at this time of the year, that the boar's head was a favorite Christmas dish, and will equally please the kind-hearted reader who loves to see the regeneration of the Mr. Scrooges whose hearts, in this frosty season of goodwill, melt down into turkeys and sausages for the poor and needy person whom at other times Mr. Scrooge browbeats, and oppresses, and charges great sums for rent. A reader who will not be so well satisfied is the reader who reads the "Christmas Carol," at the same time knowing the late Dr. John Mason Neale's "Christmas Carol," and being desirous of that author's getting due credit for what good things he did. For the rest, "The Sailor's Snug Harbor" describes a New York institution, and should be read by New Yorkers; Miss Thackeray's "Old Kensington" goes on; so does Mr. Charles Reade's novel and Mr. Wilkie Collins's; the "Recollections of an Old Stager" revive for us the duelling days of "the giants," who used to make of Congress a bear-garden, and once in so often disgraced us all and made us all ridiculous as well as contemptible by their chivalrous performances; Mr. Curtis resuscitates his agreeable Sassafras Club, of which too little has been heard of late; some one writes well enough about the British Museum's Reading Room; and there are several other articles.

Savings-Banks Life Insurance. By Elizur Wright. (Boston.)—Whatever emanates from the pen of this veteran advocate of life insurance is worthy the careful attention of every one engaged in the business of insuring lives, a business in which perhaps five millions of the people of this country are interested as prospective beneficiaries under policies now in force. Mr. Wright undertakes to analyze each class of endowment policies—life policies being regarded as endowments payable at death or 100, the age beyond which it is unscientific for anybody to live. He points out the distinction between "Insurance," or that portion of the contract which more directly concerns the company, and "Self-insurance," or that which directly concerns the individual policy-holder; the former showing the company's actual risk, the latter the amount by which each person insures himself, and which is treated as a savings-bank deposit, to be withdrawn at the option of the depositor, the company making a small "surrender charge" to compensate them for procuring a new insurant to fill the vacancy created by the retiring member.

The *principles* on which these savings-bank life insurance tables are based are regarded as correct by our best actuarial authorities; but whether the assumed "margin" for expenses is liberal enough to attract the soliciting agent, without whose intervention little or no business has yet been obtained —whether agents and clerks can carry into practice the somewhat complicated system of commissions proposed — and whether the "surrender charges" are sufficient to effect the end desired, are all questions which will in time be determined by those having the requisite practical knowledge.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Abbott (J. S. C.), Miles Standish, the Puritan Captain	(Dodd & Mead)
Almanach de Gotha, 1873	(L. W. Schmidt) $2 25
" "	(F. W. Christern)
Calderwood (Rev. H.), Handbook of Moral Philosophy	(Macmillan & Co.) 2 00
Carey (H. C.), The Unity of Law	(H. C. Baird)
Collier (W. F.), Great Events of History	(J. W. Schermerhorn & Co.)
Hickling (W.), The Rector of Roxburgh	(E. P. Dutton & Co.)
Hudson (F.), Journalism in the United States, 1690–1872	(Harper & Bros.)
Jenkins (E.), Little Hodge	(Dodd & Mead) 1 25
Lightfoot (Rev. J. B.), Revision of the English Version of the New Testament	(Harper & Bros.)
Methodist Almanac for 1873, 8wd	(Nelson & Phillips)
Murray (Prof. D.), Manual of Land Surveying, with Tables	(J.W. Schermerhorn & Co.)
Porter (Rev. G. P.), From Atheism to Christianity	(Nelson & Phillips)
Reade (C.), The Wandering Heir	(J. R. Osgood & Co.)

WE WILL SEND THE WEEK

For one year, with any one of the following works at the prices annexed, and to Teachers or Clergymen for $1 less in each instance.

THE FORTNIGHTLY REVIEW (the English sheets of which we have made arrangements to republish in America at Six Dollars a Year, or Fifty Cents a Number), for $9.

TAINE'S ENGLISH LITERATURE. 2 vols. Retail price, $7 50; both for $7 75.

DANA'S CORALS AND CORAL ISLANDS. Retail price, $6; both for $7.

ANDREWS'S LATIN LEXICON. Retail price, $6; both for $7 75.

LIDDELL & SCOTT'S GREEK LEXICON. Retail price, $6; both for $7 75.

☞ Remittances by P. O. order, draft, or registered letter, should in all cases accompany the subscription.

For free specimen copy of *THE WEEK*, address

HOLT & WILLIAMS, Publishers,

25 Bond Street, New York.

VALUABLE BOOKS FOR PRACTICAL MEN.

DICTIONARY OF MANUFACTURES, Mining, Machinery, and the Industrial Arts. By George Dodd. 12mo, cloth, $2.

NUGENT ON OPTICS; or, Light and Sight Theoretically and Practically Treated. 1 vol. 12mo, cloth, $2.

BAUERMAN ON THE METALLURGY of Iron; containing the History of Iron Manufacture, Methods of Assay and Analysis of Iron Ores, Processes of Manufacture of Iron and Steel, etc., with Hewitt's Report on the Martin Process for making Steel. Illustrated. 12mo, cloth, $2 50.

D. VAN NOSTRAND, Publisher,

23 Murray Street and 27 Warren Street, New York.

Copies sent free by mail on receipt of price.

My Catalogue of American and Foreign Scientific Books, 64 pages 8vo, sent on receipt of 10 cts.

SEVERAL VALUABLE BOOKS RECENTLY PUBLISHED.

MEMOIRS OF BARON STOCKMAR. By his son, Baron E. von Stockmar. Translated from the German by G. A. M. Edited by F Max Müller. In 2 vols. crown 8vo, $8. Baron Stockmar was one of the most important historical personages of the last generation. He was the private adviser and counsellor of many of the crowned heads of Europe, more especially Prince Albert and Queen Victoria. These Memoirs, compiled by his son from the Baron's own papers, presented for the first time to the public many curious historical documents, and an inexhaustible fund of fact and gossip pertaining to English and Continental Courts.

STONEHENGE ON THE DOG. The Dog in Health and Disease. Comprising the various modes of Breaking and Using him for Hunting, Coursing, Shooting, etc., and including the points and characteristics of Fox Dogs. By Stonehenge, author of 'The Greyhound,' etc. 1 vol. 8vo (in press.)

UNDERWOOD'S AMERICAN AUTHORS.

HAND-BOOK OF ENGLISH LITERATURE (American Authors). By Francis H. Underwood, A.M. Crown 8vo, cloth, $2 50; half-calf or half-morocco, $4 50.

H. UNDERWOOD'S BRITISH AUTHORS.

HAND-BOOK OF ENGLISH LITERATURE (British Authors). By Francis H. Underwood, A.M. Crown 8vo, cloth, $2 50; half-calf or half-morocco $4 50.

"The general fitness of this compiler for the task to which he has set himself is shown in almost every page, in the character of his selections, and not less in his introductory statement of the historical aspects of the subject, and his estimate of the forces operating to develop literature especially in the United States. He has made the work more than a hand-book for our high schools—he has made it a generally readable and attractive work for everybody, which is well adapted to awake popular interest, and to serve as a pleasant introduction to the richest and most various literature of any language." —*Hartford Times.*

BY WOODWARD AND CATES.

ENCYCLOPÆDIA OF CHRONOLOGY, Historical and Biographical. Comprising the Dates of all the great Events of History, including Treaties, Alliances, Wars, Battles, etc.; Incidents in the Lives of Eminent Men and Works, Scientific and Geographical Discoveries, Mechanical Inventions, and Social, Domestic, and Economical Improvements. By B. B. Woodward, B.A., late Librarian to Queen Victoria, and W. L. R. Cates, editor of 'The Dictionary of General Biography.' One thick volume, crown 8vo, of 1,496 pages, 3,000 cols. brevier. Cloth, $15; sheep, $18.

Sold by all Booksellers and News-dealers.

LEE & SHEPARD, Publishers, Boston.

LEE, SHEPARD & DILLINGHAM, New York.

POTT, YOUNG & CO.'S PUBLICATIONS.

EMMANUEL; or, The Incarnation of the Son of God the Foundation of Immutable Truth. By the Rev. M. F. Sadler, M.A. 8vo, cloth, $3.

CHURCH DOCTRINE — BIBLE TRUTH. By the Rev. M. F. Sadler. 12mo, cloth, $1 50.

THE CHURCH TEACHER'S MANUAL OF CHRISTIAN INSTRUCTION. Being the Church Catechism expanded and explained in Question and Answer. For the use of Clergymen, Parents, and Teachers. By the Rev. M. F. Sadler. 18mo, cloth, $1.

LECTURES ON THE RE-UNION OF THE CHURCHES. By John J. Von Döllinger, D.D. Translated, with Preface, by Henry Nutcombe Oxenham, M.A. 12mo, cloth, $1 50.

INDEX CANONUM. Containing the Canons called Apostolical, the Canons of the undisputed General Councils, and the Canons of the Provincial Councils of Ancyra, Neo-Cæsarea, Gangra, Antioch, and Laodicea, in Greek and English. Together with a complete Digest of the whole code of Canon Law in the undivided Primitive Church, alphabetically arranged. By John Fulton, D.D. 8vo, cloth, $4

LECTURES ON THE TWO ESTATES: That of the Wedded in the Lord, and that of the Single for the Kingdom of Heaven's Sake. By the Rev. Morgan Dix, S.T.D., Rector of Trinity Church, N. Y. 12mo, paper cover, 50 cts.; or cloth, bevelled boards, $1 25.

THE WEEK IN TRADE AND FINANCE.

January 7.

THE money market since our last has shown a continued stringency, and during the week borrowers have been compelled to pay the monstrous rates that prevailed through the month of December. The rates of interest upon call loans have ruled all the way from 7 per cent. per annum to ¼ per cent. per diem. These halcyon days for lenders, (including, by the way, a great number of the solid men of the Street), who bravely defy the pains and penalties of the usury laws, are about over, and in all probability we shall hear no more about "tight money" until April next, when large amounts of currency will be sent away to the interior. The repeal of the obnoxious usury law is demanded by nearly all business men with whom we have come in contact, and the cry of "free trade" in money is general. From all that we hear it is not improbable that a determined movement will be made in the approaching session of the Legislature for the repeal of the law prohibiting owners of property in the shape of money from disposing of it as they see fit. The chief opposition to the repeal of the law will come from members who represent interior districts of the State, where farmers dread the possibility of having to pay over 7 per cent. for money borrowed upon mortgages on their farms. As the law now stands, the large moneyed institutions, in order to make interest upon the money owned by or left with them on deposit, gladly loan it out "on time" to parties in Wall Street at the outside legal rate, knowing that during the dull summer months they can obtain but 3 or 4 per cent., and that they are prohibited by law from taking more than 7 per cent. in the fall, when money is always more or less stringent. This places a large amount of money in the hands of Wall-Street people, who, when the pinch comes, are sure to squeeze out of borrowers all they can get, and succeed, day after day, and week after week, in obtaining the rates we have quoted as having been paid during the last thirty days.

It seems to us that if the usury law was repealed, capitalists and moneyed institutions would always keep their money "in hand," knowing that they could profit by the increased rates of interest occasioned by any great demand, and make up for the low rates they may have to accept during a time of ease by loaning upon such terms as would make a fair average rate of interest upon their money for the year. This, at least, would certainly tend to keep rates down to something like a reasonable limit.

At the close of the week the disbursements of the various corporations, in the shape of dividends and interest, which are variously estimated in this city alone at from $60,000,000 to $75,000,000, have already begun to be felt in the increased supply of loanable funds in the Street, on Saturday the highest rate for money being $\frac{1}{16}$ per diem, which was paid very early in the day, and from which point there was a gradual decline until the afternoon, when it was freely offered at four and five per cent.

The weekly bank statement is again favorable, and indicates an easier working of the money market; the gain in legal tenders is small, but the Government disbursements of gold interest have contributed about two and a quarter millions to the bank reserve. The following is the statement in detail, compared with that of last week:

	Dec. 28.	Jan. 4.	Differences.
Specie	$17,241,800	$19,478,100	Inc. $2,236,300
Legal tenders	41,119,600	41,165,400	Inc. 45,800
Total reserve	$58,361,400	$60,643,500	Inc. $2,282,100
Circulation	$27,573,000	$27,613,800	Inc. $40,800
Deposits	198,529,600	203,808,100	Inc. 5,278,500
Total liabilities	$226,102,600	$231,421,900	Inc. $5,319,300
25 per cent. reserve	56,525,650	57,855,475	
Excess over legal reserve	1,835,750	2,788,025	952,275

The above statement shows that the banks now hold in excess of the legal reserve $2,788,025, against $1,835,750 last week, a gain of $952,275.

Considerably less than half the average amount of business has been transacted at the Stock Exchange during the week, owing to the occurrence of a holiday, and it is denominated in Wall Street parlance a "broken week."

The features of the market have been Central and Hudson, Erie, Lake Shore, Pacific Mail, and Western Union Telegraph. The speculation in Pacific Mail, in which a prominent officer of the company is represented as being interested in favor of a decline in the price, received an unexpected impetus in its downward tendency by the report of the disabling at sea of another steamer, which caused a decline to 72¾ on Tuesday from 75¾, the price on Monday. The recovery of the price to 74¾ at the close of the week would indicate that the large operators were purchasers at the decline. Nearly 170,000 shares are recorded as having changed hands during the week, which was the largest amount of business transacted in any one stock. Next in point of dealing has been Erie, and its price is higher, in sympathy with the higher quotations of the London market. Central and Hudson has been active, and the advanced price of last week has been well sustained; the oft-repeated report is afloat that the company will increase its capital stock from $89,423,330 to $100,000,000, by issuing new stock to the stockholders at a low price, the proceeds to be expended in increasing the capacity of the road, by giving it four tracks. The speculation in Western Union Telegraph has not made material headway, and, at the close, the price is at its lowest point for the week. On Saturday, after the publication of the favorable bank statement, the general market, from some unaccountable reason, became weak, and prices receded from 1 to 1½ per cent. on the more active stocks from the highest prices of the day. Owing to the declaration of the usual 4 per cent. dividend, about which some doubts had been current, the price of Lake Shore remained firm in the face of the decline in the general market.

The Michigan Central Railroad Company has declared a dividend of 4 per cent. in stock in place of the usual 5 per cent. semi-annual cash dividend which its stockholders have been for years in the habit of receiving. The road has been in great need of repairs and improvements, and the earning for the last six months will probably be expended in that way.

The Chicago, Burlington, and Quincy Railroad Company has lately leased the Burlington and Missouri River Railroad in perpetuity. The lease took effect on the 1st of January. The agreement provides that as soon as a satisfactory and certain construction can be placed upon the laws of Illinois and Iowa relating to the consolidation of railroad companies, either by legal decision or legislative action, there shall be effected a complete consolidation of the two companies. In the meantime, the Chicago, Burlington, and Quincy Railroad Company agrees to pay to the stockholders of the Burlington and Missouri River Railroad Company the same dividend it pays to its own. At the time that the directors of the two companies proposed to their respective stockholders the above lease, and ultimate consolidation, the directors of the Chicago, Burlington and Quincy Railroad Company declared a dividend of 25 per cent. in the form of 7 per cent. bonds of the Company, dependent upon the vote of the stockholders of both companies in favor of the lease. This dividend was made for the purpose of equalizing the value of the two stocks and also of dividing the surplus of the Chicago, Burlington, and Quincy, which amounted to over $3,500,000.

Government bonds have been firm, and on Saturday prices were somewhat higher than at the close of last week. Should no important change take place in the gold market, it is probable that the usual demand from corporations, and from other investors, will impart firmness to the market during the present month, and carry prices higher. The Treasury programme for January includes a purchase of $1,000,000 bonds for the sinking fund on each Wednesday, making $5,000,000 bonds to be purchased during the month. It is to be hoped that the Treasury will meet with more success in the amount of its purchases than it did last month, when less than $1,000,000 bonds were obtained altogether.

A very limited amount of business has been transacted in State bonds. The interesting announcement (to holders) is made that the interest upon the bonds of the State of Louisiana, due January 1, will not be paid, owing to the want of funds, caused by the non-collection of taxes. Several of the counties in Missouri have also defaulted in the payment of the interest on their bonds, due at the same time.

The demand for railroad bonds has been fair, considering the extreme dulness of the week. The principal transactions have been in the bonds of the Union Pacific, and Boston, Hartford, and Erie railroad companies. The price of the latter has advanced from 42½ to 45, on a report, which set Boston parties to buying, that further aid was to be extended to the road by the State of Massachusetts.

The tendency of the gold market has been slightly downward, the highest sales of the week having been at 112⅛, and the lowest at 111⅝. There is said to be at present no strong party or clique in the market interested in keeping up the price, and the impression seems to prevail that the importations for the next six months will be light; consequently, a very small amount of specie will be required for shipment. The professional operators look for lower prices, and if the market could be left free from all speculative influences the premium would undoubtedly decline. The Treasury will sell $1,000,000 gold on each Thursday of the month of January, making $5,000,000 to be sold during the month.

The Nation.

NEW YORK, THURSDAY, JANUARY 16, 1873.

The Week.

MR. FISH'S despatch on the colonial policy of Spain has been made public, and furnishes the most prominent political topic of the week. It is decidedly the most menacing document which has issued from the State Department during General Grant's administration. It is dated October 29, 1872, and begins by reproaching the Spanish Government for not executing the emancipation law in Cuba and Porto Rico; declares that the freedmen in this country naturally and properly sympathize with their brethren held in bondage in the Spanish islands; maintains that, although a majority of the Spanish people are opposed to the independence of Cuba, the Cuban slaveholders have been allowed to prevent the execution of the emancipation laws, and argues that this, if permitted to continue, will prove the inability of Spain to control the island; shows that the insurrection in Cuba has lasted four years, and cost 100,000 lives, and that the strain which this and the nearness of the island impose on our vigilance in the enforcement of the neutrality laws, is something which cannot be borne indefinitely; hints that if the struggle is not brought to a close speedily, this Government may be forced to "consider the question whether duty to itself and to the commercial interests of its citizens may not demand some change in the line of action which has been thus far pursued"; expresses the opinion that the war is protracted in some degree through the influence of contractors and other persons who make money out of hostilities; reproaches the Spanish Government with the failure to fulfil its promises of municipal reform in the island, and with the maintenance of the odious distinctions of the old colonial system between the Creoles and the Spaniards; complains of the non-payment of compensation to American citizens whose property on the island has been damaged, or wrongfully confiscated, during the rebellion. The despatch, which is very severe—in parts almost bitter—in its language, concludes by imposing on Mr. Sickles the apparently difficult if not impossible task of making its contents known to the Spanish Government "without giving offence," and threatening that if its remonstrances are not heeded Spain may look for a "marked change in the feeling and in the temper of the people and of the Government of the United States." It appears, however, that Spain has taken the matter in perfectly good part.

Mr. Oakes Ames has been cross-examined before the committee on the subject of his dealings with the Crédit Mobilier stock, and from his answers we get a clearer account of what happened than from his direct examination; and this is what it seems to be: He came to the conclusion that it would be advisable in the interest of the road to have the stock of the Crédit Mobilier distributed as widely as possible among members of Congress, and for this purpose he obtained an allotment of 375 shares from the company, which he paid for with his own money, but they were transferred to him and one other person, his own clerk, "in trust," though why in trust he could not say, and these shares he "assigned" to various members of Congress. By "assigned" he meant planned in his own mind to give them, not with the idea of corrupting them, but with the view of "having enough people interested in the affairs of the road to look into them." Unfortunately, Mr. Ames says he was not in the habit of keeping memoranda or books until lately, and he frequently complains of the badness of his memory. To those to whom he gave the stock he paid all the dividends accruing before November, 1868. For instance, he "presumes" he paid them a dividend of 80 per cent. in Union Pacific bonds in January, 1868, and the same day a dividend of 100 per cent. stock; and "his impression is" that he paid them in July 75 per cent. Union Pacific stock, and, on the same day, 75 per cent. of Union Pacific bonds; that in September he paid them 100 per cent. in Union Pacific stock, and, the same day, 75 per cent. of bonds—in all, 425 per cent. in a single year, which made the original investment a very nice little thing. But it seems to have been even better than this, for the total amount of the dividends paid to the holders of the Crédit Mobilier stock between April, 1866, and December, 1868, was 715 per cent. in Union Pacific stock, 730 in first mortgage bonds, and 60 per cent. in cash—or 1,505 per cent. in all.

The question of most interest to the public is, what members of Congress received their dividends, and what members, having received them, gave them back. Mr. Ames thinks that all who paid for their stock received these dividends up to December, 1868, and these were Messrs. Patterson, Bingham, Wilson, Colfax, and Scofield—a part only; Kelley and Garfield never paid for the stock, and therefore got no dividends. It ought to be added that these dividends to the Crédit Mobilier Company were in part compensation for building the road. The actual cost of construction was $36,221,000, while the sum paid was about $69,000,000, and under the influence of the operation the Crédit Mobilier stock rose from below par to 225. But it is maintained by Mr. Ames and his friends, and, we believe, is not contradicted, that it was only by such an arrangement as this—that is, the receipt of the profits of construction by the shareholders—that the enterprise could ever have been carried out under the charter. The charter required that the stock of $100,000,000 should not be sold below par, so that an investment of $51,000,000 would be required to control the road. To get over this, the Crédit Mobilier was founded and composed of the chief holders of the Union Pacific stock, who then made highly advantageous contracts with themselves, and divided the Union Pacific stock and bonds in payment on these contracts.

Mr. Boutwell and Mr. Richardson have both been before the Finance Committee of the Senate, trying to persuade that body that they have the right under the law to re-issue the $44,000,000 of greenbacks, but the Committee was not convinced. On the contrary, it has made a report reviewing the acts of Congress in relation to the currency, and, while acquitting the Secretary of the Treasury and his assistant of improper motives, it condemns their late action in the most emphatic manner as unwarranted by law, "resting upon a doubtful construction of words," and a "bad precedent." With this conclusion we believe there will be an almost unanimous agreement. We now need more than anything else greater certainty in finance; the great objection to all paper money, no matter how well managed, is the uncertainty about its value, and this uncertainty is of course considerably increased if the power of expanding and contracting its volume is given to a single man. We have no doubt whatever that Mr. Boutwell is the first person, not of royal blood, who has within two centuries publicly claimed this power within the limits of Christendom. "Such a power," in the forcible language of the report, "if given would be by clear and unambiguous language, and should not be inferred by subtle reasoning or depend upon the pressure of interested parties, or changing views of public policy."

It appears from the investigation now going on that a good many of the prominent politicians of Kansas are doing some very pretty perjuring, or else that a good many other prominent politicians and legislators of Kansas have been purchased by Mr. Caldwell, one of the Senators, at prices—for low-toned ones—ranging between eight hundred and twenty-five hundred or five thousand dollars. High-toned ones, who came out like men and would not take a bribe, and

intimated as much to Caldwell's agent, furthermore said that they had been at some expense in order to secure their seats, and that if Caldwell would give them the money to defray such charges, why they would vote for him—or words to that effect—we suppose may have cost about as much, one with another, as the low-toned ones. If a man goes to the legislature "on the make," he expects to have several opportunities in the course of the winter, and to use them, and can afford to be bought a little cheaper at each single time than the man who decides on selling out but once; but, on the other hand, he is apt to think each time that he can't afford it. It is a pleasing spectacle as it stands, and one can only fall back on the hope that, after all, perhaps a majority of the members, even of a Kansas Legislature, are unbribable; and that of the others there are some who have been rather indifferent about getting up their ethics. Besides, "the boys must have something," as one of our New York Commissioners of the Board of Charities and Correction used to say.

In his message to the Legislature, Governor Dix recommends that the practice of voting sums for various objects "greatly in excess of the current revenues" be given up, and the rule be adopted that no appropriation be made without simultaneous provision of the means of payment. For this purpose he advises the passage of a general law requiring the Controller, "whenever in any year an appropriation by the Legislature shall exceed the amount of the revenue applicable to it, to provide for such deficiency by adding it to the tax levy." The Governor declares himself in favor of paying debts in hard money; suggests that the securities in which savings-banks may invest be prescribed by law, and that any investment in violation of such a law be made a misdemeanor; announces it as his intention to keep the militia organization effective; advises the retention of the canals in the hands of the State, and the employment of steam on them; suggests the funding the State debt at 5 per cent.; advises the Constitutional Commission, now in session, to prohibit special legislation as far as possible, and to make suitable provision for the payment of legislators; recommends that aliens be enabled to hold real estate; recommends the repeal of the usury laws, if not entirely, at least so far as to cover all ordinary commercial loans in which real estate is not mortgaged. He calls the attention of the Legislature to the reports of the Tax Commission and to the inequity and absurdity of the tax on mortgages of real estate. This tax, the disabilities imposed on aliens, and the usury laws, are among the chief causes, the Governor thinks, of the recent rapid growth of wealth and population in Massachusetts, Connecticut, Rhode Island, New Jersey, and Pennsylvania, as compared with that of New York.

With regard to the city, the Governor wishes the Mayor to have full power of removal and appointment of municipal officers; he thinks that cumulative voting ought to be adopted, in order that the minority may be "sure of a representation to detect, resist, and expose abuse"; recommends a new board, to consist of the New York Board of Fire Underwriters, the Commissioners of the Fire Department, and (possibly) the American Institute of Architects, which shall have a final voice as to all modifications of building laws. He also announces his intention of recommending to the Senate six honest and capable harbor-masters, to take the places of the sharks who now hold these positions. He refers to the alarming increase of crime, and the delays in carrying sentences into execution through the interposition of legal technicalities. "In framing our system of criminal jurisprudence, the merciful purpose of protecting the innocent from unjust conviction was kept chiefly in view. It is worthy of consideration whether, in carrying out this purpose, we may not have created impediments to the punishment of the guilty, and given a rein to crime through its impunity." He very truly observes that "the duty of securing property from depredation and life from felonious assault . . . connects itself closely with the durability of our political system; for if the machinery of the law proves inadequate to effect the fundamental purposes of government, it will soon be made to give way to the arm of force." The message is throughout moderate and thoroughly sensible.

There are several things which should make all decent people hesitate long about giving serious attention to Custom-house charges of "fraud" against merchants of high standing: (1) The notorious intricacy of the revenue laws; (2) The character of our Custom-house officials, the chief of whom are politicians, engaged above all else in "serving the party," and getting money for it; (3) The fact that a charge of fraud, if successful, entails the forfeiture of the whole value of the goods described in the invoice in which the alleged fraud is discovered; (4) The enormous reward offered for the prosecution of such charges in the division of the spoil—viz., two per cent. to the District Attorney, one-half to the Government, and one-quarter to the informer, and an equal division of what is left between the collector, naval officer, and surveyor; (5) The outrageous power lodged in the hands of the Custom-house of seizing a merchant's books and papers, and stopping his business for an indefinite period, and damaging his character, *on mere suspicion*. This last instrument of oppression and extortion, which is really exercised by a worthless band of "detectives" whom nobody would let into his house for one hour if he could help it, furnishes the explanation of the readiness of merchants to pay enormous sums by way of "compromise" the minute a charge is brought against them, anything being preferable to the summary suspension of their business. We may add that the apathy with which the public witnesses the subjection of the commercial community to this system is, in our opinion, one of the worst political signs of the times.

We say all this apropos of the case of Messrs. Phelps, Dodge & Co., which is now exciting a good deal of attention. This house has been charged with making fraudulent invoices by a thievish clerk, who is now awaiting trial for breaking into their office at night, stealing their business secrets, and selling them to rivals in the trade. He has, by way of intimidation, made charges which are undergoing investigation, and which we believe are easily explicable; but they are no sooner made than many newspapers of the country begin to gloat over the prospect of seeing a long-honored name disgraced, a great business ruined, and a great merchant torn limb from limb by a gang of political adventurers. The result of this state of things is—we say it deliberately—that just as the foreign carrying trade has passed out of American hands, under the operation of the tariff, the foreign trade is rapidly passing out of them also, under the operation of our Custom-house regulations, and into that of foreigners, who, by keeping their books and papers on the other side of the water, and dispensing with a good character on this, are able to defy the "Controllers of Primaries" and make plenty of money. There will very soon be as few Americans engaged in foreign trade as there are Americans engaged in the shipping business.

We have received from a correspondent at New Orleans a letter explanatory of the condition of affairs in Louisiana. It is in substance this: To say that Kellogg is Governor of the State in virtue of bayonet law or of any interference by any Federal judge, is to show misunderstanding of the case. The vital point of the whole controversy is, that the Eighth District Court, which is not a Federal tribunal, but a State tribunal, having full jurisdiction in the matter, decided the Bovee-Longstreet-Lynch-Hawkins Returning Board to be the legal Board, while, at about the same time, the State Supreme Court decided Bovee to be the legal Secretary of State. So, then, the Kellogg government bases its validity on the validity of its Returning Board, and the latter bases its validity on the decree of a State court having full power to decide. Judge Durell's action was incidental, and not of the essence, says our correspondent; and, admitting that everything Judge Durell has done is

unconstitutional, null, and void, the Kellogg government is, nevertheless, as firmly established on a legal and constitutional foundation as that of Governor Dix in New York; and if Mr. McEnery desires to contest the election, his proper place of appeal, the courts of the State, are open to him. This may be all true, but the fact still remains that Kellogg did not rely on the State Courts, but went into the United States Court, and from it obtained the physical force which gave him the victory over his adversaries. We see, however, that Judge Durrell declares that he sits as "the vicegerent of God," which, if true, raises his interference above criticism.

The Franco-German war, helpful to civilization as we believe it to have been in the main, has had one result which friends of universal peace must consider unfortunate. It has indefinitely postponed the realization of the scheme of international coinage, in support of which so many statisticians and publicists of all nations have been laboring for many years, and with which Mr. Samuel B. Ruggles, in our own country, is so honorably associated. There is probably no one of the small things which help to keep nations apart by impeding commerce so absurd both in form and substance as the differences in national money, and nothing does more to keep alive the delusions with regard to the nature of money in general which are the pests of political economy. We were making, it seems, considerable progress towards an assimilation of all the gold coinage of the Western world when the Prussian war broke out. In 1869 a large majority of the chambers of commerce of the various German States met in convention at Hamburg, and agreed to recommend their governments to adopt as their common monetary gold unit the French five-franc piece. Then came the war, and after it the payment of the enormous indemnity in gold to Germany, which the new empire at once began to coin into units of its own of "twenty marks," equal to $6\frac{2}{3}$ Prussian thalers, or 476·4 American cents, while the twenty-five franc piece is worth 482 cents. In 1869 Sweden contributed to the work of general unification a new coin called the "carolin," worth ten francs; but last year a convention of the three Scandinavian States adopted a new gold unit of their own also, called a gold crown, worth only 270 American cents, eight of them equal to nine German marks.

An international gold unit seems further off than it was five years ago, so far that Mr. Ruggles gives up all hope of it for the present, and urges the friends of the movement to devote themselves now, as the next best thing, to securing an assimilation of the silver coinage. There is a bill now before Congress providing for the revision of the coinage of the United States, which proposes to reduce the silver dollar from 412½ grains to 384. The addition of $1\frac{8}{10}$ grains, or one half cent, to this would make our silver dollar precisely equal to the five-franc piece of France, Belgium, Italy and Switzerland, Spain and Greece, and just double the new silver florin of Austria, and would lead to its circulation without recoinage among a population of 120,000,000 Europeans. The Finance Committee of the Senate has reported in favor of making the required change in the new half dollar, but the National Board of Trade, on Mr. Ruggles's suggestion, urges its application to the whole dollar, and we hope they may be listened to. We should then have got some distance towards community of coinage, at least with "the Latin races," and if there were only two units afloat in the civilized world, the Latin and German, the final consummation would not be very far off.

The ex-Emperor Napoleon died rather unexpectedly, at Chiselhurst, on the 9th inst., after having undergone two or three severe operations. His condition has, however, been very poor for several years, and this probably contributed in a considerable degree to the mistakes and follies of the close of his reign. He was unable to ride on horseback during the campaign of Sedan, and thus had to exhibit himself to the army as a decrepit old man, at the moment of all in his life when he most needed to surround himself with an air of romance. His surrender was wanting in pluck, singularly so for the hero of the Strasbourg and Boulogne exploits, which, though laughable, were certainly marked by great courage. His leading confederates in the *coup d'état*—De Morny, St. Arnaud, and Persigny—all, except Fleury, have preceded him. Fleury, who was the meanest and most money-loving of the lot, is living comfortably in England, having accumulated a "competency" through long service as "Director-General of the Haras," a delightful post for as keen a lover of horseflesh as he was. It appears to be generally supposed that the death of the Emperor makes the French political sky somewhat clearer, but this we doubt. Of his restoration, there never was any chance, while it is highly probable that his son will now be pushed as a pretender. It would be quite in keeping with the Empress's character, which is both superstitious and romantic, to bring him up as "the hope of France," and a person defrauded of his rights.

There seems to be no serious foundation for the rumor that Bismarck's resignation of the Presidency was prompted by a personal disagreement with Count Von Roon upon the Kreis-Qrdnung and other recent measures of the Ministry. It is true that the Minister of War had shown some symptoms of dissent from Bismarck's later policy, and had requested to be relieved from his office; and the rumor of Von Roon's resignation, followed by his promotion to the Presidency vacated by Bismarck, gave countenance to the belief that there was some grave dissension in the Ministry itself, and that the Government was about to change front. But though there may have been shades of difference in the Ministry, and Bismarck has grown both imperious and irritable, the facts are that, on account of failing health, Von Roon requested to be relieved from the cares of office, that a partial release has been granted him, and that, as the senior member of the Ministry, he has been provisionally designated to the Presidency. The interior motives of these changes, if there are any, have been guarded with a jealous secresy; yet there lurks in many minds the suspicion that Bismarck is planning to carry into effect his theory, that there should be but one Minister, untrammelled by his surroundings, and with powers equal to his responsibilities.

The Ministry consists of eight departments—Foreign Affairs, Army and Navy combined in one, Trade and Manufactures, Education and Religion, Agriculture, the Interior, Justice, Finance. In the sessions of the Ministry Bismarck has for ten years held the post of President, but his colleagues are not his adherents or appointees, but his equals, having co-ordinate powers. The Presidency, without giving him control of the Ministry, has made him constructively responsible to Parliament and to the country for all the acts and suggestions of all the departments, and he has been burdened and vexed with questions of trade, of finance, of education and religion, and with details of internal administration, when all his time and all his thoughts were required for the momentous measures of foreign policy, which he had originated and he alone could carry through. Besides, in bringing forward his own measures he must first harmonize his seven associates, in order that the Ministry should present a united front in Parliament, and though he was held responsible for his colleagues, they were not held responsible for his sayings and doings. His health and comfort demanded that he should rid himself of this onerous dignity. But he retains his place in the Ministry, and will naturally be the ruling spirit in its counsels; and he keeps the portfolio of foreign affairs, so that the foreign policy of Prussia will be identical with that of the German Empire, at the head of which Bismarck remains as Chancellor. The text of the royal order of December 21 relieving him of the Presidency of the Prussian Ministry, though it gives no hint of the cause of this most unlooked-for step, confirms incidentally the view we have expressed above of its origin and motive in the mind of Bismarck himself.

THE LATE FRENCH EMPEROR.

THE death of the ex-Emperor of the French (how large a part "ex" plays in titles in our day!) has happily no great political importance. He had outlived not only his power but his influence on the imagination. He leaves behind him an unfortunate boy, who will probably be brought up as "a pretender," and pass his early life in dreams and conspiracies, surrounded by priests and adventurers, but it is pretty certain that the "Napoleonic legend" has lost its hold on the French mind. The name of Napoleon is no longer associated with history and glory, but with defeat and humiliation such as France has never experienced. The closing campaigns of Napoleon the First in 1813 and 1815, though almost as disastrous in their results as that of Sedan, left but little sting behind. They were examples of consummate military skill, and followed close on twenty years of almost unbroken conquest, during which the eagles were carried in triumph into nearly every capital of Europe; and the Emperor surrendered his sword, ruined, it is true, but still the terror of his brother sovereigns, who could not sleep till he was shut up on a distant island, watched by a great navy. The Liberal party in France under the Restoration, therefore, found no difficulty in adopting him as a hero, and making his fate the burden of their patriotic lamentations in their attacks upon Louis XVIII. The men who turned their backs at Waterloo still wore those "habits bleus par la Victoire usés" of which Béranger sang. The contrast offered by the close of his career to Louis Napoleon's wandering, a helpless invalid, in quest of the victor, for the purpose of "laying his sword at his feet," is too painful for any dynasty to support with impunity; and "the heir to the throne," besides having to carry the heavy load of his father's incompetency, starts with one of his own hardly less heavy, in the shape of a ridiculous entry on public life. The rôle of a pretender to the crown of France is a sufficiently difficult one in our day, under the most favorable circumstances, but to begin it as the Prince Imperial did with the episode at Saarbrück, in 1870, is to make success all but impossible.

Nevertheless, it cannot be denied that the events which have followed the close of the war have done something to wipe out the shame of the war itself, and to rouse sympathy for the fallen Emperor in quarters in which it had long been extinct or had never been felt. The Commune did much for his memory, and will continue to do much. It furnished to a great many people, if not justification, considerable palliation for much of what was most hateful in his career. It was taken, and will continue to be taken, by many as a specimen of the evils from which he for twenty years saved France. He was not a soldier, all must admit; but he at least, say thousands, gave France a quarter of a century of security and quiet; and that the task was not an easy one, anybody can see who watches the efforts of all the parties whom he so long kept under his heel to erect a new government on the ruins of his. And then he was a kind-hearted man. He swept the streets of his own capital with grapeshot, and gave the French Treasury up to a band of gamblers and blacklegs; but he used a good deal of the money in the alleviation of individual suffering or misfortune. Tears flow over his bier on this account from hundreds of eyes as they flowed here over Fisk's. As "the heart" gains ascendancy in politics, the multitude of rascals who collect under "the mantle of charity" grows larger and larger. The assemblage of gentlemen who in the politics of many countries are covered by that particular garment is one of the oddest on which the eye of the philosopher has ever rested.

The ex-Emperor's success, however, is very suggestive in one way. It was achieved by the supply of a want which France, owing to peculiarities in her recent history and in the national character, felt more than other nations, but which all nations feel, and some feel more and more every day—viz., repose. During the protracted struggle for a share in the government which has been going on in Europe, ever since the Reformation, on the part of the middle and lower classes, political activity not unnaturally came to be regarded as the highest political good. A chance to vote and legislate and "manage," which had been so long the prerogative of kings and aristocrats, became the dearest ambition of the Average Man, until at last in our time it is by multitudes almost forgotten that government is but a means to an end—a contrivance to enable men to follow their callings, bring up their children, and add to the stores of human knowledge, in peace and quiet, and not in itself the object of their existence. Indeed, the ideal society of many progressive people is one in which the citizen is for ever either running for office himself, or nominating somebody else for office, or voting at the polls, or watching other people voting, or passing bills for the regulation of his neighbors' concerns. The process through which the world has been going on this point is somewhat analogous to that through which the European armies went between 1815 and 1851, described by Kinglake in his 'History of the Crimean War,' and which made a fine appearance on parade and not fighting the chief end of a military force, and elicited from a Russian Grand Duke the remark "that he hated war, because it spoiled the troops." Nevertheless, it is easily seen that as society grows richer and busier, its work harder, its machinery more delicate, the relations of individuals to each other more numerous and difficult of adjustment, constant preoccupation about politics becomes more and more irksome, and the insecurity and uncertainty which great political activity breeds more intolerable. The French reached the point of utter disgust and weariness sooner than other people, partly because there is more impatience in their temperament, and partly because their politicians are unusually bad and unskilful. But, as the world becomes industrial and commercial, the tendency towards this point grows stronger everywhere, and it is out of this weariness and disgust that Cæsars make their fortunes, and that Louis Napoleon made his. He was a good specimen of a bad class, and it is a class which is by no means extinct. Nothing but enormous improvements in administration, which will make the work of government easier to the citizen and more efficient, will prevent this class from gaining strength, in one disguise or another. Tweed and Sweeny were not called emperors, but they did in a small way the imperial work, and they, or their like, will always be impending over us as long as American citizens allow politicians to impose on them the incessant political fuss of the Athenian democracy—a democracy in which nearly every voter was a loafer who passed his days in the sun chopping logic, and was obliged to keep electing and debating in order to kill time. A certain amount of politics is a means of culture to every people; but when politics becomes so complicated as to furnish a livelihood to "professionals," "professionals" are pretty sure in our time to have it to themselves—a fact which Louis Napoleon discovered twenty years ago, and turned to account.

THE DISTRIBUTION OF THE ALABAMA DAMAGES.

WE publish elsewhere a letter on this subject from an able correspondent. We do not exactly understand what he means by saying, in reply to the *Nation*, that there is no evidence that the claims of the "United States for the destruction of public vessels and other property were rejected." We never said there was. The seventh article of the Treaty of Washington requires that the Tribunal shall first determine, as *to each vessel*, whether Great Britain has by any act or omission failed, etc., and shall certify such facts as *to each of said vessels*." The tenth article directed the board of assessors to ascertain and determine "the amount which should be paid by Great Britain on account of the liability arising from such failure as *to each vessel*." Turning to Vol. VII. of the 'Claims of the United States against Great Britain,' containing the details, we find only one claim of the United States set forth, namely, that for the destruction of the revenue cutter *Caleb Cushing*, cut out of Portland harbor, and this is valued at $25,000. To this must be added, however, the destruction of the steamer *Hatteras* and of two coal brigs by the *Alabama*, though there is no mention of it in

the "Case." Whether these claims were proved before the Tribunal we do not know; but we have very good means of determining whether they were included either by the parties or the Tribunal under the head of what are called "national losses," or, to recur to the phrase used in the article to which our correspondent refers, "damage received as a nation." The preamble of the supplemented article drafted by Lord Granville, and accepted on this point by Mr. Fish and the Senate, defines the term "national losses" as meaning the "transfer of the American commercial marine to the British flag; the enhanced payments of insurance; the prolongation of the war; the addition of a large sum to the cost of the war; and the suppression of the rebellion." The supplementary article broke down on another point; but the above claims were the "national losses," or "damage received as a nation," which Count Sclopis, on behalf of the Tribunal, declared "wholly excluded from the consideration of the Tribunal in making its award." This is all we meant to say. That the United States could come in and claim, as an individual, for property actually destroyed by the cruisers, for which Great Britain was found liable, of course no one doubts; but in dividing the money, the Government is as much bound, morally, to retain only the cost of the property actually destroyed by certain specified vessels, as it is to pay over to private citizens the sum coming to them for losses sustained under similar circumstances.

That "the arbitration was a transaction between two nations" is plain enough; but "that no individuals were or could be recognized in it" is something we fail to see. Individuals did not appear before the Tribunal, it is true, but that was because our Government appeared for them. The losses of individuals, as such, formed the whole subject-matter of the debate; in fact, under the ruling of the arbitrators on the indirect claims, had the United States not been able to say that a man called A lost so much, and a man called B lost so much, through the operations of this or that vessel, there would have been absolutely no case whatever before the Tribunal, and no award would have been made. The whole matter would have fallen to the ground. "The sum when paid will," it is true, "be held by the United States, trammelled by no technical rules of municipal law," but this is simply because the Government is above the law, and not because municipal law does not furnish good rules of distribution. Nor can we see that "the money was paid as a matter of comity between nations." It was paid as a matter of right, and was demanded as a matter of right, and not as a matter of "civility" or "good breeding," as Noah Webster says. In other words, it was paid by England as a wrongdoer to compensate certain determinate persons for certain determinate losses suffered through her wrong-doing; and though, as our correspondent says, "the courts have no control over it, and the Legislature must determine where it shall go," the duty of the Legislature with regard to it does not for this reason differ from its duty with regard to any other national trust or liability. The payment of a gross sum to the United States was not an acknowledgment that our Government might exercise absolute discretion in the matter of the final disposition of the fund, but simply the imposition on the United States, as the agent best competent to perform it, of the duty of finding out what persons were entitled to the money, which would otherwise have devolved upon a board of assessors. Our Government is, therefore, trustee of the fund under certain restrictions imposed by the American pleadings and proofs before the Tribunal, and by the grounds on which the arbitrators based their decision, both of which are, of course, perfectly well known. That the money was intended "to relieve the hardships of the war growing out of the depredations of the Confederate cruisers," is a proposition too vague in its terms to be traversed. What were those "hardships"? Would not a phrase of this kind justify the use of the fund to endow a soldiers' home or to lighten taxation? In short, the Government has received the money for the satisfaction of certain claims, for certain specific losses caused by certain specific acts. Under what rules should it proceed in ascertaining who are the holders of the claims? If the Government were an individual, the courts would furnish these rules, and they would be those by which the transactions of business men are regulated all over the civilized world, and which the experience of many generations has approved as fairest and most expedient. Our correspondent thinks the Government, however, ought to disregard these rules, but he does not give any better reason for it than that it *may* disregard them if it pleases.

We must not be understood, in saying this, to find any fault on the score of abstract justice or "equity" with the rules he lays down in his letter. They are good enough, or would be, if they were to be applied to simple division of a charitable donation among a body of direct sufferers from a fire or shipwreck. The fault we find with them is that they disregard the machinery provided by civilization for lessening or distributing certain risks of trade and commerce and manufactures, and refuse to take any count of the state of mind in which men enter into a certain class of transactions. These are things recognized by the courts on grounds of utility, which long usage has converted into practical justice, and which the Government has no more right to overlook than Smith or Jones, and which it is, for obvious reasons, far more dangerous for the Government to overlook than for individuals. The very doctrine which our correspondent now urges was produced in 1867 by General Butler and Senator Morton with regard to the public debt—we beg his pardon for mentioning him in the same sentence—and it is in substance this, that a government, not being amenable to the law, is justified, whenever it finds itself in the position of an obligor, in ascertaining, not what the obligee expected when he advanced his money, but what he is likely to make by the transaction, and in deducting this sum from the amount of its liabilities. This is in one sense "equity," but in another sense it is cheating. A man who bought Government bonds in 1862 at 50 did so amidst a set of conditions, some external and some internal, which to him formed part of the contract. In other words, he took certain heavy risks, on the understanding that he would, if he escaped them, be compensated for his courage and anxiety. What Butler wished to have the Government do was, when the risks had passed away, to apply the principles of "equity" to the case, and give the creditor back exactly what he paid, and to disregard the state of mind in which he lent the money.

Such a doctrine, if adopted by the community, would of course ruin the business of insurance completely, and we should be sorry to see the Government sanction it even for $15,000,000. The insurance business is conducted on a calculation of chances and under certain precautions which would be absolutely worthless if exposed to have its contracts upset or its expectations frustrated by curious enquiries into the amount of its receipts. Suppose Mr. Vanderbilt had insured his vessels—which we believe he never did—with a marine company, and for many years had had no losses, and at last ran one of his vessels ashore, and was paid her full value, how would it do to permit him to refuse to surrender the wreck to the underwriters on the ground that they had received far more from him in premiums than the amount of his policy? We do not say that the Geneva award is exactly salvage, but it is so like it that the Government ought to think twice before disregarding in its distribution all the rules of law governing salvage, and indeed all the usages on which the insurance business is based. "Equity," administered by totally irresponsible bodies of persons like our Congress, is apt to be a very queer article, and, as long as we have courts and law-books, the less we have of it, the better. The usual result of an attempt by Congress to distribute money on principles of abstract justice is that nobody gets anything. The history of the French Spoliation Claims furnishes a capital illustration of the qualifications of the legislature for any such task, and the result in that case has been defended by Republican organs within a few weeks on the "broad ground" that if the Government only keeps a man out of his money till he dies, the claims of his heirs and representatives become too shadowy and remote for consideration.

We ought to point out, in conclusion, that there is no human tribunal capable of deciding to what extent war premiums were caused by the cruisers for which the British were held responsible, and thus carrying out our correspondent's suggestion that such war premiums should be refunded, if lost through the sale of goods imported in neutral bottoms in competition with those imported under the United States flag. This, like some other questions which have been raised in this controversy, is one of the things which will only be cleared up at the last great day. Mr. Pomeroy's position on this subject was only tenable on the supposition that Great Britain was held responsible for *all* the Confederate cruisers, as she would have been if, for instance, Mr. Seward's theory of the effect of belligerent rights had held water.

AFFAIRS AT WASHINGTON.

WASHINGTON, January 11, 1873.

THE Crédit Mobilier investigation is still the sensation of the hour. The published testimony has produced a painful impression. There were but few people who believed that the statements made by Col. McComb last summer in the Philadelphia trial were entirely groundless. But the prompt, emphatic, and sweeping denials put forth by most of the Congressmen whose names had been mentioned in connection with the business had found general credit. Now it turns out that in most cases those denials had been too sweeping, that the Congressmen in question had not told the whole truth, and that their explanations have to be further explained. The best friends of these gentlemen admit that this is much to be regretted. Nobody here seriously thinks that such men as Garfield, Dawes, Senator Wilson, and others I might name, deliberately sold their influence in Congress to the Crédit Mobilier or any other corporation, or that they sought to enrich themselves by corrupt practices of any sort. In fact, the very smallness of the sums involved in the alleged transactions makes the idea appear almost ludicrous, considering the influential position of those gentlemen in Congress. But it is also thought that the persons concerned would to-day stand in a much more favorable light before the country had they, when the matter was first discussed in the public prints, made a perfectly clean breast of it instead of resorting to vague generalities with loopholes in them. Their conduct has been such as to impair the public confidence in the statements of men who have always been believed to be honest and honorable. Moreover, the testimony of Oakes Ames with regard to some of these individual cases is so indistinct and unsatisfactory, owing to his wonderfully bad memory, as to create the impression that there is much more behind that has not yet been told. The case of Mr. James Brooks is looked upon as a desperate one, and Mr. Colfax's statement, which makes him appear as a benevolent creditor of the Massachusetts capitalist to the amount of $500, has created much amusement, as a fair specimen of that kind of explanations which make a thing appear worse than it really is. On the whole, the disclosures already made have excited the suspicion that the real evil-doers have not yet been discovered, and that we have touched only the outlines of a vast system of corruption. The books of the Crédit Mobilier and the examination of Mr. Durant are in this respect looked for with eager interest. There is a rumor afloat that the Crédit Mobilier, or its leading spirits, have contributed large sums of money to procure the election of certain Congressmen, and that this also will appear in the progress of the investigation. In the meantime, an enquiry has been begun by the Senate Committee on Privileges and Elections into the money transactions connected with Mr. Caldwell's election to the Senate, and this also wears a very ugly look. It is understood that a similar enquiry will be moved when Mr. Patterson, who stands publicly accused of having bought his way through the Legislature of South Carolina, presents himself in the Senate. Things of this kind are rapidly accumulating, and there is a vague fear springing up that, if the investigations go on, a mass of rottenness will be laid bare which will amaze the people. I heard a Congressman say that the investigating business must be stopped, or it will destroy all confidence in the integrity of public men. To stop the investigations entirely will, of course, now be impossible; but the alarm is spreading, and an attempt is not unlikely to be made by political managers to have the work done as superficially as possible, and to fall back upon the old practice of whitewashing. One good effect these investigations seem to have produced already. Congressmen are beginning to perceive that it is quite unsafe to have their names involved in "job-legislation," and I learn that some comprehensive schemes which were to be pressed this winter have virtually been given up for the time being.

As the principal leaders of the Administration party in the Senate whose terms expire on the 4th of March, Messrs. Morton, Cameron, Conkling, and Howe, have been or will be re-elected "triumphantly" and without apparent opposition in their own party, the "Senatorial Ring" so called will remain unbroken, unless disturbed by personal jealousies among themselves. Now that the Presidential election is over, and the President of their choice is secure in his place for another four years, the question presents itself who is to wield the greatest power under and through him. Morton, Conkling, and Edmunds will undoubtedly aspire to the leadership in the Senate, with the chances in favor of Mr. Conkling, who represents the greatest State, is the most magnificent in speech and the most assuming in deportment. It is said that while before his "triumph" in New York he would have been satisfied with a seat on the Supreme Bench, he thinks now that the Presidency itself would not be too good a thing for him. Morton has long been troubled by the same ambition, and his achievements during the late canvass have shown that his bodily infirmities do not unfit him for hard work. We may look, therefore, for a lively race between these two candidates for the succession. In the Senate they have an open field, while at the White House the supremacy of their influence will be contested by such statesmen as Cameron and Chandler, who, indeed, do not shine in debate, but understand the tricks of the trade as well as anybody "inside politics," and are apt to get ahead of their more showy rivals in the matter of management. But each one of these gentlemen is said to appear sometimes seriously puzzled as to the influence which is really most potent with the President. The latter will now and then do things about which neither of the above-named party managers has been consulted, apparently acting upon advice of which nobody seems to know whence it comes. The Administration leaders in Congress are, therefore, sometimes under the necessity of defending and advocating things for which they would rather not assume the responsibility, in order to preserve the influence which they possess, and to show themselves worthy of more. So it was during General Grant's first term, and it will probably remain so. On the whole, we have to expect a continuation of the old fights, pretty much in the old form, and between the same sets of men, only that Mr. Trumbull will drop out on the 4th of March, which will be a very serious loss to the friends of genuine reform. At the commencement of this session there were a good many men here who hoped that the President would turn over a new leaf after his success in the election. But, in the light of current events, that hope is growing fainter every day. The President's order to the Federal office-holders in Louisiana, either to stop taking an active part in State politics or to resign their Federal offices, was indeed a sign of new promise in the direction of civil-service reform; but on the other hand, newly elected Congressmen whose term will begin on the 4th of March, and "meritorious workers" who distinguished themselves in the late campaign, are already gathering here with an eye to a "new deal" in the Federal patronage, and scarcely anybody believes that the President's reform zeal will resist the pressure. Thus the dreary prospect of a repetition of the old struggle opens itself before us, and it will require new and stirring incidents to impart to it the charm of freshness.

The Democratic leaders seem to have made up their minds that, after the great disaster of last fall, the reorganization of the Democratic party on the old basis must be attempted. Some of them still indulge in the old talk about their three millions of voters and the strength of their party discipline, which has a somewhat ludicrous sound after the experience they have just gone through. It almost looks as if they needed a few more defeats to make them understand at last that the people will not trust the power of the Government in the hands of the old Democratic organization. If defeats are needed to that end, they will certainly come.

ENGLAND—MR. GLADSTONE'S SPEECH-MAKING.

LONDON, Dec. 27, 1872.

THE old year is taking leave of us very quietly. No very conspicuous agitation is going forward, and the British public is able to solace itself by contemplating the baby hippopotamus at the Zoological Gardens, looking at Mme. Tussaud's waxwork show, and, in other similar methods, paying what is considered to be fit homage to the social associations of the season with a tolerably disengaged mind. Rather small incidents are sufficient to amuse us under the circumstances, though they excite warmth enough to show that we are not altogether absorbed in peace and good-will towards all mankind. I must, however, in the first place, notice one event of a more melancholy nature which has occurred since my last letter. Mr. Disraeli has lost his wife, Lady Beaconsfield, amidst the general sympathy even of his

opponents. His political career was much facilitated, if not made possible, by his marriage, and his wife's devoted interest in his success was known to every one. Probably your readers are already acquainted with the story how on the occasion of some important debate she had accompanied her husband to the House of Commons in a carriage, the door of which was carelessly closed upon her hand; and how she heroically concealed the pain of a crushed finger in order that her husband's nerves might not be shaken on the eve of action. That such a domestic blow should, for a time, protect Mr. Disraeli from hostile remarks, and call forth some positive expressions of sympathy, is only right and natural; and it is to be hoped that he has not read some articles in which the gush of good feeling from avowed enemies has been rather unctuous, not to say fulsome. That political generosity has not been everywhere pushed to a Quixotic extreme seemed to be proved by a recent utterance of a frail old Tory nobleman. Lord Radnor presented some agricultural club in Wiltshire with a "good old English baron of beef," and promised, so it was reported, to send two barons next year in case Mr. Gladstone had "gone the way of all flesh." However, as his son writes to the *Times* to-day to explain that it was not Mr. Gladstone but Mr. Gladstone's administration that was to go the way of all flesh, the point of the story is spoilt.

Mr. Gladstone has been very lively of late, and has incidentally exhibited some of those queer streaks of eccentricity which blend so oddly with his general ability. He was reported to have said the other day, but it seems that reporters are not very trustworthy at Christmas time, that "every day must begin for him with his old friend Homer." Mr. Gladstone's faithful supporters were thrown into ecstacies of admiration. The *Spectator* plunged into profound psychological speculations as to the secret bond of harmony which somehow made it part of the essential fitness of things that the ancient Greek poetry should provide the richest nourishment for the soul of our modern statesman. It discovered that the same conception of the universe was at the bottom of Mr. Gladstone's statesmanship and Homer's poetry. According to Goethe, it seems, Homer regarded life as a conflict and a hell; and it was of course easy to demonstrate that Mr. Gladstone also regarded life as a conflict and a hell. The *Spectator* belongs to the philosophical school of the late Mr. Maurice, and seems to have inherited his extraordinary ingenuity in showing that any given opinion is at bottom the same as any other opinion. No doubt it would have been equally capable of proving upon occasion that Mr. Gladstone conceived of life as a peaceful heaven. The *Telegraph* is less given to refined speculations, though it idolizes Mr. Gladstone with a fervor so marked as to be a little damaging to its object. The *Telegraph* is supposed to enjoy the personal confidence of the minister to a degree which is not a little remarkable. Mr. Gladstone is a man of taste and refinement. The *Telegraph* panders to the appetite of the lower middle classes for a kind of unctuous balderdash which is singularly offensive to most cultivated minds. However, flattery seldom shocks its recipient, however gross the incense; and Mr. Gladstone, it would seem, really likes to be called "the people's William," and acknowledges the loyalty of those who bespatter him with such praise by what is generally thought to be unworthy condescension. It has even been generally rumored that the services of the *Telegraph* were to be acknowledged by the bestowal of a baronetcy on a person whose fitness for that honor was not very manifest to the ordinary mind. The *Telegraph* was of course in raptures with this revelation of the premier's habits. In a fine flow of eloquence, it discoursed upon this marvellous union of the scholar and the statesman, and declared that official labors which would break down the constitution of most men allowed Mr. Gladstone to prosecute the studies of his youth with a vigor and an energy which the keenest Heidelberg professor might envy. It did not hint that Mr. Gladstone has talked an amount of nonsense about Homer which Heidelberg or other professors contemplate with simple amazement. However, Mr. Gladstone has cruelly struck away the foundation of all these finespun speculations and this glowing rhetoric. It seems, according to the true version of his speech, it was not "every day," but every enquiry into certain historical subjects, that must for him begin with his old friend Homer. In fact, he has not read Homer consecutively during the last four years, and has not devoted to Homeric studies during that time more days than could be counted on the fingers. The whole beautiful fabric of speculation is thus demolished at one blow, and poor Mr. Gladstone is reduced to the standard of human nature. Even he cannot be at once a prime minister of England and a German professor.

It might be wished, however, that he could confine himself a little more closely to his ministerial functions. Although Mr. Gladstone, sleeping with Homer under his pillow, must be regarded as a purely fancy portrait, it is true that the old Oxford habits of thought make their appearance at times in very singular fashion; and that life, if it is not "a conflict and a hell" to him, is always provoking him to unnecessary ebullitions of sensibility. A Protestant clergyman in Ireland wrote to him the other day to put these singular questions: "Can you, as an Englishman, tell Irishmen as such that you have done to them and theirs as in the same case you would be done by? Or can you, as a son of man, tell him, the Son of Man, that you have dealt and are still dealing with his as he commanded?" Mr. Gladstone thought it necessary to explain his reasons for answering these questions in the affirmative instead of putting them in his waste-paper basket. Not long ago he went out of his way to advertise a blasphemous hymn-book of Mr. Bradlaugh's, and recently he has been making a speech which is really a curiosity in its way. He had promised to distribute prizes to a school at Liverpool, and of course he had to make a speech on the occasion. We all remember with what good-humor and shrewd sense Lord Palmerston used to discharge such duties, and, though Mr. Gladstone is in all essential respects a man of incomparably higher intellect than "Pam.," it is curious to remark the contrast. He could not help going into one of the most inappropriate discussions which could possibly be brought before a schoolboy audience. It seems that Mr. Gladstone has recently been reading Strauss's book, 'Der alte und neue Glaube.' It seems, too, that the book has very much puzzled and vexed him. In this there is nothing surprising. For a High Churchman of the Oxford type it is in many ways disagreeable to read a book in which a grave and learned professor, who has made the subject the study of a life, declares his profound conviction that all belief in the supernatural must be abandoned, and that the resurrection of Christ, if we are invited to receive it as a matter of fact, must be regarded as a "welthistorische Humbug." The phenomenon is clearly one which demands the attention of statesmen as well as divines. The odd thing is that Mr. Gladstone is so overflowing with the speculations to which it has given rise in his mind, that with characteristic intellectual incontinence he finds himself impelled to bestow them upon a set of schoolboys. He of course confesses that it would be absurd for him to attempt the refutation of Strauss under such circumstances. It may be added, that from the hints which he throws out it would probably be very rash in him to attempt the refutation of Strauss under any circumstances. His principal argument appears to be that as a good many doctrines were settled at the Council of Nice many hundred years ago, in which most Christians have ever since acquiesced, it would be a pity to reopen them again. The argument, if it is an argument, is not one which will very much trouble historical enquirers of the school of Strauss. But the question remains why Mr. Gladstone, being unable to refute Strauss, and being therefore able to do nothing but comment on the awful nature of his opinions, should have done so to a set of schoolboys. Why could he not simply hold his tongue? The only effect which he has produced upon their minds is to inform them that a very able and thoughtful enquirer has declared Christianity to be all moonshine, and to add that he, Mr. Gladstone, is very much frightened, and hopes that they will not think so too.

The reason of this strange performance is of course simple enough. Mr. Gladstone did not adopt the obvious course of holding his tongue because he is totally incapable of holding his tongue. That is the weakness which irritates and discourages his followers. They can never be certain that he will not at any moment burst out with some perfectly gratuitous bit of imprudence. Even his antagonists admit his extraordinary ability in his own particular province. There is no one among his colleagues, though they include some very able men, who can be compared to him for an instant for grasp of a complicated financial and legislative question and for power of expounding it. After everything has been said against him, the fact remains that he has beyond all comparison the most comprehensive and versatile intellect in his party, or indeed in Parliament. But his strength is alloyed by this incomprehensible weakness. Mandeville called Addison "a parson in a tie-wig," and Mr. Gladstone sometimes seems to be a High-Church curate placed by some strange freak of fortune upon the Treasury Bench. Incomparable in making a budget speech intelligible and almost poetical, he descends suddenly to the level of a popular preacher when the impulse unfortunately takes him. The main result of his last performance will be to give an excellent advertisement to Strauss, and we shall probably soon see a translation, with a testimony to the singular ability of the performance from the Prime Minister of England. To that I have personally no objection whatever; but Mr. Gladstone will have wantonly shocked a good many of his supporters, and helped to ruin whatever character he had left for common sense and prudence.

On the day of Mr. Gladstone's performance at Liverpool, two other prominent members of Parliament, Mr. Bruce and Mr. Mundella, were also making speeches about education. The subject is plainly coming up again for discussion, and amongst other points which will probably excite some interest is the proposed reconstruction of our universities. A commission recently appointed will soon publish a report upon their endowments, and

it is supposed that the revenues will turn out to be so great as to excite the cupidity of various schemers. The question is a very large one, and I shall probably be obliged to speak of it at length before the end of next session. Meanwhile, I will merely remark that there seem at present to be two parties. There are the pure utilitarians, who would wish to apply part of the revenues to the encouragement of technical education in our large towns, or to some similar purpose. These, however, are not at present a numerous or a noisy body. The larger number of University reformers are anxious to remodel them in such a way as to make them worthy centres both of the higher education and of original research, and to remove some of the anomalies derived from mediæval times, which at once hamper the activity of the universities and tend to make them obnoxious to the utilitarians. There are, however, so many difficulties in the way of adopting any generally acceptable scheme that these reformers are very much divided amongst themselves. Great changes may certainly be anticipated, but it is difficult to foretell what form they will probably take. To make the points at issue at all intelligible, I must go into the matter rather more fully than I can do at present, and I therefore postpone the subject till another opportunity.

Correspondence.

THE $15,500,000.

TO THE EDITOR OF THE NATION:

SIR: In the able article of December 26, entitled "What shall be done about our Fifteen-and-a-half Millions?" there are some statements which seem to call for a reply. It is stated that all the Alabama claims by the United States for damages received as a nation were rejected at Geneva. It is true that the claims for the cost of pursuit of the Confederate cruisers were rejected on the ground that they could not be distinguished from the general expenses of the war; but there is no evidence that the claims of the United States for the destruction of public vessels and other property were rejected.

A brief examination of a part of the treaty, of the Case presented by the United States, and of the award, will show what was rejected and what was allowed.

By the treaty it was agreed that all claims *growing out* of the acts committed by the several vessels which have given rise to the claims generically known as the Alabama Claims should be referred.

After the ruling out of the indirect claims, the Case of the United States covered (1) losses growing out of the destruction of vessels and their cargoes by the insurgent cruisers, (2) the national expenditures in pursuit of those cruisers.

Under the first head, ships of the United States as well as of individuals were included. The United States did not prove any claims in detail, and in case the Tribunal did not award a sum in gross, reserved a right to present further claims and further evidence in support of the claims presented and of any further claims.

The Tribunal rejected the claims for the cost of pursuit for the reasons above stated. It also rejected the claim for prospective earnings and "set aside all double claims for the same losses, and all claims for gross freights, so far as they exceed net freights." It then awarded a gross sum of $15,500,000 to be paid to the United States, and then awarded that all claims referred to in the treaty, whether presented or not, were to be "henceforth considered and treated as finally settled, barred, and inadmissible." The award, therefore, covers all claims *growing out of the acts committed by the several vessels* for which Great Britain was held liable, except those expressly rejected. The arbitration was a transaction between two nations; no individuals were, or could be, recognized in it. The fund, when paid, will be held by the United States, trammelled by no technical rules of municipal law, but simply to relieve the hardships which have grown out of the depredations of the Confederate cruisers. The money was paid as a matter of comity between nations. No individual has strictly any legal right or property in it. The courts have no control over it, the legislature must determine where it shall go. In this view only can the duty of the United States be made clear.

To whom, then, should the United States pay this money?

1. There are the uninsured owners of ships and cargoes. They suffer losses growing out of the acts of the cruisers. The officers and crews of vessels destroyed lost time and property, and perhaps suffered in their persons; and for these they should receive compensation.

2. The owners of ships and cargoes who were fully insured, and received their insurance, lost nothing by the destruction of their property; they should recover nothing. Their claims can only rest upon the technical ground that they had the legal title to the property destroyed. But in substance they lost nothing, and the United States should look to substantial and not technical losses.

3. The insurance companies, if on the whole they lost nothing in consequence of these depredations, if their war premiums exceeded their losses, have no better claim than the insured owner. It may be admitted, for the sake of the argument, that if the insured owner has a right to the fund, and obtains it, the courts would compel him to transfer it to the underwriter, to whom he may have abandoned it. But, as we have seen, the owner has no right to it, and should not receive it. The insurance companies will, therefore, stand on the merits of their direct claims on the Government. Unless they can show losses growing out of the depredations. they should retain nothing.

4. The owners of ships and cargoes who paid the war premiums, or who, in other words, made up the fund from which the owners of the ships and cargoes destroyed were reimbursed, have an equitable claim, unless they received back their war premiums in the enhanced price of freight or merchandise.

It is said that they did not receive them back, but that merchandise imported under the flag of the United States was sold in competition with that imported in neutral bottoms, and that the war premiums were wholly lost. If this is so, these war premiums should be reimbursed, certainly to the extent to which they were caused by the cruisers for whose injuries Great Britain has been held liable.

Most of these premiums were deposited with mutual insurance companies, and would have been returned to those who advanced them if they had not been appropriated to indemnify the insured owners of ships and cargoes. The mutual companies are mere stakeholders, who receive premiums upon trust to pay out of them such losses as may happen, and to return the balance to the depositors of the premiums. They returned less because of these losses. This fund received from England should make up the deficiency.

Assuming that the shipowner has abandoned a right to a mutual insurance company, that company is merely a trustee for those who paid the premiums, and the United States should pay the money directly to those who are really entitled to it. If it goes to the insurance companies, they may attempt to divide it, and, perhaps, under technical rules of law, might divide it among their present members, who have no claim, either legal or equitable, to the fund.

The claim to war premiums is clearly stated by Mr. Pomeroy in an able article in the January number of the *American Law Review*. He says: "The claim of compensation for enhanced rates of insurance paid by American shipowners and shippers was in no respect indirect; . . . its amount could have been proved with exactness, and its necessary connection with the wrong was as plain as that of the capture of ships and cargoes; indeed, it stood upon exactly the same footing as the captures. During the progress of the general controversy it was urged that the injured shipowners and shippers were insured, and that even the losses paid to them by the underwriters were made up by the increased premiums for war risks. If this were all true, it only pushed the loss one step further back; it did not make the loss any the less or any the less certain. It is enough to say that every owner of an American ship, and every shipment of cargo by an American owner, and every dollar of increased insurance paid for such ship or cargo, can be proved with absolutely certainty; and that the claim for such enhanced insurance was in every respect as direct as the claim for destroyed ships and goods. This claim, so just, so certain, so direct, was lost by the inaccurate arrangement and classification made by the persons who composed the Case."

To this statement of Mr. Pomeroy there can be no objection except to the last clause. The claims for war premiums were rejected, when presented as distinct from, and *in addition* to, the claims growing out of the destruction of ships and cargoes. The premiums were received by the underwriters as the equivalents for the ships and cargoes destroyed. The war premiums are the exact measure of the injury caused to parties who insured, and the value of the ships and cargoes destroyed is another measure of the amount of the same damages. Both should not be allowed. The Tribunal did not reject the claims for war premiums as a measure of the damages or as the equivalent for the insured ships and cargoes destroyed. ***

"THE MODE OF ELECTING THE PRESIDENT."

TO THE EDITOR OF THE NATION:

SIR: I have read with some surprise the article in the *Nation* of January 2 on "The Mode of Electing the President." The *Nation* evidently inclines to a change in the Constitution which shall remit this question to be decided

by a majority of the popular vote of the whole country, irrespective of territorial limits.

This discussion is, I believe, by no means new. If the *Nation* will turn, for instance, to the *American Journal of Social Science*, it will find in No. I. (pp. 93-96) the election of the President by a majority of the popular vote discussed, and, in No. II. (p. 148), it will find the proposition abandoned—and this, too, for an obvious reason. We have heard something of election frauds, doctored returns, and candidates "counted in" in this country. Recently, in the well-ordered city of Boston, we have seen one ward try to "return" a mayor. In electing a President, we, in the better-ordered communities, may now regard with some degree of complacency frauds which only at most effect the electoral vote of one State, no matter how large. How we should regard vast "Pembina" majorities rolled up from the wilderness to offset our registered ballots, is wholly another question. Are not the temptations and opportunities for election frauds great enough now that we should amend the Constitution so as to make the first irresistible and the last unpreventable?

To avoid the possibility of an evil from which we never have suffered, it is proposed to rush on to an evil from which we have repeatedly suffered—an evil the most fatal to, and inseparable from, any system of universal suffrage. So far from the remedy lying in the direction suggested by your article of the 2d inst., it would seem to lie in the exactly opposite direction. The effects of fraud should be localized, and not still further extended. This was the conclusion arrived at four years ago, after the most thorough discussion of this long-vexed question; and the following proposed amendment to the Constitution was then submitted to Congress in accordance with it. It was never acted upon, but it will be found in House Docs., 3d Session, XLth Congress, Report No. 31:

ARTICLE.

"The electors of President and Vice-President shall be chosen as follows:

"Two electors of President and Vice-President shall be chosen at large, from each State, by the qualified voters therein.

"A number of electors in each State equal to the whole number of representatives to which such State may be entitled in Congress, shall be chosen in single districts of contiguous and compact territory, each containing, as nearly as practicable, an equal amount of population.

"Congress shall prescribe the mode of determining the validity of the choice of electors, and of contesting the right to the office of President and Vice-President."

Under this system of election, local frauds, no matter how extensive, could only affect three electoral votes, instead of thirty-six, as at present, on the final result, in case of choice by popular majority.

Under it the electoral college might be abolished, if thought necessary, and the votes of the several States returned by State or United States officials as so many electoral votes cast for such and such candidates. This would be election by local popular majorities.

The death of a candidate, successful or otherwise, as in the case of Mr. Greeley, would not affect the result any more in this case than under a system of direct voting. In each case the votes are lost, as needs must be, if a candidate dies.

Under such a system of small local results, the chances are infinite that the aggregate of local majorities will almost exactly reflect the general vote.

Finally, the "man inside politics" loses his greatest inducement to commit frauds when he finds that the effects of fraud are reduced to a minimum.

This question is important. In discussing it, I hope the *Nation* will not find in it another argument in favor of the destruction of one of the few remaining barriers against a general centralization. A.

BOSTON, January 4, 1873.

[The only thing to which the *Nation* really "inclines" is some change which will prevent the possibility of the purchase of the Presidency some fine day from three or four gentlemen holding "the balance of power" in the college. We have men among us now who would give a million for a chance of "moving the crops." They have debauched the Senate, and they are rapidly debauching all bodies small enough to be purchasable. But whether popular election is the best mode of preventing this, we do not feel sure. —ED. NATION.]

Notes.

A WORK in some respects overlapping Mr. Bartlett's 'Dictionary of Familiar Quotations' will be Mr. S. Austin Allibone's 'New Dictionary of Poetical Quotations,' covering the entire field of British and American poetry from the time of Chaucer to the present day. The work will have three indexes, and will be published by J. B. Lippincott & Co. They have also in press a translation, by George Vandenhoff, of Dumas's 'L'Homme-Femme'—'Man-Woman'; and, by Mary G. Wells, of Mme. Guizot de Witt's 'Marie Derville,' a story of a French boarding-school.——Lee & Shepard will republish the 'Memoirs of Baron Stockmar.'——Macmillan & Co.'s for list February embraces 'The Cavalier and his Lady'—selections from the works of the first Duke and Duchess of Newcastle ('Golden Treasury Series'); 'The Depths of the Sea,' as explored by Drs. Carpenter, Gwyn Jeffreys, and Wyville Thompson, on the *Lightning* and *Porcupine*, in 1868-9; 'Caliban: The Missing Link,' by Daniel Wilson; 'The Mystery of Matter, and other Essays,' by Rev. J. A. Picton; 'Essays in Theoretical and Applied Political Economy,' by Prof. J. E. Cairnes; and 'Plays and Puritans, and other Essays,' by Rev. Charles Kingsley.

—We wish to call attention to the new French quarterly journal *Romania* published at Paris ('Recueil trimestriel consacré à l'étude des Langues et des Littératures Romanes, publié par Paul Meyer et Gaston Paris'), of which the first three numbers are before us. Their contents are both interesting and useful, and undoubtedly have been welcomed by the students of Romance languages. The principal object of the *Romania* is the publication of the inedited old French literature, as a basis for etymological, grammatical, and lexicographical researches; besides which it is devoted to studies on all Romance languages before the Renaissance and the Reformation. The Anglo-Norman language forms a part of its programme, which will help to awaken a wider interest. The opening article, "Romani, Romania, Lingua Romana, Romancium," by Gaston Paris, shows great scholarship and independent research, and contains a good deal which is at once valuable and novel, mainly in reference to the historical character of the Romance nations. There are some statements with which many readers will not agree; thus, he considers "l'esprit de race" not less dangerous than "le rationalisme pur," and then he says: "Le principe des nationalités fondées sur l'unité de race, trop facilement accepté même chez nous, n'a point eu jusqu'ici de fort heureuses conséquences. A ce principe, qui ne repose que sur une base physiologique, s'oppose heureusement celui qui fonde l'existence et l'indépendance des peuples sur l'histoire, la communauté des intérêts et la participation à une même culture. Il oppose le libre choix et l'adhésion qui provient de la reconnaissance des mêmes principes à la fatalité de la race; *il est éminemment progressif et civilisateur, tandis que l'autre sera toujours par son essence conservateur et même exclusif.*"

—We have received from Messrs. L. W. Schmidt and F. W. Christern copies of the *Almanach de Gotha* for 1873. It contains a few more pages than the edition of last year, but, owing to the peace of Europe, it has had comparatively few changes to make, except in the diplomatic and official personnel, and in certain statistics which always require annual revision. In addition to the *Geographisches Jahrbuch*, which has of late years accompanied the *Almanach*, a special publication on the population of the globe has been found necessary, and was begun in September ('Die Bevölkerung der Erde'). The editors sharply rebuke two of their countrymen, Block and Dammer, for having borrowed too freely of their carefully prepared matter without acknowledgment. They also firmly defend themselves for continuing to place the cardinals under the head of the Holy See, in the 'Annuaire diplomatique,' instead of among sovereign princes in the first part of the 'Généalogie.' They have, they say, taken advice of competent authorities in civil and canon law, and remain of opinion that the cardinals must be regarded as the Pope's aids and the first dignitaries of the Church, but still at the same time as subjects of the states in which they reside. France resumes her place in the alphabetical arrangement of the 'Annuaire diplomatique.' The necrology contains only one prominent name—that of the late King of Sweden; Napoleon's death must be chronicled another year. Mr. Joseph Whitaker has sent us his *Almanack* for 1873, of which it may be said, as of its predecessors, that for English-speaking people it is as valuable in its way as that of Gotha. Great Britain and her possessions occupy, in the scheme of this almanac, five-sixths of the space, the rest being devoted to foreign countries. In the notice of the United States we remark on page 301 a few errors: *Canada*, N. J., for Camden; *Charleston*, as a suburb of Boston, for Charlestown—a mistake which, even if it were not clerical or typographical, would be far less gross than that of an English admiral, prominent in the Crimean War, who actually thought Charleston was situated on the Pacific Ocean; New Orleans, *Louis*, for Louisiana or La.; and 49,473 for 149,473 as the population of San Francisco.

—The *Atlantic Almanac* of Messrs. Osgood & Co. is only to a very limited extent serious and statistical. With a few pages of this kind, it mingles full-page illustrations, some of which have done duty in *Every Saturday*, and light reading in the shape of original and selected articles,

poetry, etc. The essay by Mr. Wilson Flagg, entitled "Picturesque Rambles," and that by Mr. Robert Morris Copeland on "Public Cemeteries," alone are worth (to use a common phrase) the price of the almanac. It is curious to observe how Mr. Flagg, who almost denies the landscape gardener any place in nature, and Mr. Copeland, whose business is landscape gardening, agree in denouncing the same sort of mistreatment of natural effects. The former tells of a certain "little pond bordered in its whole circumference by neatly-pecked curbstones, with a few formal clumps of shrubbery irregularly disposed outside of it"; while Mr. Copeland ridicules in his cemetery "the circular wash-basin confined by a stone wall, its shore paved with cobblestones set in geometric forms, and perhaps painted or whitewashed to give glaring contrasts of form and color, every wild plant gone, and every tree that has been retained robbed of its drapery, and clipped and pruned out of its typical form, to correspond with some idea of how a tree should look." Mr. Flagg has some very instructive remarks on the relations between certain kinds of trees and the houses of different periods in New England before which they are found planted; on the prevailing or once fashionable roadside trees; and on open-lot and pasture trees. We cannot say that we attach implicit credence to his theory that the oaks which have been preserved on cleared land "were planted by the Northmen from Greenland and Iceland, . . . whose ancestors were of the religion of the Druids," they cherishing the tree as still sacred, though previous to their emigration they had been converted to Christianity. Mr. Flagg, however, has no doubt of all this, or that "the colonists, not being reinforced by new arrivals of people, became absorbed into the native Indian population."

—Mr. Henry Blackburn's design for an annual exhibition of English and foreign water-color drawings and sketches, if carried out by the National Academy in the spirit in which it was originally proposed in England, should have a permanent influence on the American taste for water-colors, and encourage its practice as an art. Painting in water-colors is little understood in this country, and it is said by artists that it "does not pay." All this may be altered, and the taste for water-colors greatly increased, by the study of works by European artists, if only for a short season every year. The exhibition which is to be opened early in February next, will certainly be interesting; but it is experimental, and on its success will depend the establishment of future international exhibitions of art, both in oils and water-colors. But whatever the merits of this first collection, which has been got together in a very short space of time, it has none of the aspects of a commercial speculation, the artists who send their works being an independent body, some of whom will be willing to sell their works and some not. There will not, we are informed, be any auction or general sale of pictures, but the Council of the Academy, to whom they are consigned, will receive a list of those for sale, and either part with them at the artists' prices or return them to London at the close of the exhibition. As there will probably be a number of "sketches in black and white" from England and France, the American Society of Painters in Water-colors have just issued a notice that they will also "receive a limited number of drawings in black and white, on wood or paper," this year. In the present active state of illustrative art, this section of the exhibition, if well represented, as it certainly should be by American artists, will have an educational value worthy of all encouragement.

—"E. D. M.," referring to Gen. Garfield's recent letter in the *Nation* on the centre of gravity of our population since 1840, writes to the Cincinnati *Gazette* that in 1790, at the outset of the republic, the centre of gravity, as ascertained by Prof. Patterson, was in York County, Pa.:

"In the next eighty years—down to the census of 1870—it proceeded west (not exactly), but very near the 39th line of latitude. It passed a little south of the 39th degree, having begun something north of the 39th degree, and not having yet quite reached it. This variation is due to the space occupied by Lakes Erie and Michigan, which deflected to the south the advancing column of migration. The straight-line distance from the southeast corner of Pennsylvania (where it began) to Wilmington (Ohio), near which it now is, is very nearly 400 miles. The centre of the advancing column crossed the main ridge of the Alleghanies about 1833, a few miles south of where the old Pennsylvania road crossed Laurel Mountain, east of Uniontown. It crossed the Pan-Handle of Virginia in 1850, and reached the Scioto River in 1860. It is now crossing Ohio rapidly. Although the decennial average is but fifty miles, yet the great column of population is now moving west at the rate of eighty miles in each ten years. The centre will pass near Hamilton, O., and reach Brookville, Ind., about 1880."

—A correspondent has furnished us some calculations in regard to the cost of telegraphic messages in this country, made "on the supposition that the increased number of miles of wire," from 1867 to 1871, "represents no increase of business," "a supposition which," as he says, "he has no means of verifying." We may add that the supposition is incapable of verification. It has no foundation whatever. The new wire put up between 1867 and 1871 was erected in consequence of, and to provide for, the increasing volume of the telegraph business of the country. And experience shows that this growth is greatest between the large cities best supplied with telegraphic facilities. The further assumption that the increased mileage of wire was owing to the consolidation of private companies with each other is also untrue. During the period to which we refer, there were no consolidations of importance. Even if this had been the case, it would not justify the conclusions of our correspondent. It would be immaterial for our purposes whether between New York and Chicago, for example, the increase in business accompanied the union of competing lines or the erection of new wires. The question is, not where the messages came from, but what increase of expense did they involve.

—At Spandau, in Prussia, a shooting match lately took place between pupils of infantry and artillery schools, to determine the comparative efficiency of these two arms of the service. At the first trial each party was placed opposite targets representing its own arm, the infantry at a distance of from 900 to 1,200 yards, the artillery from 1,000 to 1,300 yards. Both practised together for the space of twenty minutes, at the end of which time the infantry had fired 20,000 shots and made about 200 hits; the artillery, using shrapnel-shells, 80 shots and about 1,200 hits. Targets were then exchanged, and firing for the same interval recommenced, with the result still decidedly in favor of the artillery. The numerical strength of the infantry of the Empire is about five times that of the artillery; but even so it would appear that its execution is considerably less effective than the latter's.

—The question whether Pope Adrian did or did not bestow Ireland on King Henry II. of England, which played so prominent a part in the controversy between Father Burke and Mr. Froude, is one on which the best Catholic historians by no means all take sides with the former. Cesare Cantù, in his classic 'Universal History,' admits the transfer. But there is stronger authority for it than Cantù's, and, if possible, one more unsuspected—Dr. Hergenröther, the ablest Catholic Church historian living, if we except perhaps Döllinger and consider him a Catholic. Dr. Hergenröther, who is the author of 'Anti-Janus,' and Professor of Canon Law and Church History in the University of Würzburg, has just published a work ('Katholische Kirche und Christlicher Staat in ihrer geschichtlichen Entwickelung und in Beziehung auf die Fragen der Gegenwart'), in which all the discussions are from the Catholic standpoint. Speaking of the case before us, he says: "Great weight has been attached to the fact that Pope Adrian IV. claimed Ireland and all islands converted to Christianity as the property of the Roman Church, and to the special fact that he made over Ireland to Henry II. in consideration of certain yearly tithes." He only adds that, in judging of this, "many things must be taken into consideration." Among those who have attached great weight to this transaction we find no less a man and no less good a Catholic than Bossuet. Hergenröther quotes from a letter of the Pope to King Henry II. to the effect that the latter had expressed a wish to him to extend the kingdom of Christ and the cause of morality, and had asked the Pope's advice as to how he should proceed to effect this. So low was the state of morals in Ireland, according to contemporary writers, that there was danger of the island's being depopulated by murder. All kinds of looseness prevailed, and even incest was not uncommon. Christianity had been abandoned in a great many parts of the island. Such a state of affairs demanded a remedy, and the remedy was to hand Ireland over to England, to be taken care of. Hergenröther quotes at length from contemporary documents, and from the letters of Adrian and his successor, in defence of these views. Indeed, like a good historian, he writes and does not make history, although he seems overanxious at times to defend the policy and even the political mistakes of the Popes. In addition to all this, our author shows that a council held in Dublin in 1176 acknowledged the sovereignty of England over the island, and that in 1213 Innocent III. warned the Irish to remain faithful to John of England, who had become his vassal.

THE STONE AGE OF GREAT BRITAIN.*

MR. EVANS has long been known as a most indefatigable worker in all that relates to the antiquities of Great Britain, and he has, in this work, given to the public the results of long and laborious examination of the specimens in his own and other large private and public collections of Europe. Being an ardent collector and a good artist, he furnishes not only accurate engravings of nearly five hundred different objects, but carefully prepared descriptions of those engraved, with many others of similar character found not only in Great Britain but in all parts of the world. So

* 'The Ancient Stone Implements, Weapons, and Ornaments of Great Britain. By John Evans, F.R.S., F.S.A., Honorary Secretary of the Geological and Numismatic Societies of London, etc., etc.' New York: D. Appleton & Co. 1872. 8vo, pp. 640. 476 woodcuts and one plate of 20 figures.

full, indeed, is this comparison of allied forms, and so erudite is the author, that the work, though limited by title to a treatise on the stone implements of Great Britain, is in reality a most complete encyclopædia of information on the subject embodied in the works of the earliest writers down to those contemporaneous with our distinguished author, and here made doubly valuable by the large number of reference notes. The work is thus a most reliable guide to the student of archæology in this country, and one that must become the handbook of every worker in this field.

In a carefully prepared introductory chapter, Mr. Evans reviews the classifications that have been proposed for the different periods of prehistoric time during which man has existed, and, though adopting the terms of stone, bronze, and iron ages as the proper divisions of the period immediately preceding and running into the historic, now generally accepted under the term of Neolithic, he shows that such a classification must be taken with due consideration, and that, though the sequence from the stone age, through the bronze, to the iron age is unquestionably in the main correct, yet that sequence does not show itself as contemporaneous in all parts of Europe, and, consequently, we have not a perfect chronology when we adopt it as a whole, but only when we restrict it to any given district. This is perfectly well exhibited on our own continent even to-day, where we have, side by side, the stone age as existing in some tribes of Indians and the late iron age of civilization. Again, we find on this continent the remains of an early stone age, possibly before the neolithic period even, followed by a period corresponding to the bronze age of Europe (the Mound-builders, who were extensive workers in copper), which is again followed by a stone age (the prehistoric Indians), with no signs of a distinct bronze (copper) age, but jumping that age and running directly into the iron or early historic age, as exemplified by the Indians coming in contact with the first white explorers of the land. In this chapter Mr. Evans has fairly stated the case, and, with a full understanding of the subject, has divided his book into two great portions—the first embracing the whole of the neolithic period, consisting of the stone, bronze, and iron ages, and the second the palæolithic period, which he, for good reasons, divides into that of the river-drift and of the caves. That he has fully considered the contrasts exhibited in the execution of the implements of the different ages is evinced by the following summary quoted from page 49, chap. ii.:

"1. That in the Palæolithic, River-gravel, or Drift Period, implements were fashioned by chipping only, and not ground or polished. The material used in Europe was, moreover, as far as at present known, almost exclusively flint.

"2. That in the Reindeer or Cavern Period of Central France, though grinding was not practised, except for bone instruments, yet greater skill in flaking flint, and in working up flakes into serviceable tools, was exhibited. In some places, as at Laugeriehaute, surface-chipping is found on the flint arrow-heads. Cup-shaped recesses have been worked in other hard stones than flint, though no other stones have been used for cutting purposes.

"3. That in the Neolithic or Surface Stone Period of Western Europe other materials besides flint were largely used for the manufacture of hatchets; grinding at the edge and on the surface was generally practised; and the art of working flint by pressure from the edge was probably known. The stone axes, at least in Britain, were rarely perforated.

"4. That in the Bronze Period such stone implements, with the exception of mere flakes and scrapers, as remained in use, were, as a rule, highly finished, many of the axes being perforated and of graceful form, and some of the flint arrow-heads evincing the highest degree of manual skill."

In his second chapter Mr. Evans states the results of his enquiries and careful experiments as to the modes of working flint and the manufacture of various kinds of stone implements. That the Esquimaux should use a piece of deer's horn fixed to a handle as the most stubborn substance with which to work out their arrowheads of chert, after first roughly chipping them into shape with the stone hammer, will be a surprise to most readers of the book, as it is so generally believed that the whole process of making an arrowhead consisted in regulating a series of blows from a stone hammer; while, in fact, the head is finished by gently pressing off small fragments with the aid of the piece of deer's horn, thus securing the almost perfect symmetry and delicate finish which we so often admire in these implements.

With chapter iii. begins the description of the neolithic implements, each form of which is illustrated by the finest of woodcuts, with few exceptions of one-half the size of the originals, giving views of the face or broad surface, side, and section; a luxuriance in illustration which few American authors could afford to follow. Under the general term of "celts," four long chapters contain descriptions and figures of the various forms of cutting instruments comprised in a series starting with chipped flakes of the roughest and most simple make, and passing through the more perfect forms of chisels to the highly finished and polished hatchets and adzes. Many of these forms of cutting instruments were probably hand tools, but the discovery of several with bone sockets or with wooden handles is evidence that they were often mounted by their makers, in the ages long past, in a manner very similar to that still employed among uncivilized races. The similarity in form of the celts figured by Mr. Evans to those found in other parts of the world shows that like ends are attained by like means, and that the human mind has for the same purposes worked and developed in every country in the same direction, up to a certain stage. The great antiquity of these stone celts is well shown by the very prevalent belief in their supernatural origin and the superstition with which, to this day, they are regarded in all countries, of which Mr. Evans recounts many curious instances. Among the absurd but once prevailing notions of their origin is quoted that of Aldrovandus, who describes these stones as formed by "an admixture of a certain exhalation of thunder and lightning with metallic matter, chiefly in dark clouds, which is coagulated by the circumfused moisture and conglutinated into a mass (like flour with water), and subsequently indurated by heat, like a brick."

Chapter vii. treats of implements of an allied nature to the celts, but which, under the name of "picks, hand-chisels, and gouges," Mr. Evans considers sufficiently characteristic to be removed from his group of celts; though in America we have so many more varieties of these forms of implements, and among them are such perfect combinations of the adze and the gouge, that it would here be impossible to draw the line between the two forms, the extremes of which are well defined. The prevailing view in regard to the gouge-shaped implements having been designed for the purpose of hollowing out the trunks of trees for use as canoes, is also that of Mr. Evans, who, from the fact that gouges are rare in Britain, while very abundant in Denmark and Sweden (and, we may add, in North America), infers that the ancient inhabitants of these countries were more of a canoe-making race than those of Great Britain. Archæologists here, however, have generally considered fire to have been the principal agent in ancient canoe-making, and that, while these gouge-shaped stones may have been used to give the final scraping to the charred wood, yet probably they were more frequently used as skin-dressers, under which name they are generally classed, in common with the chipped instruments known as scrapers. This view is supported by the fact that the majority of the gouges were evidently hand instruments, and are generally made of too soft a stone for very effective work on hard wood.

We must pass over the next 260-odd pages devoted to the neolithic period, simply calling attention to the various forms of implements, utensils, and ornaments of which they treat. The finely-finished stone axes with perforations for the handle, the hammers made in a similar manner, and those with a groove around them for the attachment of the handle, like the common form found in this country, the interesting series of implements classed under the head of scrapers used for dressing the skins of animals and similar purposes, the splendid series of arrowheads and javelin points, the flint knives and saws, stone-drills, whetstones, mortars and pestles, cups of rude stone, amber and gold, amulets and ornaments, etc., etc., are all most beautifully figured. The dryness of the technical description is charmingly relieved by general remarks on their modes of use and the conditions under which they have been found, and by instructive comparisons with those of other regions. We cannot close our imperfect review of the neolithic period without allusion to the very important discovery of the nodule of iron pyrites and a round-ended flake of flint found in a barrow in Yorkshire. Mr. Evans has concluded from a careful study of these specimens, together with other evidence, that the iron pyrites must have been used in connection with the flint for the purpose of producing fire, and that we have, in these simple and natural means, at least one of the early modes of producing fire explained.

We now pass to the second division of the book, the Palæolithic period. Here the author, who is of the committee appointed by the British Association for the Advancement of Science to explore the famous Kent Cavern, has with the greatest care brought together the results which have been attained, and which prove the existence of man at a time when the cave lion, the hyena, the cave bear, grizzly bear, mammoth, woolly rhinoceros, the urus, the bison, the Irish elk, reindeer, and other animals now wholly unknown in Great Britain, and many of them extinct species, were the common animals of the region.

"What," asks Mr. Evans (p. 464), "do the presence and condition of these instruments denote"?

"The flint flakes occur in great numbers, and have mostly been used; the blocks from which they were struck are present; there are traces of fire on some of the bones; there are hammerstones, whetstones, weapons of the chase, and the needle of the housewife: all prove that during the accumulation of the cave-earth the cavern was, at all events from time to time, the habitation of man."

Again (p. 476), he says, in his concluding remarks on the cave period:

"Were no other evidence forthcoming, the results of an examination of these British caves would justify us in concluding that in this country man

coexisted with a number of the larger mammals now for the most part absolutely extinct, while others have long since disappeared from this portion of the globe. The association, under slightly differing circumstances, and in several distinct cases, of objects of human industry with the remains of this distinct fauna, in which so many of the animals characteristic of the existing fauna are 'conspicuous by their absence,' in undisturbed beds, and for the most part beneath a thick coating of stalagmite, leads of necessity to this conclusion. This becomes, if possible, more secure when the results of the exploration of other caves on the continent of Western Europe are taken into account. How long a period may have intervened between the extinction or migration of these animals and the present time is, of course, another question; but such changes in the animal world as had already taken place at least three thousand years ago, do not appear to occur either suddenly or even with great rapidity; and, leaving the stalagmite out of consideration, we have already seen that in some instances the physical configuration of the country in the immediate neighborhood of the caves seems to have been greatly changed since the period of their infilling."

The next 145 pages of the volume treat in a thorough manner of the implements of the river-drift period. As our author says, he proposes, "first, to give a slight sketch of the origin and nature of the discoveries which have been made in this particular field of archæology; then to furnish some details concerning the localities where implements have been found, and the nature of the containing beds; next, to offer a few remarks on the character and possible uses of the various forms of implements; and, finally, to consider the evidence of their antiquity"; and most admirably has this been done. Mr. Evans shows, in this part of his book, how carefully he has pursued the geological side of the subject, giving a most instructive résumé of the whole subject of the formation of the river-gravel beds. Though the high antiquity of man on the continent of Europe may be considered settled, from his having been found to be contemporaneous with a number of large animals, such as the fossil elephant and fossil rhinoceros, long since extinct, to fix the time in years with any degree of precision is impossible, and our author makes use of the following equation to represent it:

"The antiquity, then, that must be assigned to the implements in the highest beds of river-drift may be represented (1) by the period requisite for the excavation of the valleys to their present depth; plus (2) the period necessary for the dying out and immigration of a large part of the quaternary or post-glacial fauna and the coming in of the prehistoric; plus (3) the polished stone period; plus (4) the bronze, iron, and historic period, which three latter in this country occupy a space of probably not less than three thousand years."

On this head the following is Mr. Evans's impressive summary:

"On the whole, it would seem that for the present, at least, we must judge of the antiquity of these deposits rather from the general effect produced upon our minds by the vastness of the changes which have taken place, both in the external configuration of the country and its extent seaward, since the time of their formation, than by any actual admeasurement of years or of centuries. To realize the full meaning of these changes almost transcends the powers of the imagination. Who, for instance, standing on the edge of the lofty cliff at Bournemouth, and gazing over the wide expanse of waters between the present shore and a line connecting the Needles on the one hand and the Ballard Down Foreland on the other, can fully comprehend how immensely remote was the epoch when what is now that vast bay was high and dry land, and a long range of chalk downs, 600 feet above the sea, bounded the horizon on the south? And yet this must have been the sight that met the eyes of those primeval men who frequented the banks of that ancient river, which buried their handiworks in gravels that now cap the cliffs, and of the course of which so strange but indubitable a memorial subsists in what has now become the Solent Sea.

"Or, again, taking our stand on the high terraces at Ealing, or Acton, or Highbury, and looking over the broad valley four miles in width, with the river flowing through it at a depth of about 100 feet below its former bed, in which, beneath our feet, are relics of human art deposited at the same time as the gravels; which of us can picture to himself the lapse of time represented by the excavation of a valley on such a scale, by a river greater, perhaps, in volume than the Thames, but still draining only the same tract of country?

"But when we remember that the traditions of the mighty and historic city now extending across the valley do not carry us back even to the close of that period of many centuries when a bronze-using people occupied this island; when we bear in mind that beyond that period lies another of probably far longer duration, when our barbaric predecessors sometimes polished their stone implements, but were still unacquainted with the use of metallic tools; when to the historic, bronze, and neolithic ages we mentally add that long series of years which must have been required for the old fauna, with the mammoth and rhinoceros, and other, to us, strange and unaccustomed forms, to be supplanted by a group of animals more closely resembling those of the present day; and when, remembering all this, we realize the fact that all these vast periods of years have intervened since the completion of the excavation of the valley and the close of the Palæolithic period, the mind is almost lost in amazement at the vista of antiquity displayed.

"So fully must this be felt, that it is impossible not to sympathize with those who, from sheer inability to carry their vision so far back into the dim past, and from unconsciousness of the cogency of other and distinct evidence as to the remoteness of the origin of the human race, are unwilling to believe in so vast an antiquity for man as must of necessity be conceded by those who, however feebly they may make their thoughts known to others, have fully and fairly weighed the facts which modern discoveries have unrolled before their eyes."

RECENT NOVELS.*

ON the whole, we think that the novel reader should certainly rejoice at the appearance of translations of works of fiction which were written in foreign tongues, so long as the choice of books is discreetly made, and the rewriting them in English (for translation almost amounts to that) is done by competent persons. There is, of course, a large class who are for ever reading French novels, although, perhaps, with an eye to their newness rather than to their merits, while there are almost as many who vary the somewhat monotonous reading of German tragedies by taking up the almost equally monotonous German novels. But besides the difficulty of determining the moral worth of an unread novel, most of those written in French will be found rather hard reading by those who are not very familiar with the language, and while this is true of most, it will be found especially true of those which are written by Victor Cherbuliez. Of his merits as a writer mention has already been made in these pages, and it is of the novel, 'Joseph Noirel's Revenge,' which is the last he has written that we have to speak to-day. Before discussing the quality of the novel, there is something to be said about the merits of the translation, which bears too great marks of having been hastily done. At the best, reading a translation is like looking at a picture through tinted glass, but when the glass has flaws in it that might have been avoided by very slight attention, the reader is naturally impatient. One is resigned beforehand to the loss of the peculiar elegance of the French, and of the grace and facility with which Cherbuliez uses it; let one think how Thackeray, for example, would read in the French translation; but of the faults that need not have occurred we will mention a few. Had Cherbuliez written the novel in English, we should hardly have found "I guess I was," which is to be seen on page 50, nor, page 107, "If anybody should ever murder me, I think it would be splendid to have Royer blow up his billiard table"—perhaps, however, we should be grateful that "elegant" was not used. "Struggled some," page 63; "considerable of a fall," page 95; "I'm not through yet," page 48; and, most remarkable of all, "bottoms of my feet," page 199, are instances of gross carelessness, though on almost every page we miss anything like the smoothness of the original. As to the title, 'Joseph Noirel's Revenge,' in the French it is 'La Revanche de Joseph Noirel,' and to translate *revanche* by revenge is a bit of inaccuracy; the word means rather "turn" or "innings," although neither of these words lends itself to a smooth-sounding title. It should be mentioned, however, that those who take up this novel will not be tempted to seek refreshment for themselves on their way through it by parsing ungrammatical sentences. As a clever novel, as one that fixes and holds the reader's attention, it is certainly deserving of very great praise. It is, in a way, a model sensational story. Cherbuliez is always clever—clever, with great wit, a charming style, and a happy invention, and the reader is carried on to the end of his novels, puzzled about the issue of the story and fascinated by the author's wonderful dexterity. Poems in prose they are not; they are too much the best work of cleverness to be that; but Cherbuliez is by no means unmindful of the charm which ingenuity alone can never produce, and in every one of his books there are passages which imply something more than mechanical facility.

'Joseph Noirel's Revenge' tells us the story of a young girl, Marguerite, a charming person, the daughter of a rich Genevan *bourgeois*, with whom a handsome count, not middle-aged but no longer a youth, falls in love, and whom, to the delight of her ambitious parents, he marries. Joseph Noirel is a young workman employed by her father, who has held a vaguely defined position in regard to the family, he being half workman and half friend. Growing up in this intimacy with the family, he falls in love with Marguerite, while the obscurity of his origin and his own inferior social position prevent him from presuming to mention his love. Around the count's

'Premiums Paid to Experience. By Edward Garrett, author of 'Occupations of a Retired Life,'' etc. New York: Dodd & Mead. 1872.

life there is a great mystery which his wife, not from curiosity, idle or busy, but from a wish to sympathize with him, tries to discover. But let no reader imagine for a moment that we are going to take the words out of Mr. Cherbuliez's mouth, and tell any more his carefully concocted story. Those who have read it do not need to have it repeated, and those who have not would not thank us. The curious reader cannot do better than take up the novel and solve the mystery for himself. We are sure that he will be interested, and that he will find it difficult to lay the book down before finishing it. Whether on his cooler second thought he will be so well pleased with the novel is another question; he will not deny its interest, but there will be left a feeling of sympathy for the people who are tormented in the story for his idle entertainment. But, on the other hand, its objectivity of treatment, its avoidance of the temptation to linger over morbid self-analysis and obscene psychological difficulties, save the book from being a dangerous one. It is nothing new to find in French novels a discussion of the state of mind of a man who is in love with another man's wife, but in few of the stories do we find such innocence as is here portrayed in Marguerite's character. If it were otherwise, the book should be tabooed; but as it is, one must be very prone to evil to be hurt by it. To some people, even 'Blue Beard,' which this novel resembles, must be an objectionable story.

A novel of as firmly settled moral tone as the Constitution of the United States is Miss Ingelow's 'Off the Skelligs.' In regard to literary merits, however, the palm must be given to the book we have just been discussing. Miss Ingelow puts the story into the mouth of a young girl, the heroine of placid love-affairs, which are much less interesting reading than the more exciting yacht voyages which she takes with her eccentric uncle and a brother, whose relation to the story is about that of a fifth wheel to a coach. She flirts with a young man named Valentine, who is a conceited rattle of a half-grown youth, while grimly flitting about in the background is the earnest man whom she marries after a series of misunderstandings. In construction, the novel is lame to a great degree. The story unwinds itself with depressing slowness; the love-making, even to those who do not care for elopements and feverish transports, seems as passionless as tea-parties. There is a fearful dulness throughout the whole book. Many pages are given up to records of the talks of the different characters, which are, for the most part, dreary enough to make one wish to turn Trappist.

Before laying aside the rod, we should like to mention Mr. Henry Kingsley's novel, 'The Harveys,' as a book to be shunned. The author outdoes all his previous failures in the way of jauntiness and ease of manner. A book that has so little that is good it is hard to criticise justly without seeming to be unwarrantably abusive, but in the way of affectation it would be hard to find anything that exceeds Mr. Henry Kingsley's later novels. This one is poorer than even 'Old Margaret,' of which mention was made a few months ago.

Those who remember Mrs. Edwards's very readable novels, 'Susan Fielding' and 'Ought we to Visit Her?' and are induced to buy 'The Ordeal for Wives' under the impression that it is, as it is advertised to be, a new novel of hers, should understand that it is not a new novel, but an old one, which is offered them. How fair it is to an author, who has no means of setting herself right, to take one of her earlier and less successful novels, which she would probably be glad to let remain in obscurity, and to put it before the public as a recent work, every one can judge for himself. This novel is far inferior to Mrs. Edwards's later stories, and bears much stronger resemblance to the sensational novels of Mrs. Rhoda Broughton than to any better models. But there is besides much of the humor, of the keen observation that make the later writings of our author so very readable. The sentimental reader will find no lack of that important quality, but it is only too evidently the work of an immature hand.

'The Doctor's Dilemma' is the title of a new novel by Miss Hesba Stretton. The question which disturbed the doctor was whether or not he should poison one of his patients. The temptation was strong; the sick man was a low-lived character who made himself very odious to the doctor, and, furthermore, he was the husband of a charming young woman with whom the doctor was in love; so that the patient's chance seemed to be a bad one, especially since he could have been put out of the way, not by having poison mixed with his pills, but by the doctor's abstaining from putting him under a new treatment, which is always successful in novels. Virtue wins the day, but still the patient is not immortal; in due time, illnesses, for which no cure has been discovered, seize him, and he dies, leaving his wife and the doctor to marry with clean consciences. The story needs no praise nor blame; it is simply one of a thousand which kill the idle hour, though sometimes by a lingering death.

Of a very different kind is Turgenef's 'Liza,' which is the last of Messrs. Holt & Williams's admirably chosen 'Leisure Hour Series.' A French translation, with the title 'Une Nichée de Gentilshommes,' has been before the public for about ten years, but this English version has been made, and with much more literalness. It can be recommended without reserve to those who are anxious to read a novel that differs as much from the ordinary kind—for example, from 'The Doctor's Dilemma'—as Keats's 'Ode to a Nightingale' differs from a chapter of ornithology. Of those which have already appeared, 'Fathers and Sons,' in spite of its very great interest, contained so much that needed for its entire comprehension a tolerable knowledge of Russian life and recent history, many of the problems it introduced were so different from anything familiar to the experience of most novel-readers in this country, that the impression it made could never be so complete as that which the original must have made upon those for whom it was properly written. In 'Smoke,' too, much of the long-drawn-out conversation in which Turgenef, with a sort of Dickens-like exaggeration, ridicules the foibles of his fellow-countrymen, has wearied many readers to whom the state of society that it caricatured was something unknown; and then, notwithstanding all that women-writers have done in the way of accustoming the public to high-seasoned food, there was something distasteful in the subject to many who did not stop to see how it was treated, as well as to many others who did. To 'Liza,' however, these objections do not apply; it is simply a beautiful story, in which no one need fear to find a dull or offensive page. The heroine, whose name in the English translation, with the author's permission, gives the title to the story, is a young girl of a serious, religious nature. If Turgenef knows how to describe perplexing, fascinating, evil-minded women like Irene in 'Smoke,' he understands just as well how to draw pure and lovely women like Marie in 'The Correspondence,' or Helen in 'On the Eve,' or the heroine of this novel. He represents her receiving the attentions of a young man, Panshine, who is an intelligent, cold-blooded, self-esteeming man whose only real ambition is political success, but who is in love with Liza. Soon there appears Fedor Lavretsky, a married man, who is separated from his wife on account of her infidelity. She was a frivolous, heartless woman whom he had married when an inexperienced youth, and who afterwards went entirely to the bad. Just as he becomes interested in Liza, he receives the news of his wife's death, he declares his love to her, she confesses her own, after a moment of happiness their dream of greater bliss is broken by the return of the wife, the report of her death having been false. Liza goes to a convent, he to his own work. Although we crowd the story into these few lines, there is vastly more in it than so brief an analysis shows. Nothing could be more delicately told than Liza's readiness, in the first place, to marry Panshine, simply because she is in a certain way pleased by his various accomplishments, and by so doing she could gratify her mother; then, when Lavretsky's influence teaches her how much more serious is that passion of which she had previously been ignorant; and, finally, when marriage with him is impossible, the dignity with which she resigns herself to her sad fate, the loftiness of mind with which she treats Lavretsky, whose whole action is controlled by her, is all set before us, or rather we see it all going on, as only clear eyes see the tragedies of life, and as only poets narrate them. A story of this sort should be read more than once before its full charm can be felt, there is so much untold, so much suggested, that its interest is never exhausted. There is, for instance, the story of Lemm, the old music-teacher, with his impossible love, which he knows to be impossible, and his futile, ardent longing for musical success, making a touching episode which only seems the more impressive the more it is thought over. Then, with regard to the whole novel, in spite of its sadness, there is no impotent outburst against the sternness of fate, any more than there is a dexterous riddance of all difficulties through some unexpected back-door; the people have their troubles, they suffer, they bow to their fate, and time brings what consolation it can.

A German translation of three shorter tales of Turgenef's has just appeared. They are 'The King Lear of the Steppe,' which was recently published in the *Revue des Deux Mondes*; 'Der Fatalist'; and 'Der Oberst,' which many will remember as 'Le Brigadier' in the 'Nouvelles Moscovites.' This last is an exceedingly interesting story—one of the best that the author has written. The 'Lear of the Steppe' is, to our thinking at least, one of much less interest. 'Der Fatalist,' which is the only one that will be absolutely new to most of our readers, is the story, told by an old officer of a friend of his youth some forty years ago, of a man who, feeling his insignificance in the world, and yielding to the intellectual fashion of that day in Russia, and mistaking some ordinary occurrences, which are afterwards satisfactorily explained, for supernatural tokens, takes his own life. It is a study of a morbid, half-mad character, like many of this writer's shorter tales, and so the sketch, in spite of the skill with which the grimness of the events is told, is far from being one of general interest. Still, no admirer of Turgenef will be satisfied until he has read it. In comparison with this and with the

'Lear of the Steppe,' we praise the more warmly 'Der Oberst,' in either the German or French translation.

For those who wish a swift transition to the monotony of everyday life, there is Miss Kavanagh's 'Bessie,' by the side of which any dull routine would be interesting and almost poetical. Miss Kavanagh has told us so many readable, if over-sentimental, tales, that one sees with regret her endeavor, in this novel, to represent greater complications than intricate flirtations can bring about. It is a story with a mysterious close, but when this is found out, it seems but a ridiculous mouse which has caused all the trouble. Still, the story reeks with love-making of different kinds, though all the people, in spite of their resemblance to Greek gods who bite their nether lips, and of the way the young women flirt desperately without seeming to be aware of it, are vague and misty creations.

Quite as remarkable as would be the appearance of a stage-coach to take travellers from this city to Boston, or a fine sailing packet to ply between here and Albany, is the reappearance of 'The Hills of the Shatemuc,' which we thought had as irretrievably disappeared from human knowledge as the Mountains of the Moon have from the map of Africa. But the book appears again, with its long talks between the man who will take no more pie and the woman who tempts him to overeat himself, or whatever the rustic imitations of a plot may be, as if novels were rare in the market. One cannot help wondering who they are who read these novels nowadays.

Twenty years ago and more, 'Kaloolah' was the delight of many young readers, and puzzled some of the older ones to decide whether it was in greater part fact or fiction. Dr. Mayo says in his preface that it would, if his notes upon the story had been printed in connection with it, have incurred the danger of being "taken by the public as mere authority on certain questions in geography, ethnography, natural history, and mechanics." A second reading of 'Kaloolah,' after the interval referred to, does not, we find, renew the pleasure of our youth, nor raise a doubt that we have been guilty of novel-reading, nor add greatly to our previous stock of knowledge about ethnography or mechanics. In a word, the story is violently improbable, and quite unworthy of resurrection at this late day.

Mr. Garrett tells us in his prologue that "life is like a roll of costly material passing swiftly through our hands, and we must embroider our pattern on it as it goes," and his book is written throughout in the serious Anglo-Saxon spirit which Mr. Taine assures us forms, rather than our creed, the basis of Englishmen's best doings in the world. 'Wheat and Tares,' 'The Crackling of Thorns,' 'A Well without Water,' 'A Sin of Omission,' 'An Israelite Indeed,' are some of the titles of chapters in which the author describes certain experiences of his life, reflecting that "if you buy a bit of wisdom at any price, it is a good bargain." He tells stories of his early companions, of their struggles in business and disappointments in love. He interests us "in a problem that vexed me sadly for many, many years"—the mystery of the "Providence that rules the world," as exemplified in its dealings with Messrs. Knight, Archer, and Henry Cromer, "the second son of the chief corn and grain merchant of Middleboro, Shropshire." He criticises his own early experiences under the derogatory title of the 'Wisdom of Fools.' Each chapter is a story, and we gather from the book a quite vivid impression of certain phases of life among the middle classes of English Dissenters, especially of lives of which privation, and suffering, and religious principle are the leading features. In the last chapter, he severely describes "one of those light natures with whom feeling follows the semblance," who "said what ought to be said and meant it afterwards." Mr. Garrett maintains throughout the story such a uniform superiority to his gay young friend, and lectures him so solemnly when he comes to grief, as he deserves, that we find our sympathies forcibly transferred to the wrong side—an accident which will hardly overtake the solid British Dissenter, who, after all, will be, we presume, the person mainly edified by these narratives.

The City of God and the Church-makers. An Examination into Structural Christianity, and Criticism of Christian Scribes and Doctors of the Law. By R. Abbey. (New York: Hurd & Houghton. 1872.)—Mr. Abbey's theological method is above all things simple, but that its simplicity is identical with that which is said to be an essential element of greatness may safely be doubted. His conception of an exhaustive treatment of the rather large question which he proposed to himself to discuss is like this: he has discovered in the course of a long life and a good deal of not overdiscriminating theological study, that the "Church of God" is seriously hampered, not to say on the very verge of being crushed out of existence, by twenty-four fundamental errors. These he states as briefly as possible, and among them are such as these: That Jesus Christ instituted a new church; that the law was abrogated by the Gospel; that the Jews offered true sacrifices; that the Jews crucified Jesus Christ; that the Jews were lineally descended from Abraham; that Jesus Christ "established new sacraments," etc. To these twenty-four errors, Mr. Abbey very peremptorily opposes twenty-four contradictory truths, which he does not propose to argue at all, because he thinks them self-evident, and that immediately on their assertion they will "probably be held incontrovertible." His next step is to summon into court "two hundred authors" in order to prove that the erroneous notions in question are, preposterous as it seems, actually believed and taught by Christian writers. Thus, the "Rev. E. P. Murphy, D.D., of Kentucky," is openly convicted of having taught in that department of "the church" that "two methods of salvation have at different times been proposed to mankind"; and having shown up the unfortunate Murphy, who doubtless never considered himself as an entirely authoritative teacher, Mr. Abbey goes on to say, with a fine irony, that this sort of thing "passes in Christian lands and among Bible readers for theology." Dr. Stuart, of Andover, fares no better, and his remark, that our Lord "proposed to teach a new religion," is met by Mr. Abbey with the retort: "The only new religion known in those days, that I know of, was the new faith set up by the rejecting Jews, in opposition to the Saviour." Even "Milligan, Carrol & Co., of Cincinnati," who published at some time or other an apparently anonymous "philosophical treatise" in which it was taught that Christianity was introduced into the world by Jesus Christ, do not escape the searching eye of Mr. Abbey, which sees all that is insignificant, and apparently sees nothing else. He arraigns "a tract published in 1860 by the Rev. Messrs. Boyce and Quintard—now Bishop Quintard"; "An American Sunday-school Book"; Hannah More; "The Methodist Catechism," and other weighty authorities, and from each of them he quotes a line or two in support of one or other of the "twenty-four errors," and then proceeds to demolish them by opposing a line or two of his own, equally weighty, equally convincing, in the way of flat denial or contemptuous comment. It is astounding, he thinks, that "the Church" has borne up so long under such misrepresentations of its true character, and he is happy in the thought that he has lived long enough to clear away so much encumbering rubbish. His notion of a general clearance is suggestive of an idea broached by a student in one of our colleges on the subject of making decently habitable one of his two rooms. The true theory of housekeeping, he submitted, was always to have two rooms, "one of them to throw the rubbish in." We shall not say on which side of the house, the new or old, a convert to Mr. Abbey's views would find the most litter; but we advise all readers who have a great deal more time than they know what to do with, and all who having more time than they know what to do with are entirely indifferent whether they spend it profitably or with complete unprofitableness, and all who being in this above-mentioned condition are careless whether or not the unprofitable employment amuses them, or on the other hand makes them low-spirited and dismally dull, to hasten and purchase "The City of God," and give it a careful perusal.

Major Jones's Courtship: Detailed, with other scenes, incidents, and adventures, in a series of letters by himself. Revised and enlarged. To which are added, Thirteen humorous sketches. With illustrations by Cary. (New York: D. Appleton & Co. 1872. 12mo.)—Twenty-eight years ago Mr. W. T. Thompson wrote the history of the courtship of Major Jones, "to give variety and local interest to the columns of a Georgia country newspaper," by portraying "Southern rustic life and character, with no more of exaggeration than was necessary to give distinctiveness to the picture." The author's very modest preface informs us that in the present edition "puerilities have been eliminated, needed amplifications have been supplied, and many verbal and orthographic changes, not inconsistent with the general character of the thing, have been made."

Major Joseph Jones was a Georgia "cracker" who lived about the year 1842, in Pineville, Georgia, was a major of militia, fond of the manly arts of coon-hunting, candy-pulling, and courting, in the habit of saying "sense" for *since*, "monstrous" for *very* or *extremely*, "yeath" for *earth*, "pore" for *poor*, and in many other ways exhibiting the peculiarities of the Georgia "mean white"—as in his contempt for "niggers," his love of country, and pride in the good old State of Georgia. For this at least we take Mr. Thompson's word, for, according to our own experience, Major Jones, though having many other dialectic peculiarities of the "cracker" tribe in Georgia, is morally above the level which we should have drawn as typical. There is a trifle too much romance, perhaps, about his relations with Miss Mary Stallins for cracker life, and indeed it may be doubted after all whether Mr. Thompson, when he uses the term "rustic life," is not more correct than when he selects the other epithet. Major Jones is certainly ignorant and vulgar, but he has not the degradation of the true mean white. We speak with hesitation on the subject, for apparently Mr. Thompson knows the field thoroughly; and the field has doubtless

changed a good deal since the picture of it was drawn; but is there not a good deal of the small Georgia farmer of the upper counties in Major Jones's character, and would the refined Miss Stallins have married a real mean white? Besides this, is there not a good deal too much of Mr. Thompson himself in this Major?

The book gives, as we believe, a very fair picture of the condition of society in the Southern interior among the poorer classes, at the period when railroads were a new thing; when service in the militia was still regarded as a matter of pride; when the memories of the Revolution and the men who took part in it had not wholly faded away; when abolitionists were regarded in the South much as the early Christians, in the second or third centuries, were by the contented worshippers of Jupiter; when the "North" was an unknown country, reputed to contain many wealthy but also dishonest and cowardly people. It was a society which read, wrote, and spelt with great difficulty, but was very contented with its own ignorance, and indeed not sufficiently familiar with other forms of society to know how ignorant it was. The description of the life led by Major Jones and his friends can hardly be called interesting reading; but it has some value, or will one of these days, as the records of extinct life always have, particularly when they are left behind by those who cannot be suspected of unfairness. The "thirteen humorous sketches" are very much like "Major Jones's Courtship"; they consist of such stories as in all frontier and half-civilized countries are told to amuse the audience which gathers round the fire after the day's drudgery or idleness is over; which is very willing to be amused, and not critical as to the means. The humor is of that broad kind which finds more delight in practical jokes, the accidents occasioned by drunkenness, "scares" in church-yards, and repartees of the *tu quoque* kind, than in the appreciation of those very remote resemblances and recondite analogies of which the best authorities assure us true wit, or true humor, we forget which it is, consists. We must not forget to add that the main story will enjoy a sort of immortality, as one of the sources of Mr. John Russell Bartlett's "Dictionary of Americanisms."

Latin School Series. Selections from Classic Authors, Phædrus, Justin, Nepos. With notes and a vocabulary, by Francis Gardner, Head Master; A. M. Gay and A. H. Buck, Masters, in the Boston Latin School. (Boston: Lee & Shepard, Publishers. 1873. 12mo, pp. 281.)—It is a good sign for the interests of classical learning that even the Boston Latin School has yielded to the demand for a more generous method, and has undertaken to substitute the study of the ancient writers themselves for some part of that exclusive grammatical dish which used to characterize it. This volume of the 'Latin School Series' proposes as a definite aim to enable the pupil "to read a Latin author with a facility which the methods hitherto pursued of studying the language have rendered impossible"—of providing "such selections as shall contribute to the most rapid and pleasant advancement of the pupil." It is very hard to make such selections in Latin—much harder than in Greek, to find passages which shall be at once easy, interesting, and in a good style; and it illustrates the difficulty that not one of these three authors can be pronounced unequivocally classical, nor, for the matter of that, either easy or really interesting. Yet these passages will perhaps do as well as any that could be found, and at all events will afford a variety from the everlasting repetition of the same books of Cæsar, and same orations of Cicero, which is one of the greatest disadvantages of our classical courses. The notes are prepared with care and accuracy, and show at every step the hand of an experienced teacher. The vocabulary is equally good; clear, compact, and giving just such information as the boy needs. The etymology is particularly good.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Roe (Rev. E. P.), Barriers Burned Away	(Dodd & Mead)	
Rowlands (C.), Henry M. Stanley: The Story of his Life	(J. C. Hotten)	
Schulte (Prof. J. F. von), Ueber Kirchenstrafen, swd	(L. W. Schmidt)	
Snider (D. J.), Clarence; a Drama, swd	(E. F. Hobart & Co.)	
Snow (Mrs. S. P.) and Floy (H.), Christmas Stories about Santa Claus	(Nelson & Phillips)	
Stieler (A.), Hand-Atlas, Part X., swd	(L. W. Schmidt)	$0 50
Still (W.), The Underground Railroad, new ed	(Porter & Coates)	
Stricker (Dr. W.), Der Blitz und seine Wirkungen, swd	(L. W. Schmidt)	
Stuart (Rev. J. P.), The New Doctrine of Prayer, swd	(Robert Clarke & Co.)	1 25
Talk and Travel	(D. Ogilvy)	
Talcock (Rev. O. W.), English Grammar and Reading Book	(Macmillan & Co.)	1 50
Underwood (F. H.), Handbook of English Literature, American Authors	(Lee & Shepard)	

WE WILL SEND THE WEEK

For one year, with any one of the following works at the prices annexed, and to Teachers or Clergymen for $1 less in each instance.

THE FORTNIGHTLY REVIEW (the English sheets of which we have made arrangements to republish in America at Six Dollars a Year, or Fifty Cents a Number), for $9.

CONTENTS OF THE JANUARY NUMBER.

The Principle of Authority. By Frederic Harrison.
Grote's Aristotle. By John Stuart Mill.
Mr. Stephen's Introduction to the Indian Evidence Act. By Sir Henry S. Main.
Memorial Verses on Théophile Gautier. By A. C. Swinburne.
Ibsen, the Norwegian Satirist. By E. W. Gosse.
Forty Years of the House of Lords. By S. Bowen Graves.
The Eustace Diamonds. Chaps. LXXIII. to LXXVI. By Anthony Trollope.
Critical Notices: 'Middlemarch,' and 'Love is Enough.' By Sidney S. Colvin.

TAINE'S ENGLISH LITERATURE. 2 vols. Retail price, $7 50; both for $7 75.

DANA'S CORALS AND CORAL ISLANDS. Retail price, $6; both for $7.

☞ Remittances by P. O. order, draft, or registered letter, should in all cases accompany the subscription.

For free specimen copy of *THE WEEK*, address

HOLT & WILLIAMS, Publishers,
25 Bond Street, New York.

ONE LAW IN NATURE.

A NEW CORPUSCULAR THEORY,

Comprehending Unity of Force, Identity of Matter, and its Multiple Atom Constitution, applied to the Physical Affections or Modes of Energy.

By Captain H. M. LAZELLE, U. S. Army.
12mo, fine cloth, $1 50.

D. VAN NOSTRAND, Publisher,
No. 23 Murray Street and No. 27 Warren Street.
*** Copies sent free by mail on receipt of price.

PUBLISHED THIS DAY:

By arrangement with the Author and from his Advance Sheets,

LITTLE HODGE.

By the Author of 'GINX'S BABY.'

With Author's Preface for American Edition.

12mo, cloth, $1 25.

In the point, pith, and pungency of its style, and the general interest of its subject, 'Little Hodge' resembles the famous 'Ginx's Baby' more than any other work of this popular writer.

DODD & MEAD,
Publishers, 762 Broadway, New York.

HARPER'S CATALOGUE. The attention of those designing to form Libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

It is suggested that whenever books cannot be obtained through the local bookseller, application be made, with remittance, direct to the publishers.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

RARE AND STANDARD BOOKS.

OLD PRINTS AND MODERN ENGRAVINGS,
OIL PAINTINGS, AND OBJECTS OF ART,

obtained at the lowest prices. Address

F. B. PATTERSON,
27 Park Row, New York.
Literary and Art Circular sent free.

MACMILLAN & CO.'S NEW BOOKS.

IMPORTANT WORK ON COMPARATIVE MYTHOLOGY.

ZOOLOGICAL MYTHOLOGY; or, The Legends of Animals. By Angelo de Gubernatis, Professor of Sanscrit and Comparative Literature in the Instituto di Studii Superiori e di Perfezionamento at Florence. 2 vols. 8vo, cloth, $8.

This work is an important contribution to the study of the Comparative Mythology of the Indo-Germanic nations. The author introduces the denizens of the air, earth, and water in the various characters assigned to them in the myths and legends of all civilized nations, and traces the migration of the mythological ideas from the times of the Early Aryans to those of the Greeks, Romans, and Teutons.

SECOND VOLUME OF LANFREY'S NAPOLEON.

HISTORY OF NAPOLEON I. By P. Lanfrey. A translation made with the sanction of the author. Volume 2. 8vo, cloth, $3 50. Vol. 1, 8vo, $3 50.

"Its clear and brilliant style, direct, yet picturesque, is almost the ideal of historical writing. Its study of the character and career of the most remarkable man of the century is superlatively acute, vigorous, bold, and truth-compelling."—N. Y. Evening Mail.

A HAND-BOOK OF MORAL PHILOSOPHY. By the Rev. H. Calderwood, LL.D., Professor of Moral Philosophy at Edinburgh University. Crown 8vo, $2.

"Dr. Calderwood's most interesting chapters will be found in his lucid exposition and logical defence of the intuitional theory of morals against the materialistic and utilitarian theories of Bentham, Mill, and Professor Bain. It is, we feel convinced, the best hand-book on the subject, intellectually and morally, and does infinite credit to its author."—London Standard.

Prospectuses of the above work may be had on application.

DR. FOX ON DYSPEPSIA.

THE DISEASES OF THE STOMACH. Being the third Edition of the "Diagnosis" treatment of the Varieties of Dyspepsia. Revised and enlarged. By Wilson Fox, M.D., Physician Extraordinary to her Majesty, etc. 8vo, cloth, $3.

THE OWENS COLLEGE JUNIOR COURSE OF PRACTICAL CHEMISTRY. By Francis Jones, Chemical Master in the Grammar School, Manchester, with a preface by Henry Roscoe, F.R.S. 18mo, cloth, $1 25.

MACMILLAN & CO.,
38 Bleecker Street, New York.

THE WEEK IN TRADE AND FINANCE.

January 13, 1873.

THE money market is slowly returning to a more satisfactory condition, although, by holding off from accepting the legal rate, lenders have been able to obtain small commissions (compared with those of last week), varying from 1-64 to 1-16 in addition to 7 per cent. per annum. As a rule, borrowers have had no difficulty in supplying their wants at 1-64 to 1-32 and interest, and, on some days, at 7 per cent. gold per annum. By the 20th of the present month a steady 7 per cent. market may be reasonably expected. The last of the "relief money," amounting to $1,345,846, was called for by the Treasury from the national banks on January 4. The total amount deposited in the banks in October was $6,023,387, which, together with the proceeds of the weekly gold sales, amounting to $11,242,486, making a total of $17,265,873, has been withdrawn by the Treasury from the banks of this city since Nov. 1. The amount paid out by the Treasury in the same time for 5-20's purchased was $5,529,212, making a net loss to the banks of $11,736,611.

In commercial paper, business has been more active, and, in view of the near approach of easy money, there has been a greater disposition to buy, and the tendency of the market is towards lower rates. The paper of some of the large railroad corporations has lately been in the market, and has found ready sale, among which we may mention that of the Philadelphia and Reading Railroad Company and the Pennsylvania Railroad Company. 9 to 12 per cent. is the range of rates for good names.

The Governor, in his recent message to the Legislature, has taken strong ground in favor of the repeal of the usury law, and bills have been introduced for its abolition. We hope to see the matter pressed to a favorable result, and New York placed in as advanced a state of civilization, in this respect, as some of her sister States.

The bank statement for the week ending January 11 is favorable. The gain in reserve is in specie only, and is due to the disbursements of January interest on the public debt. The receipts of currency from the country so far have been in national bank notes, which are not available to the banks, and go to swell their liabilities in the shape of deposits. The banks now hold $4,690,025 in excess of the 25 per cent. reserve required. The excess for the week ending January 4 was $2,788,025, and the banks have consequently gained $1,902,000 in their net reserve, as shown by the following statement of averages, compared to that of the previous week ending Jan. 4:

	Jan. 4.	Jan. 11.	Differences.
Loans	$277,720,900	$275,552,800	Dec. $2,168,100
Specie	19,478,100	22,539,100	Inc. 3,061,000
Circulation	27,613,800	27,461,600	Dec. 152,200
Deposits	203,808,100	207,441,500	Inc. 3,633,400
Legal tenders	41,165,400	40,876,700	Dec. 288,700

The following analysis of the above statement shows the relation of the total liabilities and the total reserve:

	Jan. 4.	Jan. 11.	Differences.
Specie	$19,478,100	$22,539,100	Inc. $3,061,000
Legal tenders	41,165,400	40,876,700	Dec. 288,700
Total reserve	$60,643,500	$63,415,800	Inc. $2,772,300
Circulation	$27,613 800	$27,461,600	Dec. $152 200
Deposits	203,808,100	207,441,500	Inc. 3,633,400
Total liabilities	$231,421,900	$234,903,100	Inc. $3,481,200
25 per cent. reserve	57.855.475	58,725,775	
Excess over legal reserve	2,788,025	4,690,025	Inc. 1,902,000

Advices from London have been favorable. The Bank of England, on Thursday, reduced its rate of discount from 5 to 4½ per cent., while outside of the Bank the rate for money is 3½ per cent.

If we except two or three of the leading speculative stocks, the week at the Stock Exchange has been dull, and free from any interesting features. Pacific Mail has made a further decline, and sold on Thursday at 70. The speculation in the stock of the Western Union Telegraph Company carried the price up to 84 on Saturday, from 78⅞, the price at the commencement of the week. The revelations in the Crédit Mobilier investigation frightened the holders of the stock of the Union Pacific Railroad Company, and their efforts to sell have caused a decline in the price from 39¼, the quotation on Monday, to 35½ on Friday, from which point only a slight reaction has taken place, the stock closing on Saturday at 36¼.

The leading feature of the week has been New York Central and Hudson, which advanced to 104 on Friday. A great many reports and rumors have been afloat regarding the earnings of the road and the large future dividends to be paid. One report places the gross earnings for the year 1872 as high as $30,000,000, and for the month of December $2,700,000. As Commodore Vanderbilt never publishes the earnings of his roads until it suits his convenience, there is no way of ascertaining the truth of the matter. There has been some uncertainty whether the money to be provided for increasing the capacity of the road, by laying two new tracks, would be raised by a division of new stock among the stockholders at a low price, or by the issue of bonds, which the directors recently authorized, amounting to $40,000,000. At a special meeting, held on Saturday, at the Commodore's office, the directors altered the form of the mortgage, and provided that one-fourth of the amount shall be in sterling bonds, £2,000,000, bearing 6 per cent. interest; the remainder, $30,000,000, to be currency bonds, bearing 7 per cent. interest. Whether the whole, or any part of them, will be issued remains to be seen; but the action of the directors at the special meeting rather discourages the recent expectation of the stockholders that, in making the proposed improvements, they would share in any division of new stock.

The general market has been heavy, with a falling off in prices. The stock of the Michigan Central Railroad Company has declined to 104—a decline of about 7 per cent. for the week, and has been caused by the disappointment of the stockholders in having to accept 4 per cent. stock in lieu of the usual 5 per cent. cash dividend, which set some of them to selling out. The following statement, taken from the *Daily Bulletin* of January 10, shows the number of shares of the leading stocks sold at the Stock Exchange during the year 1872, with the par amount of capital stock of each issue:

	First 6 months. Shares sold.	Second 6 months. Shares sold.	Year. Shares sold.	Capital stock.

Total amount of stock, par value				$578,871,512

The amount of 5-20's offered to the Treasury on Wednesday amounted to only $71,500, at prices ranging from 111 74 to 112 50. The amount purchased was $21,100, at 111 74. The demand from investors and shippers has developed a great scarcity of bonds, and a consequent advance in prices of all the different issues has taken place, amounting to from 1 to 1½ per cent. on the more recent issues of the 5-20's and on the 6 per cents. due in 1881. The foreign bankers report their inability to fill their orders, owing to the scarcity of bonds in this market. Three years ago there would have been less difficulty in purchasing $1,000,000 Government bonds in the open market than is now experienced in purchasing $100,000. The ready market which Government securities always have causes them to be a favorite investment with savings-banks and other moneyed corporations which are liable, through losses, to be suddenly called upon for large sums. The amounts held by such institutions, together with the bonds deposited in Washington by the national banks as security for their circulating notes, and the very large amounts owned abroad, leave but a small supply floating in this market, which is being gradually absorbed by the Treasury in its weekly bond purchases.

The transactions in State bonds have been light, the largest dealings having been in Missouri sixes, which, on account of their comparatively low price, 92¾, have held out better inducements to investors than any other State bonds upon which interest is regularly paid. A committee of the Virginia State Senate is to confer with the representatives of the bondholders on Feb. 3 next, and try to arrange some terms of settlement for the payment of the interest due Jan. 1, which payment was suspended by law.

A well-distributed business has been done in railroad bonds, those of the Union Pacific Railroad, as well as the stock, having been unfavorably affected by the developments of the Crédit Mobilier investigation, especially the Income bonds, which declined from 83¾, the opening price of the week, to 75½ on Saturday. The first mortgage bonds and the Land Grants also fell off, but the decline in these was not so marked as in the Income bonds. A good deal of speculation has been going on in the first mortgage bonds of the Boston, Hartford, and Erie Railroad Company, but the price of last week has not been maintained, the closing sales of this week being 43¾.

In consequence of gold shipments during the week, the general feeling in the gold market was one of strength. The export of specie for the past week was $2,695,233. The total shipments since January 1, 1873, have been $3,527,153, against $572,827 shipped during the same time in 1872, $977,997 in 1871, and $715,893 in 1870.

The Nation.

NEW YORK, THURSDAY, JANUARY 23, 1873.

The Week.

THE Finance Committee of the Senate has reported, by a majority of five to two, against the extraordinary claim of Messrs. Boutwell and Richardson to issue paper-money to the amount of $44,000,000, in their own discretion, for the purpose of "moving the crops" and otherwise assisting the community. The majority report makes several propositions which can hardly be shaken—(1) that the provision of the Act of June 20, 1864, (which was a Loan act), that the total amount of United States notes issued, or to be issued, should not exceed $400,000,000, and such additional sum not exceeding $50,000,000 as might be temporarily required for the redemption of temporary loans, "was not only a limitation upon previous acts authorizing issues of paper money, but a declaration of public policy and a pledge of the public faith to the national creditors that their securities should not ever thereafter be impaired by an increase in legal-tender notes"; (2) that the object of the financial measures which were adopted after the close of the war, under the Administration of Mr. McCulloch, was the still further "limitation and reduction of the volume of the legal-tender notes"; that the Act of 1866, under which this controversy has arisen, forbids by implication the reissue of notes ordered and authorized to be "retired and cancelled"; that the plain intent of the act was to "reduce and contract the currency"; "that any other interpretation would have enabled the Secretary to defeat or evade the whole act, even its funding provisions, and to increase the public debt"; (3) "that the intent and legal effect of all these acts, when fairly construed, was to reduce the maximum of legal-tender notes to $356,000,000"; (4) that "to overthrow this construction, and establish the authority of the Secretary of the Treasury to reissue $44,000,000 at his discretion, would require some clear and unequivocal expression of the legislative will"; (5) that the two decisions of the Supreme Court which Mr. Boutwell cited in his letter to the House Committee "have no bearing on the case before us."

The Committee draw attention also to the patent fact that the power claimed would enable the Secretary of the Treasury on his own motion to alter the value of all commodities, and impair the obligation of all contracts to the extent of at least ten per centum, and deny it to him, not only on a fair construction of the law, but on grounds of public policy, in very emphatic language. If the Senate adopts the resolution reported by the Committee, as we trust it will, it of course will relieve us from all danger of this particular species of expansion. But if politics were in a healthy condition in Washington, it would also lead to the resignation of both Mr. Boutwell and Mr. Richardson. To be charged officially, as these gentlemen have now been, with disregarding "the plain intent of a statute"; with increasing the public debt without authority of law; with sheltering themselves in a matter of money under legal decisions which "had no bearing on the case" before them; with the assumption of a power to disturb the existing value of property and the obligation of contracts to the extent of ten per cent., is, or ought to be, to men in their position a serious matter. To be sure there has been no great harm done by the claim, but it revealed a state of mind on the part of those gentlemen which shows inaptness for their place. If any trustee displayed such extraordinary notions of duty and expediency, notions so dangerous, so wild, and so much opposed to the ordinary theory and practice of prudent business men, no *cestui que trust* of mature age would want to leave property in his hands. Mr. Boutwell's translation to the Senate, if that should happen, will relieve the country of all embarrassment as to him, but Mr. Richardson is talked of as his successor. It will be interesting to see whether his appointment will now be ventured upon.

The Boutwell-Richardson performance, by illustrating the dangers to which we are constantly exposed as long as we use inconvertible paper as money, is apparently likely to rouse us into renewed efforts after specie payments. Mr. Sherman, the Chairman of the Senate Committee on Finance, has reported a bill from the Committee on Finance, which provides that the Assistant Treasurer in New York shall, after January 1, 1874, either redeem in gold, or exchange for five per cent. ten-year bonds, at his option, all United States notes presented to him in sums of $1,000, or multiples of $1,000; repeals limitation on aggregate circulation of national banks; secures circulation of such banks by deposit of United States bonds; relieves those banks from present obligation as to specie or legal-tender reserves, which, after Jan. 1, 1874, redeem their bills in coin or legal-tender notes. There is no probability of its passing, so there is little use in discussing it.

Some bankers have been examined by the Committee of Ways and Means touching the Syndicate operations, the most prominent being Mr. Butler Duncan and Mr. L. P. Morton of this city. Mr. Duncan's testimony or opinion on the whole bore pretty hard on Mr. Boutwell, who sat by. Mr. Duncan considers the Syndicate "an entire mistake." He saw no reason why the Treasury should not have continued the operations in the open market under which it disposed of the first $65,000,000, as there was no pressing necessity for its making a new loan at all at that moment. Offering the five per cent. bonds in the manner resorted to had a tendency to change the United States bonds, which are now a permanent investment in the hands of small holders all the world over, and therefore not likely to be seriously affected in value by commercial or political crises, into a speculative security held by great bankers and operators, and therefore likely to be thrown on the market in great quantities in moments of panic; for this reason, the conversion as made, or as attempted to be made, was not a benefit to the old bondholders, and was likely to prove injurious in the long run to the credit of the United States. He thought the placing of the loan on the London market was the result of a "vigorous, ingenious, and able stock operation"—that is, great activity in exciting "an unnatural demand," and thus getting rid of the loan under cover of this rather than on its merits. He put down the expense of the new loan at 1¼ per cent., and agreed with Mr. Boutwell in thinking the three months' interest on the old bonds an inevitable loss under any circumstances.

Mr. Morton thought the Syndicate arrangement the best that could have been made at the time, and fortified this opinion by the assertion that at no time since could the new bonds have been got rid of by the persons holding them without loss, which seems to confirm Mr. Duncan's statement as to the unnaturalness of the demand. Mr. Morton also recommended the disposal of the remainder of the loan in the same manner. Mr. Maynard of Tennessee examined Mr. Duncan as to the par of exchange, a point which troubles him exceedingly, but which we trust is gradually growing clearer to him. Mr. Duncan explained that the pound sterling was worth $4 44, plus 9½ per cent., or $4 86·65, and we recommend Mr. Maynard to grapple this fact firmly, and not let it go under any new wind of doctrine. Mr. Duncan also made some unpleasant observations, to the effect that the new loan was affected injuriously in foreign markets by the taking away of the United States banking business just about that time from the Barings, and giving it to two new and comparatively little known houses. One of them is, however, a banker simply, while the other is a New York politician.

The House Committee on Post-offices have reported a bill reducing the rate of letter postage to two cents for every half-ounce, but it appears that it is only regarded as an experiment which, if found unsatisfactory, may be abandoned in two years. The Committee also propose to recommend the compulsory prepayment of the postage on newspapers, owing to the enormous losses sustained by the Post-office in this branch of its business, through the failure of persons to whom printed matter is addressed to pay the postage, and the failure of the postmaster to account for such postage as is paid. The Committee estimate that the newspapers now transmitted through the mail ought to pay $2,292,307, whereas they only pay $984,940; in other words, the Government loses over a million. We know of no good reason why the stamp system should not be applied to newspapers in some form, and thus ensure payment, and save an enormous amount of account-keeping or attempts at account-keeping, besides fraud and defalcation. But if there exists any demand for the reduction of the letter postage, we have thus far failed to hear of it. We hear a great deal of complaint about the franking privilege, and we hear still more of the inefficiency of the Post-office, but we never hear any complaints about the dearness of the postage. We venture to assert, moreover, that what the country wants is not cheaper transmission but surer and quicker transmission of letters, especially in the large cities. The way in which this is done in the thickly peopled States of the East is generally admitted to be a disgrace to the nation, and we believe nine persons out of ten would approve of an addition of one cent to the postage, if it ensured us better carriage. On this point, however, it is impossible to get a hearing from Congressmen. When you speak to them of the abolition of the franking privilege, they gaze steadily at the sky, or are astonished by the odd behavior of a dog in an adjacent field; and when you propose to them the appointment of clerks and letter-carriers and postmasters for merit and during good behavior, they ask you savagely what is to become of the one-armed soldiers, and the soldiers' widows, and the sailors' orphans, and the loyal "workers"; and you then learn that the Post-office is not, as you supposed, a machine for facilitating the intercourse of members of the community, but a kind of hospital for the relief of destitute or disabled worthies of both sexes who sort letters as a kind of distraction, and whom it would be cruel to call to account for their errors or omissions.

There was too much money in the San Domingo annexation scheme for its supporters to be disheartened by its failure in Congress last year, so it has been withdrawn from politics, and is now launched as a commercial undertaking. A company with a capital of $20,000,000 in shares of $100 each, having Dr. S. G. Howe of Boston as its president, has entered into "a treaty with the Dominican Government," by which all that was to be granted to the United States by the Convention of 1869 is granted to the present Company, and even more. The Company gets "eminent domain"—as Dr. Howe says in the lyrical letters he has written to the *Tribune* about the matter—over the peninsula of Samana, the bay, the islands and reefs, with high and low justice, power of taxation direct and indirect, power of establishing banks, and, in fact, all sovereign powers, including the maintenance of an army and navy. Its means of making money are almost endless in their variety. In the first place, for each league of railroad, wagon-road, and telegraph line it constructs on the island it is to have a land-grant from the Dominican Government of every alternate square league within two leagues of the road or line on each side, and if there are no public lands within these limits, it may "locate" on any other public lands it pleases. It is expected that the Company will in this way shortly get hold of the entire domain of the Dominican Government. Besides this, it has unlimited power of purchasing real estate where it pleases, and will, it is expected, monopolize the entire commerce and mining of the island; in fact, there is no reason why it should not. Once the Company gets fairly started, the native Dominican Government will become a mere shadow, like the Great Mogul in the hands of the East India Company. One provision of the "treaty" is that the Dominican Government shall grant no charter to any other company without having first offered it to the Samana Bay Company on the same terms.

There is an occasional sign nowadays that the strain which marked politics during the stress of the past few months, and indeed of the past few years, is slightly relaxing. Among such signs may be placed the report of the Congressional Committee in the contested election case which has been going on between those two political ornaments, Mr. Bowen, of South Carolina, the cadet broker and bigamist, and Mr. De Large, a colored corruptionist of some promise. In October, both these gentlemen were candidates for a seat representing the Second South Carolina District, which contains the city of Beaufort, but the greater part of whose voting population is composed of negroes who are extremely ignorant, and who as regards the right performance of a voter's duty are as ignorant as a horse or a sheep. Among these people are, however, some cunning and utterly unscrupulous file-leaders, such as itinerant preachers and the like, and the amount of cheating done in election canvasses is both amazing and amusing. The De Large men cheated enormously, and the Bowen men cheated "all they knew," which also was enormously and almost miraculously. Each side must have admired the other. But De Large got the certificate of election. Bowen at once set to work to contest, reflecting in his own mind that as long as the Treasury Department pays your bills while you are contesting, no matter if you had but four votes against your adversary's 400,000, and though you bought these four, why then, contesting is a good, legitimate carpet-bag or "scalawag" trade to follow, and as worthy as any other. Mr. De Large forthwith engaged a lawyer to defend his rights, and as far as our recollection goes this professional gentleman did indeed collect testimony enough, and that with ease, it being exceedingly thick all over the Second District; but when his employer desired to produce the same and triumphantly destroy Mr. Bowen, he was told that he could have it if he paid the cost of it.

However, Mr. De Large got leave to take more testimony, and the Committee have just got done with the examination of it. They find, first, that there was so much fraud and irregularity on both sides that no man can tell, and only the gods know, who did get a majority of the votes legally cast; secondly, they find that on the same day when, as he asserts, he was elected to Congress, Mr. Bowen caused and procured himself to be elected to the South Carolina House of Representatives, as knowing that his cause against De Large was just and righteous, but as also liking "a dead sure thing," and regarding the chances of thieving rather better, if anything, at Columbia than at Washington. Besides, the State needed reform, and Mr. Bowen felt that strongly. In the third place, says the report, the same Mr. Bowen got himself elected Sheriff of the city of Charleston for four years, and that too is an office the duties of which cannot be performed by a Congressman. The Committee, therefore, recommend that the seat in dispute be declared vacant, and the property of neither of these two model legislators.

There could hardly be a better example of the way in which a story grows in travelling than is afforded in the last comments of the London *Spectator* on Jay Gould's "restitution." The *facts* of that matter were, that when the Erie directors found that Gould had got in his possession over $9,000,000 of the property of the road, they brought an action against him to recover the amount, and availed themselves of the provision of the Code which permits the arrest of the defendant when affidavit is made that the debt sued for was fraudulently contracted, but the arrest causes no inconvenience beyond the finding of bail. The mention of "fraud," however, in connection with the arrest filled the minds of some of our own editors with the notion that Gould was being pursued criminally; and when the directors accepted a "cognovit" from him, or, in other words, payment of the amount for which

they sued, these editors began to wail piteously and denounce the transaction as the "compounding of a felony," and ask if there was no justice in New York for thieves any longer. As the Erie stock rose on the news of the restitution, and Jay Gould was reputed to be dealing in it, it was announced solemnly that he had made as much as he lost by the compromise. What he bought was first asserted to be 200,000 shares, and as the stock rose ten per cent. he *might* have made on this $2,000,000. According to the *Spectator*, however, he made $4,000,000. Even this is, however, far short of $9,000,000, so it makes up the total amount, and more, by alleging that "the New York papers" assert that "his total gains amount to $12,000,000." To have made this sum, Gould would have had to hold or agree to deliver $40,000,000 more than the whole stock of the road, common and preferred. What "New York papers" asserted this we do not know, but we advise the *Spectator*, which trusts this mysterious authority a great deal too often, to be very cautious in believing it again.

The *Economist*, which is rarely led astray, also has a severe article on "commercial morality in America," and the *Pall Mall Gazette* another, based on the report in the *Tribune* of an "interview" with Gould, in which he said he had stipulated before disgorging that he would be "informally admitted into the direction," that is, consulted on all important matters connected with the road; that "the road" should "lay a third rail and connect itself with the Lake Shore Road, instead of the Atlantic and Great Western"; and that "he should be allowed to make the first market bid for 200,000 shares of stock." This last assertion is on its face so absurd that it is curious that it should not have excited the suspicions of a financial paper like the *Economist* with regard to all the others. We now beg to assure the friends of "commercial morality in America" that the story is a pure fiction; that no such conditions or any conditions at all were made with Gould; that if any such interview ever took place, and Gould gave any such information, he lied, as is not uncommon with him, from beginning to end; that there has not for a long while been a transaction of such magnitude more creditable to American morality; and that it is a curious illustration of the mischief done in this world by "a story" to find the recovery of a large amount of property, by due process of law, from a wearied or frightened knave, converted into an argument against investing money in American securities.

England is rejoicing over a year of extraordinary commercial prosperity, as indicated by the revenue returns. During the last nine months the receipts have been $258,423,430, against $240,520,400 during the corresponding period of last year, and two-thirds of this sum comes from customs duties on about twenty-six articles. The estimated surplus will be about $16,000,000, which will be almost completely absorbed by the payment of the *Alabama* indemnity. On the other hand, there is a tremendous strike of the colliers and iron-workers in Wales. It is really the colliers, 11,000 strong, who have struck, but as there can be no iron without coal, the iron-men, 60,000 strong, had to join in. The *casus belli* has been found in a proposed reduction of wages to the amount of 10 per cent., which the employers justify by the fall in the price of iron, but the workmen refused to believe their statement, and on being referred to the books refused to examine them, on the ground that they would not be able to understand them, which is probably true. Even if the workmen had some knowledge of book-keeping, the books are not kept in such a way as to present this particular point in a comprehensible form; so the strike goes on, and, as it has the support of the English colliers, is likely to last long, but will probably result in the establishment of some permanent machinery of arbitration. It is due in great part to the backward condition of the Welsh laborers, who are only now making their way to the position of independence and intelligence which their English brethren have long enjoyed, and who have been held by their employers in a contempt which numerous strikes and prolonged agitation have destroyed in England.

The Pope's last "Allocution" has reached this country in full since our last issue. It opens with a lamentation over the condition of Rome, in which "clerical persons have been torn from the foot of the altars and deprived of their immunity, and been summoned to military service" (*Anglicè*, monks have been made liable to military service); bishops have been deprived of the right of teaching, and seminaries closed; religious orders driven out, and ecclesiastical property "subjected to an enormous tribute" (*Anglicè*, made liable to taxation) and taken possession of by the state. There is, however, nothing on which so much indignation is expended as on the secularization of the property of the religious orders, and on this the Pope exhausts all his missiles. He pronounces null and void all legislation in this direction, and warns all purchasers of ecclesiastical property that their title will be worthless, and all vendors of it that they are laying up for themselves a terrible retribution at the day of judgment—which ought to "cloud the title," but does not seem to do so. His Holiness also hurls denunciations against Germany for trying to "subvert the Church from its very foundations" by "secret machinations or open force," rebukes those in authority in that country for attempting to define Catholic dogmas and rites, and persecuting the prelates and priests for "refusing to prefer the laws and will of the civil empire to the holy laws of God and the Church." Switzerland undergoes similar castigation for favoring apostates and interrupting the exercise "of episcopal authority." The Canton of Geneva, in particular, has suppressed Catholic schools, banished religious orders, and deprived others of the rights of teaching, and has been guilty of divers acts of hostility towards "our venerable brother Gaspar, Bishop of Hebron." Spain, it appears, is just as bad as Italy, Germany, and Switzerland, if not worse. That once pious country has not only been "breaking solemn treaties and conventions, but trampling every rule of right and justice under foot," by tampering with the endowments of the clergy. Bad as the Spaniards are, however, they appear to be surpassed by "an impudent band of Armenians" who are doing a little "schism" on their own account at Constantinople, behaving with the most disgusting violence and craft, having prepared their schemes in a caucus (*conciliabulum*). In fact, whichever way the Holy Father turns his eyes, he sees the laity engaged in some form of rascality, and finds consolation only in the conduct of the bishops who have charge of these unruly goats.

There has been a curious "conflict of veracity" going on lately between Spain and the United States. Some time since, Mr. Fish, thinking that Spain was not acting in good faith with regard to the proposed abolition of slavery in Cuba, sent instructions which, according to ordinary diplomatic usage, would have been of the most private kind, to General Sickles at Madrid, suggesting that he should urge upon the Spanish Government the necessity of taking steps to free the slaves—that the Government of the United States regarded the inaction of the Government of Spain with those moderate diplomatic feelings of regret and surprise proper to the occasion, but intimating that unless Spain did something or other pretty soon, other more passionate emotions would take their place, and then no one could say what might happen. The Government of Spain immediately promulgated a decree, or law, of the most satisfactory nature, whereupon Mr. Fish published his correspondence with General Sickles, and thereupon Zorilla, the head of the Ministry, publicly and officially denied the receipt of any suggestions or recommendations on the subject from Mr. Fish, General Sickles, or any one else. Now to clinch the matter, Mr. Fish publishes a despatch from Sickles of an earlier date than the rest, also of the most private character, in which he handles the Spanish Government without gloves, and in a rambling way shows the absurdity of its attempting to put down the Cuban insurrection, and gives some interesting statistics as to the number of "casualties" caused by the war.

THE NEW SAN DOMINGO SCHEME.

THE leasing of the bay and peninsula of Samana by a private corporation from the Baez Government is an excellent example of doing a thing "by hook or by crook." A small body of persons, mostly in New York, are exceedingly anxious, for reasons of their own, that the United States should become possessed of one-half of a distant island inhabited by semi-barbarous blacks. By working on General Grant's professional eagerness for a military harbor in the West Indies, and particularly on his somewhat peculiar notions of the nature and objects of foreign commerce, they induced him to take their scheme up, make it his own, and urge it on Congress with great energy and pertinacity. Neither Congress nor the public, however, could be got to entertain it, and it was withdrawn in spite of the favorable report of the Commission sent down to examine the island.

The undertakers were not, however, men to be easily disheartened. When their attack failed on one side, they began diligently to push their approaches on another. They withdrew from "politics" altogether, and, in fact, disappeared for a season from the public view, and went to work to form a company, which speedily acquired the bay and peninsula, and ever so many privileges and perquisites, from the Dominican Government, on a long lease. Their "privileges" indeed seem only to have been limited by their demands. Baez and "the people" in Dominica were willing to cede anything, and they have really given the company sovereign powers. One little right they have reserved, but really only one, and that is "the right of inspecting, or ordering the inspection of, the books of the Company." The directors, if men of average humor, must have made this concession with much hilarity. The feeling that the eye of Baez and the "Consulting Senate" will be upon them during their ninety-nine years' lease will hardly infuse any great solemnity into their proceedings. To throw a romantic air over the transaction, and indeed give it the appearance of a missionary enterprise, Dr. S. G. Howe has been put into a prominent office; and that he has entered into the enterprise in the spirit of an apostle is easily inferred from the dithyrambic letters he has been writing in the *Tribune*, describing the great things in store for Dominica and the United States through the operations of the company.

The next thing will of course be—of this Dr. Howe at least makes no secret—to get the United States Government in some manner involved in the affair, so as to compel it to take possession of the Dominican Republic. If the Company exercises even half its power, the Republic will soon become a mere dependency on it; and whether the two work well or ill together, the Company, as a body of Americans abroad possessing extensive property on foreign soil, will have a constant claim on the protection and assistance of the home Government. Their title to this will be asserted in two ways. One will be by working on the national pride of their countrymen; the other, by appealing to the cupidity of Congressmen. The public will be treated to glowing accounts of the operations of the Company—the enormous profits it is making, and the great work it is doing for civilization, and the wonderful benefits it is conferring on "the African race"; stock will be "assigned" to members of Congress, or "placed where it will do most good," in order to "induce them to look into the thing"; a powerful "Dominican lobby" will be established in Washington, with fine rooms and a good supply of champagne; "facts" will be supplied to the Washington correspondents by "intelligent Dominicans" to be "worked up" for their respective journals; a large corps of lady writers will be sent down to sit under the palms and wander along the banks of "the ever-flowing streams," and take rides among "the grand old mountains" on mules supplied by the Company, and will, under the influence of flowers and warm weather, commemorate their impressions in gushing letters to the weekly papers. In this way "enthusiasm" for Dominican annexation will be worked up like the enthusiasm for the Union Pacific Railroad, only twice as great, owing to the tropical element in the Dominican problem. New reasons for annexation will every day make their appearance. "Commerce," we shall be told, "demands it; manufactures demand it; the army and navy demand it; posterity looks for it; the health of our people is suffering for want of it; art, science, and literature will be the better of it; the prairie breezes sigh for it; the lonely loon of the Northern lakes cries for it. In the name of our common humanity, then, open the door to this dusky daughter of the sun-kissed seas, and let her take her seat in her golden robes among her frost-crowned sisters of the continent." We would refer those who think this picture too highly colored to the following argument for the admission of Colorado to the Union. It appeared in leaded type in the columns of a leading morning paper, and it is worthy of note that the writer describes herself as "ravenous" in her "demands for woman's rights":

> "I really believe a great mistake, even for Congress to make, will be made if, after coming for the third time to the door of the Union, with her silver lamp trimmed and burning, Colorado knocks in vain; is told she is too early for the wedding-feast. *The question, I understand, is simply of numbers, but it seems to me the character of the population should have some weight. It is composed of brave women and pretty fair men, and of the most dashing, daring, wideawake boys and girls on the continent.* In the mountains are miners of the best quality, the unsettled and adventurous sort pushing westward to the more tempting treasure-fields of Utah and Nevada. Along the river-courses and in the towns are the very pick of Eastern agriculturists, mechanics, and railroad men. There is a great deal of social refinement and intellectual culture among the women of Colorado, that would show well even at a Washington reception, and there are men in any one of the Colorado colonies who might stand up against the best eleven of the Forty-second Congress, and be bold."

When the "tidal wave" had done its work, and the Congressmen had "looked into the thing," and the politicians had "fixed it," the terms of transfer would have to be arranged; and here the Sentimentalists would hang up their harps and go home, and "the practical men" would come out from their holes and corners and go to work. If the Company only exercises a quarter of its rights, the number of things it will have to sell to the Government—the telegraphs, railroad lines, piers, wharves, bridges, warehouses, dry and floating docks, buildings, lumber, and stores of all kinds—will, to the common eye, be past counting; but there will, nevertheless, be no difficulty experienced in making the bills up, and perhaps, at the rate we are going, not much difficulty in getting them paid. It is already almost impossible to gainsay a great corporation, and the greatest we have yet seen is but a pigmy to what this Samana Bay Company may become.

Dominica once annexed, the conquest or absorption of Hayti would soon follow, almost as a matter of necessity. For the government of such communities as these are, either for their good or for ours, the Constitution supplies no machinery. Principle, and the precedent set at the South, would compel us to admit them to the Union as equal States, and the island would cut up naturally into two, sending four members to the Senate and several to the House. Bands of white men would of course undertake, as at the South, to show the Africans "how to run the machine," and we should then have a pleasant addition to the existing complications of our politics. We may rely on it, the "Custom-house party" at San Domingo and Port-au-Prince would not be in any respect inferior in ingenuity or audacity to its great prototypes nearer home; and it is safe to conclude that each election would give us four or five governors and as many legislatures, who would barricade themselves in halls and other strongholds and bid defiance to their enemies, till an Attorney-General's "opinion" or a battalion of infantry came from Washington to settle the dispute. The influence on the Senate and House, and on the morals of politicians of the Southern States, and of "the wild-cat States" of the West which have been recently admitted, is already pretty well known to our readers. We do not need to enlarge on it. Let no one, however, read the poetical effusions of the Dominican undertakers without thinking of these things, of South Carolina and Louisiana, of Kansas, of the Crédit Mobilier, and without asking himself how long the Government can stand the indefinite expansion of this awful volume of ignorance and corruption. There is no way of hindering as many gentlemen as please from investing money in San Domingo, and buying privileges from Baez and his people, but there is a way of hindering the full execution of the programme by drawing the United States into the net.

That part of the scheme can be defeated by watchfulness and by reform; but watchfulness without reform is of no use. We are evidently getting every day nearer to the point at which either virtue or money must get final control of the Government, and we see very plainly what is going on. It is not perspicacity which is wanting, but the remorseless determination to get rid of rogues and put down "schemes."

TWO HUNDRED AND THIRTY-EIGHT MILES OF NATIONAL HIGHWAY.

THE investigation into the operations of the "Crédit Mobilier of America" now going on at Washington, throws a great deal of light on existing principles of finance, of railroad management, and of politics. The investigation is not yet over, and until it is, the complete history of the Union Pacific Railroad will not be known—if it is even then; but a good many facts of importance have been already brought out.

It is just ten years since Congress passed an act incorporating a company for the purpose of building a railroad and telegraph between a point in the Territory of Nebraska on the 100th meridian and a point on the western boundary of Nevada. The capital authorized by the act was $100,000,000. The Company was granted a right of way two hundred feet wide through the public lands, a right to take grounds for stations and other necessary buildings; the right also to take from any adjacent public lands earth, stone, timber, and other materials for construction. Besides this, a grant of land was made of alternate sections along the whole line, twenty miles wide. The act also authorized the company, on the completion and equipment of forty consecutive miles, to call upon the Secretary of the Treasury for United States six per cent. bonds, at the rate of $16,000 a mile, this loan to be a first mortgage on the whole line and equipment. For 300 miles of the road, however (the most mountainous and difficult part), the loan was to be $48,000 a mile, to be issued as each twenty miles was completed. On still another part the loan was to be at the rate of $32,000 a mile. This was the act incorporating the Union Pacific Railroad Company. Under this charter, however, nothing was done for a long time; $100,000,000 of capital are always difficult to raise, particularly in the middle of a great civil war; and besides this, the capital under the act was to be *bonâ-fide* paid-up stock—for every certificate issued by the Company the Company must have received its full value in lawful money of the United States. In this condition affairs remained for two years, when it occurred to some ingenious and hopeful men that the act might perhaps be modified so as to make the enterprise a less difficult one. They accordingly applied to Congress, and obtained what they asked. There was about this time a very general feeling of interest in the enterprise; "it was felt by the people that we ought to have a railroad connecting the Atlantic with the Pacific, a great national highway, bringing the products of China and Japan—their silks and teas and their labor—to our very doors." The newspapers were in favor of it; Congress was in favor of it; Mr. Lincoln himself gave it his warm support. The legislation applied for was granted with a sort of enthusiasm. This time the Company received for a land grant, instead of five alternate sections per mile, ten; the grant was made forty miles wide, instead of twenty; provisions in the former act in favor of the Government were repealed, and the road was empowered to issue first mortgage bonds for an amount equal to the United States loan, whenever they had completed twenty miles of road. This act made the United States loan a second instead of a first mortgage. In return for all this, it was provided that the Government directors should be five in number instead of two. The land-grant by this new act was equivalent to 12,800 acres, or twenty square miles for every mile of road. It is worth while to observe that Mr. Oakes Ames was at this time on the Pacific Railroad Committee of the House of Representatives.

Still, little or nothing was done. Half a million was subscribed in New York; but as Mr. John B. Alley pathetically observed at the time to Mr. Oakes Ames, "capitalists are generally very timid," and the requirement in the charter that the books should be kept open till one hundred million dollars had been subscribed, was impracticable. "Everybody regarded it in that light," Mr. Alley said. Mr. Ames had by this time (1865) been applied to by certain people in New York to take the road on his shoulders.

When everybody regards a valuable charter as impracticable, it generally happens that some way is found of making it work by carrying out its spirit; this way Mr. Ames discovered. He asked his friend and fellow-Congressman, Mr. Alley, to go into the enterprise with him. Mr. Alley declined, on the ground we have just mentioned. Mr. Ames became urgent, and explained to Mr. Alley how, although it would be impossible to build the road "under the provisions of that bill, you could construct it by a contracting company, to which parties owning stock could subscribe a limited amount, and be in no danger of losing any more than they subscribed."

At this time there was in existence a charter which had been granted by the Legislature of Pennsylvania, some fifteen years before, incorporating some gentlemen as a "Fiscal Agency." The word "syndicate" had not then been invented. What were its original objects is a secret of no less a person than Mr. George Francis Train, but it is probably safe to say that building a great national highway was not one of them. Its name had, meantime, been changed to the "Crédit Mobilier of America"; and as the stock was almost worthless, and the liabilities of stockholders of course limited, it occurred to Mr. Oakes Ames that, instead of proceeding according to the terms of the charter of the Union Pacific Railroad and subscribing the very large sum of $100,000,000, it would be a far simpler matter to buy out the Crédit Mobilier for a few thousand, and let the Crédit Mobilier build the road. He accordingly approached Mr. George Francis Train on the subject—or, at any rate, Mr. Train was approached by some one on the subject; Mr. Train went to Philadelphia, and the result of his journey was that the charter of the Crédit Mobilier changed hands for $20,000 or $30,000.

In order to understand fully the character of the undertaking, it is necessary to know something more of the principal person interested. Mr. Ames has given a full account of himself in the investigation now going on.

In any age of the world he would have been a remarkable man. Having accumulated a fortune in the modest business of shovel-making, he finds himself in middle-life in control of one of the main commercial avenues of the country, levying toll to the amount of millions annually on all passengers and merchandise passing between the western and the eastern coast of the continent, and at the same time in considerable doubt from year to year whether he is a millionaire or a bankrupt. According to his own account, he has an extremely bad memory and no head for dates; yet he has not had till within a year or two any book-keeper, and has never even seen the books of the corporation which built a quarter of the Union Pacific Railroad, which he himself employed as a means of avoiding personal liability, and which guaranteed a contract of his amounting to $47,000,000. Some idea of the simple plan on which Mr. Ames's financial operations have been carried on may be gathered from the testimony of Mr. George W. Kennedy, at present his book-keeper. He testified that he owned no Crédit Mobilier stock, and never had any information that stock stood in his name on the books of that Company; had never heard Mr. Oakes Ames say to whom he sold stock. On being informed that on the books of the Company thirty shares of the stock stood in his name, he said that he knew nothing of it. On being asked about the alleged transactions with members of Congress, he "thought he had seen on some books some transactions; did not remember what they were; could not recall the entries; it was a long time ago; had no positive memory about them." On being questioned further, "thought he had seen two or three entries in reference to parties he supposed to be members of Congress; had read so much in the newspapers that he had got it all mixed up; thought he recollected Mr. Patterson's

name; thought he saw something which tended to refer to Mr. Colfax; could not remember what it was; the entries were made in a pocket memorandum-book; remembered nothing he could swear to positively."

Of Mr. Ames's associates we have not a very impartial account. Col. McComb was formerly in the leather business, and according to his own statements bore a very high character in that trade. According to his enemies, however, he has more lately been engaged in the less creditable occupation of "robbing the soldiers and the Government, as the records of the Government could show"; and according to his own account trying to force Ames to compromise the difficulties which soon arose between them by threats of "exposure." Then there was also Dr. Thomas C. Durant, vice-president of the Union Pacific and president of the Crédit Mobilier, a financier of established reputation, who, of the same party with McComb, went, according to Mr. John B. Alley, further even than McComb was willing to go—mailing a letter on one occasion "directed to Elihu B. Washburne, accusing the companies of the greatest rascalities." McComb, however, "knew the Post-office clerk," and got the letter out of the mail.

Then there was Mr. John B. Alley himself, not a capitalist, he says, but formerly in the leather business, where he learnt something about the character of Col. McComb which was not to the latter's advantage. Then there was Mr. John M. S. Williams, member of the Congress which meets next March, who was treasurer of the Union Pacific Railroad from May, 1869, to March, 1871; was elected a director, but never served as such; was one of the original subscribers for $20,000, and held from time to time stock to the amount of $400,000; took an interest in the Crédit Mobilier in the beginning of 1865; he and his partner, Glidden, subscribed $62,500 each; was a director from June, 1865, to May, 1867, and on the Executive Committee with Thomas C. Durant and A. Griswold Gray, and who considered that the Crédit Mobilier and the Union Pacific were "so nearly identical that there was no diversity of interest," and who, in reply to the question whether the cost of the road was larger to the Union Pacific than to the Crédit Mobilier, suggested that this was merely a question as to whether certain gentlemen had "more money in one pocket than in the other." There were other financiers interested, but those we have named have thus far cut the principal figure.

The construction of the Union Pacific Railroad now began. The stockholders in the two companies were the same, and the way in which they built the road was this: First, Two hundred and thirty-eight miles were built under the management of the Union Pacific Railroad, at a cost of $27,500 per mile, and then the Union Pacific made a contract, through Mr. Oakes Ames, with the Crédit Mobilier to complete the undertaking at from $17,000 to $103,500 a mile; this contract was made to apply to the two hundred and thirty-eight miles already built; that is to say, the Crédit Mobilier agreed to build a road already built, and for this the same corporation agreed to receive as a profit for not having built it the difference between the actual cost and the contract price. This contract was made in October, 1867, and it proved very profitable. On June 17, 1868, the stockholders of the Crédit Mobilier received 60 per cent. in cash, and 40 per cent. in stock of the Union Pacific Railroad; on the 2d of July, 1868, 80 per cent. first mortgage bonds of the Union Pacific Railroad, and 100 per cent. stock; July 3, 1868, 75 per cent. stock, and 75 per cent. first mortgage bonds; September 3, 1868, 100 per cent. stock, and 75 per cent. first mortgage bonds; December 19, 1868, 200 per cent. stock; while, before this contract was made, the stockholders had received, on the 26th of April, 1866, a dividend of 100 per cent. in stock of the Union Pacific Railroad; on the 1st of April, 1867, 50 per cent. of first mortgage bonds were distributed; on the 1st of July, 1867, 100 per cent. in stock again.

In the winter of 1867–68, stock in the Crédit Mobilier was naturally valuable property. In fact, the value of the property was in Congress rather a joke. Members of the House of Representatives used to ask Mr. Ames "when he was going to divide." About the same time a quarrel arose in the corporation itself, Col. McComb alleging that he was entitled to a certain 250 shares to which Mr. Ames said *he* was entitled. At the same time dark doubts began to be cast upon the condition of the road. There had been a Government inspection, and one of the inspectors had found that it was not well built; there were threats of investigation into the management, and it was necessary that no investigation should be made. The 250 shares were decided to belong to Mr. Oakes Ames, and were transferred to him, he alleging that he had contracted before this to sell them to a number of people, many of them members of Congress. According to the general practice, if A agrees to sell to B a certain number of shares of stock, he completes the contract by delivering him a certificate, or procuring for him the assignment of a certificate of the stock sold. The certificate is the evidence of title. Mr. Ames, however, had, it appears, a totally different way of selling stock. He was anxious that the transaction should be managed in such a way "as to do most good," and the way he managed it was this: He kept all the stock in his own name, and whenever he found any member of Congress who had any money to invest, he simply let it be understood that so many shares were his at about half or a third their actual value, and in order to save any trouble about the transfer of papers he was willing to keep the stock and pay over the dividends as they accrued. Still more obligingly, he was willing to return the stock if the investors did not like the bargain, and guarantee them ten per cent. on their money. Many members of Congress took the stock, innocently supposing, as they have all testified, that there was no more wrong in the transaction than in their investment in the stock of a national bank or a factory. They did not know, they say, anything about the Crédit Mobilier, but they knew the high character of the gentlemen connected with the enterprise, and that was enough for them. Into all the details of these investments and the subsequent legislation we cannot go. Some of the members kept their stock, and received dividends on it; some of them, hearing of the difficulties in which the road was becoming involved, returned their shares to Mr. Oakes Ames, or rather rescinded their contract to take them, for the stock had never been transferred.

Meanwhile the building of the road went on, "and it will be remembered," Mr. James F. Wilson, of Iowa, says (and he ought to remember, for he secured ten shares of the stock for a thousand dollars, and was fortunate enough, according to his own account, although he knew "almost nothing of the organization and the details of the Crédit Mobilier, or of the value of the stock he had purchased," to make a profit of three thousand dollars on his investment),—"it will be remembered that the praises of what was being done swelled on until they burst forth in the ringing of bells and the firing of cannons all over the country," until, "in the spring of 1869, it was announced that the last spike had been driven, and that the tracks of the Union Pacific Railroad and Central Pacific Railroad companies had been united, and that an iron way spanned the continent from ocean to ocean." It is the feeling of the Hon. John B. Alley, too, that "if the American people could know all the facts, instead of bestowing upon Oakes Ames one word of censure, they would far sooner erect a monument to his name in grateful recognition of his eminent services." Two Congressional committees and two prosecuting attorneys are now engaged in looking into this question.

LACOMBE'S HISTORY OF THE FRENCH PEOPLE.

PARIS, December 31, 1872.

"KNOW thyself" is a maxim as difficult in its application for nations as for individuals. I have often been struck by the singular fact that the French people, which by race is chiefly Celtic, is in its language almost completely Latin. The University of Oxford has just confided the task of making an etymological dictionary of the English language to a young Frenchman, M. Brachet, who has made a very good etymological dictionary of the French language. The latter work, which has been received with great favor in the scientific world, shows that this nation, which Goldwin Smith invariably calls, and to a certain extent has a right to call, Celtic, has

hardly any Celtic roots left in its language. It presents the curious and, I believe, most exceptional instance of a race which completely forgot its own language after it was conquered by another race. The French language is really quite Latin, and more German roots than Celtic are mixed up with the Latin ones. What can be the reasons of such a phenomenon? They can only be found in the history of the Roman conquest of Gaul.

I was talking on this subject not long ago with M. Brachet, and he said to me, "Have you ever read a small book called 'Petite Histoire du peuple français,' by M. Paul Lacombe?" I had not even heard of it; but I immediately sent for it, and after reading this small volume, which costs only twenty-five cents, it immediately struck my mind that I had never seen any book better adapted to give to strangers a correct idea of French history in its great features, and of the growth and development of the French nationality. It is no small praise of this modest work to say that it would be an admirable text-book for primary schools (for your excellent American schools especially), and that those who are the most familiar with the great works of the best historians, the 'History of Civilization' of Guizot, the 'History of Southern Gaul' by Fauriel, and, in fact, all the historical literature of France, will not find in M. Lacombe's little volume a single error or any false judgment. I hope I am not in the state of mind of La Fontaine, when he met all his friends with the question, "Have you read Baruch?" I really am very much struck by the immense amount of solid information which is found in this 'History of the French People,' and which is almost concealed in an unassuming, simple, and quiet exposition of the transformation of French society. It is hardly possible for a foreigner to get acquainted with all the details of French history; whoever wishes to have an accurate knowledge of it must read at least three hundred volumes of original documents and memoirs. But it must interest everybody, the philosopher, the lawyer, the moralist of all countries, to see how the French nationality was formed, out of what elements, and to understand what has been in this great work the part of Rome, of the church, of the barbarians, of the feudal system, of monarchy, of the Revolution. M. Lacombe enters into this vast and difficult subject with a fair spirit of equity; he is evidently a Liberal, and a strong Liberal, but he is also a critic, and he does not judge French royalty, for instance, or the church, in the spirit of a sectarian. Whatever may be thought of the actual influence of the Catholic Church, it is not difficult to prove that this church was for four centuries the best protection of Gaul against the cold cruelty of Rome and the brutality of the barbarians. It is not so much to Rome and its functionaries that Gaul surrendered what seems the dearest treasure of every race, its own language, as to the softening and mild influence of the church.

We speak now in vague terms of the cruelty of Rome; let us try to realize it. Cæsar prided himself on having sold as many as a million of Gauls as slaves in Rome. The conqueror was followed everywhere by slave-dealers, and Cæsar had the greatest interest in their cruel operations. These men not only lent him money, they were his electioneering agents in Rome. M. Lacombe does not relate these curious facts, but he shows well the effects of the Roman administration in Gaul. Brittany, it is well known, became a desert, and was only settled afterwards by emigrants from Great Britain. Most Gauls became, under the name of *coloni*, real slaves. This painful period of the administration of Gaul by Rome is not sufficiently dwelt upon by M. Lacombe; and he does not sufficiently explain the important part played by the church when the Roman Empire became divided. It is a very significant fact, however, that the German tribe which succeeded in getting possession of Gaul was the most barbarous and the smallest of all; the Franks were only a handful, if you compare them with the Burgundians and the Visigoths, who had taken possession of the Jura, the valleys of the Saône and Durance, of Toulouse and the South. But the Burgundians and the Visigoths were Arians, heretics, and the whole influence of the Catholic Church was exerted in favor of Clovis and his cruel followers, who had made themselves Catholics. The German hordes which conquered Gaul were not so large as may be supposed. We have seen by a recent experience that a handful of organized soldiers can rule a whole province. A few battalions of Germans reigned by terror in Touraine, in Champagne, in large provinces; the Gallo-Romans were accustomed to obey; they made very little resistance to the invaders. The first Frank kings were merely military commanders. The great Roman centralization disappeared, and the feudal system was established. Every military service was followed by a grant of land, and by degrees the domain thus given became hereditary. A great process of disintegration of sovereignty began, which lasted several centuries; it was followed by a contrary process. The atomic or nebular state of the Middle Ages was not without its advantages. The slave of antiquity could be sold, without his family, far from the estate where he was born. The serf of the Middle Ages could not be separated from the land. The tenth and the eleventh centuries, on the other hand, were filled with private wars, as the old Roman idea of a centralized justice had quite disappeared. There were no real tribunals for the lords of the land; the modern law of nations, which forbids any unnecessary cruelty towards non-combatants, was unknown. One can imagine the misery produced by such a state of things. It is, however, not a little singular that the Normans, who began their invasions at that time, and who soon conquered Normandy, attained a remarkably high culture in the course of a century. Their architecture shows it clearly enough. This extraordinary Scandinavian race seems to have a wonderful elasticity; the first Normans were pirates, their sons and grandsons became feudal lords; they forgot their own language completely, and adopted the Latin language, which had already assumed its French form. The civilization of Normandy was much advanced for the period at the time of the English Conquest. Wherever they have gone—to Sicily, to Canada—the Normans have shown a marvellous power of adaptation and commanding abilities; they are a truly imperial race.

The Capetian dynasty found its origin in the first struggles against the Normans. It was essentially a popular, a Parisian dynasty. The Capetians were not the successors of Charlemagne; they were strong allies of the clergy, which was at that time half military, and they preserved order, first in the small horizon of the district of Paris, and afterwards in Touraine, in Poitou, Aquitaine. Consciously or unconsciously, they became the adversaries of the feudal system. Wherever there was a quarrel, they interfered in the interest of peace and justice. France is really the work of this dynasty. I have no time to dwell on its long and patient efforts, which culminated in the administration of Richelieu, of Mazarin, and of Louis XIV. Whatever may be said against the Grand Roi, whatever were his errors, it must be acknowledged that his image, surrounded by such warriors as Turenne, Condé, Vendôme, Villars, Catinat; by a host of great men, Descartes, Bossuet, Pascal, Molière, Corneille, Racine, marks an era in the history of the world. But the condition of the people was far from happy in the seventeenth and in the eighteenth centuries. Nothing can be more interesting than the account M. Lacombe gives of the general state of society before the French Revolution. The system of taxation was really barbarous. The *taille* was the land-tax, and was only paid by a third of the inhabitants. The noblemen, the priests, and the officials were all exempt from it; and they contrived to have their farmers, when they had any, exempted. The *taille* was fixed every year by a royal council for each *intendance*. Nobody could ever know how much he would have to pay the next year. The distribution of the tax among the inhabitants was nearly arbitrary. The collectors were responsible for the amount of the tax; they taxed, in consequence, the most prosperous of the peasants very heavily, for fear of not being paid by others. Thence it became customary for the French peasants to conceal their fortune, to dress miserably, to live in hovels. Even now this class is sordid; the peasant is always afraid of appearing too rich; he hides his money. Every sign of prosperity was punished in old times by a sudden increase of the *taille*. Bois-Guillebert has given a graphic description of the collectors, who met in a public-house, and there fixed the *taille*. They were often met with imprecations, and they went away. They came back with soldiers and huissiers; seized, in the refractory villages, all the cows, even the furniture of the houses. The most industrious, the best peasants, became the victims of the lazy, of the disorderly. How can we wonder at the famous description of La Bruyère?

Lacombe is very partial to the French Revolution; it certainly rendered an immense service in abolishing the privileges of the nobility and the clergy; but, after many years, the condition of the French peasantry is not so different as might have been hoped from what it was in the last century. You can still find in the heart of the Gaul this frightful hypocrisy of misery, which comes down from the Gallo-Roman colonies and from the serf of the Middle Ages; and this fear of every outward progress, of every sign of prosperity, is the chiefest obstacle to a high culture. France owes to it an immense and seemingly inexhaustible reserve of capital, but frugality may become suicidal, and the principle of equality may drag all men down as well as lift them all together.

TAXATION IN ALSACE-LORRAINE.

STRASSBURG, Dec. 13, 1872.

IT is a well-known fact that the Alsatian mind is, in general, of a more material turn than the German. With an energy almost equalling that of a genuine Yankee, the Alsatian devotes himself to the pursuit of the goods of this world, and even a Parisian hardly knows better how to enjoy them. This characteristic trait of our population has been often adduced as almost a guaranty that in a few years they would be completely reconciled to their fate. Though their attachment to France is sincere and strong, yet the *Thaler* will weigh heavier in the scales; that has been from the beginning

and is still one of the principal reasons of the hope entertained by most Germans for a speedy reassimilation of the Reichslande. That their pockets would find their account by the change of government was hardly doubted by any German somewhat acquainted with their former condition. Only the large manufacturing interests, it was allowed, would form an exception for some time to come. Now, it is a curious fact that exactly the peasants, and all other classes of people with but modest means, are complaining the most and the loudest, and their complaints are to a great extent well founded. They do not earn less money than they used to, but they are more heavily taxed, and that is the standard by which the great mass—so far as their relations to the Government are concerned—commonly measure their material well-being. Yet, on the other hand, the Imperial Government cannot be charged with having fallen into the gross mistake of intentionally overburdening the people in order to subdue them. We are still under the dictatorship of the *Reichskanzler*, and it is felt in every respect that we are governed by an iron will; but this iron will stands itself under the control of the enlightened ideas of a profound statesman. Inclined by nature to a most reckless absolutism, Bismarck has learned by experience that whip and spur are not always the right means to break unruly spirits. The Government is really desirous of winning the people's good graces by justice, mildness, and assiduous care for the promotion of their general welfare; and, what is of no less value, the people are thus far, to a rather astonishing degree, willing to acknowledge that. Yet it is an undeniable fact that everybody, and especially the poorer classes, have now more than ever before to dread the tax-gatherer in all his various forms. The explanation is to be found in the other fact, that the old French laws, with but a few exceptions, are still in force, while they are executed by German officials.

It was one of the immoral maxims of the Imperial Government of France to fix the taxes at a really exorbitant rate, in order to collect them with great leniency. This way of seeking popularity by systematically demoralizing the officials and the whole population has, of course, been utterly repudiated by the present Government; everybody has now actually to pay what was formerly but the nominal amount of the taxes, and that is often simply ruinous. The peasants (farmers) are, perhaps, worse off than all the rest. They work hard and with intelligence, and the soil is rich, but, nevertheless, as a rule they are always short of ready money. Any of those "extraordinary" events which occur every day—a burial, a marriage, a bad crop—renders a loan necessary, and every loan is with them a real calamity. There are no agricultural banks where the peasant could get money to meet sudden exigencies, and much less to use for the improvement of his lands. A mortgage is the beginning of his ruin, for, beside the interest, he has to pay the Government 5 per cent., and his neighbors begin to regard him as a lost man as soon as the rumor spreads that he has been obliged partly to mortgage his estate. So he looks out for some friend to lend him money without a mortgage. Such friends are always on hand, and their rate of interest exactly corresponds with the genuineness of their friendship: the usurers are now the curse of the Alsatian peasants, as in the time of Napoleon I. The Government, however, is almost still more merciless than the usurer. Suppose a peasant divides his estate, valued at 20,000 francs, but encumbered with a mortgage of 12,000 francs, amongst his eight children, one son getting the estate to pay one-eighth of the real property, *i.e.*, 1,000 francs to every one of his brothers and sisters; now the Government considers the mortgage as not existing, and charges at first $1\frac{1}{10}$ per cent. for the whole nominal value of 20,000 francs=220 francs; secondly, 4 per cent. for seven-eighths of the mortgage=420 francs; and thirdly, $1\frac{1}{2}$ per cent. for transferring the property of 20,000 francs=300 francs. So the estate of an actual value of but 8,000 francs is charged by the Government with 940 francs. Suppose furthermore the son who got the estate dies before he has been able to pay his brothers and sisters their share, he leaves to his heirs, in fact, but 1,000 francs, as there is a mortgage of 12,000 francs and debt of 7,000 to be paid out of its full value of 20,000 francs. The Government, however, still regards only the 20,000 francs, and charges $6\frac{1}{10}$ per cent. on them, equal to 1,220 francs, *i.e.*, 122 per cent. of the whole real property left. Perhaps the case is not quite so bad, and the happy heir is still left in possession of 500 francs, which he invests in real estate, in a hut. The Government steps in again and gets, under various heads, 39 francs 5 cents out of him. If but 300 francs were his own money, so that he had to borrow 200 francs, he has to pay the Government 30 francs 60 cents more. These examples will amply prove that the present Government cannot be quick enough in doing away with the *enregistrement* and the *droits de mutation par décès*. The division of the soil having been carried to almost the extreme in Alsace, they are all but ruinous to the peasants.

Another tax deserving special mention is as heavy, and in many cases not less iniquitous. It is a kind of income tax, the rent of the lodgings occupied by the taxpayer serving as the standard by which the amount of the tax is determined. The French collector, like the American appraiser was wont to put down a lodging of 1,000 francs at 700 or 600; thus, in fact, reducing the nominal tax of 10 per cent. to 7 or 6 per cent.; the German collector sticks mercilessly to the letter of the law, the tax being, therefore, at present equal to an income tax of about 2 to $2\frac{1}{3}$ per cent. Only with those happy few whose income is considerably larger than their yearly expenses, the percentage is proportionately smaller, while with that numerous and most unhappy class who have to live upon a fixed salary, it is steadily increasing. A. is in the Government employ, and receives a salary of 1,000 thalers. He makes his calculation, and finds that he is able to support a wife. The lodging of the young couple costs 600 francs, the tax is accordingly 60 francs. After a year a baby appears, and the landlord raises the rent to 700 francs, and the Government taxes him 10 francs more upon the supposition that he has more to spend than last year. There is a kind of bitter humor in this conspiracy between the ever-greedy landlords and the Government.

The exact amount of the real-estate tax, and the manner of assessing it your correspondent has not been able to ascertain. One of the principal Imperial officials maintained that it was not heavy. The peasants, however, seem to think very differently, although they admit that it is inconsiderable in comparison with the above-mentioned burdens. The head-money (*Kopfgeld*) is also of no great consequence: its equivalent for those who are unable to pay it is three days' work on the public roads.

The only class of producers thus far considerably benefited by direct action of the Government are the wine-growers. In former times they were utterly unable to compete with the wine-growers of Southern and Western France. Even now they find it difficult, although the duties levied on the French wines serve them as a protective tariff. The difference in the price is, however, sufficiently reduced to be outweighed, to a great extent, by the predilection most of the Alsatians have for the wine of the country, which has quite a decided character of its own. Besides—and it is this for which the producers as well as the consumers have to thank the Government—the heavy *octroi* formerly levied by the cities has been abolished. For the former class, it is perhaps of still greater importance that their wine has to pay no duty on the other side of the Rhine. It does not seem quite improbable that the Alsatian wines, mixed with the light wines from the Moselle, will find a market in Silesia and other provinces of Germany not producing themselves any wine. As to the tobacco-growers, another interest of much importance, it is hardly doubtful that they also will soon find themselves in a better condition than they were under the French Government. The Imperial Government, which had until now retained the monopoly, has just sold its stock, etc., it is said, for 1,800,000 francs.

To give satisfaction to the just demands of the people, however, it is not sufficient to mend here a little this year, and there a little the next year. The whole manner of raising revenue has to undergo a thorough reform. Everybody knows, of course, that the French laws will not remain in force for ever; but the people are growing impatient, and not without reason. Such a radical change of the whole system of taxation is no child's play; but the provinces were not annexed yesterday, and no one has the slightest idea if the change will take place in six months or in three years. The *Courrier du Bas Rhin* remarked the other day with great justice, "You have taken from us what was dear to us in our connection with France; now, if you want us to cease complaining of our fate, and to become good Germans, at least make haste to abolish what was always hateful to us in our connection with France." Here *is* the rub, and the Government *should* make haste.

In conclusion, I might mention an interesting fact to show how "the sober second thought" is beginning to carry the day over the heart-burnings, even where they are the strongest. The manufacturing princes of Mülhausen had the strange presumption to ask permission to send their goods, intended for the Vienna Exposition, to the French department. When this was refused, they demanded a separate building, for which they were willing to pay a very considerable sum. This also not being granted, most of them—only about six standing grimly aloof—have finally made up their minds to appear as Germans at the world's fair. Thus far about 600 firms have declared their intention to exhibit at the Exposition—manufactures, agriculture, *Forstwirthschaft* (economy of forests), and mining each being represented by about 150.

Correspondence.

MORE ABOUT THE ALABAMA DAMAGES.

To the Editor of the Nation:

Sir: In your comments upon the communication in your paper of January 16, in relation to the "Alabama damages," you agree with your corre-

spondent that the Legislature must determine where the fund is to go, and that it is not trammelled, as a court would be, by any technical rule of municipal law. You, however, contend that the Legislature is bound to follow the analogies of the law. Under your rule, as I understand it, if the builder of the *Alabama*, or any other British subject, had insured some of our ships, and paid the loss, and the ship had been abandoned to him, he is entitled to his share of the money, although it might be shown that he had received twice as much in war premiums from American citizens as he had paid in losses.

You say you find no fault on the score of abstract justice or "equity" with the rules I lay down.

The precise issue between us is whether Congress should follow the analogies of the law, or whether it holds the fund to distribute equitably to relieve the actual hardships. It is understood that there is a difference of opinion among those who acted for the United States—that Mr. Evarts and Mr. Beaman take the former view, while Judge Hoar and Mr. Cushing take the latter. It is undoubtedly a fair question for discussion.

The question whether the *courts* even are bound by the rules of law in administering a fund of this kind has been raised. Sir Thomas Plumer, Master of the Rolls, in a case before him in 1818, said of a fund of this kind: "Whatever the individual obtains is not on the ground of right or private property, but of hardship and injustice. Though this therefore is not a case of pure donation, as of a gift without anything in the nature of consideration, yet for the purpose of being contrasted with property or right it is donation, not a restoration of a former right, but from a new fund, belonging to an independent authority; a grant to the sufferer for what he lost." Although Judge Story did not concur with the view as a rule for courts, may it not be a proper view for a legislature to take?

Is abstract justice such a "very queer article" that a legislature must shun it and do injustice in order to conform to the analogies of technical law?

* * *

[We ought to have mentioned in our article last week that this question about the rights of the insurance companies in this controversy was not raised until recently. From 1863 until the close of the war the claims of the insurance companies against the British Government were regularly received and presented by Mr. Adams and Mr. Seward on precisely the same footing as those of individuals, and were received by the British Government in the same manner. Moreover, it was understood by insurers and insured all through the war that the underwriters succeeded to all the owners' rights as against the British Government in all cases of total loss. The idea that the underwriters' total receipts ought to be looked into in order to ascertain the exact amount to which they are entitled is of quite recent origin. It is worth notice, too, that the preparation to deal with their claims in Congress is conducted under the superintendence of that great moralist and "equity" man, Mr. B. F. Butler, and, characteristically enough, in profound secresy. He has taken the most extraordinary precautions to prevent the public's knowing what he is about, partly in order to prevent discussion, but partly because he never feels like himself till the night falls. Our correspondent's closing remark begs the question.—Ed. Nation.]

THE OTHER VIEW OF NAPOLEON III.

To the Editor of the Nation:

Sir: In view of the prevailing tone of the criticism of our press upon the life and character of the late Emperor of the French, which is to my mind exceedingly harsh, and in great part devoid of common sense, I beg that you will allow me to publish in your paper an estimate of the man and of his government which I believe to be shared in by many close observers of French history, even although it be a different estimate from that which will be given in your own editorial columns. I have no desire to open a controversy on what would be an interminable theme; my only purpose is to put on record opinions which, though entertained by a minority doubtless of our people, are nevertheless entitled to respect.

Those, then, whose views I present start with the notion that the reign of the late Emperor cannot be properly estimated apart from the previous history of France. They regard the French people as having been, in 1789, totally unfitted by their ignorance, and by their utter want of practice in the art of governing themselves, for a republic. They see clearly, however, that by the destruction of the old nobility, the restoration of the monarchy as the permanent form of government became impracticable. They regard the First Empire, therefore, as the only form of government possible for the French people at that point in their history. They regard the forcible expulsion of Napoleon I. from France, by the allied powers, as necessarily undermining the principle of allegiance, and bringing about a series of experiments in which the very form and structure of the government were made to depend upon the popularity of a particular king or of his counsellors. They do not undertake to justify the revolutions of 1830 or 1848, but they see in them the proof that the old monarchy is without roots and without real support. They regard the Republic of 1848 as an attempt to govern a great country, the masses of whose people were, through lack of education in self-government, entirely unfitted for the republican system, by a self-appointed oligarchy, composed no doubt to a considerable extent of excellent men and of enlightened thinkers, but containing also bad and dangerous components; having no reliance on the masses of the people, yet governing in the name of liberty and using the forms of the Republic. In fact, they regard the Republic of 1848, as it evidently was regarded by France at that time, as obviously a provisional government, which, having no justification in the tyranny of the late king, no weight with the people, and no roots in the past, was, every day that it lasted, a cause of alarm to the friends of civilization in France and elsewhere. They see in the *coup d'état* of 1851 the violent close of this exceptional state of affairs—an act not to be justified on strict grounds of morality, certainly; but also an act by no means to be confounded with a deliberate overthrow of a lawful free government. They are not blind to the almost universal satisfaction with which the event was accepted by the nation; nor are they forgetful of the many years of peaceful order which succeeded it, and the benefits thence resulting.

They have seen in the Emperor a hard-working and enlightened monarch; a man who devoted more time, and labor, and intellect to the task of governing his country than any of his contemporaries. They do not believe that in the matter of personal morality or of domestic duty he fell below the average of the men of his time similarly situated. They are unable to recognize in the friend of Cavour and of Cobden either the incapacity or the lack of honest purpose to carry out wise and enlightened measures which so many deny the Emperor to have possessed. They see in the alliance with England and the war with Russia a solid benefit conferred upon the European family of nations; recognizing as they do the immense value of the extinguishment of that jealousy between France and England which has led to so many bloody wars, and the disastrous consequences to European progress had the Emperor Nicholas been allowed to extend his too powerful reactionary influence in Germany by the conquest of Turkey. They find that the Italian war of 1859 brought a great and permanent benefit not only to Italy but also to all Europe. Italy, changed from being the hotbed of revolution into a constitutional monarchy, has amply justified the enlightened policy which led Napoleon into his alliance with Cavour. While they cannot be blind to the fact that the Emperor Napoleon, in common with the leading statesmen of England, considered the victory of the United States over the rebels as impossible, and that he consequently urged upon England a prompt recognition of what he considered as a fact, they are equally free to recognize the perfect neutrality with which he observed the duties of his position. They deplore the Mexican expedition as the great mistake of his reign; but they are free to confess their doubts as to the advantages to Mexico which have resulted from its failure.

They do not find any evidence in the Emperor's policy towards Germany of a resolution to bring about a war. They blame him for not having been satisfied with the abandonment by the Prince Leopold of his candidature. They cannot but admit that the French Government asked what the Prussian Government ought not to have been asked to do. But they are not blind to the fact that the affair was of Bismarck's making; that a frank and open policy on his part in the outset would have given no ground for a quarrel. Nor do they forget that it was the (so-called) liberal opposition that had been goading the Imperial Government into a war with Germany ever since the battle of Sadowa.

A writer in the *North American Review* for January has said:

"Both of the Napoleons maintained their hold upon the nation through two classes of people—the first embracing a small but intelligent minority, who believed in an absolute government as the best which the nation could have; the second, made up of the vast but ignorant majority. With the firm support of the former class in the cabinet, and with the overwhelming numbers of the latter as a kind of ultimate court of appeal, Napoleonism was for a long time able to sustain itself, even in opposition to the great mass of the intelligence of the nation."

This we regard as substantially true. But our conclusion differs from that of the writer of the article. We regard a nation, "overwhelming numbers" of whose people are ignorant, as a nation which cannot be successfully ruled by the majority of the intelligent classes, unless those intelligent

classes constitute a powerful aristocracy. A country in which the vast majority is ignorant can be ruled only by a despotism or by an oligarchy. For the "intelligent classes," who, of course, must differ among themselves, to establish a new government, without a history, without traditions, without previous experience of any value, and to attempt to carry it on without the prestige of great names or families, by a crude adaptation of the methods of republicanism, is not only to attempt an impossibility, but to war with the most deeply rooted prejudices of human nature. Such a people as this must have a government of some traditional authority, identified with the national history, recalling the days of the national prosperity and glory. To liken Paris and Lyons to Boston and Philadelphia, the peasantry of Gascony to the yeomen of New Hampshire, is absurd.

The writer in the *North American* goes on to say:

"When at last it [Napoleonism] gave way, *crumbling into very dust at the mere touch of the enemy*, the world expressed its surprise, and fell to studying the causes of the disaster. What had long been understood by the most intelligent observers came now, on closer observation, to be generally admitted, namely, that Napoleonism has proved a lamentable failure, and that it may be well characterized as *a system of appearances without substance, and of pretence without reality.*"

What ideas of "a mere touch of the enemy" the learned writer may entertain I know not. Neither the formidable armies of the Germans nor the ability of the Count von Moltke has ever given rise to a similar reflection in my own mind. But the remark, absurd as it is, shows how easy it is for a writer on history to idealize everything, and to fail to examine the facts. The truth is, that, taking into account the immense advantage possessed by an invading army since the building of railroads, the invasion of France in 1870 was more dangerous than the invasion of Russia in 1812, which was at the time the greatest military expedition of modern times. And disastrous as the war was for France, every one must admit that the means employed to effect her overthrow were unprecedented. She went down under the attack,—but not at "the mere touch" of the enemy. Prussia succumbed in 1806 in half the time, and Austria, in 1866, in less than that. If the French Emperor had acted with the prudence of his Austrian brother, he would have saved his throne. It is true, the French were greatly outnumbered; but they suffered more from incompetent generals than from being outnumbered. Bazaine surrendering 180,000 men; the insane march of McMahon to the Belgian frontier—these are what ruined France and dethroned the Emperor. Am I asked, Is not the Empire responsible for this incompetence by its demoralizing effect on the tone of public men? I ask in return, What would have been the result if Lee had met McClellan on the Peninsula with twice his numbers? Or if the sapient strategy of Lincoln and Stanton in the Valley had been met not only with Stonewall Jackson's skill, but by an overwhelming force of numbers at his back? I cannot forget the hasty opinions of our English brethren on the value of our institutions expressed at these junctures, and I call upon those who desire only the truth to remember how long it has taken a nation like ours to select the best generals.

The French put into the field by the first of August over 250,000 men, and by the first of September 150,000 more. These facts alone confute the charge that the Empire was "a system of appearances without substance, and of pretence without reality." But these armies were sacrificed through lack of skill. The Emperor undoubtedly showed himself an incompetent general, and painfully irresolute in all his decisions, during the campaign; so did his chief officers. The enemy were in overpowering numbers; they lost no time, they made no mistakes; the regular army of France went down, and the Empire with it. But does any one, even the bitterest opponent of Napoleon, believe that Louis Philippe or Charles X. would have survived such an invasion as this?

I have perhaps said too much; I have, however, said what I believe to be true. I have said but little of the Emperor's faults, but in the existing state of public opinion it is not necessary to enlarge upon them.

J. C. R.

Boston, January 13, 1873.

SOME FACTS FOR "GOVERNOR" KELLOGG.

To the Editor of the Nation:

Sir: Accompanying this we send you a copy of a pamphlet containing a condensed statement of the proceedings in the State Courts of Louisiana with reference to the Boards of Returning Officers. You will see by this that your New Orleans correspondent errs in his explanation of the case, as follows:

First: The Lynch-Hawkins Board was enjoined by Judge Dibble, as well as the Warmoth-Wharton Board. (See page 4.)

Second: The Eighth District Court, Judge Elmore presiding, subsequently dismissed all the cases relating to the boards, for the reason that the law approved Nov. 20, 1872, abolished the offices, and thereby terminated all rights or claims upon them, on the part of either plaintiffs or defendants. (See page 4.)

Third: The Lynch-Hawkins Board made their promulgation under Judge Durell's decision, and without *any* official returns.

Fourth: The Lynch-Hawkins Board was restrained by the Eighth District Court from counting votes, or assumed votes, not included in the returns, and from excluding votes except upon the affidavits and testimony required by law; and to this injunction they paid no attention whatever. (See page 7.)

Fifth: The list of persons assumed to constitute a legislature was placed by the United States Marshal in the hands of the officer commanding the United States forces occupying the State House, and that officer admitted to the building only those thus designated.

Sixth: The Legislature thus composed impeached and removed Governor Warmoth, partially remodelled the State judiciary, and declared the election of Kellogg and Antoine, being all that time, and at this moment, protected by United States soldiers who now occupy the State House. Very respectfully yours,

E. B. Wheelock,
Albert C. Janin,
Representing Citizens' Committee of Louisiana.
Durant da Ponte,
Representing Joint Committee Louisiana Legislature.

Washington, D. C., January 17, 1873.

PUBLISHING COLLEGE EXAMINATION PAPERS.

To the Editor of the Nation:

Sir: Everybody has heard of the humorist in Newport and his new fence. The native Newporter is said to spend his time in nothing else but either to tell or to hear some new thing. In deference to this amiable weakness, a placard was put on the fence, running somewhat in this wise:

"NOTICE.—This fence is to be built by John Jones, and painted by John Smith; it is to be 127 feet long and 4 feet 4½ inches high; it is to be done on the 27th of August."

A university in this State caters to a morbid public curiosity quite in the Newport way by printing the examination-papers of the year in the annual catalogue. Whether the publication of such domestic details is likely to do any good, either to the student in search of a university to go to, or to the public at large, is doubtful. Examination-papers necessarily give a very imperfect idea, even to scholars, of the character or amount of the instruction given. To the outside public, who cannot see the bearing of the conundrums put, or their connection with the daily teaching, they must often seem puerile, sometimes even farcical, and must tend to lower the low estimate in which universities are too apt to be held by men of affairs. Besides, public curiosity is as insatiable as the daughters of the horseleech. If Mr. Beecher should put a notice in the *Christian Union* that he was to dine to-morrow on beefsteak and fried potatoes, some fidgety spirits would never rest till they were told whether the potatoes were Jackson Whites or the Early Rose, and how he came to have them fried and not boiled in the jacket. That numerous class in the community, meddlers with education, will hardly be contented with the imperfect revelations of the college catalogue, and we may expect soon to hear their unsatisfied "give, give." The only persons benefited by the publication of these papers are the undergraduates of the university, who with a little shrewd cramming-up on past papers will be enabled to anticipate their future examinations. This may in the end do good by making examinations of less account, and thus counteracting the evil toward which the American College just now seems drifting—that of attaching too much importance to examinations.

New York, Jan. 20.

Notes.

SCRIBNER, ARMSTRONG & CO., following the example of other leading American publishers, have begun the publication of a 'Library of Choice Fiction.' The first issue is Mrs. Oliphant's 'At His Gates.'——Porter & Coates, Philadelphia, will publish 'The Bonaparte-Patterson Marriage in 1803, and the Secret Correspondence on the Subject,' collected and arranged from inedited letters by W. T. R. Saffell; also, 'Romain Kalbris,' from the French of Hector Malot, by Mrs. Julia McNair Wright.——A biography of the late Rev. Dr. Eliphalet Nott, by Prof. Tayler Lewis and Dr. C. Van Santvoord, is in preparation and will be published by Gould & Lincoln, Boston.——J. R. Osgood & Co. are to reproduce all the works of Jules Verne, whose 'Adventures of Three Russians, etc.' was lately noticed in the *Nation*.——'Buckle's Posthumous Works and Remains,' edited by Miss

Helen Taylor, will be reprinted here by Scribner, Welford & Armstrong, as will John Timbs's 'Clubs and Club-Life in London'; a uniform illustrated edition of the 'Life and Works of Charlotte Brontë and her Sisters'; a pocket edition of the Waverley Novels; and a 'Manual of Mythology,' by Alexander S. Murray.——G. P. Putnam's Sons' spring list embraces a large number of works published jointly with London houses, of which we need only mention the reprint in one volume of the 'First Three English Books on America: 1521–1555 A.D.,' to be subscribed for at $9. Other works, manufactured here, are 'The Mother's Register,' by Prof. J. B. Fonssagrives; 'A Manual of Thermometry,' by Dr. Edward Seguin; 'First Steps in Geography,' by Theodore S. Fay; 'The Berber,' a romance of Morocco, by W. S. Mayo, M.D.——A work which ought to give a great impulsion to the study and practice of phonography is the 'Dictionary of Munson's Practical Phonography,' to be published shortly by Mr. J. E. Munson, of this city. The prospectus states that "besides giving the most approved phonographic outline of each word in the language, and its position, it will present all the principles of phraseography, illustrated with numerous examples, so that the learner as well as the experienced writer will have a perfect book of reference to guide him at every point, and also securing the desirable result of absolute uniformity of writing among phonographers." Along with this Mr. Munson will also publish a much-needed 'Text-book of Munson's Phonography,' prepared with particular reference to school instruction.—— Dodd & Mead have in press 'Wanderings in Spain,' by Augustus J. C. Hare, with illustrations; 'Luchmee and Dilloo,' a novel by Edward Jenkins, author of 'Ginx's Baby' and 'The Coolie,' perhaps based on his Guiana experiences; 'De Soto,' by J. S. C. Abbott; also new editions of Edward Garrett's 'Occupations of a Retired Life,' and 'Crust and Cake.' "Edward Garrett," by the way, is not, as would naturally have been inferred from our notice last week of 'Premiums Paid to Experience,' a man but a woman (Mrs. Isabella Mayo, of London), and still young. She is a leading contributor to the *Sunday Magazine*.

—In the new-born zeal of the Japanese for reform and improvement of every kind, there seems to be absolutely no limit to what they are willing to attempt. The attention of our public has been again during the past week attracted to this by the publication of a letter from Mr. Mori to Prof. Whitney of Yale College, proposing the adoption by the Japanese nation of the English language in place of its own vernacular; but of our English language improved by planing out its irregularities, and also reformed in orthography. The correspondence is not very recent, but dates from last May and June. It is to be, we understand, in due time brought out in full by Mr. Mori. In anticipation of its more public appearance, it was laid before the American Oriental Society last October, in New Haven, and discussed and commented on at some length. The sentiment of the Society appeared to sustain the principal positions taken by Professor Whitney in his reply, which are somewhat as follows: In all the history of the world, no nation has exchanged its own dialect for another because of the intrinsic superiority of that other as an instrument of thought and means of improvement; the inducement has been mainly external—the desire to enter into a community of culture with a more advanced race. This advantage the Japanese would in great measure lose if, in adopting English, they worked it over into a shape that made it strange, and even ridiculous, to its English and American users; the very slight gain in point of ease of acquisition would not at all make good the loss. For similar reasons, they cannot afford to ignore the established English orthography, although they may well enough bridge over the difficulty by first learning spoken English in an orthography accordant with that which they shall adopt for their own language, reserving the written form (pending the phonetic reform which may some day come in English itself) for a higher stage of education. But to substitute a new and wholly different language for an old one through the whole mass of a great community must be, if practicable at all, an extremely difficult and slow process; and that the educated and leading class should do their work wholly by means of a foreign tongue would have deplorable results; it would lead to the foundation of a learned caste, separated by a wide gulf from the main body of the people, and might defer indefinitely the general elevation of the nation. To prevent this, the Japanese tongue must also be the object of utmost care; it must be first emancipated from Chinese influence, and written phonetically with the Western alphabet, and then made accessible to and enriched by new stores of expression from English or other Western languages, as intercourse and the growth of knowledge shall bring them in. Perhaps, with such care, the Japanese will prove itself equal to all that the future shall demand of it; this the future alone can decide, and will. The present generation can only initiate the movement, and their leaders need to beware lest they attempt the impracticable, and put obstacles in the way of the progress they have most at heart. There is indeed something startling in the suggestion that our language should be adopted by the leading race of the extreme East, when hitherto not one Oriental people possessing culture of its own has been found willing even to adopt our mode of writing; and we are in some danger of being thrown off our balance by the magnificence of the idea, and led to favor and abet a precipitate radicalism which will defeat its own ends.

—If we are to believe the captains of the ten police precincts in Brooklyn, life in that city is remarkably free from almost all the pests of modern civilization. The Police Commissioners recently directed the police captains to make a thorough investigation into the number of gambling-houses, "policy-shops," "panel places," and other houses of doubtful reputation in Brooklyn; and according to the reports made, there are really no places of this sort worth mentioning within the city limits. For example, we take from the *Herald* the account given of the third precinct:

"*Third Precinct* (Captain Daniel Ferry).—This precinct, which is one of the largest in the city and embraces the most thickly populated section of South Brooklyn, is free from the haunts of vice described in the general order to which his attention was called. In his report the veteran and energetic captain states that some time ago a man who called himself Edgar Wallace sold policy slips in a lamp store at 52 Union Street, and was arrested no less than four times for the offence. Upon one occasion Wallace was fined. If again caught, he will be attended to."

It is a little singular, considering the Arcadian condition of society described in these reports, that the board to which they were made immediately issued an order announcing that the commanding officers of the precincts or subprecincts will, "from this date" (Jan. 9), be held responsible "for a more effective protection of the person and property of our citizens, the enforcement of all city ordinances and excise laws, the suppression of gambling, lotteries, and other violations of law, in their respective precincts." We learn from the *World* that this order was issued "in view of the recent increase in crime in Brooklyn."

—The late Rev. Joshua Leavitt, D.D., whose death occurred last week, was one of the oldest journalists in the country, having been an editor in this city for the past forty-four years. He was a native of Massachusetts, born in 1794, and graduated at Yale, after which he began the study of law, practised awhile in Putney, Vt., then prepared for the ministry, and was settled in Stratford, Conn. He left the pulpit to engage in the reform movements of the day as secretary of Temperance and Seamen's Friend societies, and at length in 1831 became editor and proprietor of the N. Y. *Evangelist*, to which he gave so decided an anti-slavery character that it could not circulate at the South, and began to lose its Northern patronage also, till his timely reporting of Dr. Finney's Revival lectures gained for the paper the then large number of 12,000 subscribers. Obliged to dispose of the *Evangelist* in consequence of the financial crash of 1837, he at once took charge of the N. Y. *Emancipator*, while in other ways actively promoting the anti-slavery cause both in the moral and political field. In 1848 he became office editor of the *Independent*, and death overtook him while still one of its editors, though his advanced age had for some years made his duties little more than nominal. He retained to the last, however, a lively interest in all matters relating to the national welfare, more especially in free-trade and cheap postage. For his writings on the former subject he was awarded a gold medal by the Cobden Society. Of late years, also, he published pamphlet essays on Denmark and Poland, in which he combated the modern principle of nationality—at least in its exaggerated pretensions—in favor of the state which is now *par excellence* the champion of nationality in Europe. Dr. Leavitt's style was clear and forcible, and in the religious controversy once so fashionable he had few superiors. He was altogether a typical New Englander for his day and generation, and will long be remembered for his services to the country, as well as for those personal qualities which ensured him a green and kindly old age.

—By the death of Lord Lytton, on Saturday last, the guild of British men of letters loses one of its most prominent members. To literature itself the loss is not so great, partly because it is now some years since Lord Lytton completed and rounded his literary career, and partly because, industrious and successful as he was, and he was very industrious and in many ways successful, to no one of his many and various works can any high rank be assigned. He was a writer of poetry and a clever one; but his metrical productions, although workmanlike and skilful, fail of being poetry. He was a dramatist, and one or two of his plays seem certain to keep the stage for many a year yet; but it is with a feeling that the theatre of our day is indeed mainly an amusement for the immature and youthful that one witnesses the love, and pride, and magnanimity, and honor, and devotion, and other fine sentiments of Claude Melnotte and Mademoiselle Deschapelles. He was a popular novelist and won much praise, and some of it very well

deserved; but it was rarely that the judicious were not compelled to grieve over some radical fault, moral or intellectual, in one of his novels, and he may be said to have all but outlived a much-faded reputation. Perhaps it is the easier to feel a dissatisfaction with him, that clever as was his performance on almost every occasion there used formerly to be a pretentiousness about it which was out of all proportion with the result. He was perpetually talking of his "art" and then making poorish books. Is he to turn out an entirely commonplace poem about King Arthur, unreadable even by reviewers? We may be sure that it will be an epic poem in twelve books or twenty-four books, and that it will be prefaced by an elaborate theory of epic poetry, as calmly put forth as if the topic were a new one, and the theory and the poem both worth having. So, too, of his novels and his dramas, whenever he builds a good-enough wooden Gothic castle, there is sure to be put up an amount of scaffolding which nothing less than the erection of a massive and enduring structure would justify. In all this there appeared to be something of charlatanry; and it seemed altogether in harmony with the false sentiment, and false thought, and false morality, which abound in all his earlier works, and which Thackeray used to lash so unmercifully and so humorously in his representation of "Bulwig," and against which he fought so ably in the really terrible novel of 'Catherine.' Very thoroughly the castigation was deserved, for bad enough is the morality and feeble enough the thinking in such stories as 'Alice,' and 'Devereux,' and 'Paul Clifford.' These were produced, however, in days which, as this death and the rest of the long necrological roll of the last few months cause us to remind ourselves, were the days of long ago. It is nearly half a century since 'Devereux,' for instance, was the latest novel that had engaged the attention of the town. In 1829, that work of fiction appeared, when George the Fourth was king, and its author was a youth not quite twenty-four years old; but he had already published half a dozen volumes, none of which, as may be conceived, contained all the wisdom in the world, and the fame of which never reached the ears of the reigning Queen of Sheba. As years and experience sobered him, nothing was to be urged on the score of morality against his books. And very good they are, some of them, in other senses too, as is well known to all readers of 'The Caxtons,' 'My Novel,' 'What Will He Do With It?' Of 'Zanoni,' "the well-loved work of my mature manhood," and the still later 'Strange Story,' with their somewhat fustian profundities and terrors, not so much can be said; but in general the later works and essays have surely given much rational pleasure to many minds, while as to the earlier, there are at least some readers left—whether or not there are many more coming—whose hearts will always have a soft side for 'The Pilgrims of the Rhine,' those singular tourists, and even for the choice sentiments of the Maltraverses and the other gentlemen who lived and loved and had their being in the "Bulwig" period.

—Lord Lytton (Edward George Earle Lytton Bulwer Lytton) was born in May, 1805. He was emphatically literary, and is said to have begun writing at the age of six years, though it was one of his characteristic affectations throughout his life to profess small regard for his reputation as a novelist and dramatist. His inclination in this direction was fostered by his mother, a woman of some attainments, who personally supervised his early education. He graduated at Trinity College, Cambridge, in 1826, and by the end of that year had published two volumes of verse and one of prose. 'Pelham, or the Adventures of a Gentleman,' came out anonymously in 1827, and speedily became a success. In the same year occurred his marriage to an Irish lady, Miss Rosina Wheeler, of much vivacity of temper and intellect, who after a few years separated from him and thereafter made a practice of showing up her husband's foibles and faults in novels much forgotten, whose principal attraction for the public was their lively delineation of Bulwer and his friends, Dickens among others coming in for some raps. These never hurt Bulwer in reputation, and it seems to be the best-accepted opinion that they should not. Regularly with each year publishing his one or two or three volumes, we find him in 1831 a Liberal Whig member of the House of Commons, he being then Mr. Bulwer. In 1838, on the occasion of the coronation of Queen Victoria, he was made a baronet, he having been selected for that honor as a representative of literature, and the late Sir John Herschel, the astronomer, as a representative of science. It was in 1836 that Bulwer made his first attempt at dramatic literature; but the play, 'The Duchess of La Vallière,' was rather a failure than otherwise. It was like him to return to the attack. His confidence in his own ability to manufacture any species of literary work was like that which animated Southey when, as a boy, he remarked that nothing was easier than to write a tragedy. And of him, too, it might as fairly have been said as it was said of Southey, that indeed nothing is easier than to write a tragedy—except to a writer of really good tragedies. However, in 1838, Sir Edward Bulwer produced the brilliantly successful 'Lady of Lyons'—a play which, we may be sure, will be captivating our children long after we have ceased to interest ourselves in sublunary affairs. We have not space to chronicle so much as the titles of all our author's volumes—novels, political pamphlets, translations, poems, historical works, plays, addresses, essays. He continued to work steadily in literature and politics for many years—even, we may say, till he died. In 1843, he succeeded to his mother in her valuable estate, at the same time changing his name to her maiden name of Lytton. In 1866, he was made Baron Lytton, and he will be succeeded in the title and estates by his son Robert Bulwer Lytton, who is somewhat known as a poetical writer. The latter, by the bye, was at one time attached to the British Legation at Washington; and the father was Under-Secretary of State of the Colonies in 1858 and '59, when the Hudson's Bay Company monopoly was abolished.

—The mistakes that the compositors in newspaper offices in Italy make in the spelling of English are often amusing. In the *Giornale di Modena* of December 20, 1872, is an account of the life of General Palma di Cesnola and of his discoveries, of which we have given a description on another page. Mentioning the banquet given last Thanksgiving Day in London by Mr. Cyrus W. Field, at which General Cesnola was a guest, the *Giornale* speaks of it as "il gran banchetto del *Iakes pivinny day* della festa nationale americana, tenuta a Buchigham Palace Hotel." "Iakes pivinny" must be a puzzler to the young Italian eager to learn English.

MIDDLEMARCH.*

I.

THERE is a well-known remark of Novalis that character is destiny, which George Eliot criticises severely in the 'Mill on the Floss,' on the ground that destiny depends rather on circumstances than on disposition. 'Middlemarch' might have been written to illustrate at once the truth of the dictum and of the criticism. The main feature of the book is, that it is a history of the development, and generally of the tragic development, of characters which are sometimes noble, sometimes base, and generally neither very noble nor very base, amidst the commonplace circumstances of a country town. That this is the author's theme, as regards Dorothea, is patent. Her outward history, and the moral to be drawn from it, are thus summed up:

"She was spoken of (in Middlemarch) to a younger generation as a fine girl who married a sickly clergyman old enough to be her father, and in little more than a year after his death gave up her estate to marry his cousin, young enough to have been his son, with no property and not well-born. Those who had not seen anything of Dorothea observed that she could not have been a 'nice woman,' else she would not have married either the one or the other. Certainly these determining acts of her life were not ideally beautiful; they were the mixed result of a young and noble impulse struggling under prosaic conditions. Among the many remarks made on her mistakes, it was never said in the neighborhood of Middlemarch that such mistakes could not have happened if the society into which she was born had not smiled on propositions of marriage from a sickly man to a girl less than half his own age, on modes of education which make a woman's knowledge another name for motley ignorance, on rules of conduct which are in flat contradiction with its own loudly asserted beliefs. While this is the social air in which we mortals begin to breathe, there will be collisions such as those in Dorothea's life, when great feelings take the aspect of error and great faith the aspect of illusion."

This passage is remarkable in itself, but its main interest for our present purpose is that, though written of Dorothea, its spirit applies to all the principal personages of the novel. In Lydgate, in Rosamond, in Casaubon, in every other person meant to incite interest, what we are called upon to note is the action of circumstances upon character. "There is no creature so strong that it is not greatly determined by what lies outside it." This is the text of the whole work. Like most texts, it sounds at the first hearing like a truism, but it is a truism to which George Eliot's genius has restored all the vividness of a truth.

The main instance, of course, of its application is to be found in the history of Dorothea herself. The actual events of her life are summed up with fairness by Middlemarch gossip. She did marry a clergyman twice her own age, and she committed this folly without anything which, to ordinary persons, would seem a great temptation to the step. She married his cousin shortly after her first husband's death, and again acted free from the stress of any overpowering necessity. Neither act was, as George Eliot admits, "ideally beautiful," yet no one can doubt the nobleness of Dorothea's character, and few persons who study 'Middlemarch' will long maintain that her actions, blamable or praiseworthy, were not, on the whole, the most natural outcome of her disposition and

* 'Middlemarch: A Study of Provincial Life. By George Eliot.' Edinburgh and London: William Blackwood & Sons. New York: Harper & Brothers.

circumstances. From the first moment you meet her dividing her jewels with Celia, you perceive that she is full of noble aspirations, of life, ignorance, and of impatience. The beauty, and also the defects, of her nature arise from this fulness of life and impatience. She is always trying to escape from little commonplace ways and thoughts, and in the hurry to do so is constantly overlooking things which are commonplace enough, but which, unfortunately, are also true. "Celia," said Dorothea with emphatic gravity, "pray don't make any more observations of that kind." "Why not? They are quite true," returned Celia. . . . "Many things are true *which only the commonest minds observe.*" "Then I think the commonest minds must be rather useful. I think it is a pity that Mr. Casaubon's mother had not a commoner mind, she might have taught him better." The two sisters are discussing Mr. Casaubon's disagreeable manner of eating his soup. He is already, although unknown to Celia, Dorothea's accepted lover. Dorothea had accepted him because she saw he had a "great soul," and while dreaming about great souls had neglected to make the observations which occur to commoner minds. The tragedy, in fact, of her life turns on her being so occupied with very noble notions, and so impatient to carry them out, that she failed to notice the commonplace things at her feet. In all her ways, great and small, there is manifest the rush and movement of life. Her delight in riding at a time when she thought the amusement rather worldly, her rapid driving and walking to work off her indignation at her lover's supposed treachery, her sudden, abrupt speeches, are all the outward signs of the same tendency to movement, expression, and action. This tendency is balanced by the keenness of feeling and intensity of sympathy which are sometimes seen in natures overflowing with vigor. The sympathy and the energy combined lead to the noblest act of her career, when, by a gigantic effort of self-sacrifice, she saves her supposed rival, her lover, and herself. But though in the interview with Rosamond you see all the grand side of a noble, impetuous disposition which disdains little things and breaks through petty rules, yet you are never supposed to forget that the same impetuosity is perpetually dragging Dorothea into errors, sometimes of trifling importance, but occasionally of infinite magnitude.

Two curious traits connected with the sympathetic, and at the same time vehement, turn of her mind, are specially worth notice as being true to nature but likely to escape observation. She was interested in intellectual pursuits, and her good uncle, Mr. Brooke, amongst others, obviously believes that she had carried her taste for learning beyond the certain point at which he held that every course of action ought to stop. "You have not," he says, "the same tastes as every young lady; and a clergyman and a scholar who may be a bishop, that kind of thing may suit you better than Chettam. Chettam is a good fellow, a good, sound-hearted fellow, you know, but he does not go much into ideas. I did when I was his age." But in spite of appearances, and in spite, probably, of Dorothea's own estimate of herself, she has little taste for knowledge. Her admiration for Casaubon's supposed learning really arose, as George Eliot is most careful to point out, from the idea that his wide knowledge would give her an insight into the problems of life which affected her personally. How to make and act up to a noble theory of life for herself was what she thought she wanted to achieve. What she seems truly to have needed was sympathy and a wide field for her power of affection. But for knowledge in itself she cared as little as was possible for any person gifted with keen intelligence. She was again, though some of her ardent admirers may dispute this, deficient in tact. This deficiency did not arise from obtuseness, but was, as it sometimes is, the result of impatience. The same characteristic which led her to rush nobly to Lydgate's defence without considering as accurately as more prudent persons whether his conduct might not turn out indefensible, led her also to press Mr. Casaubon on the two points on which his mind was naturally the most sore—the slow progress of his great work and the way in which he was bound, in Dorothea's view, to make restoration to Will. The latter instance is peculiarly characteristic, because, to give even a pedant his due, as regards the provision for Will, Casaubon was in the right and Dorothea distinctly in the wrong. There is, perhaps, nothing in the whole work better than the way in which the readers see that, while Dorothea had sacrificed herself through mistaking the pettiest and dreariest of pedants for a man like Locke and endowed with a great soul, they are also made to feel that this miserable scholar could hardly have met with a greater calamity than his marriage to Miss Brooke. "I," says George Eliot somewhere with the curious irony which distinguishes 'Middlemarch,' "am rather inclined to pity Mr. Casaubon;" and though this sentiment may strike some enthusiastic readers like an expression of compassion for the sufferings of an odious and cold-blooded reptile, yet it is perfectly just. You have in Mr. Casaubon the worst type of that much praised, and at best not very noble character, the gentleman and the scholar. Except in the matter of his will, when jealousy and ill-health had broken down his gentlemanlike habits, he acts as a gentleman. He also shows distinctly enough that he really is a scholar. He has, in fact, developed a kind of dreariness of mind which could be the result of nothing but a life devoted to the cramping pursuit of inner scholarship. But for the rest, he is a man who is always deficient in vitality, eaten up by egotism and jealousy, and by an indistinct consciousness of his own incapacity. His one consolation in marriage would have been a wife stupid enough to admire him, and apathetic enough to leave him to repose. He does marry a wife who, within six months, finds out that he is a sham and suspects "the reconciliation of the mythologies" to be an imposture, who is prepared for every effort of self-sacrifice, and whose sense of duty and superabundant vitality scarcely leave a moment's true repose either to herself or to her husband. If it is possible for the fate of an utterly mean and contemptible nature to be tragic, the marriage with Miss Brooke makes life as great a tragedy to Casaubon as to his wife. Each of them is, by the irony of circumstances, placed in an utterly false position. Indeed, though Dorothea's life is, in many respects, a failure, still you close the book with a feeling that a noble nature succeeded at last in finding genuine happiness, if not in developing to true greatness. The real tragedy of 'Middlemarch,' and by far the most original part of the book, lies in the story of Lydgate, which records the steps by which genius and energy sink at last, overpowered by the force of circumstances, and of circumstances of the pettiest nature.

The flaw in Lydgate's nature, and the ultimate source of his fall, is a certain "commonness" in his views of everything unconnected with his science. Hence his liking for respectable appearances, hence his original underestimate of Miss Brooke because she was a woman a little out of the common line. Hence his immediate admiration for Rosamond and the marriage which is the bane of his life. The thing to notice is how perfectly natural is this commonness, and how naturally it works out its results. Most readers probably detest Rosamond, principally because of her complete satisfaction with herself, too much to do justice to her victim. But take Rosamond with all her self-satisfaction, pettiness, and duplicity as she is known to the reader, and as, be it remarked, she could be known to nobody else, and she still remains a woman with whom ninety-nine men out of a hundred would most indubitably fall in love. Nor, again, was Lydgate's commonness the only cause of his failure. He fell as men do fall, quite as much by his merits as by his defects. Being a man of genuinely strong affections, he was always in dealing with Rosamond at the untold disadvantage of loving much and scarcely being loved at all. Every pain he gave her was a double pang to himself, whilst her flinty nature was incapable of feeling that she gave pain to others, or of suffering from any pain except mortification to herself. Lydgate's affection, as far as it had any effect on Rosamond, disgusted her, for it deprived him of the kind of calmness which might perhaps have impressed her imagination, or at least cowed her will.

The action and reaction of Lydgate's character upon Rosamond, and Rosamond's upon Lydgate, is merely one example of that power of analyzing the effect of one nature upon another which is one of the most marked features of George Eliot's mind. Contrast her writings, for example, with the works of Thackeray. You will find in the latter a number of characters quite as striking and perhaps more consistent than those painted by the author of 'Middlemarch.' But with rare exceptions, the characters of Thackeray each stand out distinct and separate from one another. You know Ethel, and you know Clive. You perfectly understand Becky or Sir Pitt Crawley, but you do not generally see, and Thackeray does not generally care to make you see, the exact influence say of Ethel upon Clive. You do not feel that they, acting together, are something essentially different from what either of them would have been uninfluenced by the other. But throughout 'Middlemarch' the influence of mind upon mind is never left out of sight. Dorothea is half-checked, half-irritated by Celia. She is oppressed in the presence of Casaubon, and develops freely under the sunshine of Will's superficial geniality. Casaubon himself is constantly suffering from the consciousness that he is surrounded by unadmiring acquaintance. Lydgate's impatience is brought into play by Rosamond's cold-hearted impassibility, and Rosamond herself chills into something slightly more icy than she was by nature under disgust at Lydgate's violence. Take what page you will of the book, and you will find examples of this play of character upon character, and you will also find that, in general, by a strange irony, the inferior character warps and in a sense triumphs over the superior nature.

For, after all, if it were necessary to fix upon any one quality as the characteristic trait of the book, few attentive critics would hesitate to name irony, taking a very extensive sense of the term, as its distinguishing feature. The avowed irony of much of the writing is too obvious to call for much notice. What is better worth observation is the indirect forms in which the

same tendency shows itself. There is, for example, a constant irony of situation. Misfortunes befall men just at the moment when they feel the safest from them. Bulstrode buys a charming house, and walks there on a summer evening wrapped in satisfactory religious meditation. He finds in the garden the villain who makes his life a misery. At the cost of something very like murder, he rids himself of his tormentor. He rides home happy after weeks of misery, and almost immediately discovers that the disgrace he had risked his soul to avoid has fallen upon him. This irony of situation often appears in George Eliot's other works, as, for example, where Arthur Donnithorne returns to take possession of his estate, full of good spirits and good intentions, and finds that his intrigue with Hetty has led to all its miserable results. But this contrast between a person's own estimate of his circumstances and his real position is by no means the most subtle way in which George Eliot draws the eternal contrast between what seems and what is. It appears often in the merest turn of a sentence. What, for example, can be a more bitter sarcasm between a man's own feeling of misery and his friend's vapid consolations than Mr. Brooke's advice to Casaubon, broken-hearted with the knowledge that his life would not suffice to finish his work?

"Yes, yes," said Mr. Brooke, "get Dorothea to play backgammon with you in the evenings, and shuttlecock. Now I don't know a finer game than shuttlecock for the daytime. . . . But you must unbend, you know. Why, you might take to some light study, conchology, now—I always think that must be a light study—or get Dorothea to read you light things, Smollett, 'Roderick Random,' 'Humphrey Clinker.' They are a little broad, but she may read anything now she is married, you know."

"I never give up anything that I choose to do," said Rosamond (referring to her engagement). "God bless you," said Lydgate, kissing her again. This constancy in the right place was adorable.

These sentences are simple enough; but any one who has followed Lydgate's career to its close will hardly read them without something like a chill of horror, for Lydgate pours blessings upon that wretched constancy of purpose which constitutes his lifelong torture. Exactly the same characteristic appears in the conversations of common people, auctioneers, horse-dealers, and landladies, in which George Eliot delights. They are no doubt amusing and truthful enough in themselves, but they derive a peculiar gusto from their presenting an unconscious parody on the thoughts and language of educated persons. But all the minor forms of irony sink to nothing compared with the irony of the lesson enforced by the conclusion of 'Middlemarch' itself. Every one who has commenced life with high aspirations either, like Lydgate, ends in misery, or, like Dorothea, purchases happiness by foregoing all ideal aims. The only persons who prosper are either selfish or commonplace. Fred, who is the very model of an ordinary selfish young man, ends as a prosperous gentleman. Will, who throughout life is and could be nothing but an amateur, gains all his wishes. Rosamond, after causing misery to others which she had not the sense even to perceive, is "rewarded" by getting rid of her husband, whom she did not like, and keeping his fortune and position, which were sufficient to make her happy. The conclusion of the whole matter is, that happiness depends on the adaptation of character to circumstances, and that, therefore, in a commonplace world, commonplace characters alone have a fair chance of happiness.

Fine Arts.

THE CESNOLA COLLECTION OF ANTIQUITIES FROM CYPRUS.

IT has been known for some time past that this collection of antiquities has been secured by the Trustees of the Metropolitan Museum of the Fine Arts as the foundation of the archæological department. It has just arrived in New York, and, although some time must elapse before it can be properly arranged for exhibition, our readers may be glad to have a more complete account of it than has been given in such brief notices as have already appeared in the journals, including our own.

During the past autumn and early winter the collection has been on view in London, where the present writer had an opportunity of seeing it, and there has been but one opinion among those competent to judge as to its extraordinary interest and importance, as well in the illustration of ancient history as of ancient art. A very general regret is expressed in England and on the Continent that, through the supineness of the authorities of the British Museum, a collection so precious to the scholar and to the artist should have been lost to Europe. Since the days when the Elgin Marbles came to England there has been no collection of works of ancient art of such importance as this brought to the country. Layard's Ninevite discoveries had a more novel interest, and his collection gave a view of a less known civilization; Sir Charles Fellowes's researches in Lycia and Mr. Newton's at Halicarnassus brought to light extremely interesting works of art and antiquity; but they are not to be compared, either in extent and variety or in their illustration of the general history of ancient art, with this collection made by General di Cesnola.

It will be remembered that General di Cesnola was one of those foreign officers who offered their swords to our Government at the beginning of the rebellion, and one of the most distinguished during the war for the efficiency and brilliancy of his services. Very shortly after the war he received from our Government the appointment of Consul at Cyprus, and there he has resided, with short intervals of absence, up to the present time. His consular duties were not so arduous that he was unable to devote a portion of his time to other pursuits. His taste and culture led him to the study of the history and art of the island, and he soon convinced himself that, although both the French and English had at times made partial explorations of its soil for such antiquities as it might contain, much more remained to be brought to light than had as yet been discovered.

From a very early period Cyprus was the meeting-place of three distinct currents of civilization. It attracted the Phœnicians, it felt the influence of Egypt, it was long held by the Greeks. Its temples have been the resort of people of many nations, and its devotion to Venus was known throughout the ancient world. Pausanias reports the tradition that when Agapenor led a colony from Troy to Cyprus, and founded there, at Paphos, the famous temple dedicated to Venus Aphrodite, the Cypriotes already adored this goddess in a temple dedicated to her worship in the city of Golgos. And Catullus, addressing her, says: "Quæque regis Golgos, quæque Idalium frondosum."

The fame of Paphos eclipsed that of Golgos, however, and in the course of time the latter city was deserted, and disappeared; its very site became uncertain.

General di Cesnola, having secured a firman from the Porte authorizing him to make excavations, and to retain such articles as he might discover; having gathered such information as the ancient geographers afford; having personally inspected the localities, and acquainted himself with the lines of former exploration, set to work with intelligence and energy.

Excavations in the island are easily made, so far as the spade is concerned, for the soil is usually light and the climate dry; but they are attended with two special difficulties—one, that there exists no trustworthy tradition in regard to the ancient sites; the other, that no remains of ancient buildings remain above the ground. The ancient Cypriotes did not apparently use stone except in the foundation of their most important edifices; the walls were built of sun-dried brick, which, falling to ruin, covered the foundations, and gradually, under the influence of the weather, changed into a soil hardly distinguishable from that of the surrounding land, and assumed a natural surface that completely disguised the artificial form of the ancient structure.

After many minor excavations, chiefly among tombs, in which objects of more or less interest were brought to light, it was in the winter and spring of 1870 that General di Cesnola made the discovery which has secured for his name a high place in the list of explorers, and which has resulted in the unearthing of an unrivalled collection of the most interesting works of Cypriote art. Some years previously, the Count de Vogué had in vain sought for the necropolis and temple of Golgos. General di Cesnola, taking up the work where Vogué had left it, came first on the necropolis, and, on the 6th of March, had the good fortune to discover the remains of the temple itself—a temple unique not only in construction, but in the character of its contents. We take the following statement from a brief account of his discovery, which he addressed to the Royal Academy of Science at Turin:

"The area of the temple was well marked by the foundation of stone that I found at the depth of about two metres. It was sixty English feet in length by thirty in width; and in this narrow space were discovered about one thousand statues. They were unearthed with care; all were more or less mutilated, which would prove that the temple was destroyed either by a band of foreign invaders or Christian fanatics, probably the latter. About a third of the statues were of natural size, several were gigantic, and one must have been truly colossal, judging from the head, which was the only part found, and was one metre two centimetres in length.

"The form of the temple was quadrangular. From the bases of the columns which remained at the two doors it was apparent that the building had been of the Doric or Ionic order of architecture. The columns no longer existed, probably because they had been of wood, of which, Pausanias informs us, columns were often made, especially in Asia Minor. . . . Along the longitudinal walls were found many pedestals, arranged in several files, of all dimensions, some of them with bas-reliefs, some with Cypriot inscriptions, but the greater part without either.

"In the interior of the temple were three double files of pedestals, upon which apparently statues were originally placed, back to back—an arrangement which may serve to explain why many of the statues are wrought only in front.

"Among the ruins were found two broken stone seats and several vases of calcareous stone, and, scattered about everywhere, were many votive objects of stone, such as eyes, fingers, ears, figures of women with babies at the breast, very similar to such as, made of gold or silver, may be seen in Christian sanctuaries at the present day. Only two coins were discovered."

That this was the temple of Venus seems likely from various indications, especially from the fact that many of the statues had doves in their hands, the bird sacred to the goddess. There were indeed statues of Hercules and of Apollo also found, but their number was comparatively insignificant; and there is reason for believing that the ancients sometimes admitted into their temples images of other gods than the special divinity to whom the building might be consecrated.

But it was not alone the number of the statues that made this discovery remarkable. It was the extraordinary variety of execution and of type which they presented, affording the visible history of the influences to which the Cypriot artists had been exposed, and presenting a series of works of the most characteristic quality from a period, at the lowest computation, more than a thousand years before Christ down to the epoch of the Roman dominion in Cyprus, not long before the Christian era. The types of Assyrian, Phœnician, Egyptian, Greek, and Greco-Roman art are distinctly represented in this most curious assemblage; and it is no exaggeration to say that no other single building has ever afforded a collection representative of so long a period in the history of art, and of so many diverse types. This collection affords the links required for binding together the history of Greek art with that of the nations that had preceded it in civilization. Here the various arts had met as at a central point, and blended.

That the statues are of Cyprian workmanship is shown not only by their being carved from a soft calcareous stone, native to the island, but also by their countenances, at every period and under every influence, retaining some of the marked traits of the peculiar Cypriote physiognomy.

General di Cesnola, in his report to the Turin Academy, speaks as we have seen of the statues being all more or less mutilated; but many of them, though their heads may have been broken off at the neck, or their feet separated from their legs, or they may have suffered in other ways, are yet in a state of the most astonishing conservation. They are broken, but the parts are whole, and when put together the break no longer appears. The dry soil and air have preserved them so surprisingly that many, even of the oldest among them, are as fresh, as perfect in sharpness of cutting and in delicacy of touch, as if they had but just left the workshop.

But very few of the statues belong to the finest period of Greek art; and no one among them lays claim to exceptional beauty of form or figure, or any high imaginative work. The coarseness of grain of the stone of which they are made prevents the last refinement of modelling, and no Cypriote artist, so far as is known, was famed for genius in ancient times. But many of the statues have great beauties of detail, and exhibit ornamentation of exquisite design, and there are very few of them that are not distinguished by a high degree of individual characterization.

The collection contains, beside the statues, a vast number of objects in terra-cotta, bronze, and gold, found in the precincts or neighborhood of the temple, or in the tombs of Golgos and Idalium. In all, there are more than ten thousand articles—terra-cotta busts, of which some are of exquisite beauty, from the best epoch of Greek art; vases, cups, toys, lamps—a multitude of objects of curious interest in illustrating the ancient civilization. It is impossible in our limits to give even an enumeration of them. The collection contains specimens of almost every department of ancient fictile art.

The archæologic importance of the collection is at least equal to its artistic interest. It contains a larger body of inscriptions in the unknown Cypriote tongue than are to be found in all the museums of Europe put together. To decipher this language, to classify thoroughly the various works of art, to illustrate them from literature and history, and history and literature in return from them, will be a task for scholars for years to come.

It is fortunate that such a rare and interesting collection of antiquities should have been obtained for our chief museum. The trustees have shown excellent judgment in securing it. It raises the museum at once to a place of consideration. The same good judgment will lead to the most liberal use of these treasures. Before the collection left England permission was granted to the authorities of the British Museum to take casts from the inscriptions, and photographs from some of the most interesting objects. There are many duplicate specimens in the collection, and the trustees would do well to offer them in exchange for other works of ancient art to the great public museums in Europe. It is not only the British Museum that was in negotiation for the collection previous to its purchase for America; the Louvre and the museum at Berlin were desirous to secure the whole or a great part of it.

General di Cesnola is to be heartily congratulated on the brilliant results of his excavations. He proposes, we understand, to return to Cyprus and to renew his diggings. Paphos is yet untouched, and its famous temple may give to us even more precious works than those that Golgos has afforded. It would be well if the trustees of our museum could arrange with General di Cesnola for the acquisition of what he may hereafter discover.

WE WILL SEND THE WEEK

For one year, with any one of the following works at the prices annexed, and to Teachers or Clergymen for $1 less in each instance.

THE FORTNIGHTLY REVIEW (the English sheets of which we have made arrangements to republish in America at Six Dollars a Year, or Fifty Cents a Number), for $9.

CONTENTS OF THE JANUARY NUMBER.

The Principle of Authority. By Frederic Harrison.
Grote's Aristotle. By John Stuart Mill.
Mr. Stephen's Introduction to the Indian Evidence Act. By Sir Henry S. Main.
Memorial Verses on Théophile Gautier. By A. C. Swinburne.
Ibsen, the Norwegian Satirist. By E. W. Gosse.
Forty Years of the House of Lords. By S. Bowen Graves.
The Eustace Diamonds. Chaps. LXXIII. to LXXVI. By Anthony Trollope.
Critical Notices: 'Middlemarch,' and 'Love is Enough.' By Sidney S. Colvin.

TAINE'S ENGLISH LITERATURE. 2 vols. Retail price, $7 50; both for $7 75.

DANA'S CORALS AND CORAL ISLANDS. Retail price, $6; both for $7.

☞ Remittances by P. O. order, draft, or registered letter, should in all cases accompany the subscription.

For free specimen copy of *THE WEEK*, address

HOLT & WILLIAMS, Publishers,
25 Bond Street, New York.

JUST ISSUED.

DESCRIPTIVE AND PRICED CATALOGUE of a fine Collection of Books, relating to Shakespeare and the Drama, the Fine Arts, Poetry, Biography, etc.; also a number of rare works on American History and the City of New York. Sent free on application. T. H. MORRELL (Agt.), 78 Nassau Street.

HARPER'S CATALOGUE. The attention of those designing to form Libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

THE LIFE OF BISHOP HOPKINS.

F. J. HUNTINGTON & CO.,
105 Duane Street,

Have just published the LIFE of the late Rt. Rev.

JOHN HENRY HOPKINS,

FIRST BISHOP OF VERMONT,

BY ONE OF HIS SONS.

1 vol. 8vo, toned paper, full gilt. cloth, bevelled boards. Price, by mail, $5.

"It is a book which tells the story of a man who had his own way to make, and does it in right manly fashion. A life struggling with iron fortunes, cheerfully and heroically struggling. It gives glimpses of a happy home, a bright fireside, books, music, pictures, taste and culture, and all gentle affections and household charities which are the earthly supports of such a life. It tells how a strong man bravely did a strong man's work. In a word, we have the biography of a man, in the peaceful work of Priest and Bishop, readable from first to last, with increasing fascination to the end."

"'LITTLE HODGE,' the poor son of the soil, born 'the minutest piece of humanity'—'three pounds five ounces and a half'—appeals to the sympathies of American readers as powerfully as 'Ginx's Baby.'... It is a good book with a good purpose, and will be well received everywhere. Dodd & Mead will need a large supply of it when the papers begin to quote from its keen and witty pages."—*Publishers' Weekly.*

"The tale ('Little Hodge') sparkles with wit. It gives new evidence of Mr. Jenkins's real originality and power as a novelist. The author's remarkable powers of satire, portraiture, and sympathetic description are as keen and fresh as ever."—*London Daily News.*

MONUMENTS OF THE CAVALLI FAMILY in the Church of Santa Anastasia, Verona. By John Ruskin, Esq. With a Chromolithograph (on mount, 20 x 25 in.) of the Monument and its surrounding Frescoes. Price $12.

The above publication has been chosen as the first of a series, to be published by the "Arundel Society," London, of some of those most beautiful and characteristic memorials of the dead which were erected in Italy during the Middle Ages and the period of Renaissance. The Drawings from the Monuments were made by Prof. Gnauth, of Stuttgard.

The above, and all the Publications of the Arundel Society, which are still on sale, may be had of the Society's Agents,

POTT, YOUNG & CO.,
Cooper Union, New York.

BACK NUMBERS OF THE NATION Wanted.—Nos. 19 (Vol. I.) and 58 (Vol. III.), for which 35 cts. each will be paid if sent at once. Address NATION, Box 6732, New York. Mark address of sender plainly on the wrapper.

THE WEEK IN TRADE AND FINANCE.

January 20, 1873.

WE are able this week to report the return of the money market to its usual settled condition at this season of the year. With the exception of one or two days, when in some cases 7 per cent. coin was paid, the ruling rate on call loans has been 6 to 7 per cent., with the supply at the close of business hours in excess of the demand. The more settled condition of the money market has stimulated business in commercial paper. The sales of the week have been at rates ranging from 8 to 10 per cent., and we have heard of some extra good names going as low as 7½ per cent.

The city banks are overloaded with national bank notes to such an extent that they have been glad to sell them to brokers at a discount of ¼ per cent. in order to get rid of them. At certain times of the year these notes cause great trouble to the banks here, owing to the fact of there being no place for their redemption. To assort and send them back to the banks by which they were issued would cause too much trouble and loss of time, and it has been frequently the habit of the New York banks to loan them out on time, from one to three weeks, free of interest, with the agreement that the loan should be paid in legal tenders when due. Numerous plans have been proposed for the establishment of redemption agencies in this city, but, for some reason, they have received no more than passing attention; probably the magnitude of the undertaking is too appalling.

The bank statement for the week ending January 18 is favorable, and shows that the banks have gained $809,075 in their net reserve, and now hold $5,499,100 in excess of the required 25 per cent. The following is the statement for the week compared with that of the previous week ending January 11:

	Jan. 11.	Jan. 18.	Differences.
Loans	$275,552,800	$278,209,600	Inc. $2,656,800
Specie	22,539,100	21,110,800	Dec. 1,428,300
Circulation	27,461,600	27,542,200	Inc. 80,600
Deposits	207,441,500	212,588,200	Inc. 5,146,700
Legal tenders	40,876,700	44,420,900	Inc. 3,544,200

The following analysis shows the relation of the total reserve and the total liabilities:

	Jan. 11.	Jan. 18.	Differences.
Specie	$22,539,100	$21,110,800	Dec. $1,428,300
Legal tenders	40,876,700	44,420,900	Inc. 3,544,200
Total reserve	$63,415,800	$65,531,700	Inc. $2,115,900
Circulation	$27,461,600	$27,542,200	Inc. $80,600
Deposits	207,441,500	212,588,200	Inc. 5,146,700
Total liabilities	$234,903,100	$240,130,400	Inc. $5,227,300
25 per cent. reserve	58,725,775	60,032,600	
Excess over legal reserve	4,690,025	5,499,100	Inc. 809,075

The feeling among stock speculators in Wall Street is one of disappointment at the delay in the upward movement of prices, which it was confidently expected would follow the return of easy money. The "January rise" has not yet taken place, and the probable reason is, that the large operators who lead and control the market, although not short of stocks, prefer to see prices recede so as to enable them to "load up" at lower figures, as well as to "shake out" the small operators who are holding on to their stocks with the idea of selling out to any one who will buy at an advance, while the leading operators would prefer to buy at a decline. Another reason which has probably induced the leading spirits of the Street to hold off from organizing a "bull movement" and running prices up from what they were at the beginning of the year, is that the prices of stocks at that time were considerably higher than they have usually been at corresponding periods, and there was consequently less margin for an advance.

Business for the week at the Stock Exchange has been moderately active; the range of prices has been quite small, and the quotations of the leading active stocks have undergone but little change since our last report. The depression in Union Pacific, which on Monday sold at 34, was followed later in the week by a sharp reaction of three per cent., the stock selling at 37 on Thursday. Rumor had it that Washington parties, who thought that the Crédit Mobilier investigations would send the price lower, had sold the stock short to a large extent, and that the "old soldiers" of the Street had quietly turned the tables upon them and bid up the price, which caused the Washington parties to buy back the stock, that they had sold short, at a handsome loss. The speculation in Erie at times has been quite spirited, and the transactions in it have been larger than those in any other stock. On Wednesday the price advanced to 62⅜ from 58⅛ on Monday, the lowest point of the week. The stock of the Delaware, Lackawanna, and Western Railroad Co. has rallied from the recent depression that had settled upon it in consequence of the extremely low price of coal, and the quarrel that has been going on between that Company and the Central Railroad Co. of New Jersey, relative to the consolidation of the earnings of the two roads, which was repudiated by the latter Company. The reported combination of several of the large railroad and canal companies, engaged in the transportation and mining of coal, to establish, by arbitrary measures, its future price in the different markets, has been the cause of the advance in the price of the stock from 94½ to 98—the Company being one of the largest producers in the country. The low price of coal last year caused the passing of its last two quarterly dividends. The combination proposed for the purpose of maintaining the price of coal at a figure which will pay to mine and ship it is very likely to succeed, if harmony continues to exist among the different parties who compose it, as they own and control an enormous quantity of coal lands, and nearly all the lines of transportation between the mines and the markets.

The price of Michigan Central has improved, and the last sales were at 108; the lowest point at which the stock sold during the recent decline was 104.

The Treasury, in its weekly bond purchase, on Wednesday, was again unsuccessful in obtaining the $1,000,000 5-20's advertised for, the total amount offered being only $218,600, at 111·98 to 112·38. $197,600 were taken at 111·98 to 111·99. The price of gold was 112¼ at the time the purchases were made, and the lowest price of the day was 112, from which it will be seen that Mr. Boutwell still construes the *lowest* price of the day as the *market price*. Government bonds have been firm throughout the week, with a very strong feeling at the close on Saturday, occasioned by the firmness and higher price of gold. The scarcity of bonds continues.

Efforts are being made to pay the interest upon the bonds of the State of Louisiana, due January 1, and it is rumored that it will soon be paid. There was little business done in State bonds during the week.

The railroad bond market has been fairly active, and a well-distributed business has been done. Boston, Hartford and Erie first-mortgage bonds continue on the downward track, selling at 42½ at the close of the week.

At a meeting on Tuesday the directors of the Erie Railway Company voted to issue $10,000,000 7 per cent. convertible gold bonds, and limited the price at which they should be sold to par. The object of this issue of bonds is to make improvements on the road by laying steel rails and a double track on some portions of it where needed, and also to lay a third rail. The broad gauge of the Erie (6 feet) is a serious drawback to the Company, and the change to the ordinary gauge of four feet eight and a half inches will place the road in a condition to enable it to accommodate the traffic coming from and going on to connecting roads, without necessitating the loss of time and cost of labor in breaking bulk. There have been doubts expressed as to the ability of the managers of the Company to negotiate the sale of the $10,000,000 bonds at the limit fixed upon. Unquestionably they will have to look to Europe as the market in which to place them, especially to London, where a strange infatuation has existed in regard to the value of the securities of this road. Already the road is mortgaged to the amount of $30,000,000, which is a prior lien upon the property, to say nothing of over $20,000,000 of leases.

The large importations of the week have been the cause of an advance in gold from 112⅛, the price at the commencement of the week, to 113¼, the highest price, on Saturday. The report of the Custom-house of the week's imports shows them to have been $11,000,000. The shipments for the week were unimportant, amounting to only $328,155, which makes the total amount shipped since January 1, 1873, $3,855,308, against $945,292 for the same period in 1872.

REAL ESTATE INVESTMENT.

FOR SALE—At a bargain, a new double store and lot, on the most fashionable and rapidly advancing street in Chicago. Premises rented for a term of years to two of the oldest firms in the city, at rates to ensure an income of 15 per cent. on investment of $60,000. Address C. R. FIELD, Real Estate Agent, Monroe Street, Chicago.

ILLINOIS TEN PER CENT. LOANS

BURNHAM, McKINLEY & CO.,
Counsellors-at-Law and Loan Brokers,
CHAMPAIGN, ILL.

Money loaned on improved farms in Central Illinois at ten per cent., semi-annual interest. Have been twelve years in the business. Send for circular.

ESTABLISHED 1835.

BOERICKE & TAFEL,

HOMŒOPATHIC PHARMACEUTISTS AND MEDICAL PUBLISHING HOUSE,
145 Grand Street, New York.

We send Laurie & McClatchey's work on "Domestic Medicine," together with a complete set of Remedies, in a solid Mahogany Case, securely packed, to any address, on receipt of $17, *i.e.*, $5 for the Book, and $12 for the Medicine Case. Address as above.

The Nation.

NEW YORK, THURSDAY, JANUARY 30, 1873.

The Week.

THE Crédit Mobilier investigation has taken a new turn since last week, Oakes Ames having discovered a certain memorandum book and other papers which had been lost or mislaid, and which, strange to say, contain a great deal of valuable information with regard to the Congressmen implicated in the scandal. The history of his transactions with them, as the evidence now stands (for how it will be next week, when a few more people are "at bay," a few more statements and counter-statements, and perhaps an alibi or two, have been put into the case, it is impossible to say), is as follows: Some time in the year 1867 or 1868, an investigation into the affairs of the road being dreaded, and the "interest question," which we shall explain further on, coming up in the distance, Ames deposited $10,000 with the Sergeant-at-Arms of the House, this sum having come from the dividends of the Crédit Mobilier stock, to be declared. Then he "placed" the stock with the Congressmen he desired to have "look into the thing," selling the stock at par, it then being worth nobody knows how much, but at any rate a great deal more than par. Then, as the stock carried with it the dividends already "earned," these dividends were deducted from the price of the stock, which made the transaction a gift, or, plainly speaking, a bribe. To take the case of Mr. W. D. Kelley, for instance, he was to pay for ten shares of stock $1,000 and interest from July 1, 1867. On the other side of the account there was a dividend of 80 in bonds of the Union Pacific Railroad, which Ames says he received and sold for Mr. Kelley, and another in cash of 60 per cent. These together made considerably more than the $1,000 and interest; the balance due Mr. Kelley was exactly $329, which Ames paid him by a check payable to "W. D. K." drawn on the corruption fund in the hands of the Sergeant-at-Arms. The check has been discovered and was cashed by some one, though Mr. Kelly denies vehemently that it was by himself.

In Mr. Colfax's case, Ames swears that he gave him a check payable to "S. C." for $1,200, and this check has turned up too. In Mr. Patterson's case, receipts for dividends signed with his name have made their appearance, and also letters written to Mr. Ames before he took the stand of a very criminating character. Mr. Wilson rescinded his contract with Ames, and only got the usual 10 per cent. for his money. Mr. Allison received a check for $600 cash dividend, dated April 4, 1868, and this check Ames says (and the fact seems admitted) he has found in the possession of the Sergeant-at-Arms. Mr. Allison returned his certificates of Crédit Mobilier stock to Ames last March, to avoid, Ames supposes, "being mixed up in this malicious charge of bribery." Mr. Dawes rescinded his contract, and got 10 per cent., but Ames thinks that he paid him a dividend also; "he had quite an account with him" in this and other matters. Mr. Garfield's case is like that of Mr. Kelley, with the exception that the check for $329 has not been found. Mr. Scofield also received some dividends. Messrs. Bingham and J. F. Wilson bought the stock, but they glory in it, so there is nothing more to be said about them. Mr. James Brooks got his son-in-law, one Neilson, to "look into it," but swears that he himself never owned any of the stock. The investigation into Colonel McComb's "campaign lie" has proved terribly deadly. Its effect on Congressional reputations may be briefly summed up in this way: total loss, one Senator; badly damaged, and not serviceable for future political use, two Vice-Presidents and eight Congressmen. The condition of Ames's reputation language is inadequate to describe.

The "suspense account" of the Crédit Mobilier, or the Union Pacific, or the Wyoming Coal Company, for they are all one, has been produced at Washington, and shows that between four and five hundred thousand dollars were paid to Dr. Durant, Colonel McComb, and the rest of the band at different times, and that there is no evidence in existence as to what became of the money. Besides this account, there was a sum of $126,000 paid for the good of the road —no one knows to whom—when Mr. James F. Wilson was Government director, his opinion being at the time that it was "better not to know." The "interest question" relating to the Union as well as the Central Pacific is this: both Companies have received from the Government about $27,000,000 in bonds, having a long time to run before maturity. The Government say that the Companies are bound not only to pay these bonds at maturity, but to pay the interest as it accrues; the Companies maintain, on the other hand, that they can wait until the bonds mature, and then pay the whole in a lump sum of about $130,000,000. The Union Pacific now owes several millions of interest, and, having no means to pay it, the chances of its being able to pay $130,000,000 fifteen or twenty years hence are small. This is one of the questions which has made it worth while for the Company to have a "suspense account," bank with the Sergeant-at-Arms, and take a friendly interest in the investments of members of Congress, in their silver-weddings, in their sons-in-law, and in their general welfare.

A bill regulating the distribution of the *Alabama* damages has been reported by the Judiciary Committee of the House, and another almost the same by the Judiciary Committee of the Senate. The report of the House Committee has been published, and, as it is the work of Mr. B. F. Butler, it is, as might have been expected, in many ways very curious. In the first place, after having spent several years magnifying the damage done to American commerce by the depredations of the Confederate cruisers, he now turns calmly round and proceeds with equal vigor and with unblushing brow to belittle it. In the former case, however, his object was to get as much money as possible out of the Government of Great Britain; the sum obtainable from that source being settled, his object now is to keep as large a proportion of it as possible for the Government of the United States. Accordingly, he shows that, while the amount claimed originally was $19,782,917 61, the estimated amount, with gross freights, prospective profits, etc., cut off, was only $8,081,348; while the estimated loss sustained, after the same reductions have been made, by vessels for which Great Britain has been held liable, is only about $7,000,000. There will thus, on this calculation, be a surplus of about $8,000,000, after paying all claims allowed, which will go into the Treasury. In order to secure this beyond peradventure, he maintains, first, that though the Arbitrators really did not mean to make and were prohibited from making any award for national losses, as distinguished from damages to the vessels of individuals by particular ships, they nevertheless really did so, inasmuch as the sum they awarded was very much greater than the estimated losses sustained; secondly, that though it is well known that the governing motive in awarding "a lump sum," instead of sending each individual claimant before a board of assessors, was to make an end of strife, and deliver both nations from the dangerous task of haggling over each item in a long list of claims, it is, nevertheless, to be assumed now that the motive was to award the Government of the United States, *quâ* government, a handsome indemnity; and the amount of this indemnity, it appears, was fixed, according to Mr. Butler, by Mr. Cobden in 1864, when that statesman remarked in the House of Commons, "It is estimated that the loss sustained by the capture and burning of the American vessels is about $15,000,000, *i.e.*, about £3,000,000 sterling."

By this somewhat remarkable process of reasoning, Mr. Butler reaches the conclusion that the amount awarded at Geneva "is the

money of the United States, to be disposed of at its pleasure, subject to no trust, but especially to no legal rights in any individual or corporation by whom a legal or equitable claim can be set up to any part of the sum awarded." In other words, the $15,500,000 is the absolute property of the United States. He then designates five classes of persons who are entitled to consideration in the distribution of the money: (1) The owners of uninsured vessels and cargoes; (2) the officers and crews of vessels captured or destroyed; (3) the United States, as owner of vessels actually captured or destroyed; (4) merchants who had vessels and cargoes afloat when the cruisers sailed, and thus had to pay war risks; (5) insurers and reinsurers of the property destroyed by the cruisers, in so far as their losses have exceeded receipts from war premiums.

He cuts off, however, all prospective earnings and profits, upon the somewhat singular ground, considering that he is proposing to distribute on principles of pure equity untrammelled by legal rules, that "this has been the universal rule in establishing damages for marine torts by all courts both in this country and in England." That is, the distribution is to be made sometimes on principles of abstract justice and sometimes on technical rules. Pure equity requires that a man who has lost his ship should receive some compensation for the loss of probable earnings. The courts disregard such claims on grounds of convenience; they do not say that he is entitled to nothing, but that it is too difficult to estimate properly what it is; but no such talk ought to be listened to in a lofty tribunal of eternal and abstract justice. The courts also say that when an insurance company takes a risk on a vessel and pays a total loss, it shall have the ship, or what is left of her; but Mr. Butler does not mind what they say in this case; he proposes to examine the books of the companies and see how they came out on the whole; if their receipts have equalled their policies, they shall have only part payment for the risk they ran and the guarantee they gave the owner, which is the very commodity in which they deal. As regards the tribunal, the claims, we are glad to say, are to be proved before the courts of the United States. The arguments used by the report in favor of this course, and against the appointment of a special commission sitting at Washington, will command everybody's hearty concurrence, and, indeed, throw a glow of honesty and good intention over the whole document. The Senate Bill, however, proposes to establish a board of five commissioners.

The franking privilege has been somewhat unexpectedly abolished by an overwhelming vote—the Senate, which was fully expected to defeat the bill, having stripped it of every excrescence, and left it a naked prohibition, and the House having taken the Senate at its word. The saving of this to the Government will be enormous, and it is to be hoped the public will gain in the greater efficiency of the Post-office. If we were ourselves to publish an account of the difficulties our own subscribers have in getting their paper through the mails, it would make the postal service wear the appearance of a sorry farce. We trust we shall now witness greater promptness, not only in the transmission of the organs of "the party," but of all newspapers and all letters. The local delivery in particular will bear improvement as regards frequency, as well as in other ways. The effect of the abolition on Congressional eloquence will doubtless also be beneficial; but the expense of political canvasses will be greatly increased. The distribution of "documents" will now cause a formidable strain on the party funds, and will probably tax the resources of the daily press more than ever, for it will have to assume a large share of the work of "diffusing just views" which is now accomplished through pamphlets.

The result of the various conferences and discussions over the funding of the new loan has been that the remaining $300,000,000 have been given to a new Syndicate, composed of a combination of two sets of bankers, who had previously been negotiating with the Treasury separately. One consists of Messrs. Jay Cooke & Co. and the Rothschilds, the other of Messrs. Morton, Bliss & Co., Drexel, Morgan & Co., and Baring Bros. A stronger Syndicate than this we could hardly have if a Syndicate we must have, and they will certainly make the loan go with great velocity. The terms made with them are reported to be substantially the same as those made with the old Syndicate, to which there is, so far as we know, no objection to be made, except one, but this is a very serious one, which ought to be removed by Congress, viz., that they were illegal. Granting that no loan could be negotiated on the conditions which Congress laid down, and that Mr. Boutwell did the best that could be done under the circumstances, the fact that he broke the law is surely worthy of some consideration in these times, and especially worthy of consideration in a matter of finance, in view of the great number of gentlemen who are just now "on the make."

The Louisiana muddle is more of a muddle than ever. The Supreme Court of the State has decided the Longstreet-Lynch board of canvassers to be the legal board; but this board never had the election returns in its possession, and selected the Governor and Legislature on newspaper reports or its own sweet fancy. The Warmoth board, on the other hand, which is now declared illegal, had the election returns in its possession, and its Legislature and Governor are probably far nearer being the right ones than those of the Longstreet board. Both, however, have sent senators to Washington, and the Senate has now to decide which was lawfully elected—the one sent by the Legislature which was elected by the lawful returns, or the one sent by the Legislature which was elected by no returns at all. It is a nice question, and has a spice of the comic in it, which is increased by the fact (for fact we believe it is) that the "regular" Senator—that is, the Custom-house man—Pinchback began life a few years ago in Cincinnati as a waiter, or something of that sort, in a faro-bank; and since his emigration to New Orleans has been a noted cock-fighter and gambler. We trust that in his new sphere he will set his face sternly against jobs of all kinds, and set the bad white men—he is himself slightly colored—of that body a good example.

The present New York Legislature is said to be a considerable improvement on the last, and there is more talk of real reforms now than there has been for fifteen years. There seems to be a fair probability that the usury laws, which produce in this city the most tremendous usury known since the fall of the Roman Republic, will be repealed, and the tax on mortgages, which drives capital into New Jersey and other places out of New York City, will be abolished, and the pack of ignorant rascals who act as police justices in this city, and oppress the poor in a most shameful way, be removed, and provision made for the appointment of decent successors by the Mayor. There is also at last some likelihood of a really good charter, though the history of its manufacture will be curious. In the natural course of things, one would expect it to be drafted by that really good representative of the morality, intelligence, and property of the city, the Committee of Seventy, which did draft the one which failed last year. But the greatness of the Republican triumph in November so inspirited the "managers" in this city that a sub-committee of the State Committee, consisting of the United States District Attorney, Mr. Bliss, and such eminent publicists as Messrs. "Tom" Murphy and Hugh Gardiner, was ordered to oust the Committee of Seventy, and take the job into their own hands, which they did, alleging that the Seventy were paralyzed by internal divisions, which the Seventy say is, in political language, "a lie." The charter thus drafted is generally considered very good, except in one particular, which is however very important. Instead of giving the appointing power to the Mayor, and thus concentrating responsibility, it makes him share it with a Board of Aldermen, thus renewing the old game of bargain and compromise and dead-lock; and this is because the Mayor, though elected as a reformer, is a Democrat, and if he were allowed to appoint, how would "the party" profit by the November triumph?

The unhappy controversy over Mr. Greeley's will has been revived in the Probate Court, owing to the inability of the parties to come to any agreement. On Monday, testimony of the most conclusive character was offered by two of Mr. Greeley's most intimate friends to prove his insanity for some time previous to his death. This has long been no secret, nor that the monomania by which he was afflicted was that he had ruined himself, his family, and the *Tribune* stockholders. Mr. Oliver Johnson testified that he had become aware of Mr. Greeley's derangement only a few days before the death of his wife; but Mr. Alvin Johnson, at whose house Mrs. Greeley died, in the latter part of October, recalled singular behavior on the part of her husband at his farm in September—that is, prior to the October elections. Clearly, therefore, the mere strain of the Presidential canvass was sufficient to unbalance Mr. Greeley; and that his nervous system was in a low state before it began, is probable from his friend's statement that he used to complain of sleeplessness at night—a frequent prelude to insanity—in 1870 and 1871, and naturally still more in 1872. The incessant wear to which he subjected his constitution had, in fact, begun to tell upon it three years ago in a manner which would, to any intelligent physician aware of his habits, have clearly foreshadowed the final breakdown unless arrested by recreation and repose.

The last and most exciting incident of French politics has been the dispute going on between the Duc de Gramont and M. Thiers as to the attitude of Austria towards France at the outbreak of the war in 1870. M. Thiers alleged in a recent speech that when he made his famous tour in the fall of that year in search of assistance or mediation, he found that France had gone into the war without a single friend or ally. The Duc de Gramont, who more than any other man precipitated the war, now says this is not true, that Austria had actually promised assistance, and that Prince Metternich handed him a despatch, dated July 20, in which he was charged to assure the French Government that "Austria considered the cause of France her own, and would contribute to the success of her armies as far as she could." The Duke, however, acknowledges that before the outbreak of the war Austria did everything in her power to dissuade France from engaging in it, and it is now understood that the language he quotes was the result of the discovery by Austria of the deplorable weakness of the French army, and a consequent desire on her part to save the "balance of power," if possible, by an alliance with Italy, and back France up probably in some moral way merely. She abandoned this design, owing to the attitude of Russia, and the hostility of her Hungarian and German subjects to interference. The phrase, "as far as we possibly can," really reserves everything. The discussion owes nearly all its importance to its possible effect on the relations of Austria and Germany. The curious fact comes out in it once more, that it was not uncommon for the French Ministers under the Empire to keep diplomatic despatches among their private papers. The Prussians, it may be remembered, seized some very important ones at M. Rouher's country-house, and the Duc de Gramont all but acknowledges that the despatches from which he quotes in the present case are not to be found at the Foreign Office.

By far the most important bit of European news, however, is the appearance at last of a collision between England and Russia in Central Asia. The Russians have pushed, or are rapidly pushing, their conquests or invasions along the Amu towards the frontier of Afghanistan, and the news of the occupation of Khiva is daily looked for. The three great khanates which compose the region known to us as Central Asia are Bokhara, Khiva, and Khokand. Russia has already taken possession of a large part of Khokand, has threatened Bokhara into submission, and is now pushing on for Khiva, on the pretext, constantly furnished in those regions, of releasing some of her own traders who were plundered and kept in captivity. England, in spite of continual nervousness among the Indian officers for many years back, has hitherto refrained steadily from official notice of the Russian advance, and this, combined with the peace policy of the last twenty years, apparently satisfied the Russian Cabinet that an arrangement would at any time be easy enough. Towards the close of December, however, the British Ambassador at St. Petersburg was ordered to say that Russia might do as she pleased, provided she did not touch Afghanistan or "the dependencies of Afghanistan" on the upper Amu. This in a vague way covered a very large region, of the topography of which very little is known, the northern frontier of Afghanistan never having been defined even. Great Britain now, however, takes upon herself to draw the line, announcing that it runs from Lake Sir-i-Kol nearly west, and that if Russia crosses it the Ameer may fight with British support. This somewhat peremptory decision has evidently alarmed Russia, and Count Shuvalof has been sent to London to talk the matter over, but apparently without result, and the *Alabama* matter being out of hand, the British public is reported to be somewhat disposed to fight. But there is little probability that Russia will at this juncture push matters to extremities.

The personal designation of Count von Roon to the Presidency of the Prussian Ministry by the royal order of January 1, seems to qualify the impression given by the first order of December 20, in which the succession to Prince Bismarck was made to devolve simply upon the senior member of the Ministry. And this recent order is made more emphatic by the facts that Count von Roon was at the same time created a general field-marshal of the Empire, and that the Ministry of War was divided so as to relieve him in part of the details of that office, and yet to create for him a sort of *foreign* war department, thus equalizing him, as it were, with Bismarck in the determination of the external policy of the kingdom. One searches the Prussian journals in vain for any light upon this changed condition of affairs—if indeed it is to be accepted as a change and not simply as an incident; they all agree in saying, "We know nothing and can give only rumors." The King's open declaration to Bismarck on New Year's day—that he had made some changes in his office with great reluctance, as the only means of retaining his services—may be taken as an assurance that there has been no serious divergence on the part of the King from the policy of his most trusted minister. And it was natural enough that the King's strong military likings should have inclined him toward Von Roon as Bismarck's successor, without regard to shades of political opinion. Nevertheless, the fact is, that in place of the head of the Liberal party a Conservative now stands at the head of the Prussian Ministry, that the Liberal press has taken the alarm, and the Liberal party is changing its attitude from that of bold and triumphant leadership to that of anxious and pugnacious criticism.

Where the veil is so thickly drawn, only events can reveal the motives of these perplexing changes. If Bismarck really contemplated a reconstruction of the Ministry with himself as premier, it would appear that the King is not ready for so fundamental a change in the Prussian method of administration. A Collegiate Ministry, with its obvious disadvantages, has these two merits: that it may combine all parties, and thus secure to minorities their proper representation in the government, and that it makes of the king a personal working ruler instead of a mere lay-figure. Of this latter point the Hohenzollerns are likely to be tenacious. It has been their pride, and their merit, that they have been kings indeed; have studied state affairs; have labored in person with their ministers upon the details of their several departments—as Frederic the Great did in finance, in trade, in jurisprudence, hardly less than in the discipline of the army. In these diversified labors, King William is just as diligent and as intelligent as any of his predecessors, and he would probably be slow to relinquish his habit of personal inspection and control to a Prime Minister who should be answerable to Parliament rather than to himself. Whatever may have been the imbroglio of the Ministry, its solution is not yet reached, nor is even its origin explained.

THE MORAL OF THE CRÉDIT MOBILIER SCANDAL.

WE do not believe many people take comfort in the Crédit Mobilier investigation. The thing is a little too unsavory even for the opposition to enjoy. It does not, on the whole, make much difference, as far as the credit of the country is concerned, whether the members accused by Oakes Ames took the stock and got their dividends or not. The fact is that nearly every one of them gave a disingenuous account last summer of their connection with the road, showing either that there was something wrong in this connection or that they thought there was, and did not hesitate about resorting to ambiguous phraseology and mental reservation in order to hide it. It is a mistake to suppose now, as some Administration papers seem to do, that the matter can be disposed of by expelling Oakes Ames. He cannot be made a scapegoat, and will not be. No attempt will be made to expel him; and if there is, it will not succeed, partly because his term of office is too near its close, and partly because too many politicians are implicated, in a greater or less degree, in whatever was wrong in his operations to make it possible to single him out for punishment. Public reprobation cannot be satisfied by decimation or any form of vicarious sacrifice. The affair will have to lie in the public mind just as the investigation leaves it, every man carrying his own share of the blame.

But it is a mistake, also, to suppose that mere punishment of any kind will remedy the state of things which this investigation has revealed; that it will prevent members of Congress from taking a pecuniary interest in undertakings on which they may be called on to legislate, or Government directors from taking stock in corporations whose operations it is their duty to watch. Nothing but a high sense of personal honor will ever keep public men out of mire of this sort, and a high sense of personal honor cannot be created by the lash, whether it be the jailer's cat or the editor's abuse. It is partly the gift of God and partly the result of education, and constituencies must take it where they can find it, and be thankful for it, and give up all hope of infusing it into any man either by reward or punishment. The character of the Congressman will always be the product of the social and moral condition of the community which elects him, and there is no use in trying to make it anything else. The thing to be done towards improving the tone of public life by active measures is the removal as far as possible of temptation from the path of public officers. This is the one field in which legislation can accomplish much in aid of political morality. If we want good judges, there is no use in threatening to hang or imprison them if they take bribes or pervert the law. What we have to do is to pay them well and surround them with security and consideration, or, in other words, remove from their path all inducements to go astray. In like manner, if we want pure legislators, what we have to do is, as far as possible, to shut them out from all fields of legislation in which it is the interest of individuals to buy votes. This is generally recognized all over the country as the best mode of dealing with that fruitful source of corruption—special legislation. This has been absolutely prohibited in Illinois, and with the best results, and it is conceded that it is from a similar course that any thorough purification is to be looked for in the State legislatures of New York and Pennsylvania. Now, there is in special legislation itself nothing more dishonest than in general legislation; but prohibiting special legislation means prohibiting that species of legislation for which large numbers of persons are willing to pay heavily—it is, in short, depriving legislatures of all vendible powers and privileges.

These vendible powers and privileges, in the case of Congress, consist mainly in the power of taxing particular commodities for the purpose of protecting native industry, granting subsidies in aid of railroads and steamboats, and of engaging the Government in industrial enterprises. The "Crédit Mobilier scandal" is only the natural result of a long course of legislation in which the seeds of corruption were thickly sown. The first assaults on the virtue of Congressmen were undoubtedly made through the tariff, and they could not have been made in a more insidious way. Once the House got into the habit of listening favorably to the arguments of men who sought to have taxes clapped on for the avowed purpose of raising the price of articles produced by themselves, the downward road was entered on. There was, is, and always must be "money" in every scheme of legislation, no matter how fine a name may be given it, which suddenly and on a day named enables A, B, or C to sell his goods at an advance. No legislature which is armed with this power, and which exercises it as recklessly as Congress has done, can long remain pure. It is not in human nature to sit hour after hour listening to men pleading for your assistance to increase their incomes thirty or forty per cent. without the feeling gradually springing up in your breast that you ought to have a share in the advance. It is not in human nature either for a man whose annual revenue is only $5,000 or $6,000, and who is only sure of it for one year, and has no profession or calling to fall back on, as is the case with a large number of Congressmen, to listen to great capitalists clamoring day after day for hundreds of thousands of dollars to help them to run steamboats, or millions of acres of land to help them to build railroads, without asking themselves what harm can it be to make these speculators pay a little for the vast "potentiality of growing rich" which they so glowingly describe in their speeches and prospectuses. The process of degradation in which all this results has been going on for many years. It begins to bear fruit at last in the vast jobs and defalcations, the small loans, the muddled accounts, the falsehoods, prevarications, and "conflicts of veracity" to which we are now treated, because the enormous powers assumed by the Government during the last ten years, coupled with the tremendous commercial activity bred by paper money, by the rapid increase of population and the great influx of foreign capital, have made speculators more eager and energetic and unscrupulous than ever, and legislators needier and more greedy. The varnish of "patriotism" which has so long covered up these miserable transactions at last begins to wear off. It is wholly gone in some places. A gentleman called on a Carpet-bag Governor not long ago, about a park for the State capital, and dwelt earnestly on all that his plans if carried out would do for the health and adornment of the city. "Oh! hang all that," said the candid knave; "what *we* want is some good contracts." The Crédit Mobilier men have managed to talk until now about the nobleness of "spanning the continent" with "a great highway of civilization"; in a few months they would have chuckled boldly over their fat dividends as the one object of their toil and sacrifice.

The remedy is simple. The Government must get out of the "protective" business and the "subsidy" business and the "improvement" and the "development" business. It must let trade, and commerce, and manufactures, and steamboats, and railroads, and telegraphs alone. It cannot touch them without breeding corruption. We care nothing about the wonderful stories we hear about what can be achieved in the way of "promoting industry" by all these canal and steamboat and railroad schemes. Were the material prospect twice as tempting, the state could not profitably meddle with them, because neither it nor any other government in the world *can command the virtue necessary to carry them on.* This is not a matter of speculation; we know it as a matter of experience. It is almost as much as this Government can do to maintain order and administer justice. It may one day be able to do a great deal more, but not until a great change has occurred in the social condition of the country. We have gone far enough, heaven knows, on the road of "protection" and "promotion," and have found at every step that it leads straight to the bottomless pit; that for every hundred dollars voted by these poor men to whom we pay scanty wages for passing bills in Washington, we lessen, and perceptibly lessen, the stock of individual honor, of self-respect, and of public spirit, of a loyalty to ideals, to which, far more than to any triumphs of material industry, we must look for continued national greatness. We are making money fast enough in all conscience; what needs fostering just now is honesty.

THE SMALL STATES IN THE ELECTION OF PRESIDENT.

THE jealousy of the "small States" proved to be the greatest impediment to the formation of the Union, and is now thought to be the chief obstacle that will prevent a very large majority of the people from effecting a constitutional change in the principle of senatorial representation and the manner of choosing a President. To understand this clearly, it must be borne in mind that fifty-eight of our seventy-four senators represent only a minority of the inhabitants of this country, and that every constitutional amendment requires the concurrence of two-thirds of the two Houses of Congress and of the States. It is inferred that the small States will never give up their excess of power, and therefore that no change can be effected in the election of President or the representation of senators.

So far as the election of President is involved, this difficulty is certainly greatly overestimated, and indeed is an objection that will arise only in the minds of those who are students in constitutional matters, and in the habit of pondering our theory of government with its peculiarities and difficulties. To the two classes of people who really control amendments, the "plain people" and the politicians of the country, it will never occur as an objection. The voter in Nevada feels only a common interest in the result of a Presidential election, and it never occurs to him that his ballot weighs as much in that result as the ballot of nine citizens of New York. To him, the machinery of electors and electoral colleges is an intricacy, an impediment, and not a necessary means to an end. He knows that the people of Nevada have no greater interest in the choice of President than the people of any other State, and it never enters his mind that they have a more effective voice in the matter, still less that they should have. He sees clearly enough that the election of President is not a contest between States, and has even ceased to be a contest between "sections," and is simply a contest between parties. As a practical man, he knows that the disproportionate weight of Nevada on one side of the political scale will be set off by the disproportionate weight of Delaware on the other. Furthermore, experience has taught him that "the candidate who gets the most votes is always elected," be it by majority or plurality, he does not care which; and that the only instance to the contrary was when this same machinery of electors threw the choice of President into the House of Representatives. Finally, as a good citizen, he believes that this ought to be so, and that it would be a most undesirable and dangerous thing for an election to occur which would give the office to a man who has received fewer votes than his opponent. The American people certainly believe that majorities (or pluralities) win, and ought to win; and there is no principle to which they will yield a more hearty assent than that the majority ought to govern. The State jealousy which is feared cannot well be aroused, because the change will not really affect any State interest. The office of elector is nothing in the eyes of the politician; no other office will be swept away by the change; the small States will still have the same number of senators and representatives to send to Congress; and everything will go on as before, save that the two political parties will then do directly what they now do indirectly.

It was said by Kent, that "if ever the tranquillity of this nation is to be disturbed, and its liberties endangered by a struggle for power, it will be upon the subject of the choice of a President." Under our present system such a struggle might be caused, first, by frauds in the election, and, secondly, by frauds, irregularities, or corruption in the proceedings of the electoral colleges. If, for instance, a decided majority of the American people had voted for the Democratic candidates at the late election, and the formal electoral choice had depended upon Louisiana, it would be an easy thing for the party managers to throw out the electoral vote of the State in the present condition of affairs, and thereby throw the choice of President into the present House of Representatives; or if, as in the event of Mr. Greeley's death, the electors were really unable, for want of time, to unite upon a common candidate, or if the fate of the electoral choice depended upon three elevated carpet-baggers, say from Florida, who might suddenly find high moral reasons for voting for a third candidate not before heard of—in any of these cases the body politic would suffer a shock more or less dangerous, as the wrong was more or less flagrant. And the opportunities for wrong are much increased by the peculiar provision of the Constitution which requires not only the greatest number of electoral votes *cast*, but that "such number be a majority of the whole number of electors *appointed*." For if on opening the returns it should appear that some for the successful candidate had been fraudulently abstracted or tampered with, nevertheless "the House of Representatives shall choose *immediately* by ballot the President." Thus it can be seen that while there may be no great danger of an election being directly reversed by fraud or casualties, the contingencies are many by which it may be thrown into an adverse House of Representatives.

So far as the Senate of the United States is concerned, the power of the small States would doubtless be exerted to defeat a change. If a surrender is ever brought about, it will in all likelihood be by some such coercive measures as have forced the House of Lords from time to time to give up positions which they might constitutionally have maintained. There is a moral power in the decided will of a decided majority which often carries down mere constitutional power. If an overwhelming majority of the American people ever become thoroughly in earnest on the subject of a constitutional amendment derogatory to the power of the small States, history indicates that they will not always dare to defeat it; and yet such a battle will be very different from any that has ever been fought between commons and lords or the people and the crown. In all of the European contests, there has been an apparent power on the one side, in the person of a monarch or an aristocracy, and the people on the other. In our own country it will be almost impossible to procure a controversy between the people considered as the people, and certain of the States considered as States. With our present constitutional views and training, such a contest, though existing in fact, would never be an earnest one, for the reason that, from the peculiar structure of our government, it would appear to be a contest between large States and small ones—a contest in which the States will be individualized, and some sympathy be felt for the weaker party.

With regard to the representation of States in the Senate, it is evident that there can be no middle ground; either we must have the system substantially as it is, or the upper house must be a mere reflex of the lower in somewhat reduced dimensions. It is true that if the States of this Union were states in the European sense of the word—that is, distinct communities with adverse interests and different languages—no greater anomaly could exist than their equality in the Senate. Thus, if population were made the rule, and New York were taken as the standard, Nevada, with a population of 42,491, would be entitled to less than ½d of a representative, and 1-50th of a senator; or, conversely, if Nevada were taken as the standard, New York should now have in Congress 103 representatives and 200 senators. But there is one fact lying behind State lines which has received little attention, yet which shows that, while our senatorial system maintains the integrity of the States as local powers, it does not do any wrong to any portion of the American people. As we have said before, the diverse interests of this country are not State but sectional. Now it so happens that these "sections" are so made up of large and small States that the aggregate of senators in each does not greatly differ in proportion from the aggregates of the other two. We are aware that this assertion does not strictly accord with the figures of the census. The South (after transferring from the old slave States Delaware to the East and Missouri to the West) will have in the next Congress twenty-eight senators to eighty-eight representatives; the East (in which we include with Delaware the

three great States, New York, Pennsylvania, and Ohio) will have twenty-two senators to one hundred and twelve representatives; and the West (with which we place Missouri) will have twenty-four senators to eighty-three representatives. In the temporary apportionment made by the Constitution in 1787, thirty-five members were awarded to the seven States north of Delaware, and thirty to the remaining six. We do not now recall anything which shows that this division was intended as an exact adjustment between the future free and slave States; but be that as it may, it gives to each side precisely two senators for every five representatives. The first apportionment by Congress, founded upon the census of 1790, disturbed this equality by giving to the Northern States an increased number of representatives; and the disproportion continued to grow slowly but steadily greater until, under the census of 1860, the South (less Missouri and Delaware) had twenty-eight senators to only seventy-five representatives, or more than one to three; while the States which we now group as Eastern had only twenty-two senators to one hundred and seven representatives, or about one to five. Yet here it must be borne in mind that this disproportion was augmented by the "three-fifths" representation of slaves, which in effect reduced the population of the South; and it must also be understood that in the Western group the proportion was twenty-four senators to sixty-one representatives; and that the South and West have always been almost exactly side by side in their respective ratios.

Thus it may be seen that the preponderance of State representation in the Senate is possessed by the South and West, the poorest and weakest portions of the country; and that the wealthy and powerful East is the only portion which in any degree suffers. The evil, such as it is, is beginning to work its own correction. Already three of the New England States have no more representatives than senators; New York, Pennsylvania, and Ohio are losing and will continue to lose members in each new apportionment; while the South and West are gaining rapidly in population, and possess States, like Texas and California, capable of taking a place ultimately among the greatest. We may therefore conclude that while a decided disparity in State representation does exist, it still works no substantial wrong; and that in practical effect it is less now than it has been, and will never again be so great as it now is.

THE GOVERNMENT AND THE *ALABAMA* DAMAGES.

THE following appears in the Springfield *Republican:*

"The distribution of the Alabama money becomes more and more a dubious problem the more it is discussed. Public attention to it has already carried the discussion behind the mere question of its allotment, to the more fundamental issue of whether we can do with the money what we like. In other words, is the money ours, completely, or are we bound to apply it to a specified object, and, if there is any left, give it back to Great Britain? The New York *Nation* takes the latter view. 'The Government,' says the *Nation*, 'is as much bound morally to retain only the cost of the property actually destroyed by certain specified vessels, as it is to pay over to private citizens the sums coming to them for the losses sustained under similar circumstances.' . . It never occurred to them [the Arbitrators] to specify the damages to which it should be applied, and to stipulate the return of any remaining moiety to the treasury of Great Britain. It was left for the *Nation*—which, with all its disgust at the sentimentalities, delights in nothing more than the inculation of moral ends that confound by the bare impossibility of their attainment—to discover and promulgate this obligation, as fictitious as it is impotent."

This is a criticism on an article written to combat the theory that the Government of the United States takes the *Alabama* damages, not as a trustee for certain specified purposes, but as absolute owner, and may do with it as it pleases. The one sentence in it on which this curious perversion could possibly be founded is the following, but the meaning of this is made perfectly clear by the argument which follows:

"That the United States could come in and claim, as an individual, for property actually destroyed by the cruisers, for which Great Britain was found liable, of course no one doubts; *but in dividing the money,* the Government is as much bound, morally, to retain only the cost of the property actually destroyed by certain specified vessels, as it is to pay over to private citizens the sum coming to them for losses sustained under similar circumstances."

The *Republican* must be careful, or it will get as bad a reputation as the New York *Times*, which seems to have laid aside all shame and scruple in the reproduction of its adversary's opinions. In this case, the phrase "but in dividing the money," which fixes the sense of the paragraph, was left out, we hope not intentionally; but it has a suspicious look.

What the United States should do with the residuum of the fund, after all legitimate claims are satisfied, is plain enough—keep it, of course. That it should return it to Great Britain is an idea which we do not believe any human being on either side of the water entertains or has ever entertained. But the doctrine that the United States Government may make this residuum as large as it pleases by setting up rules of distribution, as Mr. B. F. Butler is doing, made up partly of "eternal justice," partly of technical rules of law, and partly of Butler's own notions of what the arbitrators meant, is something which very few unbiassed people are prepared for. Butler—(can there be anything odder than the selection of this worthy—the author of the repudiation scheme of 1867, and the promulgator in the same year of the famous maxim that "a nation has no conscience"—for the settlement of a nice question of public duty!)—Butler proposes to misappropriate the money by repaying war premiums of insurance, which were expressly excluded from the consideration of the Tribunal, and declared to be for ever barred and extinguished; and he proposes to increase the residuum wrongfully by refusing to pay the claims of the insurance companies, which were not excluded, and which he, with characteristic double-mindedness, acknowledges to be sound if the companies have lost money, but untenable if they have made a profit—which is like saying that a man's rights under the law ought to depend on the condition of his bank account. The submission to the Tribunal of the indirect claims, and the history of those claims before the Tribunal, were a source of considerable mortification to most intelligent and upright Americans. This mortification will, however, be very much deepened if the fund is dealt with in entire disregard of the conditions of the award and of the plain intent of the arbitrators. The doctrine of absolute ownership is one which a fair-minded man—though we do not ourselves see how—may entertain; but if it is adopted, it only becomes all the more necessary that the national honor should be saved from the stain of having the fund parcelled out under the rules supplied by a person in whom nobody has any confidence, and who takes pride in his own unscrupulousness.

There is no reason in the world worthy of five minutes' consideration for paying the insurance companies anything, unless they are paid all that they claim. They took war risks in the regular course of their business; if they have lost money by them, they have lost it in the regular course of their business; and there is no more justice in making up their losses out of the *Alabama* fund than out of the funds of the American Tract Society, or in making them up at all, any more than those of the fire insurance companies. In short, we owe them salvage on the ships they paid for, or we owe them nothing; and the compromise proposed by Mr. Butler is a bit of tortuousness, which it may be entertaining to see him engaged in, but with which Congress ought to have nothing to do.

THE BREAK-UP OF PARTIES.

WASHINGTON, January 25, 1873.

THE disclosures of the Crédit Mobilier investigation continue to occupy, almost monopolize, the attention of political circles here. They form the staple of conversation. The question is no longer whether this or that politician has bought and owned Crédit Mobilier shares and drawn dividends. The mere ownership of stock and the drawing of dividends appear now as a sin of minor importance, and those who made a straightforward confession at once are almost looked upon as men of honor, brave enough to tell the truth. The question to-day is whether men of high standing in Congress—men who so far enjoyed an unblemished reputation for personal probity and possessed the confidence of the people—men who were honored by intelligent constituencies with positions of great power and responsibility, did or did not deliberately commit perjury before a committee of Congress. There is

a general impression that, unless appearances are utterly deceptive, some of them did, and that the more they try to clear themselves, the deeper they sink. Nobody is inclined to take the statements of Oakes Ames, after all the transformations they have gone through, as absolute truth. But the testimony given by him this week is so strongly supported by documentary evidence and by corroborating circumstances, that it can no longer be brushed aside by mere general denials.

The impression produced by these developments is most painful. At first, members of one party were heard to express a sly satisfaction at the discredit thrown upon certain leading members of the other. But this partisan feeling is giving way to a different sensation. Now, men of patriotic impulses, who have the honor of the American people at heart, are asking one another with alarm and mortification, What is to come next? Nothing seems now impossible. When perjury, in the highest political sphere, becomes so cheap, who is there whose honor can be relied upon? When Oakes Ames drew forth his memoranda, and made his terrible revelations about Colfax, Patterson, Kelley, and Garfield, the Investigating Committee presented a spectacle worth seeing. Not one of its members appeared inclined to push the enquiry; they rather seemed to shrink from the depth of shame which disclosed itself. The Democrat Niblack, who might have enjoyed the cruel embarrassment of those shining lights of the Republican party, was even carried so far by an impulse of pity as to suggest that those gentlemen should be permitted to employ counsel. The enquiry was almost entirely left to the accused and Oakes Ames, who has turned accuser, and assumed the rôle of a vindicator of truth. The leniency of the Committee is generally noticed, and there is scarcely any doubt that many important points might have been much more clearly established had the examination been pushed with vigor on the part of those charged with its conduct. The latter seem rather disposed to let a fog of doubt hang over the matter, to hide the deepest disgrace. But it is said that Oakes Ames has more documentary evidence which will bear as heavily on Colfax and others as that which utterly crushed Patterson; and also, that his memorandum book, when produced before the Committee, will reveal the names of men involved in the Crédit Mobilier business hitherto not yet thought of. The extension of the enquiry to the affairs of the Central Pacific Railroad bids fair to lead to new disclosures equally startling, especially as this branch of the investigation has been confided to the more energetic "Committee No. 2." There is a rumor that another contribution of $10,000 to the election expenses of a senator will be shown, and that several prominent legislators will appear in the character of regularly retained and paid attorneys of railroad companies. There is still a vague hope entertained by some that the worst part of the testimony of Oakes Ames with regard to Colfax, Patterson, Garfield, and Kelley may be overthrown by counter-proof, but that hope is growing weaker from hour to hour, while the impression is gaining ground that the truth has not half been told yet. The party managers are getting seriously alarmed lest the weight of these things become so heavy as to break down "the machine"; and they bless their stars that this is a short session, and that in about six weeks the agony will be over, at least for the present.

But party discipline appears to be almost broken up. No Administration measure can receive the united support of the Republicans in Congress, and, as far as I can remember, there has not been a single "strict party vote" on any important subject during the present session. There may be one when the Louisiana matter comes up, but even that is not certain. The Democratic vote has so far been as little united as the Republican, and even the old partisan style of making opposition is gradually falling into disuse. When, in the discussion on the bill to authorize the building of ten new ships-of-war, Senator Hamilton of Maryland, a fair representative of the old-line "unterrified" school, made a regular Democratic speech in opposition, he was gently but firmly reproved by some of his party friends, who openly supported the bill, and seemed to be of the opinion that the old kind of talk will no longer do. As I heard Congressmen describe the situation: "The fences are down, and nobody seems to know exactly where the lines are." The House of Representatives is evidently without leadership. The Crédit Mobilier investigation has made sad havoc among its prominent men. The only leader left untouched is Speaker Blaine, who, while in his present position, can of course not lead on the floor, and of whom it is quite uncertain whether he would make a great effort to enforce party discipline even if he could. To say that this lack of drill, this confused mixing of elements, is the prelude of a speedy dissolution of the old parties, would be too sanguine a prediction; the present condition of things is evidently pointing that way, and the results of the Crédit Mobilier investigation are certainly strengthening the disintegrating tendency. I find that the number of politicians who express indifference as to the future of their respective parties is perceptibly increasing. The developments now taking place are exciting so much disgust that men of self-respect lose their veneration and attachment for the old organizations more rapidly than otherwise they would have done.

The majority being in so disorganized a condition, there will probably not be much legislation this winter beyond the appropriation bills, the ordinary routine business, and such other subjects as must necessarily be disposed of. What the Senate will do with the repeal of the bankruptcy law, I am not able to predict. The number of those who favor repeal instead of amendment appears larger than was first expected; but whether large enough to carry the Senate is quite uncertain. The abolition of the franking privilege was treated in the Senate in a manner clearly showing that a majority would be glad to see the measure defeated in some indirect way. The House bill was so burdened with injudicious provisions that even the truest friends of the measure voted to amend it. Unless the House accepts the Senate amendments, you must not be surprised to see the franking privilege outlive the present session, and then perhaps many others. The recommendations made by the President in his message are either voted down by decisive majorities or treated with neglect. It seems impossible to rally the Administration party on any of them. Senator Ramsey has given notice that he will call up the Postal Telegraph Bill as soon as possible, and it is reported that if he succeeds we shall have the curious spectacle of Mr. Schurz and Mr. Conkling fighting side by side in opposition to that Administration measure, while it seems uncertain whether any of the other prominent friends of the Administration will champion it. I am told that the advocates of the measure count upon a large majority in the Senate, but I am assured also that it cannot pass the House. The great internal-improvement enterprises recommended by the President are also doomed to failure. This method of "moving the crops" will not prosper this winter. Congressmen are on their good behavior just now. While the more enterprising among them venture out with a big job now and then, the average member labors under a vague impression that he is surrounded by extraordinary dangers, and must be careful how he votes on jobs. Even the proprietors of the restaurants are complaining of the extraordinary dulness of the season, because the "Third House," the lobby agents, find Congressmen too timid to dine and drink champagne with them—all this, thanks to the Crédit Mobilier and the indiscretions of Oakes Ames.

In the meantime, all is reported serene at the White House. I am told they have a quiet chuckle there over the Crédit Mobilier investigation, for a very characteristic reason—as long as Congressmen investigate and destroy one another, they will have no time to think of investigating the executive departments, and the White House may look with cool indifference at the slaughter going on "at the other end of the avenue." But, unless I am greatly mistaken, that indifference is ill-advised, for the investigations are, like a fire, "not under control," and it is not far from the Capitol to the White House. Moreover, there are the first symptoms perceptible of an estrangement between the President and some of the Republican leaders. I have seen several senators and representatives who think that the President is not in a proper frame of mind at all; that he does not care to "recognize" the great services rendered to him during the late campaign; that he believes and says that his own popularity alone carried the election, and had to pull the so-called party leaders through, who in many cases were mere dead-weight; that therefore he does not owe anybody anything on account of the late campaign, but that those whose re-election was secured by the strength of his popularity owe him much. Now, the said senators and representatives are of a decidedly different opinion, and remark that if his Excellency thinks they did not help him during the late campaign they need not help him now, and his Administration may take care of itself. This will not disturb Gen. Grant very seriously, inasmuch as he does not take much active interest in "politics" just now, except so far as the new San Domingo enterprise is concerned, which he hopes will succeed, especially since his own San Domingo scheme, together with the whole policy of his Administration, was so "triumphantly vindicated by the American people at the late election."

ENGLAND.—MR. MILL AND THE LAND-LAWS.

LONDON, January 10, 1873.

IT may be disputed whether Mr. Mill does or does not occupy so distinguished a position in the country as he did before his parliamentary career. He never became quite acclimated to the atmosphere of political agitation: and his failure was owing as much to certain defects as to his superiority to party manœuvres or his incapacity to descend from the regions of pure speculation to the level of country squires. There was a want of that union of robust mental and physical vigor which is the best qualification for any one who takes part in the rough game of English politics. He was rather

an oracle to be consulted than a leader to be followed, and therefore, if Mr. Mill retained the allegiance of his own friends, he certainly did not conciliate his antagonists, nor even impress them as a formidable antagonist. His own followers, however, regard him with undiminished affection, and especially the little band who are anxious to appropriate to themselves the old title of "philosophical radicals" once applied to Mr. Mill's early friends. To say the truth, their philosophy is apt to be of a rather barren kind. It is summed up in a few dogmatic utterances about the rights of man, and still more of women, the necessity of diminishing government interference, and so forth—all of which may be very true, but which do not necessarily indicate great cultivation or width of views. Indeed, the opinion is becoming current, if I am not mistaken, that those good old revolutionary formulæ did not contain the whole truth, and are not quite capable of edifying a philosophical mind. But whether the adjective "philosophical" be or be not appropriate, the radicals are undoubtedly a strong party, and have a great respect for Mr. Mill. Some importance is therefore to be attributed to a rather curious manifesto which he has lately published in the *Examiner*. The *Examiner*, I should say, once celebrated for its controversial vigor, has undergone a long period of eclipse, but has lately come out as an organ of Mr. Mill's friends. The manifesto of which I am speaking is called Advice to Land Reformers, and speaks of the question of land-laws as having fairly come to the front. Two proposals, it is added, have lately called for attention: First, the abolition of primogeniture and the power of entail; and, secondly, the compulsory sale of all corporate property and the investment of the proceeds in the Funds. The first proposal, says Mr. Mill, should be supported and the last opposed by all true reformers. For the present, he only speaks of the first. His reasons are somewhat remarkable. There are a variety of proposals afloat of a considerably more violent character than those which Mr. Mill discusses. The abolition of private property in land altogether, or the forcible limitation of landed estates to very small areas, are amongst the dreams of the more revolutionary schemers. Mr. Mill, however, passes by such plans as altogether chimerical for the present, whatever may be their ultimate value. The abolition of primogeniture and the limitation of power of entail might be carried out at once, but the reformers are divided as to their expediency. They are advocated by some radicals on the ground that these changes would tend to form a class of peasant-proprietors; and the advantages of that system to the cultivators have been set forth by many radicals, and by none more forcibly than by Mr. Mill himself. A letter from Mr. Cobden, preaching the same doctrine, has just been published by Mr. Bright. But here occurs the division of sentiment. Many radicals are strongly averse to the multiplication of landed properties, and their reason is a simple one. Give a man a bit of land, be it twenty acres or twenty thousand, and you make him a conservative. Any one, therefore, who wishes to upset society altogether may very well hesitate before increasing the class which Continental experience proves to be the most obstructive and immovable of all classes. You would destroy the influence of a duke, but it would be at the price of setting up a thousand peasants, each of whom would be every whit as conservative as the duke himself, and probably a good deal more pigheaded and ignorant. If you think of setting up a guillotine, one neck is obviously better than a thousand; and even without such extreme measures, there is a danger in multiplying the resisting forces of society.

Of the morality or wisdom of this theory I have not space to speak, though it seems rather questionable policy in any one convinced of the benefit of peasant proprietorship. To refuse to remedy an evil in order to maintain a great body of discontent with evils in general is scarcely a fair manœuvre. Mr. Mill, however, has a different answer to those who take this view. He denies that the abolition of primogeniture and similar changes would be favorable to the growth of peasant proprietorship. It is doubtful how much land would be brought into the market, and there is no probability that it would be bought by poor men. So long as society is what it is, an increased facility in the sale of land would probably tend rather to accumulation than otherwise. The rich manufacturer who is anxious to become a county magnate is the man who snaps up any fragments that come into the market, and not the poor cultivator, who, indeed, could hardly buy it on profitable terms. Land in England brings with it so much more than mere pecuniary returns, that the interest obtained for landed investments is, as a rule, exceedingly small. Mr. Mill's answer to the reformers who object to peasant proprietors is therefore complete, and, in all probability, quite sound. Abolish primogeniture to-morrow and it would make next to no practical difference. So long as the power of testamentary disposition is not limited, it would make no difference at all, for it is very rare for landed estates to be divided according to the laws of intestacy. And even if the power of entail and settlement be restricted within narrower limits than at present, the social tendencies which now prevail would effectually prevent any great subdivision of the land. What, then, is to be gained by Mr. Mill's proposal? is the natural question of reformers. We have all been denouncing the manifold evils which result from the accumulation of landed property, and have professed our anxiety to abate them. Mr. Mill, as the acknowledged prophet of the radical party, proposes a great measure of land reform, and his first argument is, that it will not have the slightest tendency to diminish the acknowledged evil. What, then, is the advantage of his plan? Mr. Mill answers that, in the first place, anything which tends to facilitate the transfer of landed property is so far a good thing, because the man who buys is more likely to be an improving landlord than the man who sells. But secondly, and this is his main answer, it is in some degree a blow at the aristocracy. The object of primogeniture and the power of entail is to maintain an aristocratic order; and they will be broken down so far as this safeguard is concerned. No radical would deny the validity of the argument, which, so far as it goes, gives a very good reason to alter the law. The law of primogeniture, indeed, so far as it produces much practical effect, runs counter to all the principles of the radical party. That requires no demonstration; but considered by itself it is, and Mr. Mill does his best to prove that it is, a matter of very small importance. If, in spite of any such changes, the accumulation of landed property in fewer hands continues, or is even accelerated, would radicals be very much gratified by the reflection that the elder sons of rich families were forced to share a little more equitably with their younger brothers? The change proposed must seem to be exceedingly petty in the eyes of those whose first aim is the encouragement of peasant proprietorship, or of those whose objection to peasant proprietorship is that it would hinder changes of a still more vital character. Both sides, indeed, might agree to Mr. Mill's proposal, but they would agree to it only as two men might agree to travel together from London to Dover, though one was on his way to India and the other to the North Pole.

The conclusion which will probably be drawn by many radicals is a very different one from that which Mr. Mill advocates. They will fully admit that a mere change in the laws of primogeniture and settlement will do next to nothing to alter the existing distribution of landed property, but they will infer that something much more vigorous ought to be done. The aristocratic spirit of the country does not depend upon these laws, but on much deeper and more permanent causes. Very well, they will say, then we must attack the aristocracy in a more vital point. Either we must enforce laws stringent enough to break up the existing properties forcibly, or we must endeavor to upset the whole system which now makes landed property so attractive by associating it with social prestige. So soon as such proposals are seriously brought forward, there will be room for discussions of a much more exciting character than those which now occupy the attention of the radicals. Meanwhile, it seems likely that Mr. Mill's moderate proposal will not excite enthusiasm enough to give it a very prominent place in the party warfare of the future. When the chief advocate of a plan advocates it on the ground that it will produce next to no appreciable influence in regard to the points most chiefly interesting to his supporters, he will hardly have very enthusiastic followers. The question will either retire from the front or will come forward in a much more menacing shape. If I might venture a guess, it would be that for the present it will be shelved in favor of more immediately popular though not more important questions.

THE GRAMONT-THIERS DISPUTE.

PARIS, January 4, 1873.

THE Duc de Gramont, who was the last Minister of Foreign Affairs of the Empire, and who is considered as one of the chief promoters of the war with Germany, has just published letters which have a great importance in an historical point of view. It will always be an object of the deepest interest to know how the war of 1870 was brought about. M. de Gramont, after two years, comes forward and wishes to prove that the Emperor Napoleon III. did not enter quite alone and single-handed into the war, and that he had good reasons for trusting in the active help of Austria. I must quote a few lines from the Duc de Gramont:

"On the 23d of July—that is, after the declaration of war—the ambassador of Austria (Prince Metternich) came to see me at the Foreign Office, and handed me two despatches of his Government, both dated the 20th of July, begged me to take cognizance of them, and left them so that I could make a copy of them. One of these despatches, which has been published since, as it was intended for publication, established in principle the neutrality of Austria, and took peculiar care to establish by reserves and by precedents that this neutrality would not hinder the armaments which should seem necessary for the security of the empire. This neutrality, which was proclaimed in accord with us, and the secret of which we pos-

sessed, could not disquiet us. For, in order to prevent any misunderstanding, there was, as I have said, another despatch, very complete and explicit, written on the same day, and left with me on the same day by the Austrian ambassador. I am not the only person who received communication of these two despatches. This communication was also made to Saint-Cloud and to other members of the Government."

M. de Gramont does not name these other members of the Government. I believe that only one of them, M. Emile Ollivier, received the secret despatch. This phrase only is cited by M. de Gramont, but it is sufficiently explicit: "Will you therefore *repeat* to his Majesty and to his Ministers that we consider the cause of France as our cause, and that we will contribute to the success of its arms within the limits of the possible?"

The publication of this letter has created so much sensation at Vienna that M. de Beust, who was at the time Minister of Foreign Affairs, was recalled from London, where he is now ambassador, in order that some sort of answer might be prepared. There could, of course, be no official answer made. M. Thiers, in the Committee of Enquiry on the Causes of the War, had given an account of his diplomatic journey through Europe, and said that M. de Beust had assured him that he had never encouraged the Emperor Napoleon III., that he never promised him any help. M. de Gramont now publishes a phrase of one of Beust's despatches which is not in accordance with the statements of M. Thiers. But the Austrian and French Governments are not directly at issue. The official press of Vienna is, however, trying to explain the words of M. de Gramont. It is no longer denied that the two Courts of Vienna and Saint-Cloud were in very close terms of friendship in 1870; it was not unknown at the Burg that Napoleon intended to quarrel with Prussia; Prince Metternich, on the 23d of July, *repeated* to the French Government that Austria meant to help France; it is not even denied now in Vienna that Austria was negotiating with Italy in order to come to a common understanding. The official press explains for what reasons the good intentions of Austria remained sterile. First of all, Austria was arrested by the hostility of Russia, then by the attitude of the German population of the empire; the other reasons given are: the incomplete preparation of the Austrian and Italian armies, and the rapidity of the Prussian successes. This last reason is perhaps sufficient. It is also well known that Count Andrássy was at Pesth at the time of the declaration of war; when he heard of the fermentation of the war party in Vienna, he sent at once a long telegram, protesting against any action which might be taken without the concurrence of the Parliament of Pesth. Prince Bismarck had taken his precautions on that side; the Parliament of Pesth declared very soon in favor of a complete neutrality. The Hungarians had no intention of giving Austria a chance of reconquering her former position in Germany. The dualistic system had been their triumph; what could Beust, what could the Emperor do between the Prussian tendencies of Hungary on one side, of the German provinces on the other, and in face of Russia? France was completely abandoned, and the revolution of the 4th of September broke all the bonds between her Government and the Governments of Europe. It is perhaps not a trifling circumstance that the two ambassadors who were the last to remain with the Empress Eugénie at the Tuileries were Nigra and Prince Metternich. It is rumored in the Bonapartist circles that the Empress has in her possession letters of the Emperor of Austria which are full of expressions of sympathy, of promises of support. Such letters, if they really exist, have deceived the Imperial Government; the constitutional system now in force in Austria deprives them of any binding character. The Empress, it is said, refuses to publish any part of them, though this publication would help her cause, in showing that the Empire in 1870 could reasonably hope for the succor of Austria and of Italy.

The mystery of all these negotiations is not quite unveiled. It is hardly credible that such revelations as M. de Gramont has just made have no other object than to rectify the account given by M. Thiers of his useless conversations with the Ministers of the various Courts of Europe. If the conduct of M. de Gramont has not very deep motives, it has really no excuse; for the publication of secret despatches he has received is likely to place France in a sort of diplomatic quarantine. In old times, the conduct of M. de Gramont would have been punished by the Bastille; the *lettres de cachet* were, at first, specially directed against the men who compromised the interests of the state. Who will be found, for a long time to come, willing to negotiate with agents who think themselves allowed not only to expose the most secret affairs of their own country, but of the foreign governments who have imprudently trusted in their good faith? The behavior of M. de Gramont is so incorrect, so monstrous, that we are led to think that this gentleman, better known for his vanity than for his intelligence, is on this occasion only the instrument of stronger men.

Two only are likely to draw any benefit from these revelations. It was quite evident, when the Emperor of Austria went to Berlin and showed himself to the world with the new Emperor, that there was a little nervousness in such a hasty acceptance of the accomplished facts. This readiness is now quite explained by the fact that Austria and France, or at least the Austrian Government and France, were at one time nearly allies against Prussia. Bismarck probably always knew all the facts of the case; the letters of M. de Gramont are no revelation to him, but they will be a revelation to the German people, to the people of Vienna as well as to the Prussians; and the German feeling is so strong now in the German-speaking provinces of Austria, that the Emperor Francis Joseph will be forced by his own subjects to prove his repentance, his remorse. He will lie, as it were, prostrate at the feet of Wilhelm, helpless, and quite unable to make any opposition to the schemes and projects of Bismarck. He will be the only German sovereign guilty of sympathy with France, and he will have enough to do in keeping his German provinces.

But there is somebody else besides the German Chancellor who is likely to benefit by the disclosures of M. de Gramont. The French people is very generous. If you talk with ignorant peasants, you will find them already disposed to forgive Napoleon III. They do not read much; they see only, as it were, the surface of events. "The Emperor has been betrayed by his generals, by his ministers." This is their explanation of our late misfortunes. They will now be able to say also, "He has been betrayed by his allies." The popular mind has a curious disposition to build up legends out of the elements of history; and the historian himself will be forced to look somewhat differently upon the conduct of Napoleon III., if it is proved that he could not unreasonably count upon the support of Austria and of Italy. Of course he will always remain guilty of a criminal aggression upon Germany, as well as of imprudence. He could only bring 250,000 men into the field at first. It was not enough to intrigue with Austria and Italy—he ought to have waited till he could procure regular binding treaties. He did not embark in the Crimean, in the Italian war, as rashly as he did in the German war. His folly is all the more to blame in that personally he did not resent Sadowa as a defeat of his own policy; that he had even contrived to facilitate the first progresses of the Bismarckian policy. He knew more of Germany than many of his ministers, and he was quite aware of the strength and of the importance of the Prussian army. I believe that Napoleon III. never had a moment's illusion, that he did not believe in a conflict of the two sections of Germany separated by the Main; he knew that the aggression of France would unite against her all the parts of Germany. But he hoped to strike a rapid blow, to obtain *one* victory, and his desire was then to step forward and to offer to Prussia very acceptable terms of peace; to recommence, to a certain extent, what he had done at Villafranca.

The Bonapartists will use for the profit of their cause the facts which are now coming to light. They are working constantly at what may be called the legend of the war; they represent the Emperor, betrayed by everybody, by his advisers, weakened by a Chamber which had refused to adopt the Prussian system of obligatory service, entering on the war, much against his will, because M. Thiers and the Republicans accused him of having since Sadowa sacrificed France to Bismarck; deprived, after the first defeats, of the supreme command of the army; advising in vain that MacMahon's army should remain before Paris; following this army to Sedan, and there sacrificing his crown and his liberty for the lives of his soldiers. Why should M. de Bismarck work now indirectly for the diffusion of this legend? It seems clear to me that the new system of revelations indicates that Napoleon III. and the German Chancellor are not adverse to each other. M. de Gramont would never have published secret despatches without the permission of his former sovereign, and this sovereign must have some reason for sacrificing, as it were, Austria to Bismarck. He cannot be moved by a foolish desire for revenge; he wants probably to prove at the same time that he did not enter into the war like a madman, and that the good intentions of Austria and of Italy were rendered powerless, not only by the military events, but also by the revolution of the 4th of September. We are waiting with some anxiety for the development of this new policy, which seems to unite the interests of the new German Empire and of the fallen empire of the Bonapartes.

Notes.

G. P. PUTNAM'S SONS will publish 'Funeral Orations and Addresses,' by William Cullen Bryant.——Roberts Bros., Boston, announce for publication, next month, 'Bits of Talk about Home Matters,' by Mrs. Helen Hunt ("H. H."); 'The Intellectual Life,' by Philip Gilbert Hamerton; 'Women in American Society,' by Abba G. Woolson, with a prefa-

tory letter by John G. Whittier; and a 'Life of Rev. Samuel J. May,' edited by Rev. J. T. Mumford—"partly biographical," say the publishers, meaning perhaps autobiographical. In his 'Recollections of Our Anti-Slavery Conflict,' Mr. May has left a true if not a full record of his humane ministry both in the pulpit and out of it, but doubtless Mr. Mumford will have something to say also of his early life and training.——Stoddart & Co., Philadelphia, are about issuing 'Hints to Young Artists,' by the late Thomas Sully.——We learn that Mr. John Hosack, the well-known author of 'Mary Queen of Scots and Her Accusers,' has finished and will soon print a second volume of that work.——Porter & Coates, Philadelphia, announce 'Lady Green-Satin and her Maid Rosette,' from the French.——At the request of W. C. Bryant, President Barnard, Judge Barrett, G. W. Curtis, Prof. Youmans, and other gentlemen of this city, Rev. John Weiss will deliver a course of six lectures on "The Characters of Shakespeare" in Robinson Hall, No. 18 East Sixteenth Street, on the evenings of February 7, 10, 14, 20, 22, and 24.

—We have received several emphatic communications in disapproval of "N. N.'s" letter, published last week, concerning the printing of examination papers in college catalogues; but, for want of room, we must reserve them for another issue.

—We shall not be alone in welcoming back into the field of political, religious, and miscellaneous controversy the now venerable but still vigorous Mr. Orestes Brownson. This month he publishes the first number of what he designates the "last series" of his well-known *Quarterly Review*. It is fully equal to its predecessors, and they formed a body of as good hard thinking on important topics as ever issued from the American press. As to the soundness of their conclusions, there were often two opinions, at the least; and two opinions diametrically opposed, and one of which was in the necessity of nature destined to destroy and exterminate the other. On the other hand, there was often perfect unanimity among all right-thinking persons as regards the good service done by Mr. Brownson to some vitally important cause, moral or intellectual. And however these things might be, there were never two opinions as to the rigid and manly honesty and openness of his intentions, and seldom two opinions as regards the unambiguous openness of his method as well, while his mere form of expression was singularly taking, by reason of its simplicity, clearness, strength, and freedom from any shadow of artifice or affectation. Had he written for some great newspaper, and on topics in which he and a wide audience had a common interest, it is probable no writer of the century would have gained a surer popularity. As it was, he has been little known, except among the more thoughtful and enlightened students of religious controversy; and, to some of those, he has been known only as an able and uncompromising enemy. He is, however, an enemy in whom a controversialist might well delight. An American Protestant, for example, who is persuaded that American political institutions are perfection, that Roman Catholicism, in its essence, is inimical to our political institutions, and that his countrymen are justly convinced of the soundness of these views, may well enough be satisfied with a Roman Catholic writer who thus expresses himself in regard to American civilization:

"I confess, therefore, though my interest in my country and countrymen is as great as ever, I do not consider it a high compliment to be credited with an intense Americanism. Where the people are Catholic and submissive to the law of God, as declared and applied by the Vicar of Christ and supreme pastor of the church, democracy may be a good form of government; but combined with Protestantism or infidelity in the people, its inevitable tendency is to lower the standard of morality, to enfeeble intellect, to abase character, and to retard civilization, as even our short American experience amply proves. Our republic may have had a material expansion and growth; but every observing and reflecting American, whose memory goes back, as mine does, over fifty years, sees that in all else it is tending downward, and is on the declivity to utter barbarism."

—"Religion, Philosophy, Politics, and General Literature" are the subjects of which *Brownson's Quarterly* will treat, and in the number before us we have, first, an article introductory to the "last series," which avows the editor's belief that what the age needs is "Catholicity in its strength, not in its weakness," and announces that "nobody must expect from the *Review* any soothing words for the enemies of the Church; any effort to conciliate the despoilers and revilers of St. Peter." The Syllabus will guide the editor when modern civilization is discussed. The second article is entitled "The Papacy and the Republic," and maintains that the Republic is doomed unless the people become Roman Catholics, and the state takes its rightful position of subordination to the church. As it is, we are all going headlong to the pit because the one true and great conservative principle of our system, "the Common Law inherited from our Catholic ancestors," "the Common Law which is of Catholic origin, or at least was brought to its perfection ages ago" by Catholic judges, is in danger of disappearing under the attacks of the politicians and the cheap lawyers. Only Catholicism can now avail to save us. Next comes "The Döllingerites, Nationalists, and the Papacy," which we confess we did not read; and the fifth article, which treats of some lectures by Archbishop Manning, we also left unattacked, our interest in that giant of intellect being faint. Between them is a very good article which we did read, and with a good deal of satisfaction, and which we feel sure will do good and a great deal of good. There is, to be sure, running through it a rather common and sufficiently cool suggestion—not an assertion, but an assumption much affected by Romanist writers—that Roman Catholicism makes chaster women than Protestantism. But this apart, there is much sound doctrine on the general question of the relation of the sexes, and of the way in which women who write novels write about women. Lady Georgiana Fullerton—"one of the very few women authors the stern masculinity of the *Review* can tolerate as writers on Catholic subjects"—and a certain Sister Mary Francis Clare, are the authors whose works form the text for the essay; but other writers are touched upon, and the general remarks are, as we have said, good and profitable, one American "woman writer," as Mr. Brownson would say, coming in for some advice which is kindly meant and, in our opinion, just. We imagine, too, that it will be as well taken as meant, and we hope it may be pondered by plenty others of our novelists besides the author of 'The House of Yorke.' "What is the Need of Revelation?" "Politics at Home," "European Politics," and "Literary Notices and Criticisms," make up the rest of the number, in which there is very little indeed that does not invite attention and repay it. Every too optimistic, Fourth-of-July orator, every Manifest-Destinarian, every too devoted idolater of Plymouth Rock, may find it of use in confirming him at least in his opinion. And it may even do him the service of making him suspect for a moment that he may, after all, have been now and again a little too inflamed.

—Readers of newspapers and magazines are perhaps too intimately acquainted with Macaulay's 'New Zealander'—that rather tiresome traveller of the future who is to visit the ruins of London, and who will indulge in the melancholy and moral reflections which such a spectacle should awaken in the properly regulated mind. In the meantime, writers of leading articles have made "a useful man" of him, and have put him to all that kind of sentimental work. But, as is well known, he is no child of Macaulay's; he had been making his prospective archæological journeys long before Macaulay was born. He was to come from Peru, from Alaska, from the Antipodes, from nowhere in particular; and he was to sigh over the ruins of New York and Philadelphia as well as of London, or, indeed, over any ruins; the main point was the moral. Mrs. Barbauld knew him in 1811: "On some future day a traveller from the Antipodes will, from a broken arch of Blackfriars Bridge, contemplate the ruins of St. Paul's." There can be no doubt that this is the identical individual—Macaulay's own man. A few years earlier, about 1803, Kirke White had a faint glimpse of him:

> "Where now is Britain? . . .
> Her palaces and halls? . . .
> . . . o'er her marts,
> Her crowded ports, broods silence."
>
> ". . . the savage sits upon the stone
> That marks where stood her capitols," etc.,
>
> ". . . and perhaps discovers
> Some vestige of her ancient stateliness."

Ten or a dozen years before White, Richard Alsop, of Connecticut, one of the Hartford wits, announced the arrival of this same traveller from

> ". . . his distant home
> From western shores with brilliant cities graced"—
>
> "Where now Alaska lifts her forests rude"—

to stray, "contemplative,"

> "Where Philadelphia caught the admiring gaze,
> Mid ambient waves where York's emporium shone,
> Or fair Bostonia graced her Eastern throne."

He hears no human voice—only

> ". . . the moan of winds that sadly sigh
> O'er many a shattered pile and broken stone."

In 1760 or '62, thirty years earlier, Goldsmith describes the man and his feelings in the 'Citizen of the World.' London itself, he says, will fade away some day, and leave a desert in its room. "The sorrowful traveller wanders over the awful ruins," and as he beholds he learns wisdom and feels the transience of every sublunary possession. "Here, he cries, stood their citadel, now grown over with weeds; there their Senate House, now the haunt of every noxious reptile; temples and theatres stood here," etc. Alsop's man also notices the noxious reptile and defines it:

> "From some gray tomb by withering fern o'erspread
> Slow rears the rattlesnake his glistening crest,
> And fills with dreadful sounds the dreary waste."

Horace Walpole's "curious traveller from Lima" appears to be the same man;

and is not the Agricola of the Georgics who rests "contemplative" upon his plough to moralize over what he has turned up in the furrow—

"Grandia que effossis mirabitur ossa sepulchris"—

an earlier avatar of this venerable personage? He can be traced back beyond the middle of the last century, and there is reason to suspect his existence hundreds of years before. We believe him to be the Wandering Jew of literature.

—Father Finotti's 'List of Works written by Catholic Authors and published in the United States' (New York: Catholic Publication Society) intersperses titles, copied with a fair degree of accuracy and fulness, with notes written in an agreeable, chatty style, and conveying considerable biographical information. He ought to be thanked heartily for one thing, that he did not wait till his work was perfect before publishing. All bibliographies should appear in two editions—one in which the author and his friends do their best; a second, in which he uses the corrections and additions that his first edition is sure to call out. Father Finotti understands this, and appeals to his readers for emendations. We send ours at once, beginning at the beginning. Why is the book called 'Bibliographia Catholica *Americana*'? No work has any right to the title 'Bibliographia Americana' which omits the rich Catholic literature of Canada, of Mexico, of Peru, and other South American states—a literature which surpasses in extent and in commercial, if not intrinsic, value that which is recorded in the present volume. Father Finotti is an enthusiastic bibliographer, but also, it is easy to see, an unpractised one. In describing books in his own library, in regard to which, if anywhere, one would expect him to be accurate, he often leaves out such important particulars as the date of publication and the form. He gives a list of Chateaubriand's "American editions, as far as I know of them," and omits the two Boston (1802 and 1814) and the New York (1818) editions of 'Atala,' and the Boston edition of 'René' (1815), all of which he could have found in Sabin's 'Bibliotheca Americana,' a work which he should have consulted constantly. Only Part I. (1784–1820) of the 'Bibliographia' has yet appeared. It is arranged alphabetically. It is to be hoped that in the Fifth Part, which is to contain addenda, a chronological list will be given, which is absolutely necessary to enable the Bibliography to perform its historical work.

—Mrs. A. M. C. Seemuller, whose death in a German town where she had been residing for the benefit of her health has just been announced, is perhaps better known by her maiden name of Anne Moncure Crane, and still better by her title of "Author of 'Emily Chester.'" A dozen years ago, three or four American young women made a sudden reputation for themselves by writing a novel apiece, and of these Miss Crane was one. The author of 'Rutledge' was another; another was the author of 'The Amber Gods'; but Miss Crane's first book was more widely read than those of either of the other ladies. It will not now be recollected very well by many people, as its success was in reality essentially an ephemeral success, and the reputation it procured for its author fleeting. And this it is worth while to point out, because its example was not without influence on many of its author's young countrywomen, and there was at once a rise in the market value of the young heroine who is wavering between two gentlemen, for one of whom she feels "an affinity," and to the other of whom she is bound by common or statute law. The soulful young hero, also, who wants the young heroine whom he cannot have, was also much advanced in value by this novel. It, in short, brought to the knowledge of the average school-girl Goethe's 'Elective Affinities,' or rather a pale shadow of that work, and so was popular for a time. "Nature is to be studied in her monstrosities" was its characteristic motto, and it may be supposed to have done the school-girls vast good. It was, indeed, the work of a writer who, at the time of writing, was hardly more than a school-girl herself, and who had that excuse for the crudity of her book. It is told of the novel that the author was one day with a party of young ladies, her companions, one of whom proposed that they should form a literary club, each member of which should in turn write something to be read to the others, and that, acting on this suggestion, 'Emily Chester' was written, although the proposed club was never organized. Some five years afterwards the story was published. Mrs. Seemuller's subsequent productions, whether short stories for the magazines or longer ones, have attracted little attention, and required little; but if they showed no marked capacity, they showed, too, that the somewhat unfortunate plot of 'Emily Chester' was a matter of no significance.

—M. Gabriel Monod's 'Etudes critiques sur les Sources de l'histoire mérovingienne,' in praise of which we lately quoted a German critic, deserves mention again on account of the peculiar circumstances of its composition. M. Monod is the director of the Ecole des Hautes Etudes, and all his pupils took part in this work. 'Each one undertook the study of a special point, and reported in our weekly reunions the result of his researches, which were then discussed and commented upon by all present.' A better mode of making the study of history profitable and delightful could hardly be imagined, and our college professors having easy access to good libraries would do well to imitate M. Monod's example. Another work, going back to the original sources, is Charles Vatel's 'Charlotte Corday et les Girondins,' which fills three octavo volumes and a quarto atlas, and, after all, presents only one phase of the life which M. Vatel has undertaken to investigate *ad imum*. Two volumes have already preceded this one, and three more are promised, including an inedited biography of Charlotte Corday, by Louis Caille Desfontaines, her first historian. Following these, mention may appropriately be made of H. Wallon's 'La Terreur,' a critical study of the history of the French Revolution. Of Paul Lacroix's 'Vie militaire et religieuse au Moyen Age et à l'époque de la Renaissance,' we hope to speak shortly from careful examination. A work that vies with it in value and costly elegance is the 'Musée des archives nationales,' a sort of guide to the original documents of French history exhibited in the Hôtel Soubise, illustrated by 1,200 fac-similes of the chirography of the most important, from the Merovingian period down to the French Revolution. Ludovic Lalanne's 'Dictionnaire historique de la France' is the product of great industry at first hand, and is said to be one of the best of its kind. To Vapereau's 'Dictionnaire universel des contemporains' (fourth edition) has been added a supplement by Léon Garnier, in which the *Polybiblion* complains that the men of the 4th September, of the Commune, and of the Left occupy the principal place, while the "conservateurs" are sadly neglected.

—There is perhaps no class of subscription books, or books sold through agents, better calculated to impose on even the well educated than atlases, nor any on which the purchaser as a rule gets less for his money, or buys in a dearer market. The opportunity to examine carefully and to compare with the best work of the same class is generally altogether wanting, let alone a knowledge of the criteria of such work. Except the maps of the Coast Survey, of the Government expeditions, and here and there of a State survey, like that of California, American cartography cannot be praised very highly—not at all, we believe, when it pretends to be an original compilation from the best sources in regard to foreign countries, as in the case of our home-made atlases. At the present moment the best map-makers for the whole world are without question the Germans, and we have before us two admirable specimens of their work, which are being issued in parts that may be bought separately, at a very low rate. Of Dr. Karl von Spruner's 'Hand-Atlas for the History of the Middle Ages and of Modern Times' (third edition) we have already spoken, apropos of the earliest issues. The sixth part is now obtainable, and it and the preceding include maps of the Eastern Roman Empire in Justinian's time; Syria at the time of the Crusades; the Ottoman Empire and its dependencies in the XVIIth century; Spain from the beginning of the XVIth; Italy from 1492 to the Peace of Campo Formio (1797); France in its widest extent under Napoleon I.; Russia, during three periods, from 900 to 1240; the whole of Poland and its several partitions; Europe in 1810, with Napoleon's Campaign in Russia—after the Vienna Congress, 1815—in the middle of the XIXth century, with its ethnographical relations, etc., etc. We have named chiefly the larger maps, but there is a host of *Nebenkarten*—minor and supplementary maps—stowed away in the spaces not otherwise in request. Of the execution and accuracy of these productions it is quite unnecessary to speak. A certain amount of explanatory text accompanies each issue, and can be bound separately in a handy volume. Of equal merit, but dealing only with the present, the very latest, state of geography and of geographical science, is Adolf Stieler's 'Hand-Atlas of All Parts of the Earth and of the World-Fabric (*Weltgebäude*).' Each part (the 11th is now out) contains three full-plate maps, with frequent *Nebenkarten*, and already Germany and Switzerland have had five maps devoted to them, Spain four, Great Britain and Ireland three, Australia three, Belgium and the Netherlands two, Hungary and Austria two, Polynesia two, Denmark, West Indies and Central America, United States, Italy, and China and Japan, one each. Besides these, the "world-fabric" is illustrated in the visible side of the earth's surface (as a planet seen in space), the northern heavens in the middle of the XIXth century, the ocean currents, winds, and navigation courses, the North Atlantic Ocean. The United States are to be mapped in six plates, of which the first appeared in Part 9 (from the Pacific to the Rocky Mountains, as far south as San Francisco), and is better than any with which we are familiar, except so much of it as is contained in Mr. Clarence King's mining atlas. Both these "hand-atlases" (not so small as the name might be taken to imply) may be had either of B. Westermann or of L. W. Schmidt, in this city, by whom they are kept in stock. Later in-

vestigations and political changes may leave Stieler out of date in some particulars, but can never deprive it of real and permanent value.

'MIDDLEMARCH.'*

II.

IS 'Middlemarch' the most successful as it is certainly the most elaborate effort of George Eliot's genius?

Hundreds of critics will answer in the affirmative, and may point to the infinite variety of the persons described, to the exquisite beauty and wit of the remarks and epigrams with which the book teems, in confirmation of their judgment. But though 'Middlemarch' has stuff enough in it to fill out four or five ordinary novels, and though it would undoubtedly at once make the reputation of an unknown author, it will not be permanently placed on a level with 'Adam Bede,' 'Romola,' or with the most exquisite of all George Eliot's works—the 'History of Silas Marner.' The defect of the book is, that the parts are much more striking than the whole, and the source of this defect lies in two characteristics, one of which is peculiar to 'Middlemarch,' whilst the other, though traceable in all George Eliot's writings, becomes far more prominent in her later than in her earlier works.

What readers care for in 'Middlemarch' is the study of character, but the author herself, as she takes pains by the very title to point out, intended it as a study primarily not of character but of provincial life. She in fact aimed at two different objects. Her first aim is to give a picture of existence in an English country town forty years ago; her second, to show how this prosaic life told upon the characters of three or four of the persons born into it. Now, in the attainment of the first object, George Eliot completely succeeds. The novel as a mere rendering of English life rises as much above such works as Mrs. Gaskell's truthful and amusing sketch of 'Cranford,' or Miss Austen's truthful but to us, we confess, not very amusing sketches of commonplace people, as a work of genius must always rise above books marked more by grace or cleverness. Looked at in fact as a series of pictures, 'Middlemarch' is the most perfect representation of life in an English country town which is to be found in our language. Even the minute details of Fred's petty and somewhat sordid extravagance, and the descriptions of the horse-dealers by whom he is cheated, and of the billiard-room which he frequents, all add something to the picture, and bring before the mind the fearful and oppressive dreariness of a country town. But the very success with which George Eliot has painted 'Middlemarch' has been unfavorable to her full attainment of the second, and by far the more important, object of the tale. The form of the story has made it impossible to centre the reader's interest fixedly on any one character. You can never fully occupy your mind with Dorothea or with Lydgate in the same way in which you can give yourself up unreservedly to the character of Romola or of Silas Marner. Just when you begin to be anxious about Dorothea's fate, you are carried off to Lydgate and Rosamond; and when your whole mind has become filled with the question whether Lydgate's genius will or will not be ruined by Rosamond's pettiness, you are compelled to break away both from Lydgate and Dorothea, and to interest yourself in the fate of Bulstrode or in the happiness of the Garth family. The mere annoyance of being constantly shifted from one scene to another is a trifling consideration. A much more serious evil of this constant shifting is, that it prevents the author from fully elaborating any one character, and from studying the effect of the work as a whole.

It is always an ungraceful and often a foolish thing to complain of a great work because it is not something which it does not profess to be, and there is something specially futile in censuring an author of genius because he has not the peculiar genius of some other writer. There is nothing, for instance, gained by pointing out that 'Esmond,' because it is meant for an imitation of a work of the last century, wants the ease of 'Pendennis,' or by censuring Dickens because he is not Thackeray, or Thackeray because he is not Dickens. But it is sound criticism to measure an author's productions by the standard of his own greatest works. Now, it is when judged by this criterion that 'Middlemarch' will be found defective. The scheme of the book as the picture of a society has, as just pointed out, the inherent defect of making it difficult to fix attention on one or two persons, or to place the minor characters in due subordination to those worth elaborate study. But it happens that George Eliot has herself shown the way in which this difficulty can be met. In her earliest and even now her most striking work you have pictures of society. The 'Sketches of Clerical Life' paint perfectly and clearly the social circle in which Janet and Amos Barton move, but you never lose sight of the principal character in the pictures of the minor personages whose figures fill up the canvas. The reason of this certainly is, in part, that the three tales making up the 'Sketches of Clerical Life' are kept entirely separate from one another. The wonderful portrait of Janet is not injured by your being called upon to study before you see it complete the picture of Amos Barton's tragic stupidity, and, on the other hand, you can attend to the miseries of the Barton family without having half your mind turned to Mr. Gilfil's romance. If any critic will candidly compare the 'Clerical Sketches' and 'Middlemarch,' he will admit that the form of the one was planned under a happy, and that of the latter a distinctly unhappy, inspiration. For the one feature which would vindicate the scheme of 'Middlemarch' is wanting. At the beginning of the book, every one must have anticipated that the different histories commenced in it will by degrees become so closely interlaced as to form a complete whole. As a matter of fact, though Dorothea's life affects the life of Lydgate, and though there is a link (a very slight one, it may be added) between Fred's marriage and Bulstrode's calamity, still the book consists of at least three perfectly separate tales. A very slight amount of change would make it possible even now to publish separately the history of Dorothea and Casaubon, of Lydgate and Rosamond, and of Fred and Mary, and no one can doubt that the author might originally have produced these histories as three separate tales of life in 'Middlemarch.'

"Any one," writes George Eliot, "watching keenly the stealthy convergence of human lots, sees a slow preparation of effects from one life to another which tells like a calculated irony on the indifference or the frozen stare with which we look at our unintroduced neighbor. *Destiny stands by sarcastic with dramatis personæ folded in her hand.*" This passage, and especially the last sentence of it, might be taken as a fair description of the attitude occupied by the author towards her own work. To a certain extent in all her books, but to a far greater extent in 'Middlemarch' than in any of her other writings, George Eliot performs the part of the "destiny which stands by sarcastic," and comments on the fate of the actors whom she brings into existence. A main feature—in short, perhaps the main feature—of 'Middlemarch' is the prominence given to what, borrowing a term from Greek tragedy, may be called the "chorus." The work begins with a prelude in which the reader is warned that he is to hear the history of a "St. Theresa, foundress of nothing, whose loving heart-beats and sobs after an unattained goodness tremble off and are dispersed among hindrances instead of centring in some long recognizable deed"; and the work concludes with an epilogue pointing out how the modern Theresa had failed, and the cause of her failure. Throughout the whole course of the story, moreover, the chorus is never long absent. At every turn reflections are introduced upon the characters, upon the events, upon the way the characters and the events work upon one another. No one who admires beautiful writing or can appreciate striking and original thoughts can fail to feel that the chorus or reflective portion of the book is full of beauty and power. To a large class of persons it forms probably the great charm of 'Middlemarch.' It certainly constitutes the most peculiar feature of the book. But a critic, even while he admires the reflections themselves, and feels that as moral reflections they possess far greater depth and subtlety than the remarks generally forced upon the world under the guise of moral teaching, can hardly deny that the part taken by George Eliot as the moralizer over her own handiwork, if it gives her novel a peculiar charm, also greatly damages its whole effect. It is a very curious study to observe the results which follow from the characteristic in question. One main and most injurious effect is that some of the characters are never drawn directly. We see not the men themselves, but the personages as they appear in the author's reflections upon them. Take, for example, Bulstrode: an immense amount of skill, pains, and thought has been expended upon him yet he never becomes a really living character in the sense in which his wife, for example, of whom comparatively little is told us, stands out as a living human being; and the reason of this is obvious. Of Bulstrode's thoughts and motives, of his views of religion, of his ideas of Providence, of his attempt to adjust his actions to principles which he held and yet had not the firmness to practise; of all this we hear a great deal, and a great deal which is very well worth the hearing. As an analysis of a peculiar kind of hypocrisy the account of Bulstrode is perfect, and a reader must be much better or much worse than his neighbors who does not feel many of the reflections on Bulstrode come painfully home to his own conscience. But of Bulstrode himself we know very little. The most marked personal feature about him is that he had a bad digestion, and that painful reflections on the state of his body alternated with anxiety about the state of his soul. All we are told, as far as it goes, is natural enough; but what we maintain is that he is never really painted. We see a reflection of him, but we never see the man.

A somewhat similar defect is traceable in the description of Will. Take him all in all, he is the least satisfactory character in the book. An amateur, who could not work and would not study, who was too proud to propose to a lady whom he thought richer than himself, and not too proud to sneer at

* 'Middlemarch: A Study of Provincial Life. By George Eliot.' London: Blackwood & Sons. New York: Harper & Bros.

and annoy the man on whose charity he lived; who, having apparently a marked distaste for work and a dislike to the serious and prosaic side of life, ends his career as an active member of Parliament somewhere between 1832 and 1840—a follower, we must presume, of the Radicals of that day, that is, men like Joseph Hume—is, we confess, a character which seems to us neither interesting nor consistent. What is most apparent is that Will has a great charm for George Eliot, and the only conclusion to which one can in fairness come is that, skilful as she is, she has for once failed to put before the reader a true picture of the man as he appears to her own mind. Take Will as the facts of his life paint him, and he appears a feeble, rather well-disposed Tito, who, late in life, turns into a feeble and less energetic Felix Holt. Take him as he is spoken of by the author, and you will suppose him a man of considerable originality, great generosity, and of a special grace—a person, in short, not absolutely worthy of Dorothea, yet whom she might marry without sacrificing the lofty greatness of her nature. The cause of this divergence between the estimate of Will formed by the author, and the view of him actually taken by the reader, is, no doubt, that he is not satisfactorily drawn. But the ultimate reason why the drawing is unsatisfactory is that George Eliot is occasionally so much occupied in the chorus to her play that she forgets to introduce us thoroughly to the characters. Will and Bulstrode afford the most marked instances of this omission; but a careful comparison say of 'Silas Marner' or of 'Janet's Repentance' with 'Middlemarch,' is sufficient to prove to any one but a very fanatical admirer that as the number of George Eliot's "wise, witty, and tender" sayings increase, the directness with which she paints living persons diminishes.

The writer's preoccupation with the reflections which her story is to suggest injures her actual delineation of even those persons whom she intends to make prominent by their own acts and speeches. George Eliot tends, no doubt, unconsciously more and more to make even the most lively and original characters in the book the representatives of different aspects of her own thoughts. The tones are very various, but they all or nearly all seem to be the tones of one voice differently modulated. Take, for instance, Mrs. Cadwallader. No one is more amusing and no one more alive, but a great number of her speeches are really little but the wit of George Eliot thrown into a sharp, rustic, and caustic form.

Her description of Casaubon's blood, "somebody put a drop under a magnifying-glass, and it was all semicolons and parentheses," is an exquisite sneer, but it is exactly the kind of sarcasm, dashed with a flavor of scientific allusion, which comes perfectly naturally into reflections by George Eliot, but comes far less naturally from the mouth of the rector's wife. Mrs. Cadwallader, again, tells us how she had learnt to like her husband's sermons: "When I married Humphrey I made up my mind to like sermons, and I set out by liking the end very much; that soon spread to the middle and the beginning, because I could not have the end without them." Here, as elsewhere, the phrases may be the phrases of Mrs. Cadwallader, but the wit is essentially the wit of George Eliot. In short, Mrs. Cadwallader, and the same thing is true of half the secondary characters, is in reality not so much a secondary character as a part of the great chorus of reflection which accompanies the tragedy from beginning to end. In general, as we have said, the reflections, if they somewhat injure the movements of the drama, are in themselves so beautiful that we should scarcely care to have them omitted. In one respect, however, they are themselves open to criticism. They are occasionally injured by what truth compels us to call scientific conceits. No doubt a time may come when the progress of knowledge will make metaphors drawn from physical science really natural as appropriate illustrations, but to such a stage of knowledge the mass of so-called educated readers have certainly as yet not attained:

"Even with a microscope directed on a water-drop we find ourselves making interpretations which turn out to be rather coarse, for whereas under a weak lens you may seem to see a creature exhibiting an active voracity, into which other smaller creatures actively play, as if they were so many animated tax-pennies, a stronger lens reveals to you tiniest hairlets, which make vortices for these victims, while the swallower awaits passively at his receipt of custom. In this way, metaphorically speaking, a strong lens applied to Mrs. Cadwallader's match-making will show a play of minute causes, producing what may be called thought and speech vortices to bring her the sort of food she needed."

Now, is there in truth one out of a thousand persons who reads this passage who finds that the ten lines of scientific metaphor really make clearer to him the fact, simple enough in itself, that Mrs. Cadwallader acted under the influence of a number of infinitely small causes? Is there any one who does not feel that the remark in the 'Mill on the Floss,' that people do not really weave elaborate plots, but live very much from hand to mouth, is in fact worth all this talk about hairlets, lenses, and vortices? In truth, throughout 'Middlemarch,' we feel inclined more than half to curse the day when George Eliot began rather to reflect than to copy. The book is her greatest effort. Its defect is, and this defect places it to our minds below her most perfect writings, that it is an effort in the bad as well as in the good sense of the word. The very brilliancy of the epigrams, the marvellous power of analysis used in tracing the action of character, the elaborate care given to the separate parts, leaves in the mind a sense of something like strain, and makes it difficult to look at the work as a whole. Yet it is impossible to part from a book which may be said, almost without exaggeration, to have made for many persons the chief happiness and interest of the last year, with criticisms on defects which, be they real or not, would scarcely deserve notice in another of inferior power. One point which tempts to criticism is that you can easily perceive that when, in the interest of the story, George Eliot forgets theories and has not time to make reflections, the whole power of simple, direct description is still as strong in her as ever. The last number was written under some pressure for space. In one or two points it is certainly less finished than the rest of the book; but just in proportion as the work becomes less elaborate it grows more effective. Harriet Bulstrode is at no time a very prominent person in the story. The reader thinks of her as slightly vulgar and decidedly commonplace. Yet the whole history of her behavior under the most crushing misfortune, when the husband whom she has loved and revered turns out to be certainly a hypocrite and probably an actual murderer, is as pathetic as anything George Eliot has ever written. Mrs. Bulstrode goes down from her room to see her husband, who now knew that she had discovered all:

"'Look up, Nicholas.' He raised his eyes with a little start, and looked at her half amazed for a moment. Her pale face, her changed morning dress, the trembling about the mouth, all said 'I know,' and her hands and eyes rested gently on him. He burst out crying, and they cried together, she sitting at his side. They could not yet speak to each other of the shame which she was bearing with him, or of the acts which had brought it down on them. His confession was silent and her promise of faithfulness was silent. Open-minded as she was, she nevertheless shrank from the words which would have expressed their mutual consciousness as she would have shrunk from flakes of fire. She could not say, 'How much is only slander and false suspicion?' and he did not say, 'I am innocent.'"

CRANCH'S ÆNEID.*

MR. CRANCH belongs to that class which may be called a natural product of our democratic institutions in one of the best directions of their development—a class of which Mr. W. W. Story is perhaps the best specimen; many-sided men, practising both art and literature, and more than one branch of each. In the dearth of encouragement for strict specialists, they do much to form the public mind and improve the public taste, and to redeem us from the charge of utter materialism. Still, the very fact of their many-sidedness sometimes interferes with their success in certain kinds of work which require long preparation and special attention.

"Caparisons are odorous," yet the very title of this handsome volume suggests a comparison. Longfellow has translated Dante, Bryant Homer, and now Cranch translates Virgil. When we have said that neither the American 'Iliad' nor the American 'Divine Comedy' fills our idea of what Homer and Dante should be in English, the reader will be less surprised at the assertion that Mr. Cranch has followed suit, and given us an inadequate rendering of the 'Æneid.' This is the more to be regretted, because he has started from a right theory and on correct principles; his conception is blameless, the fault lies in the execution.

In translating a classical or foreign author, one of the first considerations is the form to be employed; that is to say, the metre. Once this would have been the first and almost the only consideration. But the progress of scholarship has made the *exact* interpretation of the original a more important matter than it was. Greater accuracy is required both in the construction and in the interpretation of single words. Thus, we are not quite certain what is the best rendering for *emicat*, Æneid, lib. vi. v. 5 ("juvenum manus emicat ardens"); but we *are* sure that the usual translation, "springs," or "leaps," does not give the entire sense of it. Perhaps an additional adjective for the noun, or an adverb attached to the verb, would bring out the full force of the expression. Again, every school-boy thinks that he can construe the well-known line describing the Cyclops; yet it is very doubtful if the ordinary rendering is correct, and if the accumulation of three adjectives after one substantive is good, idiomatic, Virgilian Latin. The line should probably be pointed

"Monstrum horrendum, informe, *ingens cui lumen ademptum*,"

and translated accordingly, "bereft of his huge eye." If it be said that accuracy in these minor details is unnecessary, because verse translation is never so literal, we reply that in order to be able to give the proper equivalents, the translator must understand the exact meaning of the original.

* 'The Æneid of Virgil. Translated into English Blank Verse, by Christopher Pearse Cranch.' Boston: Osgood & Co. 1872.

Under this head we may include some obvious points of quantity, about which translators are sometimes careless. And here we are obliged at the outset to mark a blunder of Mr. Cranch, which might perhaps have passed unobserved had he not taken special pains to call attention to it in a note. Apparently not knowing what a spondaic line is

(Quales | Threici | æ quum | flumina *Thermō* | *dontis*),

he writes *Thermŏdon*, and blames Symmons and Conington for writing *Thermōdon*.

Still, in reference to the general reader, the principal question for the classical translator will be, What metre shall he adopt? Our first answer is negative. With all due deference to the very respectable authority on the other side, *not* the classic hexameter. One of the ordinary objections, and the first brought forward by Mr. Cranch in his preface, namely, that the English language is short of spondees, does not seem to us insurmountable. It is only a question of time and trouble. By taking parts of words, and making a cæsura in every spondee, you may find enough of these feet to break the dactylic monotony. Much better is the second reason which he assigns, to wit, that the metre is "obsolete," exotic, and un-English. Indeed, we are inclined to adopt his *obsolete* as a very happy epithet, and to maintain that, whether we understand the proper rhythm and swing of the old hexameter or not, it is unsuited to modern tongues. Much has been said in praise of the German hexameter. Our own opinion is, that if an old Greek or Roman could be resuscitated, a large dose of German hexameters would send him headlong back to his grave. What sort of dactyl, for instance, is *säuselnde*, with its *three* consonants after the vowel of the second (*short*) syllable? Setting German aside, in English the metre is certainly unhandy, and, after a time, tires both writer and reader. This is a more potent consideration than may appear at first sight. Let us illustrate it by the French heroic metre. That metre, as Bishop Percy observed, exists in English, but only in the form of popular songs and "broadside" ballads. Hence we cannot invest it with sufficient dignity for heroic verse. Who could suffer canto after canto of lines like these?

"The war-cloud of dust, rolling heavy and dun,
Cut off from the fields all the light of the sun.
The crash of the drum and the clarion's blast
The death that was following grimly forecast."*

No one would think of translating the 'Henriade' (supposing it worth translating at all) into anything but Popian heroics, nor would any one think of translating Racine except into blank verse.

As respects Homer, our own idea has always been that he should be translated into fourteen-syllable iambics, the metre employed by Chapman, his first complete translator. Chapman's chief fault was that he broke up the sense and ran it from one line into another, which is utterly un-Homeric. Whenever he has made a full line, with sense and sound closing together, his metrical advantage over his successor is to us extremely clear. But as we never found any one to agree with us, except the late Dean Alford—"Christopher North" coquetted in that direction, but could not make up his mind—we suppose this must pass for a private crotchet. Aytoun contended that long trochaics, like 'Locksley Hall,' were the proper English vehicle for Homer. This may also be considered an individual fancy. No one has ever proposed to apply either of these metres to Virgil.

The irregular ballad-like stanza, of which Scott's poems are the best long specimens, has been recommended and tried as the proper medium for transferring ancient epics into the English language. Maginn made "Homeric Ballads" out of episodes in the Odyssey. Professor Conington has rendered the Æneid into Scottian verse. The motive, we suspect, was different in the two cases: in the former, a notion of the ballad origin of Homer, and a conviction that in any case some of the episodes were intercalated ballads; in the latter, a persuasion that the martial tramp of Virgil was best expressed by the metre of Scott. There is a certain amount of reason in this, but the insuperable objection interposes itself that the classical epic was written in a continuous form of verse, and is altogether metrically misrepresented by a changeable and changing versification. The extravagance of turning regular into irregular metres was unintentionally illustrated by Bulwer when (in his 'Athens') he substituted a wild, choruslike lyric for the stately iambics in which Clytemnestra relates† the progress of the beacon-fires that announced the capture of Troy.

There remain the English heroic couplet and blank verse. The former has these recommendations: First. Authority and precedent: the weight of which is much diminished by the consideration that the epic of our language is written in blank verse. Second. That rhyme is easier to remember. This reason may appear to some readers puerile; with us it has a definite weight. Passages from classic translations are some of the very best exercises for schoolboys, who have to commit to memory "pieces" for recitation or declamation; in later life they form agreeable ornaments to solitary reflection, to private conversation, and to public oratory. But these and some other reasons, which might be urged in its favor, are not strong enough to overcome the objections to rhyme, such as the occasional omissions and more frequent paraphrases which it requires. Even in original composition one line of a couplet is often a mere makeweight to the other, and this must more frequently be the case in a translation.

Mr. Cranch has, therefore, to our mind, acted wisely in choosing blank verse for the metre of his 'Æneid.' But now comes the great trouble and difficulty, something much greater than any of the difficulties attendant on rhyme, because more subtile and less apparent. Blank verse is both the easiest and most difficult of all verse to write; the easiest to make out *somehow*, the most difficult to inspire with a true *afflatus* of poetry. When a versifier has a facility of rhyming, the mere rhyme supplies something which, if not exactly poetry, is at least a specious imitation of it—witness many jingles of Poe, Swinburne, and Jean Ingelow, which owe their doubtful poetic *status* entirely to their endings, and, if deprived of these, would be sheer balderdash. The writer of blank verse has no such help. If he does not possess a real sentiment of harmony and melody, as well as somewhat of the true poetic vein, the literal blankness of his composition will stand out. His verse will be little more than prose cut up into equal lengths. And, therefore, while any fairly educated person who can count on his fingers, and has read a certain quantity of poetry, can turn out something that will do duty for blank-verse, the men living or dead who have produced the genuine article are few indeed. Moreover, there is an additional difficulty in the case of translation; the original author has a manner of his own, which must be to some extent imitated by a translator who understands his business. For instance, if Tennyson had the patience and perseverance to translate Homer, his version, despite sundry Tennysonian mannerisms, would be a masterpiece. But he could not translate Virgil equally well; he has not "go" or *entrain* enough to reproduce the Latin poet.

There is a kind of translation which ingeniously manages to take all the poetry out of the original. We all know what Hobbes did for Homer. Now we will not say that Mr. Cranch's work is quite on this level, but it often descends perilously near to it. No person unacquainted with Latin could gather from it the least idea of the sonorousness, the majesty, the grandeur, and, at the same time, the vigorous movement and martial swing of the old poet, whom everybody used to call Virgil. We are careful to reiterate the epithet martial, because the ideas of valor and battle are as prominent in Virgil's verse as in Bellini's music. After this general pervading fault, it is scarcely worth while to dwell on particular blemishes.

That our readers may judge for themselves, we give Mr. Cranch's rendering of one of the finest passages in Virgil, the awakening of Æneas by the Trojan conflagration:

"Meanwhile, with many a lamentable cry
The city is confused. And more and more,
Although my sire Anchises' house stood far
Away, hid and secluded, 'mid the trees,
The noise grew loud, and all the horrible clang
Of arms increased. Starting from sleep, I gain
With swift ascent the housetop's loftiest verge,
And stand and listen with arrected ears.
As when the flames are raging through the corn,
Driven by the furious winds—or a mountain stream
Swollen to a rapid torrent, floods the fields,
And desolates the smiling crops and all
The labors of the oxen, and drags down
The forests; and the unconscious shepherd stands
Listening upon the peak of some high rock,
Bewildered by the rushing noise below,
Then verily the false faith of the Greeks
Is manifest—their treacherous arts revealed.
Down falls the palace of Deiphobus
Amid the conquering flames; Ucalegon
Next burns. The broad Sigean waves reflect
The fiery glow. And shouts of men are heard
And blare of trumpets. Wildly I seize my arms;
Although for arms there seemed but little use.
But still I burned to gather a small band,
And with my comrades to the citadel
Rush on; for rage and fury hurried me.
A glorious thing it seemed to me to die
In arms."*

POLITICAL TEXT-BOOKS.†

IT is a difficult question to decide how far our public-school course should be widened, so as to take in the study of political and social science. On the one hand it is complained, and with some justice, that the introduction

* "Les nuages épais que formait la poussière," etc.
† Æschylus, 'Agamemnon.'

* "Diverso interea miscentur moenia luctu," etc.—Lib. ii., 298 sqq.

† 'A Manual of American Ideas, Designed, 1, For the use of Schools; 2, For the Instruction of Foreigners seeking Naturalization; 3, For the Use of Voters. By Caspar T. Hopkins, M.A.' San Francisco: Printed for the Author. 1872. 12mo, pp. 320.
'Social Economy. By J. E. Thorold Rogers, Tooke Professor of Economic Science, University of Oxford. Revised for American Readers.' New York: G. P. Putnam & Sons. 1872. 12mo, pp. 167.

MADDEN PUBLIC LIBRARY

of a multiplicity of branches into our schools has already resulted in a superficial and fragmentary knowledge of many things, which is of far less service in the long run than the narrower but more thorough training of the last generation. On the other hand, if the one sufficient justification of free and compulsory education is this, that universal education is the sole safeguard of a political system like ours, it would seem that no single study should take precedence of that of government and society. And we are inclined to think that this is so; that when the pupil can read and write and reckon, and has a fair general knowledge of the geography of the earth, and the history of his own country, the very next object of attention should be, not algebra, or chemistry, or astronomy, or even perhaps natural philosophy or physiology, or grammar, but the institutions under which he lives. The necessity of this has been recognized in the many serviceable text-books on the American Constitution which have appeared of late years. The two books before us undertake to widen the field somewhat further—the one, by a study of "ideas," which is to precede that of institutions; the other, by the general principles of political economy and social science. We have no doubt that both authors undertake to supply a real want; we think, however, that the book that is wanted for our schools is one which shall incorporate all that is desirable on these heads—or at least the first mentioned—with the detailed study of the Constitution of the United States. Few schools can afford the time for two books on so nearly related subjects.

In the first place, of Mr. Hopkins's book, we are shy of the study of "ideas" for any but very advanced students. The scholars in our public schools do not want abstractions, but a clear presentation of concrete facts—including, no doubt, certain definite and well-established general principles. That is, the study of ideas should follow, not precede, a knowledge of outside facts. When a class has once acquired a familiarity with the institutions of its own country, it can understand something of those of other countries, and can for the first time see a real meaning in such terms as *freedom, republic, citizen;* until then, the most carefully learned definitions are nothing but empty strings of words. For this reason we do not think Mr. Hopkins's book is likely to be of much service in its present form. It is intended as an introduction to the study of government, while most of its material is better fitted to come in a later stage.

Perhaps what we have said upon the general object of the book is enough; but we will remark further, that in the execution of it the author has made the same mistake, of giving too much general talk, and too little definite, easily mastered matter. A great deal of it is in what one may call the "Fourth of July" style, a universal eulogy of whatever is American, with no attempt at teaching the pupil to discriminate what is good in other systems, or what needs to be improved in his own. He is not distinctly taught that our American institutions and ideas are after all only a development of English; and the term "American" is sedulously reiterated, even in cases where "English" would have been equally correct. We cannot value too highly the inculcation of genuine American ideas, the political principles upon which whatever is good in our system rests; but it can only do mischief to encourage the common habit of glorifying whatever is American. It ought to be remembered that it is because of this practice of indiscriminate glorification and boasting that so many at the present day have lost even a pretence of sympathy for American republicanism. They see that a great part of what they have been taught is mischievous and untrue, and they rush, no less illogically and inconsiderately, in the opposite direction. As an illustration of this false treatment and exaggerated Americanism in the book before us, we will mention the chapter on aristocracy, and the frequent recurrence of such statements as that "no nation that ever existed has been so completely governed in all its public acts by the influence of pure religion among the people" (p. 123).

Apart from the feature just objected to, the book has considerable merit, and contains much that could very advantageously be incorporated in a study of the Federal Constitution—part of it as introductory, part as a sequel, but most in connection with the commentary upon the several clauses of that instrument. The special attention given to "Legal Ideas" is a very good feature, and the chapter on Checks and Balances, p. 64, is an example of the author's best work. In what we have said we have had in mind the wants of the school-room; for the other professed objects of the author the book would serve a very good purpose, except for the aggressive character of its Americanism, which would certainly do the newly naturalized citizen more harm than good.

Professor Rogers's 'Social Economy' is a brief and compendious discussion of the principal social phenomena, from the point of view of political economy; embracing therefore an outline of political economy as a basis of the further discussion. The author has been remarkably successful in compressing this large and difficult subject in a small space, and in treating it in a clear and interesting manner. He seems, however, to have erred sometimes in aiming overmuch at brevity and simplicity, and in trying to avoid technicalities in points which are essentially technical. The subject of Rent, for instance, p. 21, is not made at all clear; the relation of Production to Capital, p. 60, is not treated so fully as one would desire; and the definition of the fundamental topic of Value does not receive the attention it requires. On the whole, we should say that the purely social chapters were better than the economical ones, although some of the latter are excellent, as, for instance, those upon Wages, Labor, and Money.

It is very seldom that a text-book prepared for one nation is adapted to the use of another, and the book before us is no exception to the rule. Not that there is any American science of political economy, or that we would take exception to the views advanced here; but there runs through the entire discussion the assumption of a condition of society and tone of thought which are different from our own. So simple a circumstance as that the English economists always speak of "bank notes" where the American boy only knows "bank bills," illustrates this point; and if we mention a few obvious cases, it is with the understanding that the feature objected to consists mainly in points too subtle to analyze or point out definitely. The American editor has done his best to obviate this difficulty, but it lies in the nature of things and could not be wholly removed. The sentence, p. 20, "The climate of the island [New Zealand] is very like that of England, and the land is as fit for ordinary crops as that of our own country"—of course intended for English boys—is a good example of this defect. Sentences like this are not uncommon, but to be sure present no difficulties to the American reader. The ingenuous student will be delighted (p. 118) to learn that tea, coffee, sugar, spirits, and tobacco "are nearly the only objects on the use of which the Government of this country lays any taxes." And we doubt whether the school committees of Lynn or Cohoes would dare to introduce a book which taught the children of operatives that their father's employer "is called master" (p. 46); the next edition must read "boss"!

Few topics deserve better the attention of our higher grades of schools than that treated in this volume; and, giving all weight to the trifling defects to which we have alluded, we doubt whether a better book for the purpose is likely to be provided.

A Memorial of Alice and Phœbe Cary. With some of their later poems. By Mary Clemmer Ames. (New York: Hurd & Houghton.)—This volume is not a memoir, but a memorial—not a biography so much as a tribute of affection. For a biography no materials existed, since not only were the incidents too few and too commonplace for remark, but there was nothing to throw light on them, such as they were. The author declares that, looking through the entire mass of their papers, she found not a single word of their own referring in any personal way to themselves. They shrank from writing letters; they kept no diaries of thought or incident. The few letters retained by their friends, sometimes, perhaps, unobservant of the writer's request that they should be burned, were either business epistles or friendly communications, too personal in character for the public eye. The author, therefore, had no choice but either to abandon her task or perform it as a labor of love, drawing on her own stores of affectionate recollection and borrowing the glowing testimonies of personal friends.

This she has done, The book is evidently written by a lover for lovers. To the critical or indifferent reader the excess of sympathetic admiration will make the pictures seem overcolored, and will raise a suspicion that they are untrue. Proverbially, the language of love is language of exaggeration, and lovers only should read it. Of those who knew the sisters intimately, some will no doubt think the portraiture just. Others will fail to find a justification of its brilliancy in anything that remains of them. For example, the specimens of Miss Phœbe's puns and repartees on page 186 will not persuade many people that she was what Mrs. Ames calls her—"the wittiest woman in America." The samples of verse in this book are of the same quality with the pieces in their published volumes, and they do not bear out the flattering encomiums on the genius of their authors with which these chapters abound. They show a talent for versification, an easy flow of sentiment, a pleasing variety of rather commonplace thoughts and fancies, a ready command of current poetical language, but nothing of genius, even in the modest form of originality in phrase or rhythm, which is characteristic of so many modern poets. Few of them surprise the imagination; most of them are conventional in thought and imagery; many of them read as if done to order for the magazine or newspaper. To the literary man they are uninteresting; to the critic they are occasionally exasperating. And yet these poems have an immense circulation among kind-hearted, uncultured people. They are copied, committed to memory, kept among the few treasures which the simple allow themselves. Some of them have histories woven in with their lines—histories of men and women whom they have touched and consoled.

In truth, these women, Alice especially, possessed qualities of a rare order, and which explain the affection they won, and also the popularity they enjoyed. To live down a bitter disappointment, to surmount a crushing sorrow, to leave home, however uncongenial, to come to the city of New York "in the desolation of youth," self-dependent, poor, almost a stranger, to live by honest, unpretending literary labor, to earn something more than a subsistence, a competence, to make a name at home and abroad that was honored by many well-known critics, and loved by readers of many classes, to secure by sheer industry a commodious, attractive house in the heart of the city, to make it elegant as a dwelling and dear as a home, to draw in a company of friends whose weekly meetings were kept up for many years, and were a source of pleasure to hostesses and guests; to gain the esteem and affection of men and women of various conditions and tastes—editors, writers, clergymen, publishers, men of business, and men of ideas—to maintain the personal dignity so completely as to escape misunderstanding, to be independent without being unsympathetic, and sympathetic without being undiscriminating, certainly shows remarkable power of character, and all this the elder Miss Cary, and the younger too—though less conspicuously, partly because she was younger and in a sense secondary—did.

A most important element in the success of these women personally, socially, and even in literature, was their strong domestic feeling. Their dislike of "boarding" amounted to aversion. They would have their home though it was only a "flat" up two flights of stairs, though Alice papered the walls and Phœbe painted the floor. There should be pictures, though of the simplest description and framed by their own hands; there should be objects of taste, though money had to be saved from material comforts to procure them. A place, however humble, to which they could attach themselves, with which they could become associated and identified, where friends could find them, was necessary to them. When that place was the modest house in Twentieth Street, they gathered into it a wealth of human fellowship that was of very great value to them as writers and as women. The picture which their biographer gives of their domestic life, their daily employments, their personal habits, their private and social relations, their Sunday-evening receptions, is not only attractive but instructive, and makes one wish that the secret of their success could become an open one. It is a secret that Americans are in serious danger of forgetting—a homely New England or Old England secret that is worth more even to literary people than the feverish restlessness of talent which secures transient spasms of success.

Freeman's Historical Course for Schools. Outlines of History. By Edward A. Freeman, D.C.L., late Fellow of Trinity College, Oxford. (New York: Holt & Williams. 1872. 16mo, pp. 366.)—It is a thing to be grateful for when a man who is really a master in his own field takes the trouble to prepare a book for schools; for school text-books represent for the most part only the inaccurate half-knowledge of professional book-makers, very seldom the ripe fruits of original study. In no department has a reform been so much needed as in history, where the field is so vast, the details so endless, and our previous knowledge on many points so fundamentally modified by recent investigations, that none but a profound special student is competent either to portray the successive epochs in their proper proportion to one another, or to secure accuracy at every step. Probably no person living is so well qualified for this task, by the breadth and accuracy of his knowledge, by the warmth with which he enters into the spirit of the times he portrays, and by his interesting style, as Mr. Freeman; and it is sufficient praise for the work before us, that it is as perfectly as possible a representation of its author's mind—in its defects, it is true, as well as its merits—in short, that it is "Mr. Freeman all over."

What these defects are no one needs to be told, and they are so slight in comparison with the accompanying merits that we will not repeat them, except so far as to point out in what degree they may interfere with the practical usefulness of this book. The very extent of his scholarship, and the sympathizing habit of his mind, are the source of the feature of the book from which we fear most. We fully recognize the difficulty which any person, and most of all a person of universal knowledge, must experience in deciding what to leave out, and we hasten to say that Mr. Freeman has succeeded in this better than most of his predecessors. Still, we think that if he had distinctly formulated in his mind the rule—which we conceive to be the true one for a book of this class—never to put in a name or a date which could be omitted, and had at the same time not diminished the bulk of the book, he would have left out a great deal of matter which will, we fear, be found a heavy burden for a class in school, and supplied its place with a fuller account of Hannibal, Cæsar, Charles the Great, William the Silent, the Battle of Marathon, the French Revolution, and other names and events of the first importance.

For instance, why say (p. 307): "There was another small war in Germany in 1777 about the succession of Bavaria"? And why not have resisted the temptation to add a bit of instruction about historical geography, on p. 323, where we are told that Robespierre "was a native of Arras in Artois, but, owing to the conquests of Louis the Fourteenth in the Netherlands, his country was now French"? It must be remarkably intelligent and well-read boys, or of an age higher than those of our highest schools, who would at this point remember enough about the northern frontier of France to have this sentence mean anything to them.

This leads us to the principle upon which detail should be selected in a book of this sort. Nothing, as it seems to us, should be introduced which cannot be made to fit in to the previous knowledge of the student and readily assimilated with it. Now there is much detail, like the two points just cited, which will merely pass through the mind of the scholar, making him none the wiser for having learned it. Historical geography, for instance, important as it is, may as well be left almost entirely aside until the student has historical maps to help him.

Except for this occasional exuberance of detail, the book is all that could be desired. It requires intelligence and some degree of culture in the pupils; but we have no fault to find with this. Nor do we object to the hearty expressions of like and dislike which we meet now and then. It is right that our boys should be taught that the greatness of Napoleon was essentially false and selfish, and that Julius Cæsar "took up the cause of the people, not honestly, like the Gracchi, but to serve his own ends." There is, however, something petty and insular in continuing to use the name *Bonaparte* after Napoleon was crowned emperor. We have but one criticism to make upon the general scope of the work: that there is no sketch of Oriental history in introduction to that of Greece. Surely we inherit the civilization of Egypt, as well as of Greece and Rome, and some outlines of these Eastern empires might legitimately be said to bear upon the "history of the West."

We find very few misprints. On page 213, Sixtus the Fifth should read Sixtus the Fourth. Charles IV. was crowned emperor in 1355, not 1325 (p. 203); on the same page, Albert II. is made to have died in 1438 instead of 1439. The mistake is a very natural one. Sigismund died December 1437, and Albert succeeded early the next year, dying in the year following. In the second sentence on page 98, the pronoun *them* has no distinct antecedent.

Mr. Freeman's historical course is on every account to be welcomed; and whether or not the several volumes are adopted in our schools, we shall at any rate have a series of brief, readable histories, well adapted to private reading and family use. They may serve an excellent purpose as reading-books in schools.

Modern Turkey. By J. Lewis Farley, Consul of the Sublime Porte at Bristol. (London: Hurst & Blackett.)—The object of this book is to whitewash the worst and most uncivilized imperial government in the world, based on the most exceptionable of all oligarchies, that which is created by servility, subserviency, and favoritism; to represent it as an Utopia left behind by advancing civilization, and to which enterprise and industry may go back as if it were the rediscovered Garden of Eden (which the author fixes so dogmatically and naïvely in the neighborhood of Beyrout); and to gild a social state which contains and develops the worst vices of civilization with a rapidity and luxuriance exactly proportional to the access of civilization.

When we read that "nowhere in Europe is that 'pearl without price,' the purity of woman, to be found in greater perfection than in the households of the Osmanlis, and although the Turks are unfortunately not free from evils, many introduced from this side of the Alps, there is one evil, the social evil, which has no home among them"—we are reminded of the reply of Pio Nono, when urged to legalize houses of ill-fame in Rome: that half the houses in Rome were already such; needless to legalize any more. Where there is no respect for the social purity of woman, there can be said to be no social evil; the extent of the vice transforms it into a kind of morality, and where a man may take a wife one day, and send her back to her father a divorced woman the next, there is little care for a vulgar prostitution; and where the men generally prefer a worse vice—as in all the Turkish cities—the social evil may languish for want of patrons; but any man who has lived with his eyes open in a Turkish town with a mixed Christian and Mussulman population, knows that Turkish prostitutes are far more numerous than Christian, and that the personal liberty accorded to the wives of Mussulmans is largely abused for the prosecution of intrigues, especially with Christian gallants. Harem intrigues are the standing distraction of European attachés and employees in Turkish towns, and nowhere in the

range of a partial acquaintance with the empire have we ever known the Turkish civilized woman to compare with the Greek, though the Levantine may possibly rank below the city Mussulman. The whole chapter on Turkish women is a tissue of the grossest misstatements, which show either complete ignorance on the subject, or wilful disregard of the truth in reference to it. The subsequent chapters on armament, the capitulation, etc., are equally worthless.

Etudes sur les Tchinghianés, ou Bohémiens de l'Empire Ottoman. Par Alexandre G. Paspati, D.M. (Constantinople: 1870.)—When the star of the East, the Sanskrit, began to cast its dazzling light upon the philological horizon, etymologists were thrown into convulsions, and ecstatically concluded that they had at last discovered the key to all linguistic knowledge. The volume before us, however, shows that the East has more stars than one. Dr. Paspati's 'Gypsilogia' contains an account of the Gypsies of Turkey, a Gypsy grammar and vocabulary, six soporiferous tales, and a French-Gypsy vocabulary. According to a popular notion the Gypsies are the ten tribes of Israel. The modern Greeks, imagining them to be the lineal descendents of Pharaoh, called them *Ægyptii*, which has been corrupted into *Ghyfti* (singular *Ghyftos*), whence the English *Gypsy*. But in reality the Gypsies are of Hindu origin, for our author has proved that their jargon is related to the modern representatives of Sanskrit. The book cannot fail of commending itself to Oriental and other philological societies. Archæologists will probably make another effort to decipher the Etruscan inscriptions with the help of this powerful auxiliary. In the course of a few years we may be favored with grammars based upon Gypsy affinities and analogies, and teachers may be informed that without a thorough acquaintance with the Tchinghiane idiom boys will never be able to get at the essence of Greek and Latin roots, suffixes, and prefixes. In view of this contingency, publishers of fashionable Latin and Greek grammars will do well to dispose of their stock before it is too late.

We will now exhibit some of the curiosities of the Gypsy dialect for the benefit of traders in etymological commodities: The article, masculine *o*, feminine *i*, which is nothing more than *ho, hē*, as pronounced by the modern Greeks. Pronouns, *me* (*I*), *amén* (*we*), *tu* (*thou*), *tumén* (*you*), *ou* or *of* (*he*), *oi* rarely *ai* (*she*), *ol* (*they*), *aká* (*this*), *kon* (*who?*), *so* (*what?*). Numerals, 1 *yek*, 2 *dúi*, 3 *triu*, 4 *ishtar, shtar, star*, 5 *pantch, pandj*, 6 *so, shov*, 7 *eftá*, 8 *okhtó, ohtō*, 9 *enéa, enía, iníya*, 10 *desh, des*, 100 *shel, shil, shevēl*, 1,000, *khília*. The numerals *eftá, okhtó, enéa*, and *khília* are borrowed from the modern Greek. The first numeral is identical with the Hindostanee *yek* (Sanskrit, *eka*); it constitutes also the root of the Greek pronominals *hekáteros, one-r* (each, both), and *héka-stos, one-st* (every one). Verb of existence, singular and plural, *isóm* (sum), *isán* (es), *isi* (est). The Gypsy word for *God* is *Devēl* (Deva), which sounds like *Devil* (*Teufel*), the Bad God or Ahriman, the only god with whom these interesting Aryans seem to be acquainted. The old derivation of Devil from Diabolos may now be regarded as exploded.

HOLT & WILLIAMS HAVE JUST PUBLISHED:

FLEURANGE. By Mrs. Craven. Leisure Hour Series. 16mo, $1 25.

"Mme. Craven's works are not 'goody.' They are profoundly religious, but they strike deeper into human nature, they touch more subtly-sounding chords, than those which are stirred by our English 'religious' novel writers. . . . The charm and success of this book are to be found in a delightful sketch of the Imperial Court of Russia at the accession of Nicholas I.; the description of a journey from Frankfort to St. Petersburg; and the episode of La Mère Madeleine. The last is a remarkable study for its touching and eloquent beauty."—*London Spectator.*

"'Fleurange' is notable, not only for its intense interest, its pathos, its simple and unadorned style, but for several excellent sketches of Italian, German, and Russian life and character."—*London Graphic.*

THE PHILOSOPHY OF ART. By H. Taine. Uniform with 'The Ideal in Art,' 'Art in Greece,' etc., etc. 16mo, $1 25.

This volume contains the course of lectures on the principles of art which was preliminary to the other courses contained in the author's volumes on 'Art in Greece,' 'Art in the Netherlands,' and 'The Ideal in Art.' In the later volumes 'The Philosophy of Art' is constantly referred to.

BARRIERS BURNED AWAY. "A novel of absorbing interest."—N. Y. Evening Mail.

"The leading characters are drawn not only with much skill, but with a clear insight into the workings of strong souls under the influence of the highest spiritual truths, as well as mere human sentiment."—Advance, Chicago.

"We congratulate Mr. Roe upon his story of the day. It is thoroughly national."—N. Y. Observer.

HARPER'S CATALOGUE. The attention of those designing to form Libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

THE DANGEROUS CLASSES OF New York, and Twenty Years' Work Among Them. By Charles L. Brace, author of 'Hungary in '51,' 'Home Life in Germany,' 'The Norse Folk,' 'Races of the Old World,' 'The New West,' 'News-Boys' Sermons,' etc., etc.

"Altogether, we know of no work which deals more wisely with some of the gravest social evils of a highly artificial civilization."—London Saturday Review.

"This is one of the most fascinating and authentic volumes of the kind ever issued from the New York press." Sunday Times.

"We recommend to philanthropists the perusal of this book. It will dispel many fanciful notions of crime and criminals which innocent people are apt to indulge, and which disqualify them to deal efficiently with the evils of society in the domestic, ecclesiastical, and political sphere. It will awaken at the same time, we trust, a feeling of deep sympathy for the wretched poor, from whose ranks our dangerous classes are recruited. In this book daylight is let in upon a dark world, and we think it may fairly be said that the illumination, while it reveals the ugliness, dispels the vague, romantic terrors which hang above the scene."—Christian Union.

"Believe me that your book is having influence in England, and that I can wish *us* nothing better than that it should become a manual."—Florence Nightingale.

THE ATLANTIC MONTHLY SAYS OF

SCOTT'S LIVES OF THE NOVELISTS:

"In Scott's charming lives of Richardson, Fielding, Smollett, Radcliffe, Walpole, and the other more elderly British novelists and romancers, one cannot help feeling that, after all, there is no really valuable criticism, save that from authors. . . . The patience, the generosity, the sensitive appreciation shown in these 'Lives' are inexpressibly refreshing; and the opinions come with the authority of one who knows because he has done, and does not merely pronounce because he likes or dislikes." 12mo, cloth, extra gilt top, price $2.

Priced Catalogue No. 37 of English and Foreign Books just issued, and will be sent free of charge on application.

THE WEEK IN TRADE AND FINANCE.

January 27, 1872.

MONEY was in fair demand during the greater part of the week, and the market may be quoted as having been active on Thursday, Friday, and Saturday. The rates, as a rule, have kept within the legal limit, but late in the day on Friday, $\frac{1}{64}$ and $\frac{1}{3}$ per diem, in addition to 7 per cent. per annum, and even as high as $\frac{1}{16}$ "flat," were paid by borrowers who had neglected to make up their accounts till near the close of banking hours. The rise in prices at the Stock Exchange naturally creates a greater demand, and the recent large gold shipments cause a closer feeling in the money market than would have been felt had they not taken place.

The demand for commercial paper has been quite brisk, with rates on prime names quoted at 8 to 10 per cent., and exceptional sales of choice names are reported as low as 7 per cent.

The large shipments of specie for the week have told upon the bank reserve, although its full extent is not shown by the weekly statement, made up as it is upon a table of averages; thus the large amount shipped on Saturday ($2,250,000) being taken from the banks on Friday, and the statement being made up for the week ending Friday evening, the amount only counted for one day in the averages; therefore the banks are really weaker in their reserve than the statement causes them to appear. Had the statement shown the actual condition of the banks as they stood on Saturday morning, it would be found that the reserve was nearly down to the legal limit. The following is the statement for the week, compared with that of the previous week ending January 18, showing that the banks now hold $5,295,700 above the required 25 per cent., against $5,499,100 last week—a falling off of $203,400:

	Jan. 18.	Jan. 25.	Differences.
Loans	$278,209,600	$282,159,100	Inc. $3,949,500
Specie	21,110,800	20,371,700	Dec. 739,100
Circulation	27,542,200	27,529,200	Inc. 13,000
Deposits	212,588,200	216,670,800	Inc. 4,082,600
Legal tenders	44,420,900	45,974,000	Inc. 1,553,100

The following shows the relation between the total reserve and the total liabilities:

	Jan. 18.	Jan. 25.	Differences.
Specie	$21,110,800	$20,371,700	Dec. $739,100
Legal tenders	44,420,900	45,974,000	Inc. 1,553,100
Total reserve	$65,531,700	$66,345,700	Inc. $ 814,000
Circulation	$27,542,200	$27,529,200	Dec. $13,000
Deposits	212,588,200	216,670,800	Inc. 4,082,600
Total liabilities	$240,130,400	$244,200,400	Inc. $4,069,600
25 per cent. reserve	60,032,600	61,050,000	
Excess over legal reserve	5,499,100	5,295,700	Dec. 203,400

The stock market has been active and prices higher. The upward movement in prices is generally attributed to the efforts of a few operators, some of whom have been connected with Pacific Mail speculations, and others, belonging to what is known as the "Vanderbilt party." They appear to have operated for a quick turn on the market, and probably realized their profit on a portion of the stock they held on Friday and Saturday, when a large amount of stock came on the market and put a stop to the upward movement. As we said last week, the leaders of speculation who usually operate on the bull side are not disposed to load up, at least to any great extent, at present prices, and it is generally thought they are out of stocks.

The Pacific Mail Steamship Company has lost another steamer, for the time being, valued at $1,200,000. At least, she is some days overdue at Hongkong. The stock has been dancing up and down, since the knowledge of the steamer's non-arrival became known to the public, in lively style, and the first reliable information whether she is lost or found would be a most valuable piece of news to parties operating in the stock. Some very interesting stories are afloat of operations in Pacific Mail based upon "points" (secured by guaranties), which proved anything but profitable to those who were so unfortunate as to be upon sufficiently intimate terms with the party who gave them as to entitle them to his confidence and good wishes. A recital of some of the stories would show the way in which a market for stocks is provided at high prices.

The range of prices on the active list of stocks since our last has been as follows—the lowest prices being made at the commencement of the week on Monday, and the highest on Friday: New York Central and Hudson, 103⅛ to 106⅜; Lake Shore, 92⅛ to 95¾; Erie, 61 to 65⅜; Rock Island, 111 to 114¾; Ohio and Mississippi, 46⅜ to 49⅝ Pacific Mail, 70½ to 75¼. On Friday afternoon the report of the large engagements for the shipment of specie by Saturday's steamer, as well as the activity of money in the Street, caused a falling off of prices, Central and Hudson selling at 104⅞; Lake Shore at 94⅞; Erie at 64¾; Rock Island at 113½; Ohio and Mississippi at 48¾; Western Union at 83⅜; Pacific Mail at 72⅞. From these prices there was a reaction, but on Saturday the closing quotations showed a fractional improvement only. On Thursday a sharp decline took place in the stock of the Atlantic Mail Steamship Company, but it was by no means a cause of surprise to Wall Street. On Wednesday the price was 12, from which it broke to 6 on the following day. The concern has been rotten for years, the line badly managed, and the recent seizure of the Company's vessels for debt caused a decline in the stock to a point nearer its real value than ever before reached. The stocks of the Atlantic and Pacific and Missouri Pacific Railroad Companies were actively dealt in for the first time at the Stock Exchange on Saturday. The election of Mr. A. B. Stockwell to the presidency of the former Company seems to have been the signal for this. The Missouri Pacific has been leased by the Atlantic and Pacific in perpetuity, the latter agreeing to pay dividends upon the stock of the former as follows: 5 per cent. per annum for the first three years, 6 per cent. for the next two years, then 7 per cent. for ever after.

The event of the week has, of course, been the appointment of the agents for the negotiation of the remaining $300,000,000 5 per cents, and as long as it was bound to cost the Government a handsome sum in the shape of commissions and interest to place the new bonds, it is perhaps the best arrangement that could have been made to give the negotiation of them to the syndicates composed of Jay Cooke & Co. and the Rothschilds, on the one part, and Morton, Bliss & Co., Drexel, Morgan & Co., and the Barings, upon the other though why there should be two syndicates instead of one we cannot say, except that everything connected with the Treasury operations is involved in mystery, as was the case for a long time in the last negotiation. It is understood that the compensation to be received by the present syndicates will be the same as in the negotiation of the first $200,000,000 of 5 per cents.

The Government bond market has been very strong, and the new Fives sold, for the first time, we believe, since they were placed on the market, at par in gold; this was undoubtedly due to a little judicious "bulling" upon the part of the syndicates, who see, of course, the necessity of keeping them at par in gold in order to succeed in carrying out the negotiation that they have undertaken.

The dealings for the week in Southern State bonds have been mostly confined to Tennessees, which were firm at 80½ to 80¾. The bonds of the other States have been neglected, but prices have undergone no important change. The Comptroller of the State of South Carolina has issued his report, in which the State debt is stated to be $15,851,327. Besides this, the contingent debt for account of different railroads is $4,797,503, which the State will have to pay, to say nothing of $4,000,000 Blue Ridge Railroad bonds and $1,800,000 Blue Ridge scrip which the State may have to pay. The difficulty in devising the means of raising the money with which to meet the current expenses of the State, as well as the amount required to pay the interest on the bonded debt, together with the deficiencies of last year, making in all $3,320,000 to be raised by taxation this year, has been too much for the intellects of the members of the Legislature. The entire bonded debt has been contracted, with the exception of $2,000,000, by the carpet-bag government since the war, and, considering the resources of the State, its ultimate payment is well-nigh hopeless.

Railroad bonds have been active, especially those of the Union Pacific Railroad Co., which are quite sensitive to the investigation going on in the Crédit Mobilier affair before the Congressional Committee, and which may cause legislation affecting the Company, in regard to the Government freight over the road, etc. In the general bond market prices have been firm, and show a well-distributed business. The Toledo, Wabash, and Western Railroad Company is about to issue $5,000,000 new bonds, for the purpose of laying steel rails.

The heavy gold shipments since the beginning of the year have been the basis upon which a party has been made up for the purpose of advancing the price. The market advanced to 114¼ on Saturday, from 112⅞, the lowest point of the week, and at the close of business on Saturday the price was firm at 113⅞, a fractional reaction from the highest point reached. The total gold shipments for the week amount to $2,955,846, making a total of $6,811,154 since the first of the year, against $1,497,361 in 1872, $1,981,823 in 1871, $2,583,390 in 1870, and $3,214,379 in 1869.

Investment Bonds.

No. 20 WALL STREET, January 29, 1873.

The Northern Pacific Railroad Company now has in full operation, with regular daily trains, 321 miles of road. A distance of nearly 200 miles more is constructed. The Minnesota section, immediately on its completion, entered upon a satisfactory business, including local traffic and the large carrying trade of the Northwestern British Settlements and the Hudson's Bay Company. The recently completed section of sixty-five miles on the Pacific Coast, at once commands a profitable business between Puget Sound and the Columbia River, heretofore done by coastwise steamers. On the opening of spring, with more than **500** miles of Road in regular operation, the Company will control the extensive and productive trade of the Upper Missouri, much of Montana and the Northwest. The earnings of the Road for 1873 will be large.

Arrangements for pushing construction vigorously the coming year are progressing satisfactorily.

Of the nearly Ten Million acres of land accruing to the Company in connection with the portion of Road now virtually constructed, some two Million acres of excellent average quality are in market, and their sale and settlement progressing. The average price thus far realized is **$5 66** per acre—which is at the rate of more than **$100,000** per mile of road for the whole grant.

The Company has already begun the process of redeeming and cancelling its First Mortgage Gold Bonds, as they are now being received at **1.10** in payment and exchange for the Company's Lands.

With these accomplished results and most favorable prospects, the Company is now selling its First Mortgage 7-30 Bonds for the purpose of completing its line of road. We recommend them as a well-secured and unusually profitable investment. They have the following elements of strength and safety: They are the obligation of a strong corporation; they are a First Mortgage on the Road, its Right of Way, Telegraph Line, Equipments, and Franchises, and a first lien on its Net Earnings. In addition to this usually sufficient security there is pledged for the payment of principal and interest a Land Grant of **12,800** acres per mile of road through the States and **25,600** through the Territories.

The rate of interest (seven and three-tenths per cent. gold) is equal now to about 8¼ currency. *Gold Checks for the semi-annual interest on the Registered Bonds are mailed to the post-office address of the owner.*

All marketable securities are received in exchange on most favorable terms. For sale by Banks and Bankers generally.

JAY COOKE & CO.

THE INDIANA
AND
ILLINOIS CENTRAL
RAILWAY COMPANY'S
First Mortgage 7 Per Cent. Gold Bonds.

An East and West Air-Line of 152 Miles from Indianapolis, Indiana, to Decatur, Illinois, two of the largest railway centres in the West.

The Western Division (eighty-five miles) of this important line, opening, for the first time, direct Western communication with the

BLOCK COAL FIELDS

of Indiana, will be completed and ready for business with an ample first-class freight and passenger equipment, by February, 1873.

It traverses a populous and a highly cultivated district, now without railway connections, and it is assured a profitable business from the start, in coal and farm products.

A large part of the cost of construction has been and will in the end be paid in cash by the stockholders and people on the line.

Bonds $1,000 each, payable in thirty years, principal and interest in gold, free of Government Tax.

Sinking Fund 2⅓ per cent of gross earnings.

Whole Issue. $3,500,000, of which those now selling are on completed road.

For sale at 90 and accrued interest, by the Financial Agents of the Company (of whom pamphlets and information may be obtained.)

WALKER, ANDREWS & CO.,
14 WALL STREET, NEW YORK.

THE CONSOLIDATED
30 YEAR
7 Per Cent. Gold Bonds
OF THE
ST. LOUIS AND SOUTHEASTERN RAILWAY.

A great Trunk Line, constituting, with its connections, the shortest possible route between St. Louis, Evansville, Nashville, Montgomery, Atlanta, and Savannah; St. Louis and Louisville, Chicago, Nashville, and the Southern and Southeastern cities.

THESE BONDS ARE HIGHLY RECOMMENDED BY THE ST. LOUIS BOARD OF TRADE.

The earnings of the Company are largely in excess of its operating expenses and interest.

For full particulars, apply to

ENGLISH NURSERY AND PLANT FARM

Specially laid out to meet American demand.

THOS. THORNTON, Heatherside Nurseries, Bagshot, Surrey, England, devotes special attention to Trees and Plants (especially Fruit Stocks) suitable for the supply of American orders.

The Heatherside Nurseries occupy 300 acres of which 150 acres are covered with Conifers Ornamental Trees and Shrubs, Fruit and Forest Trees, Rhododendrons, Roses, etc. These are grown in peaty loam, on elevated table-land, and are hence peculiarly adapted to stand long voyages. Priced Catalogues and all information furnished on application. Orders to be accompanied by a remittance on London; and T. Thornton, on his part, refers purchasers, as to his trustworthiness, to Messrs. W. H. Power & Co., 23 William Street, New York, from whom priced catalogues may be obtained.

J. B. LIPPINCOTT & CO.

HAVE JUST ISSUED

JOSHUA DAVIDSON, COMMUNIST. A Powerful Satire. 12mo, extra cloth, $1 50.

"This is one of the most daring and clever pieces of work we have recently read. The humor is never without elevation, though it mercilessly transfixes whole classes, and the tone of a lofty earnestness is felt throughout."—*Nonconformist.*

"A remarkable book, which will set readers thinking. Perhaps it may set them working for the good of their fellow-men."—*Graphic.*

MARIE DERVILLE. A Story of a French Boarding-School. From the French of Madame Guizot de Witt, author of 'A French Country Family,' etc. By Mary G. Wells. 12mo, extra cloth, $1 50.

The extended and well-earned reputation of this gifted writer is fully sustained by this her last and, in many respects, best book.

AN ORPHAN OF THE OLD DOMINION: Her Trials and Travels. 12mo, fine cloth, $2.

A very interesting narrative, told in the style of a biography, and containing a great deal of valuable information in relation to life in China.

NEW NOVELS.

PEMBERTON; or, One Hundred Years Ago. By Henry Peterson. 12mo, extra cloth, $1 75.

"Is one of the most attractive works of fiction issued this season."—*Philadelphia Evening Bulletin.*

EXPIATION. By Mrs. J. C. R. Dorr. author of 'Sybil Huntington,' etc. 12mo, cloth, $1 50.

"A work of absorbing interest."—*Boston Gazette.*

"A story of mystery, and almost tragedy, intensely portrayed."—*Washington Chronicle.*

ERMA'S ENGAGEMENT. By the author of 'Blanche Seymour.' 8vo, paper, 75 cts., cloth, $1 25.

"Is a thoroughly readable book."—*Appletons' Journal.*

"The style is fresh and entertaining, and the various characters are sketched with great animation."—*Boston Gazette.*

BEECHWOOD. By Mrs. R. R. Springer. 12mo, fine cloth, $1 50.

A charming story, charmingly told.

For sale by Booksellers generally, or will be sent by mail, post-paid, upon receipt of the price by

J. B. LIPPINCOTT & CO., PUBLISHERS,

715 and 717 Market Street, Philadelphia.

MONUMENTS OF THE CAVALLI FAMILY in the Church of Santa Anastasia, Verona. By John Ruskin, Esq. With a Chromolithograph (on mount, 20 x 25 in.) of the Monument and its surrounding Frescoes. Price $12.

The above publication has been chosen as the first of a series, to be published by the "Arundel Society," London, of some of those most beautiful and characteristic memorials of the dead which were erected in Italy during the Middle Ages and the period of Renaissance. The Drawings from the Monuments were made by Prof. Gnauth, of Stuttgard.

The above, and all the Publications of the Arundel Society, which are still on sale, may be had of the Society's Agents,

HISTORY OF ENGLISH LITERATURE. By H. A. TAINE. 2 vols., cloth, $7 50.

Sent, post-free, on receipt of price. Address

PUBLISHER OF THE *NATION.*

1873.

ECLECTIC MAGAZINE,

TWENTY-NINTH YEAR.

SCIENCE. The ECLECTIC devotes a considerable portion of its space to an exposition of the latest discoveries and speculations in the scientific world, and claims to be more comprehensive and complete in this department than any other magazine not exclusively devoted to the subject. Its articles are prepared by such men as Profs. HUXLEY and TYNDALL, RICHARD PROCTOR, B.A., Prof. OWEN, Dr. W. B. CARPENTER, MAX MULLER, and Mr. J. NORMAN LOCKYER.

LITERATURE. While presenting the freshest and most valuable scientific papers, the ECLECTIC finds room for an array of instructive and entertaining articles in general literature, which is surpassed by none of the literary monthlies. Its selections are made from all the English periodicals, and occasionally from those of France and Germany, and cover a literature incomparably richer and more productive than any other to which the reader can find access. Recent issues have contained articles by JAMES ANTHONY FROUDE, MATTHEW ARNOLD, CHARLES KINGSLEY, FRANCES POWER COBBE, ROBERT BUCHANAN, KATHARINE S. MACQUOID, ALFRED TENNYSON, ARTHUR HELPS, and others equally eminent. During the coming year special attention will be paid to translating, and the best of the admirable articles which have given fame to the *Revue des Deux Mondes* will appear in our pages from time to time.

FICTION. The ECLECTIC offers its readers the best serial stories to be had, together with the short stories for which the English Magazines have a high and deserved reputation. The leading attraction in this field for 1873 will be a new story, entitled "Too Soon," by the author of "Patty," which, by special arrangement with the author, will be published from advanced sheets.

EDITORIAL DEPARTMENTS. The Editorial Departments are LITERARY NOTICES, FOREIGN LITERARY NOTES, SCIENCE, ART, and VARIETIES, and they are made as comprehensive and complete as possible. LITERARY NOTICES deal with the books published at home; FOREIGN LITERARY NOTES give the freshest information about literary matters abroad; SCIENCE supplements the longer articles with brief paragraphs covering the whole scientific field; and in VARIETIES will be found interesting odds and ends from a multitude of sources. No other eclectic publication attempts anything of this kind.

ENGRAVINGS. No other Magazine is so artistically illustrated as the ECLECTIC. Each number contains a fine Steel Engraving on some subject of general interest—usually a portrait. These engravings are of permanent value, and add much to the attractiveness of the Magazine.

TERMS: Single Copies, 45 cts.; One Copy, one year, $5; Two Copies, one year, $9; Five Copies, one year, 20. Agents wanted to get up Clubs. Address,

THE LIFE OF BISHOP HOPKINS.

F. J. HUNTINGTON & CO.,

105 Duane Street,

Have just published the LIFE of the late Rt. Rev.

JOHN HENRY HOPKINS,

FIRST BISHOP OF VERMONT,

BY ONE OF HIS SONS.

1 vol. 8vo, toned paper, full gilt, cloth, bevelled boards. Price, by mail, $5.

"It is a book which tells the story of a man who had his own way to make, and does it in right manly fashion. A life struggling with iron fortunes, cheerfully and heroically struggling. It gives glimpses of a happy home, a bright fireside, books, music, pictures, taste and culture, and all gentle affections and household charities which are the earthly supports of such a life. It tells how a strong man bravely did a strong man's work. In a word, we have the biography of a man, in the peaceful work of Priest and Bishop, readable from first to last, with increasing fascination to the end."

NOTES ON ENGLAND.

BY H. TAINE.

Price $2 50, post free.

CONTENTS:

Introductory Chapter, containing a Sketch of M. Taine's Life and Career, and an outline of his method of criticism.
CHAPTER I.
BOULOGNE TO LONDON BRIDGE.
CHAPTER II.
SUNDAY IN LONDON. THE STREETS AND PARKS.
CHAPTER III.
ST. JAMES' PARK, RICHMOND, THE DOCKS, AND EAST-END.
CHAPTER IV.
VISIT TO EPSOM AND CREMORNE GARDENS.
CHAPTER V.
TYPICAL ENGLISH MEN AND WOMEN.
CHAPTER VI.
ENGLISH GIRLS AND AUTHORESSES.
CHAPTER VII.
ENGLISH MARRIAGES AND MARRIED WOMEN.
CHAPTER VIII.
ENGLISH HOUSEHOLDS.
CHAPTER IX.
ENGLISH SCHOOLBOYS AND SCHOOL LIFE.
CHAPTER X.
LIFE AT THE UNIVERSITY.
CHAPTER XI.
VILLAGES AND FARMHOUSES.
CHAPTER XII.
LANDED PROPRIETORS AND ENGLISH GENTLEMEN.
CHAPTER XIII.
MANSIONS, PARKS, AND GARDENS.
CHAPTER XIV.
THE CLERGY.
CHAPTER XV.
THE GOVERNING CLASSES AND THE GOVERNMENT.
CHAPTER XVI.
RAGGED SCHOOLS, HOSPITALS, WORKHOUSES, AND THE VOLUNTEERS.
CHAPTER XVII.
THE CONSTITUTION, THE HOUSES OF PARLIAMENT.
CHAPTER XVIII.
THE CLUBS, THE BRITISH MUSEUM, THE CRYSTAL PALACE.
CHAPTER XIX.
STREET PREACHERS AND RELIGIOUS SENTIMENTS.
CHAPTER XX.
ARISTOCRATIC ASCENDANCY.
CHAPTER XXI.
SOCIETY AS DEPICTED BY "PUNCH."
CHAPTER XXII.
SPORTING, POLITICAL, AND SOCIAL CARICATURES IN "PUNCH."
CHAPTER XXIII.
INNS OF THE COURT, BARRISTERS, AND JUDGES.
CHAPTER XXIV.
THE THEATRES, LIVING IN LONDON.
CHAPTER XXV.
MANUFACTURERS AND ARTISANS.
CHAPTER XXVI.
MANCHESTER AND LIVERPOOL.
CHAPTER XXVII.
ENGLISH WORKINGMEN.
CHAPTER XXVIII.
SCENES IN MANCHESTER.
CHAPTER XXIX.
CHARACTERISTICS OF THE ENGLISH MIND.
CHAPTER XXX.
FRENCH WIT AND ENGLISH HUMOR.
CHAPTER XXXI.
ENGLISH PAINTINGS AND ENGLISH PAINTERS.
CHAPTER XXXII.
MODERN PAINTERS AND RUSKIN'S CRITICISMS.
CHAPTER XXXIII.
ENGLISH POETRY AND RELIGION.
CHAPTER XXXIV.
A TRIP THROUGH SCOTLAND.
CHAPTER XXXV.
RETURN HOME FRENCHMEN AND ENGLISHMEN.

Address

PUBLISHER OF THE NATION.

THE ACROPOLIS OF ATHENS.

By W. J. Stillman, late U. S. Consul in Crete. Twenty-six autotype views, many of them unique, of the Acropolis and its Monuments; with brief explanatory letterpress. Elegantly printed and mounted. Cloth, folio, price $25, delivered at the Office of the *Nation.* Sent by express to any address.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 6, 1873.

The Week.

THE examination of Mr. Clark, the President of the Union Pacific, before the Wilson Committee, on Thursday last, brought to light a somewhat amusing case of "striking." "Striking" is a slang term of "politics," and means threatening a person with what may be called predatory legislation, or, in other words, with the passage of a bill or resolution calculated to injure him pecuniarily, with the view of inducing him to purchase immunity, and is one of the modes of procuring subsistence to which "workers" resort in dull times between elections. The art of "striking" has been carried to greater perfection in New York and Albany than elsewhere, and at one time brought in considerable revenue to the old New York Common Council, but it flourishes in nearly all the States, and at Washington. In the present case, the dispute between the Government and the Union Pacific about the liability of the latter for the interest on the bonds advanced to it furnished a tempting opportunity. General Negley, of Pennsylvania, last spring, in the House, offered a joint resolution of a threatening character on this subject, but was reduced to silence by Mr. James Brooks, who proposed to read a letter or letters showing it to be "a blackmail operation." And now comes Mr. Clark and produces a letter written to him in April last, by Mr. Cowlam, the "private secretary" of Mr. B. F. Butler, in which this functionary warned him that there was "a movement on foot" which would cause immense damage to the Union Pacific; that it had behind it "one of the most indefatigable workers in the House"; that "it *could* be headed off"; but to do this, Clark or his agent "should meet Cowlam on the following Sunday morning in Washington"; that "the fight would be hard, but it must be a short one"; and that "prompt action could defeat, corner, and punish" the "worker," but that "there was not an hour to lose." In spite of the fact, however, that the warning voice issued from that fountain of morals and "equity," Mr. Butler's office, Mr. Clark was too old a bird, declined to take "prompt action," called "the worker" a "vagabond," and declared he might do as he pleased. The "private secretary's" feelings over this reckless indifference to the interests of a great corporation must be left to the imagination.

Another ugly witness has turned up in the person of one Spence, an accountant, who testified with regard to the $126,000 to which we referred last week. This $126,000 disappeared in May, 1871, no one knew where. It was accounted for under the head of "special legal expenses." The directors appointed as a committee to audit this account Messrs. Thomas A. Scott, G. M. Dodge, and J. F. Wilson, Government director. They audited it without any difficulty, but, strange to say, Mr. Wilson, although he audited it, knew no more about it than any one else. He says that he thought it best not to know. Mr. Spence, who was formerly chief clerk and assistant-treasurer to the Union Pacific, swears that he drew the checks which made up the sum of $126,000, and that one for $24,500 he handed to G. M. Dodge, and another for $19,000 he handed to J. F. Wilson. Neither of these checks, however, was payable to the order of the two gentlemen in question. While this testimony was being put in, Mr. Wilson entered the committee-room. "What Wilson do you refer to?" he enquired in, we have no doubt, an indignant tone. But he compelled the witness to reply "James F. Wilson, of Iowa." At this point, the correspondent goes on to say, there was a "decided sensation among the Committee and the spectators, and there was the most oppressive stillness for an instant." Mr. Wilson stepped forward somewhat excited and said, "Now I want to settle this thing right here," and was apparently on the point of proceeding to settle it by the usual Congressional form of denial, first by denying that he had ever received any such check, second by denying that he remembered having received any such check, and third by an argument founded on the preceding denials, showing the absolute irreconcilability of his statements with the statement he would have been obliged to make if he had received any such check. He was stopped, however, by the Committee at the time. Since then he has got the testimony of some one that he did not receive the check.

The facts about this sum of $126,000 appear to be these: One of the various acts required of Congress by the Union Pacific Railroad was the right to mortgage a bridge between Omaha and Council Bluffs and C. S. Bushnell, a director, went to Washington to get Congress to look into it. The Iowa members, however, "would not move, as then there was much jealousy about the bridge both at Omaha and Council Bluffs," and Mr. Bushnell found there was nothing for it but to "send for General Dodge," at that time a director. The General came to Washington in low spirits, said that the "d—d Boutwell raid" on the road (meaning by this language the attempt of the Treasury to get the back interest out of the Company) "had ruined him," whereupon Bushnell said:

> "I cannot help that, but you go to work to carry this game through, and I will give you all you lost, your expenses, and for your time; Dodge went to work, and in less than ten or fifteen days we had the bill through Congress just as we wanted it, all right; we settled all difficulties between Nebraska and Iowa that time."

Dodge then "figured up," and received $24,500. The $19,000 which Spence says he handed to Wilson was passed over to Thomas A. Scott, who had loaned the road "several hundred thousand dollars," and naturally wanted some money on account. The rest of the money seems to have gone as a "bonus" to General Dodge, to enable him to carry out a contract to take a quantity of the Union Pacific bonds above their market price.

By the time the Crédit Mobilier investigation comes to an end, we shall probably know what kind of a world we live in. Last week left Ames's check for $1,200 payable to "S. C." or bearer, dated June 20, 1868, unexplained, and now the bank account of Mr. Colfax having been examined shows that Mr. Colfax did, on June 22, 1868, deposit the exact sum of $1,200, notwithstanding his emphatic denial, before the Poland Committee, that he received any such addition to his income at that time from any source whatever. His exact words were, "Now I could not have had $1,200 added to my income without remembering it very positively." As soon as the fact of this deposit came out, Mr. Colfax demanded a new investigation from the Senate, which the Senate very naturally declined to let him have. He has now retained as counsel Mr. Robert S. Hall, of this city, and when Mr. Colfax has refreshed his memory by looking over his papers, he is going to disprove the whole thing.

Mr. Colfax is behaving—to speak mildly—very injudiciously. He has been accused, on evidence on which any jury would convict him, of having perjured himself with regard to the receipt of $1,200 from Oakes Ames. Now, there is only one answer to this, viz., that Mr. Colfax received the money from somebody else, and this answer could be made in five minutes. All he has to do is to name the man who paid it to him, and give the reason for which it was paid; and this, to a gentleman of small income who keeps his accounts with great accuracy, as Mr. Colfax says he does his, can be a task of no difficulty. Instead of doing this, however, he went to the Senate, and made an absurd demand for a fresh Committee of Investigation, though the Wilson Committee was still sitting, then allowed Oakes Ames to go home, and said he would produce his defence when Oakes Ames came back, made some rambling observations about "looking over his papers," and then started off to

attend religious and temperance meetings in Philadelphia and Baltimore. At Philadelphia he made his appearance before the Young Men's Christian Association, and was received with shouts of applause; and at the temperance meeting at Baltimore there was more frantic applause, and the Vice-President informed the audience that "the world was full of human trials, and crime, and suffering, full of wars, and disease, and breaking hearts, full of unjust aspersion," and made other moral reflections of the same sort. We now beg to inform Mr. Colfax that honest men are sick, heartsick, of this sort of thing; that what the world demands of him just at present is not philosophical observations on the vanity of this life, but a plain account of how he got that $1,200; and pending his preparation of that account they think he ought to maintain a decent seclusion and reticence. We may also, with equal confidence, inform the young brethren of the Christian Association that when they raise shouts of applause for a man in Mr. Colfax's position, they set hundreds of thousands of other young men asking—as they asked during the Methodist Book Concern troubles—whether there is any more necessary connection between morality and the worship of Christ than between morality and the worship of Pan. Membership in these associations is fast ceasing to be a certificate of integrity; let them take care that it does not raise a presumption of want of integrity.

That politics at Washington are not essentially different from what they are in other parts of the country may be taken for granted after the Crédit Mobilier disclosures. A letter to the *Tribune* gives one or two curious specimens of the political work going on there. The day of land grants being over, at any rate for the present, the gentlemen who used to ask for land now go there seeking subsidies for the revival of American commerce and other kindred objects. The arguments they use are, in the language of John B. Alley, "chiefly of a patriotic character." For instance, there is some one who is willing to revive American commerce by running a line of steamers from Southern ports to the Suez Canal and the ports on the Mediterranean, if the United States will guarantee his bonds to the extent of $13,000,000, and promises, to make the thing definite, to build twenty iron steamships fit for conversion into war vessels. The Government will not lose anything by it either; for, first, they will save the cost of maintaining twenty war steamers for twenty years, $146,000,000; secondly, the education given to young sailors, taking as a basis the cost of training the pupils at Annapolis, will be worth $4,480,000; next, the revenue derived by the Government from each laborer or mechanic brought over, at $78 a head (12,000 for twenty years), amounts to $19,200,000. Finally, the economic value of the total emigrant population ($1,600 a piece) to be brought over in twenty years will be $800,000,000. This shows a clear balance in favor of the scheme. We learn from the same letter something about the Texan Border Commission, which has been charged by the State Department with the duty of taking evidence as to losses suffered by Americans from Mexican incursions on the border. Apparently they have done their work very thoroughly. One claimant, according to the Commission's report, ought to have $3 a day a head for the interest on a herd of cattle stolen from him some fifteen years ago. Others have reckoned the natural increase of their stolen herds at one calf a year for every animal, male or female. It is suspected that these claims have been trumped up for the purpose of offsetting Mexican claims against us.

The scheme of subsidizing a line of Australian steamers to the tune of half a million a year for ten years has been killed in the Senate. The difficulties in the way of the scheme were that there were no exports from this country to Australia, except hoes, shovels, and sewing-machines, inasmuch as the Australians get everything from England far cheaper than we can supply it; and it would be cheaper to make them a present of all they want of these articles than maintain a line of steamers for the purpose of carrying them. Australia, on her side, sends us an occasional consignment of wool, and carrying wool to San Francisco is like sending coals to Newcastle. More than that, although there has been a line of steamers running to Melbourne from that port for three years, Americans residing there send their letters by the Suez route, as the most regular and expeditious. Finally, it was proposed to run on this Australian line, at Government expense, a lot of wooden side-wheel steamers, a species of sea-boat which is now found nowhere outside the United States, and which excites the laughter and pity of the civilized world. How long will it be, we wonder, before this business of "reviving our shipping trade" will be left to the American man who originally made the shipping trade?—that is, before the Government takes its clutches off of him, calls off its agents, detectives, weighers, appraisers, comptrollers, inspectors, who now have him by the throat, and are constantly "going through him," as the pickpockets say, and lets him get his ships and his materials for building them where he pleases, and run them where he pleases and how he pleases, like a hardy sailor and sharp trader, as he once used to be considered, and not like a reformed drunkard, whose friends have to find a situation for him and have to watch him when he walks the streets?

The report on the distribution of the *Alabama* damages has been sent back to the Committee on their own demand, made by Mr. Butler, which looks as if they had thought better of it under the influence of an address from Mr. Evarts. The plain truth is, that if any private person who had secured an award of money from arbitrators under circumstances similar to those under which the United States appeared before the Board of Geneva—that is, as the advocate and protector of third parties—on the ground of specific wrongs suffered by them, were, as soon as he got the money, to turn round and put his own construction on the award, and say that the money belonged to him for his sole use and behoof, and that he would give it to whom he pleased, he would be generally considered an outrageous swindler and humbug. There may be reasons for excepting governments from the operation of the ordinary laws of honor in dealing with money, but we have never seen them stated with any clearness or authority. The business of the Committee is to drop metaphysics and let "equity" and "eternal justice" alone, and devote themselves to finding out by the pleadings and proceedings and the judgments to what objects the arbitrators intended the money to be applied, and resorting to the rules of law by which the commercial transactions of honest men are regulated to help them out in all cases of difficulty or doubt.

A late decision of the President, sustaining the Attorney-General, although referring to a matter local to Philadelphia, has a national importance, as showing a determination to frustrate all prosecutions of criminals who support the Administration. A repeater named James Brown, a member of the Paid Fire Department of Philadelphia, was arrested for fraudulent personation at the October election, tried, and convicted in the United States Court, and sentenced to eighteen months' imprisonment. He was pardoned after eighteen days' imprisonment. The case excited deep indignation, and the Reform Association sent a committee to Washington to ascertain upon whose recommendation the pardon was granted. It is to be observed that in this case the usual precaution of consulting the District Attorney was omitted, and the pardon recites that it was "strongly recommended by a number of prominent citizens of Philadelphia." The rest of the disgraceful story is better told in the address, signed by Henry C. Lea, the Chairman of the Reform Association:

"To obtain this information, therefore, at the instance of the Executive Committee, a gentleman of standing and character visited Washington with such credentials as ensured his being listened to. Obtaining a letter from a prominent official of the Executive mansion to the United States Attorney-General, he made application to see the papers in the case, and was refused; and a request to be informed as to the names of the 'prominent citizens' who had joined in the recommendation for pardon was met with the humiliating assertion that they could not be divulged until the parties had been consulted, and had given permission. As, in spite of a second application

in writing, a week has elapsed since then without further information being received, it is presumable that the 'prominent citizens' prefer to remain concealed.

"An appeal to the President from the decision of his Attorney-General was unsuccessful, and the conclusion is forced upon the Committee that while the Administration had been misled by its pretended friends in Philadelphia, it preferred to accept the responsibility thus thrust upon it rather than surrender them to the indignation and contempt of their fellow-citizens."

The whole of this document is well worth reading. We believe that, as a rule, the Administration papers of Philadelphia have given only partial extracts. There is reason to believe that the political state of Philadelphia is worse than that of New York in the days of the Ring, and the apathy of the citizens gives reason to fear that it will continue for some time.

Senator Pomeroy has been defeated in his attempt to be re-elected by the Kansas Legislature in a very melodramatic way. Just as the vote was about to be taken in joint convention, Colonel York, one of the members, handed up $7,000 to the presiding officer, which, he said, the unfortunate Pomeroy had given him as a bribe, and he improved the occasion in a speech an hour long. There appears to have been a great deal of latent virtue in the Legislature, for the effect of this revelation was, we are told, overwhelming, and they at once elected another man, as if under the influence of an afflatus. Pomeroy, who had a powerful lobby on the ground, and was "assigning" money vigorously, has been deeply affected by the disaster. His explanation of the affair is that it is a "put-up job," by which, we suppose, he means that Colonel York slandered him, and backed up the slander with a deposit of $7,000. It ought to be said that Pomeroy's reputation has for years been very bad. It is a great thing for the Senate and the country to get rid of him, particularly as his successor, though little known, appears to possess a good character; but of course any product of the Kansas Legislature must, for a while, be regarded with suspicion.

The Bar Association has at last come to some conclusion about Mr. D. D. Field's case and that of other lawyers implicated by the evidence and finding in the Barnard impeachment. The judgment of the Senate finding Barnard guilty inevitably involved the advocates who asked for the orders and appointments and carried on the combined proceedings which brought Barnard to his punishment. Some of these are members of the Bar Association, and others not. The question what the Bar Association should do in the matter was referred to the Judiciary Committee of that body, which made its report on Thursday evening. It concludes, in substance, that there would be no use in prosecuting before the Supreme Court those who are not members of the Association, because the evidence used at the impeachment trial would have to be all taken over again by a referee, and that proceedings of this kind before a referee might without difficulty be protracted indefinitely. As regards those who are members of the Association, the Committee on Grievances is the proper body to take cognizance of charges against them, but such charges cannot and ought not to be made by the Association as a whole, but by individuals, and no individual has made them. The Judiciary Committee declines to recommend a vote of censure on the accused, because it could not fairly do so without giving them an opportunity to be heard in their own defence, or, in other words, trying the whole case; and although it might seem doubtful to some whether this extreme caution should be observed in the case of Mr. Field, "after his anticipatory and otherwise remarkable defence, recently spoken within the walls of the Association, against an expected accusation, and after the publication by him in the newspapers of matter falsely pretended to have been spoken by him in the face of the Association," the Committee think "that to yield to such a temptation would tend only to mislead themselves and the body to which they belong." The result is that nothing has been done, and nothing will be done, unless some individual lawyer, having his own business to attend to, and perhaps a family to support, will go before the Committee on Grievances, the members of which also have their own business to attend to, and get them to engage in an investigation which might last for years; but that this individual lawyer is not forthcoming, and is not likely to be, is, we think, a very safe conclusion.

The Tweed trial has resulted as was expected in the disagreement of the jury. The jury was a most extraordinary body. Not only were its members persons of little education or intelligence, but several of them were drawn from "the dangerous classes." Some were liquor dealers and keepers of oyster saloons, one was a "bummer" from the docks, and one represented Tweed in the Albany lobby. There is a fierce controversy going on as to the responsibility for this miscarriage. The prosecution charges the Commissioner of Jurors and the Sheriff with tampering with the panel. The Commissioner replies, and, we think, fairly, that it is his business simply to make up the list of persons liable to jury duty, and that he is in no way responsible for the character of any particular panel; but it does appear that the Sheriff, who is an old Tammany hack, failed to summon decent men, and that only the dregs of the panel drawn in Court presented themselves to be sworn. This brings us down to the question, How was it that the counsel for the prosecution allowed them to be sworn? This question we have not seen satisfactorily answered. There was nearly as much reason for suspecting the Sheriff before the trial as after, and the appearance of many of the jurymen was in itself sufficient to draw challenges. There is a good deal of controversy about the manner in which the prosecution was conducted, and on this point there is a division of opinion among lawyers, as might have been expected, but the preponderance of opinion is favorable. The charge of the judge was strong against the "Boss," who, however, "sat smiling by," being apparently sure of his men.

Behind the trial there is, however, dark and deep-seated trouble among the newspapers and politicians, on which we are only able to cast one or two faint gleams of light; but it is worth some notice, as an illustration of the difficulties of "reform" in this city. The *Tribune* several times during the trial assailed the conduct of the case by the prosecuting counsel and made light of the evidence, and this, coupled with the fact that it omitted from its report—accidentally, we are informed—a very important portion of Garvey's testimony, has given currency to the charge that it is in some way under the influence of the Ring. It, on the other hand, maintains that Tweed's escape was prepared by the secret connivance of "Tom" Murphy and the Custom-house politicians, who have all along maintained friendly relations with "the Boss," with whom "Tom" was at one time connected by real-estate speculations; and color is given to this theory by the fact that "the Custom-house party" were very eager to nominate "Jimmy" O'Brien for the Mayoralty, and came very near doing it, and carrying the New York *Times* over into the support of it; thus showing that the tribe to which "the Boss" belongs was by no means hateful to them. This scheme was frustrated by dread of public indignation, and they then, under stress of weather, put up Havemeyer as a kind of jurymast, and ran into port by his aid. But they have ever since been opposing him bitterly, and have drawn up and are forcing through the Legislature a new charter, in which he is shorn of all real power, showing that they love "the party"—meaning their precious selves—far better than reform. Out of all these facts the conclusion has been drawn by their Greeleyite foe that they are now paying "the Boss" for support given them during the canvass. It is also alleged that they have broken with the New York *Times*, and that that paper no longer supplies true and unadulterated doctrine. To these unpleasant insinuations the *Tribune* adds attacks on the Attorney-General, which it began some months ago, apparently in the interest of Mr. D. D. Field, and tries to put sting into them by calling the really able and competent counsel employed by him in Tweed's trial "the Attorney-General's Ring." What this means we confess we do not know.

THE BAR AND ITS ETHICS.

THE result of the attempt made by the Bar Association to punish Mr. D. D. Field and others for their alleged complicity in the misconduct of which Barnard was convicted by the Senate, furnishes an instructive illustration of the way in which much of our penal machinery has grown obsolete under the influence of important social and political changes. When our criminal procedure grew up, communities were small, authority very strongly entrenched, and the law emanating from authority moved with tremendous momentum. Reformers, therefore, in every age of Anglo-Saxon jurisprudence, devoted themselves to surrounding accused persons with a barrier of somewhat intricate forms, and imposed on the courts the duty of scrupulously respecting them. Individuals were so weak and insignificant, the Government and its ministers so mighty, that it was arranged that even the most notorious criminal should only be approached through a labyrinth, and that his punishment should only overtake him after every avenue of escape had been solemnly and laboriously closed. Public opinion, too, sided with the law with something like ferocity, and with terrible concentration. The crown and consummation of this system may be seen in the ordinary New York criminal trial, in which the whole procedure seems to have for its great object the escape of the prisoner. In that cumbrous and antiquated process, every precaution short of complete suppression seems to be taken to prevent the facts of the case having any influence on the fate of the accused, and to convert the investigation into a simple trial of ingenuity between two sets of lawyers, with the jury sitting as umpires. To make the performance all the more complete, too, great pains are taken to prevent the jury from being qualified umpires, who might close the debate with a clean-cut decision. They are carefully selected in such manner as to make it unlikely that they will agree at all, or thoroughly understand what is going on; and, in fact, about two years are passed submitting to a variety of tribunals a series of grammatical or dialectical puzzles, which have no more to do with the guilt or innocence of the prisoner than the famous question with which Sir Thomas More floored the scholastic doctors at Louvain, "whether beasts of the plough could be replevined *in withernam*."

Around this system there has grown up a state of things of which the fathers of the law could hardly have had an idea. Instead of a small, ferocious public, following the criminal to the gallows with hootings and execrations, pelting him in the pillory with stones and rotten eggs, and going to see a man burnt or broken on the wheel as to a fête, we have a very humane, careless public, full of horror for all inflictions of suffering or degradation, much too busy to be willing to give any time to pursuing murderers or robbers, and saturated with sympathy and with the sentiment of equality to such a degree, that not only is each man unwilling to inflict punishment on anybody else, but has a good deal of doubt whether he has any right to do so. Indeed, the sentiment of equality has sunk in so deep that almost everybody shrinks from assuming any moral superiority, even to a murderer. We approach a criminal with a sheepish, humble air, which seems to say that there is no knowing when we may cut a throat or pick a pocket ourselves. Tweed has embodied this feeling in a shrewd, humorous saying, which has since become popular slang—"you know how it is yourself." It found still more comic expression in the reply of the professor who murdered and then burnt or blew up a negro the other day in Baltimore, and who, when asked why he had got rid of the body in this barbarous manner, at once appealed to the fellow-feeling of the questioner by saying, "You don't know what you would do yourself, if you had a dead nigger on your hands"; assuming without hesitation that any gentleman might any day find himself in that predicament. This tendency in the popular mind, too, is stimulated by the later theology, which dwells strongly on the distinction between the sinner and his sin, and makes "love" of the one perfectly compatible with hatred of the other, separating conduct almost completely from men and women, and relegating vice as an abstraction to some metaphysical limbo, in which it may be stigmatized and kicked about without hurting anybody's feelings. Add to these things a total want of cohesion in public opinion, the absence of any generally accepted standard of right or wrong or of propriety, and we have a confusion in which moral reprobation can be hardly said to exist, and which makes our elaborate precautions in the courts of law for the protection of innocence almost absurd.

The same phenomena present themselves, with slight variations, in what is called society, as distinguished from law and politics. Most of the regulations which govern our social intercourse and the voluntary organizations for social and professional purposes called clubs, were framed or grew up when society was much smaller and more homogeneous than it is now, and when its opinion acted with great force and directness, and kept alive in individuals an extreme sensitiveness to its judgments, so that it rarely had to do execution on an offender itself. The mere hint of its displeasure caused him to go into exile or perform hari-kari. It is now so large and varied in its elements that it rarely agrees on anything, and accordingly finds its judgments of little weight. If a man is accused of carrying off silver spoons from a dinner party, far from going into seclusion, he simply abandons the "set" which believes the "dirty libel," betakes himself to another which does not believe a word of it, and does not care whether it is true or not, and to which he tells in his turn that his host on the occasion referred to is the biggest thief in the country, and actually has a stolen teapot on his sideboard. Indeed, the facts of the case in regard to any man's morals are daily of less and less consequence, and we seem to be drifting back to the sentiment and usage of the early period, when jurymen were simply bystanders; when, if you could get a batch of your neighbors to say you had not committed an offence, no evidence that you had committed it could hurt you; or, better still, when the gravest charges could be met by offering to fight the accuser. For some time past in this city, persons charged with misconduct have been getting more and more in the habit of meeting charges not with defence, but with counter-charges, or by opposing to witnesses who saw them doing the thing, crowds of other witnesses who did not see them do it, and maintaining that one kind of testimony was as good as the other.

The rules of the Bar Association for the trial of offences against professional morality have evidently been framed under the influence of the traditions of a period when both society and the bar were totally different from what they are. They assume a power and unity in public opinion and a sensibility in individuals which no longer exist. They assume that the bar is a harmonious and homogeneous body, with a common standard of propriety, when the fact is that it is as divided in sentiment as the shoe trade, and when a counsellor who is censured by one section of it can get another section just as big to rally round him and set the censure at defiance. They assume that a "charge" is nowadays felt as a wound, and that anybody against whom one is made will, all business excuses being laid aside, give himself heart and soul to searching out its author and meeting it, when the fact is that the air is full of charges, nearly everybody has a few hanging over him, and the first concern of a man accused of bribery or blackmailing is not to defend himself, but to get up stories of worse bribery and blackmail about his accuser. In short, after reading the report of the Judiciary Committee, one feels that if the account it gives of the machinery of the Association is correct, the sooner all expectation of doing much for the purification of the profession under that machinery is abandoned, the better. It was made for the days of stage-coaches, when lawyers lived over their offices. The assumption on which the constitution of the Committee on Grievances is based, that when a lawyer behaves badly, another lawyer will at once leave his business and occupy himself in tracing out his badness all over the State in all sorts of cases, and before divers judges, until he has brought his guilt home to him, is simply a faint souvenir of old times. It may make elderly men sigh, but it will not improve the profession. Even if such prosecuting lawyers could be found in our

day, the case would speedily double itself, as it were; that is, the accused would bring counter-charges, and the committee would have to try three or four cases of professional misconduct in place of one, until the proceedings would resemble the celebrated beaver hunt, in which the dog and the beaver dodged in and out of the water and around the dam with such extraordinary rapidity that no mortal could tell whether the beaver was after the dog, or the dog after the beaver.

IS THE REPUBLICAN PARTY OPPOSED TO THE LAW?

IT is observable in the history of the Republican party, and it is a fact which in the future will appear greatly to its discredit, that its representatives in Congress have been arrayed generally against the judiciary of the United States. This is all the more remarkable because the strength of the party does not lie in great cities, and it contains a much smaller proportion than its rival of the lawless elements of society. The intelligent part of our rural population and the respectable middle classes, styled by Mr. Lincoln "plain people," are largely Republican, and furnish the party with its controlling majorities, and they certainly are what most Americans pride themselves upon being—"a law-abiding people." Nevertheless, ever since the war ended there have been Republican members of Congress in some way or other attempting to interfere with the administration of justice in United States Courts. And this must seem all the less excusable because the judges who now administer the laws of the General Government are chiefly of Republican antecedents. It appears indeed as if, from the moment when a Republican lawyer went upon the bench, an indefinable separation began between him and his political friends, widening gradually into a condition of positive antagonism. If the breach were merely personal or political, our enquiry might stop here; but when it becomes legislative, society has a direct interest in the matter, for then antagonism to the judiciary may be nothing less than resistance to the law. It is therefore of some importance to know how far this resistance has gone, and what it means.

Since the foundation of the Government there have been eight acts of Congress pronounced (by the Supreme Court) unconstitutional, and only two of these were enacted in the long period extending from the first session of the First Congress in 1789 to the accession of the Republican party in 1861. The remaining six are the work of Republican Congressmen. Yet it is not merely the disproportion of numbers which should receive attention; there is also something significant in the character of the acts.

The first, passed in 1789, was a statute conferring some original jurisdiction upon the Supreme Court. In most courts such statutes would be regarded with favor, and if not passed for an exceptional or improper object, no great harm could happen to anybody from the error. The keen judicial eye of Marshall, however, saw that the Constitution designed the Supreme Court to be an appellate tribunal, and that the only original jurisdiction conferred upon it was exceptional and declared by the instrument itself. The court so held in the great case of *Marbury* v. *Madison*—a decision doubly important, inasmuch as it was the first authoritative declaration of the limited powers of Congress, and the constitutional independence of the three great departments of Government. The next statute pronounced unconstitutional was the "Missouri Compromise" in the well-known case of Dred Scott. It was so decided, according to Mr. Lincoln, "in a sort of way," by which he meant, he says, that the decision "was made in a divided court by a bare majority of the judges, and they not quite agreeing with one another in the reasons for making it, and that it is so made that its avowed supporters disagree with one another about its meaning." But according to the masterly analysis of Governor Andrew when a member of the Massachusetts Legislature, the only question determined was the legal effect of a Missouri statute, and the remainder of the opinions was mere *dictum*. Be this as it may, the statute termed unconstitutional merely related to the authority of Congress over the Territories, and did not affect the ordinary constitutional rights of either citizens or States.

Passing to the unconstitutional acts of Republican Congresses, we find that the first (in 1863), growing out of the excitement of the rebellion and distrust of Southern courts and juries, affected both the rights of the States by subjecting their judicial tribunals to a novel and unconstitutional method of review, and the rights of the citizen by overthrowing the finality which the Constitution expressly ascribes to trial by jury. The second was that extension of the income-tax to the salaries of State judicial officers which has been discussed in the columns of the *Nation* when reviewing the decision of the Supreme Court—a decision which we thought one of great importance, as bringing back the General Government to its proper relations with the constitutional independence of the States. The third statute was a police regulation forbidding the sale of kerosene and explosive oils unless of a prescribed standard, and the Supreme Court held unanimously that it was an interference with the authority of the State Government, and unconstitutional. The fourth statute was the Legal Tender Act, which compelled a man who had lent another gold before the enactment to receive in exchange for it non-redeemable, depreciated Government paper. It is true that the decision is said to have been reversed, but inasmuch as five judges concurred in pronouncing the act unconstitutional, and only five have since pronounced it constitutional, it may be enumerated in the list of questionable assumptions of legislative power. The fifth statute, passed at the end of the war, was one of those attempts of Congress to punish rebels legislatively instead of judicially—an attempt to take away from a man for life without a trial his ordinary means of subsistence. Of it the Supreme Court held, that while the Government may punish the guilty, it cannot, until he be tried and convicted, prohibit a citizen from pursuing his ordinary avocation by a sweeping legislative enactment. The last of these statutes, the "Drake Amendment," appears the worst at the point of view from which we are contemplating them; for it is the first direct attempt of Congress intentionally to evade the supreme law of the land, previously declared to be such by the unanimous judgment of all the judges of the Supreme Court; and it sought to do so by an attempted interference with the judicial discretion of the Courts of the United States, prescribing to them "an arbitrary rule of decision" in cases pending before them, requiring them to decide certain cases in a certain way, and forbidding them to give that effect to evidence which in the judicial judgment such evidence should have. It is noticeable that this decision of the Supreme Court in *Klein* v. *The United States* caused very little and no unfriendly comment within the loyal States; for as the angry feelings of the war subside, people begin to see clearly that a rebel is still a citizen, though a guilty one, and that while he may deserve hanging, he still has a constitutional guaranty that he shall be hung by a United States marshal and not by a sergeant-at-arms of one of the Houses of Congress. It is also noticeable that of the eight judges who united in declaring the act unconstitutional, all but one were appointed by Republican Presidents.

Nevertheless, we observe that a fresh attempt at evasion has been made in the House by certain Republican members, which, having failed there, has been renewed in the Senate. It seems that the Supreme Court decided, and with considerable unanimity—Justices Miller and Bradley only dissenting—that the title to captured cotton taken from the possession of individuals, and never used in aiding the rebellion, remains in the original owners, and that the captured cotton fund in the Treasury does not belong to the United States, but to the owners of the property, being merely held in trust by the Government. Whereupon a number of Republican gentlemen, who have been loudly calling upon the South "to accept the situation," decline to accept it themselves, and propose to nullify the decision of the Supreme Court by enacting that no such judgment shall be paid. It is also said by them that the case is one where members of Congress ought to "exercise *their* dis

cretion," and they have thrown out some not altogether original reminders that "the people rule this country," and not the Supreme Court. Now it is perfectly clear that if the highest judicial tribunal in this country has determined that money in the Treasury does not belong to the Government, and does belong to A, B, and C, then sooner or later A, B, and C will get it, and any attempt to keep the money in the Treasury is a dishonest attempt to deprive A, B, and C of what has been judicially determined to be their property. Moreover, when the Government was a party to the suit in which this was determined, and voluntarily submitted its demands to the arbitrament of the Supreme Court, it is peculiarly bound to submit to the decision.

It is a cheering fact, however, that the enactment was stoutly opposed by some of the strongest members of the party, such as General Garfield, Mr. Shellabarger, and Mr. Bingham; and it is strongly confirmatory of public opinion that leading members frankly said that "any tribunal is better than Congress for considering claims," and that Congress is "the least independent, the least intelligent, and the least honest tribunal for that purpose that can well be selected." In the Senate, on the contrary, all of the Northern Republicans supported the measure—the Southern Republicans, including Senators Sawyer and Poor, voting with the Democrats—and urged it with a good deal of the old rancor. Mr. Edmunds even went so far as to say of the Supreme Court: "We delegated this authority to them *as our agents*, as a convenient form of administration to enquire, on an appeal from the Court of Claims, into the particular cases that were brought to them." "The people," who are so often invoked when some piece of mischief is afloat, have tolerably clear ideas of the true nature of legal obligations, and a lively dislike of those litigants who, being beaten on the trial, proceed forthwith to beat their creditors on the execution. Certainly "the people" were never more averse than they are to-day to submitting the decrees of impartial legal tribunals to the "discretion" of members of Congress.

So far as Republicans are concerned, it is time that they cease to occupy a false position. The "Dred Scott decision" no longer exists; the "war legislation" of Congress was undeniably hasty and ultra; there is no portion of the people who more fully believe in the supremacy of law, or know better the value of an independent judiciary. Allowing themselves to be arrayed against that branch of their government which they most esteem, by that branch which they least respect, is what they have been too long doing. Senators Bayard and Stockton, courageously advocating an increase of salary for Republican judges, much more nearly expressed the views of Republicans than their own narrow-minded representatives have done. So far as the Supreme Court is concerned, all that is said of its assumption of power is idle talk; no better thing can be said of any court than that, through years of public excitement, it stood the bulwark of the weaker party.

THE PRICE OF A POSTAL TELEGRAPH.

IN discussing, a short time since, the proposed appropriation of the telegraph by the Government, we showed that a general reduction of message charges always involved a decrease of revenue, and we reached the enquiry whether Government is justified in reducing tariff below the cost of service for the benefit of those who telegraph at the expense of those who do not. The reply to this question by no means determines the expediency of governmental control of the telegraph. If the Government is to charge substantially present prices for messages, its appropriation of the business may still be a good thing for the country. Such doctrine, it is said, leads necessarily to the absorption by the Government of all branches of industry, of the boot and shoe trade as well as of telegraphs and railroads. We admit this freely, and we hold that there are circumstances under which the Government would be justified in going into the shoe business. There is but one case which warrants such interference, and that is essentially the same for all departments of industry. That case arises for a republican government when any one branch of the business of the community is so monopolized that citizens can no longer share in or control it, and so mismanaged that they can no longer endure it. When that day comes, either in the shoe trade or the coal trade, in the conduct of a Pennsylvania petroleum combination, or of railroads and telegraphs, Government is warranted, when all other remedies have failed, in prostrating private enterprise by the crushing hand of power, and supplanting private industry as best it may. But while the interests of the whole people may sometimes justify the conduct of particular industries by Government bureaus, is there any justification for doing the work at less than cost? If Government should supplant the great coal-producing corporations, ought it to sell coal below cost in Maine, and make up the deficit by taxing the people of Louisiana? If it absorbed the railways, ought it to carry pleasure-travellers at half price, and collect the difference from citizens who stay at home? Is money to be appropriated by force out of the pockets of the whole people for the profit of a favored class? It strikes us that, in principle, this proceeding is about the same whether done by a popular government, under guise of law, or in defiance of law by highwaymen. There is no theory of republican government upon which such legalized robbery can be defended. When Smith, who does not travel and does not telegraph, is taxed so that Jones may ride in the cars and send messages to his wife at less than cost, then private property is taken without compensation, not for public but for private use, and the very foundation of our constitutional law of property is overturned. Government thereupon enters on the broad road to pure socialism. The only exception, if such it can be called, is in the case of education. It is as a means of education alone that Government is warranted in imposing the deficit in the post-office upon the public treasury. We believe that in meeting by taxation the expenses of such an uncertain educator as the post-office, we have already pushed the principle to its utmost limit. To the telegraph it cannot be applied with reason or consistency. A telegraph line has no more direct effect as a means of education than a newsboy, a type manufactory, or a mail-bag. The telegraph is, in fact, but a messenger with a verbal message, and it is not essential, except for purposes of convenience, that the communication should ever be reduced to writing. The lightning may fill the place of courier and errand-boy, but not, in a proper sense, of teacher.

If it is clear that this Government has no right to do telegraphing at less than cost for some citizens at the expense of others, and that no money can be made, as has been popularly supposed, by a sweeping reduction of existing tariffs, we have at least cleared away some rubbish from the subject, and can consider more intelligently the real advantages of Government control and its probable results. Four causes will cheapen the practical operation of the telegraph in the hands of the Government. They are:

1. Freedom from taxation.
2. Exemption from lawsuits and claims for damage.
3. Control of post-office facilities.
4. Monopoly of the business.

The economies from these sources as compared with private management are undeniable. Now, so far as the people are concerned, what do they amount to? It will be seen at once that the saving under the first head is but another form of the fallacy which, when fully worked out, ends in Fourierism. It is again cheapening messages for the few at the cost of the many. The taxes which private telegraph companies now pay are spent in supporting Government—Federal, State, or municipal—as it now exists. If this revenue no longer comes into the Treasury, it must be made good out of the pockets of remaining taxpayers. But why should telegraph property not contribute to the general burdens of government? And why should not the beneficiary, the consumer, pay the tax?

The saving under the second head, by immunity from lawsuits, would be something. As it is an item which concerns the senders of messages almost exclusively, the economy would be strictly legitimate. But we very much mistake the temper of the customers of the telegraph if they desire to have their messages cheapened in that way. The tendency of legislation and of popular opinion is to impose a strict accountability for errors and mistakes in messages; and some business men think the irresponsibility of a Government bureau dear at any price.

We have mentioned the control of post-office facilities as a source of economy more in deference to Mr. Creswell's opinion than to our own. In fact, the saving here would be very little. From Mr. Orton's letter to the Postmaster-General, recently published, it appears that rent, light, and fuel constituted but six per cent. of the expenses of the Western Union Telegraph Company for the last fiscal year.

Whenever the business is important, as in cities, it demands exclusive accommodation and exclusive attention. No divided labor, and, as a rule, no space less than that now occupied, will answer the purpose. In the smaller towns and villages, telegraph offices are already associated with railroad and express offices, or with other business, so as to make the rent practically nothing, and to economize labor as effectually as by any possible

connection with the post-office. We have often met telegraph operators, like Mark Twain's "condensed citizen," whose various titles and avocations would fill a page.

We come, then, to the last advantage, and that is the saving derived from monopoly. Here is the stronghold of Government telegraphs, the one point where they have no rival, the element of cheapness, which, more than all others, will affect the price of messages. It cannot be ignored, and should not be underestimated. Private companies have no questions so perplexing as those growing out of competition. Their main revenues accrue between large centres of population and trade, and this territory is always open to invasion. A line of telegraph costing one or two hundred dollars per mile in cash, may utterly destroy the dividend-earning capacity of a large investment in telegraph property. It may reduce rates not only between its termini, but in all the adjacent country. A new company, from the necessities of its position, almost inevitably cuts down prices, whether these were previously reasonable or excessive. While lines are new, repair expenses are small, and in the struggle to attract business and to injure competitors, the temptation is strong to reduce tariffs below the cost of service. As we have shown that reduction of tariff means loss of revenue, there is less profit to divide among two companies than there was before for one while the double organization largely and needlessly swells expense.

The result is the same as that of almost all other kinds of corporate competition, whether by railroads, insurance companies, steamships,or coal-miners; first comes a sharp contest in which rates are sacrificed and business rendered worthless; second, a combination by which prices are often as unduly raised as they were before unnaturally depressed. High prices and resultant profits provoke after a while fresh competition. And so the ebb and flow of tariffs goes on, while the public pay sometimes much more, sometimes much less, than the cost of the service would require if this disturbing element were withdrawn. So far as stockholders in telegraph companies are concerned, the necessary consequence is, great uncertainty in the return from their investments, involving a demand for a far higher rate of interest than would be accepted if their income was stable and secure. There is no independent telegraph company in the United States that, during the last ten years, has paid dividends with any sort of regularity. The latter have reached that degree of uncertainty at which stockholders may well regard them rather as prizes in a lottery than as lawful interest upon capital. Since the 1st of January, 1867, the five largest companies in the country have together paid but nineteen dividends. Over two-thirds of these purported to be made "quarterly." The average is about one "quarterly" dividend every two years.

The effect of such a state of things upon prices can hardly be overstated. Until within a few days it has cost five dollars to send a message from the Atlantic to the Pacific over either of the competing lines. We assert deliberately that any company in the United States would contract at once to do this business hereafter at a maximum price of one dollar a message, in return for the single grant of monopoly from the Government. If the people of the United States want cheap telegraphing, here is the road to it. It can be obtained either through the agency of Government or of private companies, under restraints and regulations of law as to all tariffs to be collected. The question is simply, do we want it on these terms? We do not propose to argue this point. We commend it to the sober thought of the readers of the *Nation*. We ask them seriously to consider, in the light of the current news from Washington about the relations of the Government to industry, and about the condition of our political morals, what the effect would be of committing one more enormous enterprise, freed from the risk of bankruptcy which accompanies all private undertakings, to the hands of the class of men who now carry on our custom-houses and post-offices, and engineer our "national highways," and besiege Congress for steamboat subsidies.

A NEW CHAPTER OF ABSURDITY IN AMERICAN LOCAL TAXATION.

IT is known to all who have examined the subject, that a hundred years ago, or less, the law-makers of England and of the Continent of Europe entertained very generally the same opinion in regard to local taxation which is yet popularly received and acted upon in the United States; namely, that in order to secure exact justice and equality, it is essential to subject all property of the taxpayer—real and personal, tangible and intangible, visible and invisible—to one uniform rate of valuation and assessment. And although it must then as now have been evident to every one, on reflection, that in order to do this it would be necessary to endow the assessors with more than mortal powers of perception, so as to enable them to see what was invisible and measure that which was incorporeal, and that in default thereof this practical application of the theory must result in absurdity and injustice, yet it is curious to note that the change in English taxation, when it came about, was not due to any such process of reasoning by the people or to any positive enactment by the state, but rather to a series of legal decisions by the courts, which gradually undermined the whole system of British local assessment, until it tumbled down, as it were, imperceptibly, and was replaced from necessity by a theory which approximated more closely to the principles of political economy and the dictates of common sense. In this work Lord Mansfield led the way by deciding, in opposition to current practice and public opinion, that English consols could not in any way be made subject to local assessments; while other and subsequent decisions practically wiped out, in its application to taxation in Great Britain, that old-time fiction of law "that property follows the person or owner," and established this other and more rational principle, namely, that for all purposes of assessment the *situs* of property is where the property actually is; the legitimate inference in the case of property having no clearly definable *situs* being, furthermore, that this very condition of indefiniteness, incorporeality, and invisibility constitutes in itself the best of proof that any attempt of local authorities to interfere with and control it can be productive of nothing but evasions and immorality on the part of individuals, and loss and injustice on the part of the state.

So much as preliminary to a circumstance of more importance, to which it is especially desired to ask attention; and that is, that history as thus related is repeating itself in a most curious manner in the United States, and that the abrogation and reform of the unjust and absurd systems of local taxation at present existing in most of the States, and for the affecting of which neither argument nor the lessons of experience have thus far availed anything, seems likely at no distant day to be accomplished, as has been the case in times past in England, through the decisions of the courts of ultimate appeal and jurisdiction—decisions given in the first instance, as it were, abstractly, and without any direct reference whatever to the most important results certain to flow from their immediate and practical application. And as illustration and proof of this averment and prediction, the following statement of facts of recent occurrence is submitted.

The right of a State to impose taxes on imported goods came up many years ago before the Supreme Court of the United States in a somewhat celebrated case, known as *Brown* v. *Maryland*, in which the point at issue was the legality of a license tax imposed by the State of Maryland as prerequisite to selling an imported article, the plaintiff being a Baltimore merchant. The Court (Chief-Justice Marshall) held that this tax, though indirect in form, was in fact equivalent to a duty on imports, and therefore unconstitutional, and that the right to import carried with it a right to sell—a decision which was subsequently carefully recognized by various States in dealing with imported liquors under local laws imposing licenses. In the first report of the Commissioners for revising the tax laws of the State of New York, submitted in 1871, attention was, however, called to the fact that in some sections of the country, especially in the New England States, no attention whatever had been paid by local assessors to this decision of the Supreme Court; that taxes on imported goods continued to be locally assessed and collected; and that occasion was thereby given for extensive reclamations. The Boston Board of Assessors, feeling themselves particularly hit by these remarks of the New York Commissioners, replied soon after in an official communication to their city authorities, and defended their acknowledged practice, by asserting that "there was a broad distinction between the prohibition of the right to *sell* an imported article and the right to *tax* the same as property," and that the decision of the Supreme Court in question went no further than to affirm that a "State could not enact a law that would prevent the sale of such property, and did not touch the question of the right to tax." The utter irrelevancy of this defence was fully exposed in the second report of the New York Commissioners in 1872; but the Boston assessors, conscious of the power with which the present "Pagan" system of Massachusetts invests them, held to their interpretation of the decision of the Court, and continued to assess as before; until, within the past year, another decision of the United States Supreme Court has been made, so direct and unmistakable that all further misunderstanding and opposition are impossible. This decision, given in the case of *Low* v. *Austin*, is as follows:

"Goods imported from a foreign country, upon which the duties and charges at the Custom-house have been paid, are not subject to State taxation whilst remaining in the original cases, unbroken and unsold, in the hands of the importer, whether the tax be imposed upon the goods as imports, or upon the goods as part of the general property of the citizens of the State which is subjected to an *ad valorem* tax."

"Goods imported do not lose their character as imports, and become incorporated into the mass of property of the State, until they have passed from the control of the importer, or been broken up by him from their original cases."

An essential prop of the tax system of Massachusetts having been thus effectually taken out from under it, the Boston assessors, standing gallantly by their principles, propose to do their best to maintain their former practice and position; and for this purpose have addressed to the tax-officials of other seaboard cities and States a most curious and extraordinary circular, of which the following is a copy:

"ASSESSORS' OFFICE, CITY HALL, BOSTON, January 1, 1873.

"GENTLEMEN: Herewith find copy of a recent decision of the United States Supreme Court, by which imported goods, which in common with other merchandise have been assessed by State authority since the formation of our Government, are declared to be free of all taxation as long as they remain in the hands of the importer unbroken in their original packages. It will probably be at once apparent to you that this new exemption will, like that in favor of United States bonds, be availed of to remove from assessment much more than the actual value of the class of goods immediately covered by the decision of the Court. Fortunately it is within the power of Congress to restore to the States the revenue they have heretofore enjoyed from this valuable property, generally held by the wealthiest merchants in the country. It would seem that as no case of discriminating taxation upon imported goods has been brought to the attention of the country during the eighty-five years that have elapsed since the adoption of the Constitution, this decision was not needed to protect the Federal revenues from embarrassment by reason of State taxation. But in restoring the right of assessment, this possible contingency can be avoided by enacting that these goods shall be assessed at no greater rate than other merchandise in the hands of the citizens of the State levying the tax. The City of Boston has petitioned Congress for a law permitting the taxation of imported goods. Enclosed find blank petition in aid. Will you assist the movement by causing it to be forwarded in the name of the municipality you represent *at once*, and also by causing the senators and representatives from your State in Congress to be informed as to the merits of the question, that they may aid in the passage of the needed law?

"Very respectfully, for the Board of Assessors of Boston,

THOMAS HILLS, *Chairman.*"

The following is a copy, also, of the petition referred to:

"To the Senate and House of Representatives, etc.:

"The undersigned respectfully petition your honorable bodies for the passage of an act making goods imported from foreign countries, and remaining in the original cases, subject to taxation for State and municipal purposes at the same rate as other merchandise held by citizens of this State."

In what has been already said, this circular and petition have been characterized as "most curious" and "extraordinary." That these designations are not now mere figures of speech, but that their use and application is every way warranted by the facts in the case, will appear from the following considerations.

Passing by the intimation of the circular that this class of property—*i.e.*, imported goods—should be taxed by the States because "generally held by the wealthiest merchants in the country," as if the law was bound to take cognizance in taxing special classes of property of the relative pecuniary condition of the holders; and also the inferential ignoring of the principle that all taxes imposed on such property are, as a general rule, incorporated by the owners thereof in the selling prices, and so, falling on consumption, are paid by the poor equally with the rich, we are necessarily led to the conclusion that the Boston assessors, in framing their circular and planning their action, must either have forgotten that there was such a restraining instrument as the Constitution of the United States in existence, or else must have assumed that it was entirely within the capacity of Congress to overrule and nullify the Constitution whenever it pleased by the mere formula of an enactment. For in the first article of the Tenth Section of this Constitution, as if designedly put in to meet this special contingency, occur the following provisions: "No State shall, without the consent of Congress, lay any imports or duties on imports or exports *except what may be absolutely necessary in executing its inspection laws; and the net proceeds of all duties and imposts laid by any State shall be for the use of the Treasury of the United States.*" It is obvious, therefore, that here is not only a clear prohibition on Congress doing what is petitioned for, but also that if it should heed the prayer of the Boston assessors and grant them permission to tax, the permission would pecuniarily avail them nothing, and that they would simply perform their work for the benefit of the Federal Treasury. It should also here be remarked that the above clause is about the only limitation in the Constitution of the United States in respect to the disposition of revenue derived from taxes or duties.

But the Constitution has something further to say on this general subject. Section 8, Article 1, declares that "all duties, imports, and excises shall be uniform throughout the United States." But if Boston, New York, Brooklyn, Philadelphia, and Rochester apply to goods imported within their precincts the same rates which are assessed against other merchandise and property of their citizens (the rates in these several cities for the year 1870-'71 having been respectively 1.53, 2.27, 3.87, 1.80, and 6.70), how can the constitutional provision that the rate of taxation on all imports shall be uniform be complied with?

But looking at this whole matter generally, and apart from its constitutional relations, is it not obvious that this whole Boston circular and petition is in effect a request to Congress that it will permit the several seaboard and border towns and cities to take a hand, whenever it so please them, in further adjusting and manipulating that already complicated and vexatious subject of the tariff; that it will permit them to say, when Congress declares that tea, coffee, dye-stuffs, hides, and other articles shall be admitted free, that this freedom shall be locally qualified; and, finally, and in short, that a few places, by reason solely of geographical peculiarities, may be allowed to benefit and enrich themselves at the expense of the great majority of the States which are otherwise situated? It would doubtless be a fine thing for New York City, which first receives some four hundred millions annually of our imports, to be allowed to add this vast aggregate to the roll of her municipal valuation; but what would Ohio, Indiana, Illinois, and other great States of the interior say, through their representatives, to such a project? Many people have the idea that almost anything can now be accomplished at Washington in the way of legislation by sufficient persistency, backed by political and moneyed influences; but this would be one of the projects which every member of the lobby who desired to retain any reputation whatever for sagacity would doubtless pronounce from the outset to be wholly beyond effort. The Boston assessors have, therefore, assumed the position of advising their representatives in Congress and brother-officials in other cities to attempt to effect a result which a mere glance at the Constitution of the United States will show to be impracticable, and a most superficial consideration of the relation of the several States would prove to be inexpedient; the whole transaction, furthermore, strikingly illustrating two points, well worthy of every man's thoughtful attention: first, how small a basis of principle and information underlies a system of taxation like that existing in the State of Massachusetts; and, second, how unjust and impracticable it is to attempt to carry out a theory of local taxation in the United States which assumes as its fundamental basis that, in order that there may be equality, it is necessary to value and assess every description of property. For if imported goods, all Federal securities, money and other instrumentalities, and property *in transitu*, are specifically exempted by law, and if the majority of all incorporeal, invisible rights to property are equally exempted by a higher law growing out of their condition and man's nature, what becomes of the boasted equality of a system based upon such a theory? Has it not everywhere resulted in exactly what might have been predicated from the outset—namely, in an administration which taxes every man for personal property who is honest, ignorant, or incapable (by reason of circumstances) of practising concealment, and which exempts, on the other hand, the property of all those who are cunning, unscrupulous, and willing to forswear themselves?

There is one point more in connection with this matter which has a prospective interest of not a little significance. Since the decision of the Supreme Court in the case of *Brown* v. *Maryland*, above referred to, was given, it has been regarded by every writer of note on constitutional law who has referred to the subject as sufficiently decisive in respect to the right of the States to tax imported goods in the original packages as personal property of the importers or merchants; and if a practice of making such assessments previously existed in the seaboard States of New York, Pennsylvania, and Maryland, it has since been otherwise. The Boston assessors have, however, in face of precedents and suggestion, preferred to be a law unto themselves on this question, and have therefore, it would seem, obviously made their city liable to heavy reclamations. Whether such reclamations will be now made we know not; but, for the sake of good law and administration in the future, it is for the interest of the whole country that they should be. And when suits of this character are followed up by others, testing the question whether one State, in virtue of having possession of the person of the owner, can tax his property under the protection, sovereignty, and jurisdiction of another State, the existing system of Massachusetts will be on the high-road to dissolution, and the Boston assessors will be anxiously enquiring for something better.

DAVID A. WELLS.

Correspondence.

THE MASSACHUSETTS SENATORSHIP.

TO THE EDITOR OF THE NATION:

SIR: An article in a late number of the *Nation*, treating briefly the question of the choice of a new Senator for Massachusetts as lying between Mr. Boutwell and Mr. Dawes, concluded as follows: "Massachusetts was never

yet without the requisite timber for half a dozen senators, and was never restricted to choosing one of any given two men."

Nothing could be more reasonable nor more seasonable than what you say. Massachusetts has some private citizens who may be favorably compared with either Mr. Boutwell or Mr. Dawes in respect to fitness for a place in the Senate of the United States. Mr. Charles Francis Adams, for instance, after a series of invaluable services to the public, is no longer in the public service.

Mr. Dawes is a highly respectable gentleman. In his place in the House of Representatives at Washington, he has shown integrity, independence, and intelligence, and in a small way has gained experience. But the most partial friend would not think of ascribing to him any extraordinary qualities of statesmanship. For high official functions Massachusetts has scores of men of as good capacity as he.

Mr. Boutwell has the name of being an adroit manœuvrer in politics, and an adept in the management of men. This reputation following any person, besides being a thing quite vague in respect to the fact, is so exceedingly equivocal in respect to merit and usefulness, that men of character would generally prefer not to have it attach to themselves. At all events, as a public man, Mr. Boutwell has not established a claim, in the past, to the respect or confidence of the State which is now asked to send him to the Federal Senate. Massachusetts is no debtor to him. On the contrary, he has made trouble for her more than enough. His only very important action in her politics took place about twenty years ago, and it was deplorably bad. As the representative of the Democrats of the State, he entered into articles with Mr. Henry Wilson, representing a portion of the Free-soilers, for a trade in the offices. Nobody said that they handled money in the transaction. They preferred to deal by barter. Mr. Boutwell's allotment was the chief magistracy of the State, to which office he was accordingly elected by the joint votes of his own political friends and of Mr. Wilson's following of Free-soilers, and the plot having been carried into execution, worthy Massachusetts men were grieved that Mr. Boutwell incorporated into his inaugural address a set argument in defence of the horrible fugitive-slave law, then recently enacted.

That was not the end, however. Mr. Wilson enlisted Mr. Boutwell and Mr. Banks in a scheme for demolishing the constitution of the commonwealth. It was not suggested, even by the movers, that anything was the matter with the existing constitution, except an arrangement open to objection in respect to the lower branch of the Legislature. If this needed alteration, the thing was easily to be done by the use of a convenient article of the constitution itself, which provided for making amendments by an action of two successive Legislatures, subsequently ratified by a popular vote. But this would not meet the objects of the contracting parties. They calculated that there was something to be made out of a general scramble, and in the heat and turmoil of the time they got a vote for a constitutional convention.

It came together, and Mr. Wilson, Mr. Boutwell, and Mr. Banks were the triumvirate that ruled it. Mr. Banks was presiding officer, Mr. Boutwell was floor-manager, and Mr. Wilson chief usher in the lobby. They and theirs "overleaped themselves, and fell on the other side." They concocted a dose too unsavory for their best manipulation to force down. If they had had their way, there would have been now in Massachusetts for the election of representatives a system very like the old rotten-borough system in England, and instead of the excellent administration of the laws which Massachusetts always has had and has, there would have been a judiciary like that which has lately occasioned some little sorrow and disgust in New York. When the result of this synod was sent out to the people in the form of an amended constitution, the people could not stomach it. The popular vote condemned it and sent it to its place; and so far Massachusetts is as well off as if Mr. Boutwell, and Mr. Wilson, and their associated friends had let her alone. But it is small thanks to them that she is so. She owes her rescue only to her own stubborn good sense. And the rescue, considering how serious the danger was, is so much to be thankful for, that it is not worth while to remember how many thousand dollars the State treasury was mulcted in for the sorry job.

At all events, for the content of such electors of a senator for Massachusetts as think Mr. Dawes eminently competent, and Mr. Boutwell eminently meritorious, things seem to stand well enough as they are. These gentlemen are both already in situations which afford the public the benefit of all their talents, however great. Mr. Boutwell is Secretary of the Treasury of the United States, a place just now of immense responsibility and power, and Mr. Dawes is chairman of one of the two most important committees in Congress, perhaps the most important. If they are capable of such vast usefulness to the public, why disturb them? Why not leave them where they are, and add to the contribution already made by Massachusetts through them to the public welfare by filling her vacancy in the Federal Senate with a man—if she has such a man—fitted by character, and ability, and knowledge, and experience to do her the highest credit and the best service in that exalted council?

In the course of his conspicuous career, Mr. Adams never did or imagined harm to Massachusetts by constitution-tinkering for sordid ends or in any other way. He has always been in harmony with her sober second thought, if not always with her ephemeral delusions. When he first came forward in public life, the Cotton Whigs (then so called) controlled her action, and Mr. Adams fell under their ban. He kept on his way with brave consistency, and presently Massachusetts thought better of the position, and stood stoutly by his side in helping to lay the slave power. Then selfish schemers plotted against the State constitution, and the peril was great. Mr. Adams addressed his fellow-citizens as its champion, and, short as the time was for blowing away the dust that had been thrown in their eyes, he prevailed, and the wholesome vote of Massachusetts declared her deliberate agreement with him. There were enough persons disappointed and irritated by his patriotic action to keep him on the shelf for some years. But by-and-by that too came right; and in his conduct in the elevated stations which he has held of late, not only his own State, but the nation, has seen cause to recognize the breadth and sagacity of view, the uprightness, the courage, the discretion, the firmness, the good temper, the variety of information and fertility of resource, which characterize statesmen of the highest order.

At all times, and notably at the present time, matters of extreme concern to the national well-being depend on the action of the Senate of the United States. Many think that that exalted body is not now overburdened with the fitting preparation of wisdom, and knowledge, and honest devotion to the public good. Many feel confident that the Senate will not be the worse for a further infusion of all such qualities, and Massachusetts is naturally looked to for such a contribution, when she has a chance to make it. This is not a time for her to be capricious or reckless. Just now the foreign relations of the country are worth attending to in the Senate with some better insight than belongs to Mr. Cameron and Mr. Morton. Is it more than fair to the whole people that before Massachusetts comes to fill her vacant senatorship, she should consider wisely who is, for the purpose, her most trustworthy and serviceable citizen? M. Y.

PUBLISHING EXAMINATION PAPERS.

To the Editor of the Nation:

Sir: "N. N.'s" letter on the publication of college examination papers is an extraordinary performance. Every one of his arguments either is directly in the teeth of the plain facts of the case, or makes directly in favor of what he opposes. First he says, "Examination papers necessarily give a very imperfect idea even to scholars of the character or amount of instruction given." I deny this *in toto*. To a scholar there is no way of imparting the idea so quickly and with so little trouble. As to the ignorant, they cannot be expected to get very clear notions on the subject any way.

Suppose a graduate of West Point or of the École Polytechnique asks me, "How high do they read in Cambridge (England) for a mathematical degree?" I answer, "Here are the papers of my year, printed in the 'Cambridge Calendar.' I only did these questions and just passed. The senior wrangler did all except such and such questions. You will remark that the time is limited."

This, I repeat it, is the best and shortest way of imparting the idea to a man who is master of the subject. Suppose I tell an enquirer that at such and such a period of the course the students of a certain college read *Mechanics*. He will then ask the name of the text-book, then what parts of it are read, and after all will not know as much about it as he might learn by a very brief look at the examination paper.

Secondly, we are told that "to the outside public, who cannot see the bearings of the conundrums put, or the daily teaching, they must often seem puerile, sometimes farcical, and must tend to lower the low estimate in which universities are too apt to be held by men of affairs."

I suspect that "men of affairs" do not generally trouble themselves to read college catalogues, whether with or without examination papers among their contents. But if we are to pander to the prejudices of those ignorant, self-conceited, and self-made "men of affairs" who think nothing which *they* do not know worth the knowing, we shall not be able to publish anything relating to the Humanities: we shall hardly be able to have any colleges at all.

Next, he thinks that "public curiosity is insatiate," and ought not to be gratified. It has always seemed to me that the fault was just the other way, and that the general public did not take sufficient interest in our colleges.

But if I am wrong as to the fact, then their curiosity is a good, not a bad sign, and ought to be encouraged.

Then the undergraduates may be assisted by these papers to prepare for their own future examinations. Exactly—and very proper it is that they should be. Not, as he wildly supposes, by cramming the answers to the actual questions in the published papers (for those vary from year to year like the figures of a kaleidoscope), but by ascertaining *the sort of questions* that are usually asked.

Finally, our colleges are "drifting toward an evil," which is that of "attaching too much importance to examinations." Here again I join direct issue with "N. N." on the fact. I am convinced—and convinced that it would be easy to prove—that much of the great progress which our colleges have made within twenty years is owing to the institution of written examinations. These require long previous preparation, and some amount of positive knowledge, whereas the daily recitations are crammed up from day to day, and forgotten, in a great measure, as soon as learned, even by many of the candidates for the highest honors.

C. A. Bristed.

Washington, D. C., January 25, 1873.

To the Editor of the Nation:

Sir: Your correspondent "N. N." should not have confined his remarks nor applied his delicate humor to Cornell University alone, but should have included in his denunciations the Universities of Oxford, Cambridge, Edinburgh, and other great foreign schools, which annually give their examination papers to the public. He should have mentioned Harvard, which, although it does not insert its papers in its catalogue or calendar—I hear it stated that even this is to be done hereafter—at least prints them, and forwards sets to anybody on application. He should have alluded to the Regents of the University of the State, who have frequently published their own examination papers, and those of institutions under their charge. "N. N." may, however, console himself with the reflection that he is by no means the first American who has displayed a gross ignorance concerning this matter. The whole subject of examination is little understood among us, and our lack of knowledge on this point has always seemed to me not one of the smallest obstacles in the way of a full and fit reform of the civil service. Not one teacher in a hundred understands the art of drawing up a proper examination paper—a paper which shall fairly represent the leading points of the subject taught, which shall elicit in the best shape the evidences of the student's attentiveness and labor, which shall maintain the right line between too minute detail and too loose generalization, and which shall subject to the same test every member of the same class. I greet any publicity which shall tend to improve our condition in this regard.

I am aware of the antipathy of a good many more or less well-informed people to "cram," and feel a sincere compassion for the conductors of the *Saturday Review* and *Pall Mall Gazette*, who have written themselves into a state bordering upon mental infirmity on this theme. But "cramming-up on past papers" doesn't seem to me the worst evil in the universe. A man who has thoroughly "crammed-up" on the past mathematical papers published, for instance, by St. John's College, Cambridge, must have got as much out of them as could be acquired from a whole library of text-books. The man who will "cram-up" on the "past papers" on English literature, for example, published in the annual reports of the English Civil Service Commissioners, will obtain a knowledge of the subject which would put to shame the graduates of most of our colleges. To your correspondent, and to others of his class, let me commend this recent utterance of Mr. Gladstone: "What a pitched battle is to the commander of an army, that a strong examination is to an earnest student. All his faculties, all his attainments, must be on the alert, and wait the word of command; method is tested at the same time as strength; and over the whole movement presence of mind must preside." As also this comment on the above made by the London *Spectator*: "Force of character is tested by an examination almost as much as intellect; for instance, the power of concentrating various quite distinct streams of thought and knowledge on a single point is of the first importance in an examination, and requires not merely presence of mind, but a certain faculty of skilful intellectual grouping which is of the first value to practical men."

January 24. S. G.

Notes.

J. R. OSGOOD & CO. have in press: 'Palmetto Leaves,' by Mrs. H. B. Stowe; 'Among the Isles of Shoals,' by Mrs. Celia Thaxter; 'The Other Girls,' by Mrs. A. D. T. Whitney; 'American Text-book of Art Education,' by Walter Smith; 'Gothic Forms Applied to Furniture, Decorations, etc.,' by B. J. Talbert, illustrated by means of the heliotype process; 'Music Hall Sermons,' by the Rev. W. H. H. Murray; and 'Enigmas of Life,' by W. R. Gregg.——Scribner, Armstrong & Co. will add to their Illustrated Library of Travels the 'Lake Regions of Central Africa,' edited by Bayard Taylor, and 'Siam,' edited by the Rev. George B. Bacon; and will reprint Medhurst's excellent work on China, 'The Foreigner in Far Cathay.'

—We have received the prospectus of a proposed magazine, to be entitled the *Chronotype*, to be devoted to genealogical subjects, and to be edited by Dr. Jerome V. C. Smith, formerly Mayor of Boston. The circular states that the journal "is designed for the instruction of the young and to afford recreation to . . . elderly people"—an announcement which does not lead us to anticipate that it will be of much value to the student of our history. With this circular, however, we received another, which reads as follows:

"Dear Sir: As it is contemplated to embody in the columns of the *Chronotype* portraits, with family coat armour (hereditary or granted), and biographical sketches of families or persons who may wish to have such memorial for preservation, we shall require to be furnished with the matter and plates, either engraved or photographed, one month in advance of publication. Also, to be advised how many extra copies of the number containing such notice will be required."

This is signed by Albert Welles, President of the American College of Heraldry and Genealogical Registry, 67 University Place. Now we had occasion, on the 10th of October last, to call the attention of our readers to a proposed book of biographies of distinguished Americans. This project, as we pointed out, bore some mysterious relationship to the Genealogical Registry; and the advertised feature of the *Chronotype*, the publication of biographies when plates are furnished, has a family likeness to the scheme of last summer. It is strange that so little is known of this ambitious "American College of Heraldry," an enterprise which is perpetually starting new schemes and issuing trashy circulars. Last year we found that Mr. Wm. Coventry H. Waddell was president and Mr. Albert Welles secretary. Now we find Mr. Welles promoted to the presidency and Mr. M. Turner Forman is secretary. Beyond these names we find nothing, except long lists of undated recommendations, a list of twenty-eight honorary members, and apparently twenty-five life members. As to the active members of the society, its constitution or officers, we are left in the dark. Can the "practical herald connected with the institution" be the Henry Hays who published in the New York *Herald*, apropos of the death of Lincoln, such an amazing exposition of his incompetency in his profession?

—Those of our readers who care for philosophy ought to know of an important weekly journal, *La Critique philosophique*, now in its second year of publication by Germer Baillière, in Paris. Its editor is M. F. Pillon, whose name many will remember in connection with the excellent *Année philosophique*, of which two volumes were published before the German war, but which now becomes merged in this broader form of periodical. The doctrines the journal has to promulgate and defend are those of M. Charles Renouvier, who is an active contributor to its pages. His name has hitherto, we fancy, been less widely known than it deserves, and we rejoice that this popular form of publication promises to attract the attention of a larger circle of students to his writings. For, in our opinion, his 'Essais de Critique générale' form incomparably the ablest effort of philosophical speculation to which France has given birth during this century. How much of truth or error they may contain cannot be discussed here. But no one will read the first two *essais* without admitting their marvellous clearness, their trenchant logic and condensed vigor of expression, and without feeling that sort of weight and moral authority which any theory will possess when it is the resultant of the convergence of all the faculties of a powerful nature. M. Renouvier is through and through a *Verstandesmensch*. No mysticism or evasion of the principle of contradiction ever spots his pages. The knowable universe is for him, as for the school of Mill and Bain, a system of phenomena, and metaphysic is an analysis or inventory of their elements. But among these elements he finds the *possibility*, which British empiricism denies, of absolute beginnings, or, in other words, of free-will. On this somewhat well-ruminated subject M. Renouvier has been able to say something original and simple. Since we *may* affirm free-will, what more fitting than that its first act should be that of its own self-affirmation? So that we have an *act* enthroned in the heart of philosophic thought. Liberty is the centre of gravity of the system, which henceforth becomes a moral philosophy, not however neglecting to say its word concerning certain metaphysical postulates which morality seems to make. Republicanism is of course the political corollary of free-will in philosophy, and the *Critique philosophique* deals with political as well as literary and philosophic questions with an ability that should recommend it to all thoughtful minds.

—The Arundel Society has published many good collections of photographs, representing fans, furniture, pottery, jewellery, gold and silver ware, the Treasury of Petrossa, the Monastery of Batalha, the Cathedral of Compostella, but none that surpasses its last volume, 'The Architecture of Ancient Delhi.' The photographs, which are permanent, are very clear, the points of view selected with admirable judgment so as to combine architectural information with picturesque effect. The absolute truthfulness of photography as to form is specially adapted to architecture, and Indian architecture has the double advantage of being little known and very beautiful. At Delhi are the noblest minaret in the world (of which we have a wonderfully good full-length photograph, taken very near the base), arches which it is very interesting to compare with the Moorish, columns that remind one of the sculptures of Yucatan, and ornamentation as rich as any in the Alhambra. Perhaps the most effective photograph is No. 21, the southern door of Ala-ud-din's Gateway, where an arch, adorned with intricate carvings, admits a soft light into a dim porch ornamented with equal profuseness. This chamber is worthy of note for the mode in which the square walls are changed into an octagonal form to support the dome. The corners of the square are cut off by horseshoe arches of the same shape as the main doorway, but diminishing in size as they recede towards the angle, giving very simply an effect of great solidity, which is clearly shown in the photograph. The text by Lieut. H. H. Cole is unusually good for a work of this kind. He gives a description of each monument and a history of all, as far as it is possible, and makes his sketch interesting in spite of the number of unpronounceable and unrememberable names that trouble every reader of Indian history. This is preceded by a short account of the Archæological Survey of India, by which it appears that the present Government is making praiseworthy efforts to get measurements and photographs of architectural monuments and casts of carvings throughout India. Two large courts, eighty feet high, have been constructed at the South Kensington Museum for the exhibition of full-sized casts of architecture, with the intention of affording an opportunity of comparing the architecture of different countries. Many Indian casts have been deposited there. It is to be hoped that our own art museums will be able to obtain copies of some of these.

—In a recent entertaining book of travels in the Caucasus and Persia, by a gentleman attached to the British diplomatic service, I find, writes a correspondent, the following incident, which is not without interest, both as bearing on Russian operations in the East and as a slight argument in favor of an intelligent civil service. The author does not vouch for its historical accuracy, but his informants, it should be noted, were Russian officials. Some years ago, when it was necessary to settle upon a new boundary between Turkey and Russia in the Caucasus, the Russian Government was very anxious to have the line a small stream running into the Black Sea about a hundred miles from Trebizond. This was in order to include Batum, a place insignificant in itself, consisting in 1865 simply of "some squalid-looking huts," but possessing "the only good harbor on the eastern shore of the Euxine." Some twenty miles to the east of this village, however, there is another stream having the same name, with the exception of a single letter. After the treaty was signed, it was discovered that this distinguishing letter had been omitted, and in consequence this latter stream became, and still remains, the boundary between the two countries. This unfortunate mistake has put the Russian Government to an enormous expense, as they have been obliged to make a port of Poti, a town situated in a swamp at the mouth of the Rion (the ancient Phasis). Though millions have been spent in improving the harbor and deepening the channel of the river, no amount of money can make it equal to Batum. A railroad is being constructed from Poti to Tiflis and Baku on the Caspian. It was opened in 1872 as far as Quiril. The importance of this road in a military and commercial point of view will easily be seen by a glance at the map. All the trade between Europe and the northern and northeastern provinces of Persia, which is now "carried on by means of caravans of camels and mules, which tramp wearily up and down the eleven hundred miles between Teheran and Trebizond," will inevitably follow this route when completed. At Tiflis our author met "a traveller from one of the largest furniture manufactories in Paris, who had been buying walnut-wood in the forests of Mingrelia, the supply in Europe being exhausted. He found it in abundance, but the question was how to get it to France." Eventually it was sent to the Caspian in bullock carts, then up the Volga, then down the Don, and so, *via* the Sea of Azoff and Black Sea, to Marseilles. Russia's negotiations with Turkey in 1871 to obtain a cession of Batum appear not to have been crowned with success.

—The derivation which dictionaries—from Bailey to Latham's Johnson—give of the name *Rickets* is one of the curiosities of English lexicography. Bailey's first edition has "Rickets (*ραχίτις*, of *ραχις*, *Gr.* the back-bone), a disease common to children." Johnson is more explicit: "Rickets (*Rachitis*, Lat. A name given to the distemper, at its appearance, by Glisson)." Dr. Latham retains the "Rachitis, Lat.," but omits the reference to Glisson. The last revision of Webster suggests that the name is 'probably from A. S. *ricg, hric*, back, spine," but adds, "see *Rachitis*" (for the old derivation from the "Greek *ραχῖτις*, sc. *νόσος*"), and gives, *sub verbo*, a story from Aubrey about one Dr. "Ricketts, of Newbury," who was so famous for curing the new disease that people gave it his name—a story which Mr. Mark Antony Lower thinks "may be corfect." No one would think of inserting in an English dictionary references to "*catchpollus*, Lat.," and "*aysiamentum*, Lat.," as the etymons of "catchpole" and "easement"; yet something very like this has been done by the lexicographers who, as Aubrey says, have "vexed their lexicons to fetch *rickets* from the Greek." *Rachitis* is doctors' Latin, as "aysiamentum" is, or used to be, lawyers' Latin. Dr. Glisson's treatise, *De Rachitide*, was written about thirty years after the disease made its appearance in England. He states that, from the first, it was everywhere called by the common people "the Rickets"; that it had no other name; but that when, where, or by whom this name was given, neither he nor any one else could find out. One day, some physicians were consulting as to the name by which the new disease should be designated by the medical profession and in books. "One of us," says Dr. Glisson, "hit upon *νόσος ραχίτις*, or *ραχίτις, morbus spinalis.*" The suggestion was made and received as a joke, but on reflection there seemed to be some good reasons for adopting it. It had a familiar sound, was easily learned and remembered, and besides, it would have an influence to redeem from barbarism the popular English name of *Rickets* ("denique videmur hoc nomine Anglicum nomen, tanto populi consensu receptum, a barbarie liberare"); for "Rickets" might be understood to be merely a corruption of *ραχίτις*, "the difference between the two words not being greater than is often made by the vulgar pronunciation of a word adopted from a foreign language." And so this designation was accepted, and the doctors agreed that the common English name should be retained, as if coming from a pseudo-Latin word *Rachitis*, formed from the Greek adjective ("*ficta voce* Latina substantiva ex Græca adjectiva"). The device was successful, and Glisson's hypothetical etymology passed current with the dictionary-makers. We must except Skinner, whose *Etymologicon* was compiled before Dr. Glisson's treatise was published, and who suggests the derivation of "Rickets" from the Germ. *recken*, to stretch. Richardson quotes this suggestion, without approving or disapproving it. A rare tract, published in 1701, entitled "Scelera Aquarum; or, A Supplement to Mr. Graunt on the Bills of Morality" (4to, pp. vi. 30), by "J. H., M.D.," gives an account of "the London Ricketty Rheumatism," and offers an explanation of the name which has hitherto escaped notice. Dr. Glisson, according to this writer, mistaking the true etymology, "stumbled at the threshold," for "the English in the county of Derby, where the disease broke out, called the thing by the medley name of *Scurfi* and Wrygates—that is to say, *scabby* and *crooked goings*. This was sweetened into *Scurvy* and *Rickets* in process of time" (p. 18). One of the "signa diagnostica" which Glisson notes is, that children affected by this malady, "paullatim infirmis pedibus insistunt, atque inter incedendum sæpius *vacillant*, levique de causa titubant, aut etiam cadunt." Was not a Derbyshire or Somersetshire man more likely to express all this by "wrygates" than to invent for it a bad Græco-Latin name for a disease "of the spine," with which, as the doctors believed, the "going awry" had some connection? Compare, however, the A. S. *wrigian* to bend, Low Germ. *wricken*, Engl. *wriggle*, and O. Engl. *ricketty*, meaning "weak-jointed."

—Among French works bearing upon the task of national reconstruction we should name, if we began at the beginning, Dr. A. Siry's 'Le Premier Age,' or the physical, moral, and intellectual education of youth. Closely allied with this are the two works on 'Marriage in France,' by MM. Ernest Cadet and Armand Hayem, both of which have received honorable mention from the Institute. The former sets forth the statistics of marriage and population in France (in 1870), traces the causes of the evil which they reveal, and suggests remedies. The statistical portion will be found valuable. M. Hayem, in a very thorough consideration of the whole subject, does not omit the effect of the law of inheritance on the number of children; but he differs from most and, we believe, the best observers in denying that the *partage égal* has any influence whatever on the increase of families. In advancing schemes of reform, he goes so far as to propose a kind of sanitary jury before which candidates for marriage shall present themselves for judgment. On the political side, we have Paul Leroy-Beaulieu's 'Administration locale en France et en Angleterre,' a prize essay three years old, though only published last year. It will be found useful in comparing the governmental details of the two countries. A more widely suggestive work is the Marquis de Biencourt's 'Du droit de voter et de la valeur du vote'—a sub-

ject by no means exhausted for the great American republic. The author would attach grades to the vote, according to the capacity of the voter, who would be entitled to promotion, as it were, on fulfilment of the conditions defining the higher degrees; and the penalty he would affix to the neglect to vote would be proportioned to the voter's rank in the scale of suffrage (*en rapport avec la valeur numérique du droit de l'électeur*). And does he not indicate the solution of the great-city problem, and the one to which we must eventually come even in this country, when he insists that there should be a difference between the right to vote for national and for municipal representation?

—Any one interested in the Catholic "revival" in France, concerning which our readers will remember an instructive letter from our Paris correspondent, may procure 'La France à Lourdes,' an official report, by the "Committee of the Manifestation," of the fêtes in honor of the miracle which has drawn such troops of pilgrims to the place. The particulars of the "manifestation" are briefly described, and the "moral" pointed out, and then follow the discourses of Father Chocarne, the Bishop of Tarbes, the Archbishop of Auch, the Bishop of Carcasonne, etc., etc. The fêtes took place on the 5th, 6th, 7th, and 8th of October, and among the pilgrims were MM. Armand Ravelet and Dubosc de Pesquidoux, who have given an account of their experiences in 'De Paris à Lourdes' and 'Pèlerinage de Lourdes'—collections of their letters written "toutes chaudes des émotions du moment" to the *Monde* and the *Union*. The fair-minded Protestant may as well read in connection with the foregoing a work published in 1870, called, in the abbreviated form to which the French eye is accustomed, 'Mémoire sur les instruments de la passion de N.-S. J.-C.,' by Charles Rohault de Fleury. This author has dared to face the impious doubts of heretics concerning the authenticity of the relics of the crucifixion. To this end "he studies one after another all the sacred instruments of the Passion, approaching what remains of them with respect, getting down on his knees before them, analyzing them scientifically, and making of himself by turns a chemist, archæologist, historian; withal, reaching in regard to each one of them irrefragable conclusions, in which faith and science are admirably reconciled." So, at least, declares M. Léon Gautier in the *Polybiblion*. To meet the scoffing allegation of Calvin and other schismatics that "a whole ship would not contain the pretended relics of the true cross," M. de Fleury has "profited by the latest advancements of science, and particularly by chemistry, from which" (we still quote M. Gautier) "nothing can be concealed, and before which Catholics do not tremble." By this means he clearly distinguished the true nail of Trèves from all those which merely contain small fragments of authentic metal. Twenty-three steel and a great number of wood engravings represent each relic with its proper dimensions.

WHITNEY'S 'ORIENTAL AND LINGUISTIC STUDIES.'*

IT is now about twenty years since Professor Whitney, young then, and just from the lectures of Roth, published his first paper on the Vedas, the very first, he says, in which the main results of modern study respecting the most ancient period in Indian history were made accessible in English. Others followed in 1859, 1861, 1868, and 1871, discussing the Vedic doctrine of a future state, the history of Vedic literature, and the translation of the Veda. First published in the "Journal of the American Oriental Society," and our heavy reviews, they are now collected for us, and thousands who had never seen them will read them gladly. Professor Whitney is surely happy in having connected his name and fame with the earliest literary monuments of the Indo-European race—works in which the foremost nations are seeking to trace their history, and through which the clue leads to the beginnings of all scientific knowledge of man. He has kindled his own enthusiasm in many who have been in his classes at Yale; but the students whom he formally instructs are few compared with those who have enjoyed his advice and aid, and who have filled their urns from his fountain; and year by year he reaches through the press a larger and more deeply interested circle. Something of this increasing interest is doubtless due to the reflex influence of Professor Whitney's European reputation, which is the pride of American scholars; but it is mainly the direct result of the same power which has made his editions of Sanskrit works, and his book on 'Language and the Study of Language,' so highly esteemed in Germany. Thoroughness is his most marked characteristic. Then there are few books of such depth and compass as his, expressed with as much simplicity. And compression never fails. In a wonderfully small space we get a sufficient body of facts for a general understanding of the history of Vedic study, of the Vedas themselves, and their relation to modern mind and life. Now and then the author rises with his thought to rhythm and eloquence.

The essay on the Avesta has the same merits. Then comes an article on Indo-European Philology and Ethnology, a review of two essays disparaging Sanskrit studies, which presents the real claims of such studies with convincing clearness. It also gives Professor Whitney's views on a number of important points in the philosophy of language. What he says on pronominal roots is especially worthy of note. It is clear that they are not thoroughly understood, and that they have been much used as a mere refuge for ignorance. Professor Whitney thinks that the whole apparatus of derivation and inflection has sprung from the composition of independent words, which were originally names of physical acts or qualities. To our mind, there is a gulf between common compounds and derivatives by the pronominal elements which the personal endings of the verb do not begin to bridge; and the characteristic uses of the pronominal letters are such as to leave it doubtful whether their first use in artificial language was not as dependent enclitic syllables or sounds.

In two articles on Max Müller's 'Lectures on Language' (in which Professor Whitney is very exacting), and in those which follow on the present state of the question as to the Origin of Language, and on the "Simian," the "Physical," and the "Psychological" theory of language, Professor Whitney sets forth his views of the nature of language against Müller, Bleek, Schleicher, and Steinthal; and if we may judge from the elaboration and vigor of the criticism, these are the articles which he thinks to contain the most important work for the science of language.

The catchwords or keys of his position are that language is a human INSTITUTION, and that the science of language is a HISTORICAL science. His favorite method is to examine one word at a time, beginning with modern words, then say the unknown words are like the known, and language is nothing but a number of words. Thus, to show that language is a product of the human will, there is "*gas* invented outright by Van Helmont, about A.D. 1600"; then *telegraph, dahlia, petroleum, miocene,* with all their kith and kin, all the same as if forged brand-new; then there are *ink-bottle, steam-whistle, steam-boat, rail-road,* and then *help-ful, loveth,* and so on, until we make the induction that every word has been devised by some man, and so that languages, which are congeries of words, have also been so devised.

When we read Professor Whitney's statements of his own views, we assent; but when we read his assaults on others, we often dissent. The fact seems to be that this region of language is under the concurrent jurisdiction of the will and the unconscious involuntary activities; so that those who would exclude the will from it, and those who would make the will sole cause in it, alike err.

Thus, Professor Whitney urges that the science of language is a historical science, and we assent. Languages are a product of man, and embody his history, and words and languages have a history of their own. The great achievements in the study of language during the last generation are historical studies. We look to the future for more and more light from similar studies. To desert them would be giving up linguistics. When the Germans, who have shown ability to prosecute them, turn to futile metaphysical speculations, it is to be deplored. But then, shall we say that there is no scientific study of language except the historical, no impersonal laws of speech to be investigated? On the contrary, before language is thoroughly understood, its laws must be grounded in laws of the mind and of the organs of speech; and it is no futile metaphysics, but true science, which tries so to ground them.

Every product of man has a history, part of which belongs to the biography of the man who produced it. There was a steam-engine, whose story is part of the biography of Watt, and every machine has its story. So has every word. When the first schooner, narrates Professor Whitney, slid from her stocks, the chance exclamation of an admiring bystander, "Oh, how she *scoons!*" drew from her contriver the answer, "A *scooner* let her be, then," and made a new English word. There is, then, a history of language, which is a collection of anecdotes, and the free-will seems to reign in it. But there are laws of language, as there are laws of mechanics, and surely the word science is commonly used for the body of laws. We speak of the history of inventions, the science of mechanics; the history of prices, the science of political economy. If there is a body of laws of speech which are impersonal, these are the science of language. The history, the anecdotes, are linguistic truth, are interesting, they furnish material for science; but science, by eminence, comes with laws.

To work out the position that there is a science of language which is laws and not anecdotes, it has been urged that neither the origin nor changes of language are personal or voluntary. This Professor Whitney controverts, and he points out at great length that every utterance of every word is an act of man. That is true, but there are involuntary acts; a large part of

* 'Oriental and Linguistic Studies. The Veda: The Avesta: The Science of Language. By William Dwight Whitney, Professor of Sanskrit and Comparative Philology in Yale College.' New York: Scribner, Armstrong & Co. 1873.

both the movements of the muscles and of the mental acts are involuntary, many even unknown to us. The laws of reflective volition are different from those of the unconscious activity. The first are motives of the free intelligence, the latter are for the most part relations between objects external to the will. We learn to use our eyes, and habitually use them by processes unknown to us, and so the laws of optics have little to do with will or motive. There is something similar in speech. There are many steps between an object and the utterance of its name. Some trait of the object is established in the mind as its representative; this is the primary sign. With it is associated the phantasm of a vocal sound, a secondary sign. Then a sound like the phantasm is uttered by the movements of many muscles. But reflective consciousness knows nothing of the movement of particular muscles. We will the sound; the movements of the muscles are directed by the phantasm without consciousness. Often the volition is directed to expressing a thought, and primary signs, phantasms, and sounds all flow forth in answer. The changes in language are in great part produced in that part of the process of speech which is unknown to consciousness. The most familiar and widespread changes of sound are those in which sounds are exchanged for others more easily pronounced, as when *k* is no longer sounded in *knight*, or we say *cap'n* for *captain*. It is all wrong to explain these by motives addressed to the free-will, to call the change reflective economy or laziness. The speakers who bring them into use have no desire or purpose to speak otherwise than correctly; they are very often used in spite of a strong special desire and purpose to speak correctly. The explanation is to be sought in physiological and psychological laws, in relations of the movements of the muscles not controlled by special volition. It is true that such changes may be produced by the will. When the father of Æschines begins to be called Atrometus instead of Tromes, the story which Demosthenes tells explains it as a matter of free-will and motive in the rising son. But when we combine the facts of any old popular speech, free-will becomes infinitesimal.

If we carry back this mode of thinking to the origin of words, we come upon another of the questions on which Professor Whitney labors most: whether or not name-giving follows conscious thought, and is to be explained by conscious motive and purpose. He tells of the invention of modern words, and insists that the object named was distinctly known before it was named, and he is surely right; many words are inventions. But we have seen that the acts concerned in speech are under concurrent jurisdiction of the will and the unconscious activities, and it may very well be that an object and the phantasm of the sound which is to be its name may be united according to the laws of association in the unconscious activity. Uneducated persons often make new words. Their affixes and prefixes are attached according to their laws of association, without the slightest heed of dictionaries, or any special volition or purpose. The combination of thought and sound is made before either comes into consciousness. The first name-givers were probably least of all deliberate contrivers, and the first words, most of all, should be explained by laws of the unconscious activity and the relations of objects. Professor Whitney's views on this subject lead him to overrate the part which the imitation of the sounds of external objects plays in the origin of language, and to underrate the intimacy of the connection between man and speech, and the rapidity of its growth. He thinks that a period of experiments in communication, and probably even a language of gestures, preceded speech. But onomatope is imaginative by-play, and no free-agent with man's natural language would live without using his voice in freedom, and no family would live without rapidly associating the natural cries as names with the objects calling them forth.

If we pass from the origin of particular words to that of grammatical forms, of classes of words, of laws, Professor Whitney admits most fully that these are not matters of purpose or invention. He says:

"The unconscious laws which govern consciousness shape into a regular and well-ordered whole the congeries of items thus miscellaneously and as it were accidentally produced; they create out of words a language." "While, however, we are thus forced to the acknowledgment that everything in human speech is a product of the conscious action of human beings, we should be leaving out of sight a matter of essential consequence in linguistic investigation if we failed to notice that what the linguistic student seeks in language is not what men have voluntarily or intentionally placed there."

It would seem as though the statement that what the linguistic student seeks in language is not voluntarily or intentionally placed there, is a full admission that the science of language deals with the involuntary and impersonal only. Müller need say no more.

The paper on the present state of the question as to the origin of language was read to the American Philological Association. It accepts the question as a scientific one, but thinks we have gone nearly as far as we can in the historical method, and that progress hereafter is to be looked for from the settling of questions in the philosophy of language. Two are mentioned, the answers to which will take us about as far as we need care to go. The first is, whether speech is essential to thought, or its assistant and instrument. The other is, should the first impulse to speech have come from within or without.

Here, we think, Professor Whitney points in the wrong direction. We want more facts, and more minute scrutiny of facts. Man has a natural language, and every presumption of science favors his passing with no *saltus*, by its gradual extension and development, to the present speech. We want a minute scientific study of the natural language in children and deaf-mutes, and of the rapidly-forming and decaying speeches of savages, and of the children of mixed races. Wedgwood is on the right track when he takes up one sound at a time and shows that it is a part of natural language used by infants and the deaf and blind, and that words grow up from it in the nursery, and are to be found in the languages of many nations, civilized and savage. Tylor's studies of the speech of deaf-mutes and savages and Darwin on 'Expression' are in the line of progress. It would have given better promise of fruit if Prof. Whitney had urged American linguists to study the speeches of savages and of families of mixed races. We have special facilities for such studies, and facts may be hoped from them which may control our philosophy.

But even if we were thrown back on philosophical speculation, Professor Whitney's questions, interesting as they are, do not seem to open any fruitful distinctions. The question whether the first impulse to speech is from within or without, seems most accurately answered by saying that we have an impulse to speech both from within and without. Professor Whitney's point is that language is social; desire of communication is its impulse. But to show that any organs of man are intended for the social state does not show that there is no impulse to their solitary exercise. The use of the voice is eminently social, yet the solitary use of it is pleasant, the degree of pleasure being a trait of race. Negroes go talking to themselves. Professor Whitney supposes man to begin speechless, and to invent one word at a time slowly. One man's first voluntary use of his natural cry might be social, another's æsthetic, a modulated tone for his own delight. If, by some miracle, a single life were enough prolonged, the man would invent many tools, subdue many animals, and he would talk to his horses, and dogs, and tools, himself, and his God. So we fancy. As to speech being essential to thought, it obviously is not. It is even a characteristic of an original thinker now, that he thinks much in natural signs without vocables. But it is by no means clear that in the beginnings of infant or speechless life, it is not the rule that thought is drawn from indefiniteness into reflective consciousness by becoming attached to some sensible sign by the laws of association; and while we would not exclude free-will and device from any stage of language, we certainly look to explain the general facts of early speech by association and the unconscious laws of mind and the organs of speech, rather than by motives and devices.

But we cannot here discuss these subjects at length. All our readers will read Professor Whitney. Many of them will study him, and none will study him without learning many things.

THE NORTH AMERICAN REVIEW FOR JANUARY.

IN the January *North American*, Professor Shaler, of Harvard University, has an essay entitled "Mixed Populations of North Carolina," which is as attractive as anything else in the number. So far as it relates to North Carolina, it is occupied almost wholly with the population, white and colored, of the Pamlico Sound region, and therefore has nothing to say about that infiltration of Scottish and Quaker blood which from before the Revolution until now has had so important an influence upon the history of the State. The Germans and Swiss and Huguenot French of New Berne and the swamp country adjacent are the people with whose fortunes Mr. Shaler has to do, and it is but a melancholy tale of stagnation that he has to tell. Of the negroes there resident he speaks at once better and worse than of the white. Better, because he pronounces them undeteriorated by the bad physical conditions, climatic and other, under which existence is carried on in the swamp and pine barrens; worse, because the fact that they endure these conditions without deterioration appears to him proof of their inferior development as human animals. A high state of development, he suggests, consists in the possession of qualities which are more precariously held, more dependent upon the conditions of environment, than are the broad underlying qualities which differentiate man from the other animals. And the "intense race individuality of the negro," while it enables his body to withstand the climatic influences which are detrimental to his white neighbor, also endues his mind with a like capacity for resisting change, and makes his intellectual advance but feeble.

Upon one or two points of Mr. Shaler's essay it may be useful to suggest

one or two considerations as worth bearing in mind, not so much for any positive and definite value that they have, but as, perhaps, of value in promoting a tendency to slowness in coming to a conclusion on a very large matter. The colored race in North Carolina, says Mr. Shaler, has before it the danger of gradually becoming extinct; "the cotton-seed is a ready substitute for ergot, and is used to an alarming extent"; "the opinion is very general among physicians and other observant persons, that the death-rate is not balanced by the births"; that there are as many negroes now as in 1860, as some say, is no proof that the race is not diminishing; formerly its increase was in excess of that of the whites; and during the first half of the decade between 1860 and 1870 the negroes were "under pretty much their old conditions, and should have added largely to the total of1860."

As regards the continuance of "the old status" throughout the half decade covered by the civil war, we should say, in view of the Emancipation proclamations of September, 1862, and January, 1863; in view of the occupancy of a great part of the slaveholding territory from 1862 onward; and in view of the "underground" information which was regularly carried to every plantation cabin—in view of all this, we should doubt if the old status was, in point of fact, a good deal disturbed. As for the crime of abortion, often as it was committed in old times out of spite, or from indifference to children, or to defraud a slave-owner of additional property, or for other causes, it is reasonable to suppose that it has a good deal increased since emancipation set free to wander about, from town to country and back again, a great number of men and women previously much restrained, and neither notably industrious nor notably chaste and constant. But, on the other hand, excessive child-bearing was in old times openly and directly encouraged and inordinately stimulated; bribes were everywhere offered to breeding women to produce children, and to produce them to an extent with which nature really had little to do beyond furnishing the apparatus. One-half the South bred slaves for the other half in order to keep itself in income, and the other half bred all it could that it might not have to purchase beyond its own boundaries. The average census-taker, a product of a very different order of things, here found himself on an unknown shore. Then again we have to recollect that in 1870, when the last census was taken, the new status, as distinguished from that of slaveholding days, can hardly be said to have been established; and that consequently, all things considered, it is early yet for trustworthy statistics bearing on the question whether the African race is really to become extinct among us.

As to the North Carolina negro's being as good physically as the Kentucky or Tennessee negro, while hardly anywhere is there a poorer specimen of the white man than has grown up side by side with him in the Pamlico districts, it is proper to recollect that the North Carolina slave, as compared with the negro of other States, was, on the whole, a favored being. There were very few large plantations; there were many small farms where two, or three, or four, or seven negroes worked side by side with their owner, were fed much as he fed himself, and enjoyed a life far freer than that of the negroes in the gangs of the great plantations which extended from the South Carolina line on through the rice, cotton, and sugar States to Texas. Then of the sickly country on the coast where the white man deteriorates, the one tolerably healthy portion is the turpentine barrens, and there the work of the negroes lay. Probably, then, there may be better regions in which to study the "intense race individuality of the negro," as compared with the race individuality of the white man. Mr. Shaler closes his interesting article by expressing his belief that the negro's greatest need now is not more or better assured rights, but better wages than fifteen dollars a month. "Civilization," he remarks, "cannot grow on such wages." And he adds, "He who would do the best for this people must seek to establish in the South real industrial schools, manufactories, and savings-banks." However, it is the North Carolinians themselves who must do this.

A writer hitherto little known to the public, Mr. Isaac Butts, contributes what will probably be proved to be the *North American's* most useful article. It consists of a very rudimentary discussion of the ill-understood problem known as "the labor question"—a question one side of which, it is perfectly true to say, is urged by men who, whatever they may think they are doing, are in fact "repudiating the principles, the language, and the customs of social and business life, and adopting those which properly pertain only to spoliation and war." This is Mr. Butts's language, and he goes on to say it over again to Mr. Edward Kellogg, author of the workingmen's free banking system, to Mr. S. P. Cummings, and others of their way of thinking, by amplifying it in these words: "An indefinite expansion of this 'system' would substitute universal spoliation for the present custom of buying, selling, and exchanging all commodities, the parties to each transaction being free to consult their own interests and tastes exclusively; and brute force would take the place of mutual consent in all transfers of property." That Mr. Butts's exposition is too elementary, that it is

> "Proving by Plato and the Stagirite
> That fire ascends and snow is white,"

no one will be over-ready to say, when he reads Mr. Butts's extracts from the monetary speeches of a distinguished member of Congress whom workingmen keep in his seat; and when he recollects that some hundred thousands of our voters are banded together in partial support at least of Mr. Kellogg's financial theories; and when he remembers the praises of the Commune which are openly chanted not only in London but in Boston. In fact, all ought to be glad to see articles like Mr. Butts's. As he remarks, there are two modes of dealing with the question and this state of facts, between which we must necessarily choose: First, to treat this pet system and its adherents with contempt; and, second, to appeal to the intelligence of the men who sincerely believe it would form a panacea for all their ills, and endeavor to convince them that its adoption would inevitably disappoint their expectations and add to their present grievances. To choose the first mode would be equivalent to saying to some millions of our population, "Your wrongs, your remedies, and yourselves are unworthy of our serious consideration"—language which, from one republican citizen to another, no matter how stupid he may be, is absurd; all the more absurd, indeed, the more stupid is the body of voters maintaining any dangerous doctrine.

"Cheap Money," "How would Cheap Money help the Poor," and "The Workingman's Grievances and their Proper Remedies," are the topics of which Mr. Butts treats from the capitalist's point of view, so to speak; or rather from the point of view antagonistic to that occupied by Mr. Kellogg and Mr. Wendell Phillips. But he does not forget that there is another side, and that the workingman, that the vast majority of the community, has real grievances which must be removed; he does not forget that there are classes in the community who habitually act upon the doctrine which Mr. Butts has known to be expressed literally in these terms, "Money has always beaten labor and always will." What is this, again, but war and not trade, spoliation and "beating," instead of "the present custom of buying, selling, and exchanging all commodities"? Not now, any more than in the past history of the slow advance of civilization, will it be the workingman who will make all of the difficulty, and be responsible for all of the injustice and cruelty of the struggle. More briefly, the essay deals with the second branch of the subject, but all that it says is calculated to promote an understanding of its subject and should have a wide circulation.

We have left ourselves very little space in which to speak of the other articles in this number of the *Review*, though there are two or three of them which for one good reason and another are well deserving of the attention of our readers. Professor C. K. Kendall, apropos of Lanfrey's first volume of the 'Life of Napoleon,' makes an article entitled the "Rise of Napoleonism in France," which at first sight looks trite, but which is not so, and for which a wide perusal may be hoped, as also for the work which it reviews. Compared with the ordinary and cherished American view of Napoleon's character, M. Lanfrey's view is like the almost frightful cast of the Emperor's face taken after death, revealing the true barbarian, when compared with Heine's picture of the Emperor after Jena, as he rode down the Unter den Linden. Mr. Hjalmar Hjarth Boyesen tells us more about Björnson than our public has previously known, and translates some scenes from one of his tragedies. A little ambitious, perhaps, the general criticism is, and a little unsatisfying the specific—as, for instance, when question is made of the fitness of Eywolf for the place of hero, as if he were of much consequence in presence of Hulda and her passion. But the essay, both critical and biographical, will be welcomed.

"The Rationale of the Opposition to Capital Punishment" is a cleverly turned little essay, or rather an essay with cleverly turned parts, which neatly and smartly sets forth some of the objections to the infliction of capital punishment on murderers. Avowedly they are, for the most part, sentimental objections; but there are one or two which are not such. The writer (Mr. E. S. Nadal) objects, for instance, that the punishment cannot be inflicted; as a matter of fact, it is found that it is "impossible"; people will not hang other people—that is to say, they will do it only once in a while, and unsystematically, "in an absent-minded and mechanical manner." Again, there is this practical and experimental objection to inflicting the death penalty—that "a great empire like Russia gets on without it" (but with the aid of Siberia), and so do commonwealths such as Michigan and Wisconsin. But most of Mr. Nadal's objections are entirely sentimental, unless we make the further exception of the objection that in putting a man to death by due course of well understood law, "we presume to lay our hands upon the awful mysteries of death and immortality." The essay is witty, and it raises a question which will bear discussion, though we suppose the death penalty will retain its place in our system, and be more or less judiciously employed until somebody, more tender of the bodies and souls of murderers than society at large has

ever been or is yet, shall devise some more effective deterring agency. Meantime, essays against the horribleness and sinfulness of hanging are tolerably good testimony to the deterring power of the particular deterring agency now in use. "Find out what your murderer does *not* want and give him that," is a coarse rule, no doubt; but it will answer after a fashion till the rule of the future is got into working order by its friends.

There is also a lively article on "The Causes of the Commune," which, perhaps, might as justly be entitled "The Commune's Occasion"; but it says nothing, we suppose, that is not true, whether or not it can be held to give us the whole truth.

The book notices are rather more varied than usual, and there is none that is not to be called good, though perhaps none which rises to the rank—not seldom attained by the *North American's* book notices—of being a literary product capable of standing by itself apart from the book reviews. But the notice of Büchner is helpful to an understanding of that philosopher; those of the biographies of Amos Kendall and Chief-Justice Taney dispense the reader from going through the biographies themselves; those of Eastlake's 'Household Taste' and Smith's 'Art Education' may be read in the gynœceum, and all the others are readable and worth reading.

THE MAGAZINES FOR FEBRUARY.

A CORRESPONDENT of the *Woman's Journal* points out that "A Curiosity of Literature" in this month's *Atlantic* is largely composed of matter which years ago appeared in an American translation of Bettina Brentano's famous letters to Goethe. But not the less does the article exhibit a real curiosity of literature, and one which will be quite new to ninety-nine readers out of a hundred; and, we may add, one which the writer in the *Atlantic* doubtless supposed himself or herself to be presenting to the public for the first time. It is a little strange, by the bye, that this Boston edition of the celebrated correspondence has been allowed to remain so long out of print and become generally forgotten; it has the name of being excellently done.

The *Atlantic's* article tells how Bettina earned seven thousand dollars by the publication of the letters in German; how this sum seemed to her insufficient for her purpose, which was to erect a colossal monument to her idol; how she determined upon putting forth an English edition, being moved to do so by a mistaken opinion as to Goethe's fame in England, for she knew only of the Goethean clique represented by Carlyle; how she employed first an Oxford and then a Cambridge student to make the translation, and how each in turn failed to satisfy her, as well they might; how she thereupon set herself to learning English that she might be her own translator; how she learned English—after a fashion, and a queer enough fashion; how the edition—ten thousand copies—was shipped to England to Messrs. Longmans, Brown & Orme without any previous understanding between them and the lady as to the reception of her consignment; and, finally, how the ten thousand copies were at last sold out of the custom-house as "unclaimed" matter, and in all probability went back to the paper manufacturers as "stock." So romantic an enterprise has seldom had a catastrophe so pathetically prosaic. Our writer has seen in this country one of the eight or ten copies of this singular work which may be presumed to be in existence—the only one, it is probable, that has ever been seen in this country. It was given by Bettina, with an autograph note, to the wife of a gentleman who alone had interested himself enough in her London venture to find out what had become of her books, and it is from this original source that the quotations in the *Atlantic* are taken. They are very interesting, especially where she describes her enthusiastic desire that the English should know the story of her affection for Goethe, and her labor in mastering, as she persuades herself she has mastered, the difficulties of the new language: "Forsooth," she says, "I saw in the last year no roses, no tree blowing; my intelligence lay narrowly grated up in the dictionary of good Johnson, and the grammars that I took to my couch and fell asleep on them, and had also a very hard bed to no boot, for I had unfortunately in no language a grammatical learning; all its terms were unknown to me, and their inferences incomprehensible; and those who would advise me frightened me out of my wits. I struggled for my version as does an animal for its young, and suffers them not to be touched by an indiscreet hand, but licks them clean again."

Often entirely incomprehensible, and sometimes only amusing, unless one recalls the intentions and the earnestness and courage of the lady, her version is once in a while quaintly but poetically felicitous. For example, we may take a metaphor which the magazine writer emphasizes. Bettina is speaking of the sun's power in opening a bud, and says, "It cannot again return to the cool closet of darkness." The phrase is a good example of that class of beauties which only a foreigner may be permitted to find in a language; but it is a beauty of a certain sort, though doubtless the reader's involuntary reference of the metaphor to the unfolded affection in the heart of the young girl lends to it a charm. We quote, in conclusion, the following letter-picture of Bettina and Herder:

"Now I will tell thee also the story of my second kiss, it followed almost immediately upon the first, and what dost thou think of thy girl, that she is become so light-minded? Yes, that once I was very light-minded and to a friend of thine—the bell rings hastily; I spring to open the door; a man in black dress, of stern appearance, with somewhat inflamed eyes, enters—even before announcing his name, or saying what is his business, he kisses me, even before I bethink myself. I give him a box on the ear, and only then I look furiously in his face and become aware of a friendly countenance which seems not at all frightened and not irritated at his proceeding. To escape my dilemma—for I did not know if I had done right or wrong—I quickly opened to him the doors of my grandmother's apartment. Then my surprise was suddenly changed to fright, when I heard her exclaim in great ecstacy, 'Herder, my Herder! Is it possible that your way should have led you into this whimsical cricket-hut? Be a thousand times embraced!' and here followed these thousand in-armings, during which I gently sneaked away, and wished that in the throng of caresses the one might be drowned which was replied to him with a box on the ear; but no! he forgot neither kiss nor flap!"

"Boy Life in a Scottish Country Seat," by Mr. Robert Dale Owen, relates, among other things, how Robert, then a thoroughgoing Calvinist seven or eight years old, undertook the conversion of his father, and is otherwise entertaining and not uninstructive. That is to say, there is about it a frankness of mental autobiography, so to speak, which may be of help to parents and other instructors of youth. "Idiosyncrasies," by Miss H. R. Hudson, talks about such unusually impressionable people as are depressed by the sight of a combination of purple and light blue, for instance, and who at once recover their spirits at the sight of a barberry bush. "Most people like roses and dislike snakes," she says; "but why are there so many snakes and roses for me?" A majority of her readers, we dare say, will be able to make a large supplement to her list of pet aversions and peculiar likings, all unexplainable, and the more unexplainable by those who are most affected by them. And probably, as she remarks, there is no one of her readers, however hard-headed, who can be described as having not a single "bit of nonsense about him." Odd associations of thought, more explicable than the so-called instinctive likes and dislikes, but probably reducible to the same law, also get some of Miss Hudson's attention, and her cursory article is throughout pleasant.

In "Thomas Jefferson, Secretary of State," we have Mr. Parton admitting that there was some right thinking on the side of the anti-French party in our early politics, and some wrong thinking on the part of our pro-French politicians; but this admission is a matter of words, it would seem, rather than the expression of full intellectual conviction. One would almost suppose, to hear Mr. Parton, that behind Burke's eloquent execrations of the Republicans who killed Louis XVI. and his queen there was nothing but the spirit of the aristocrat or of the romantic rhapsodist, with a half-crazy ideal of the spirit of chivalry. Perhaps so in the case of Burke, and Burke at this moment; but for all that, it requires Mr. Parton to say that some of the men and some of the theories against which Burke was fulminating did not need opposition of various kinds, unarmed and armed. As the Jeffersonians said, it was indeed not well that the wretched French peasantry should be feeding on grass in order that "one Austrian woman," whom Burke had happened to see when she was beautiful and graceful, should pursue uninterrupted "a career of ignoble pleasure." And, on the other hand, it is not well either that Mr. C. C. Bowen should have that "manhood" constituency of his in South Carolina which he has because of the practical carrying out of some of the doctrines which Burke detested and denounced, and of which many millions, of whom Burke was the too eloquent mouthpiece, disapproved, some from selfish, some from disinterested and reasonable motives. But some of us will die with this unlearned.

"The Bride of Torrisdell" is a versified Norse legend by Mr. H. H. Boyesen; "Lost," by Mr. P. Deming, is of good promise if, as the sketchy handling of its incidents would seem to indicate, the writer is young; "A Hunt for Smugglers," by Mr. Prentice Mulford, will be liked even by those who would have expected to find it in the *Overland Monthly* rather than in the *Atlantic;* "The Telegraph and the Post-office," by Mr. E. H. Derby, bristles with figures and is strong for the assumption of the telegraphic lines by Government; "Edible Fungi," by Mr. R. M. Copeland, shows us how little it is that the unbotanical epicure knows of his resources in the way of mushrooms; Mr. Howells's "Chance Acquaintance" goes on; and Mr. Whittier has a poem called "A Mystery"—the mystery being that common one of some day seeing with the bodily eyes a landscape which, it seems to us, we have assuredly seen before, in a dream perhaps; or in another life, "as poets feign":

> "Was it a dim-remembered dream?
> Or glimpse through æons old?"

The critical departments of the *Atlantic* are even better than usual. Mr.

Theodore Thomas is mildly expostulated with for playing to unaccustomed audiences not such music of Wagner's and Berlioz's and Lizst's as might lead them on with him to a hearty admiration for the "music of the future," but the more painfully intense, passionate, abstruse, and terrifying and annihilating music of those masters. Under the head of "Politics," we have an article, useful to journalists, which discourses of the common-law doctrine of contempt of court. The art-critic—who, by the bye, considers himself but poor authority as regards the just measurement of statues, while we, on the other hand, consider ourselves good enough authority in a matter so simple—gives us the good news that there is now in Boston a "Household Company of Art," which will be of invaluable assistance to persons who are furnishing houses and who wish to furnish them tastefully.

The Scientific Department develops one of the principal points in Mr. Walter Bagehot's "Physics and Politics"—a book of much interest to those who maintain and those who contravene the position that there "cannot have been in prehistoric times a general loss of the attributes of civilization." The department of "Recent Literature" reviews Turgenef's 'Liza,' Mr. John Fiske's 'Myths and Myth-makers,' About's 'Alsace,' Gagal's 'Tarass Boulba,' Cherbuliez's 'Etudes de Littérature et d'Art,' and the second volume of Forster's 'Life of Dickens'—the last-named work meeting with no more favorable a welcome from the *Atlantic's* critic than from the rest of the critics. It is indeed a work which justifies a good deal of plain speaking.

For a good specimen of the *suggestio falsi* in historical writing we refer the reader to the 349th page of the current *Harper's*. The writer is once more going over the story of Mary, Queen of Scots, and is speaking of her education at the Court of France:

"Certainly the last custodians of the conscience which a modern would choose would be those Jesuit fathers—Vasquez, Escobar, Mendoza, for example—who did not hesitate to defend by their casuistry, and under color of religion, fraud, forgery, falsehood, murder; and whose teachings, before they were counteracted by the protests of such believers as Pascal and such heretics as Luther, brought forth their fruit in the assassination of William of Orange and of Coligni and in the wholesale massacre of St. Bartholomew. And it was these fathers, and their apt disciple the Cardinal of Lorraine, who were the keepers of Mary's conscience."

One would not gather from this paragraph that Escobar was born two years after Mary had had her head cut off. And as for the other two, neither of them, so far as we know, ever set foot in Spain, and therefore "certainly were among the last custodians of the conscience" which anybody, ancient or modern, would have selected as the instructors of a young princess resident in Paris. Another queer assertion is that the last that is known of Henry Darnley he was reading the Fifty-fifth Psalm. Why he was doing this appears from two of the verses here quoted: "It is not an open enemy that hath done me this dishonor, for then I could have borne it. . . . It was even thou my companion, my guide, and mine own familiar friend." Save us from our friends, indeed.

"Life in the Diamond Fields" is lively in its description of the South African miners, boers, and negroes; "The Mont de Piété" describes a French institution which Boston once copied, and a copy of which our New York philanthropist might, we suppose, set on foot with advantage to many people now the prey of the pawnbroker; Professor Henry Draper publishes a lecture, desultory and fragmentary, but well adapted to a general audience, on "The Delusions of Medicine," in which he says something about the follies of the astrologers; "The Easy Chair" eulogizes the late Horace Greeley, not without discrimination; also, he satirizes the citizens of Boston for their alleged severity of taste in music, and appears to approve an assertion overheard by a gentleman who recently visited that city, to the effect that "the Bach business" as transacted in the Music Hall is a humbug—a fashion that has nearly gone out. Mr. Reade's, Mr. Wilkie Collins's, and Miss Thackeray's stories continue as usual, and, as usual, there is much other matter of a well-known kind.

Lippincott's has for its most attractive article one upon a curious subject—the strange sights which meet the eye of the submarine diver. The writer is fond of adjectives, and cannot bring himself to tell his story in plain language, as one would suppose a man of his profession would be likeliest to do; and his incapacity in this respect, and the large capacity that he displays for fine writing, incline one to doubt if what he says may not be of his own invention. If not, it is well worth having. For an example of the better part of the article, we quote a passage in which the writer illustrates the proposition that fishes are full of curiosity—and he remarks *obiter* that the fact that animals are so full of curiosity as they show themselves to be when not terrified, is, to his mind, sufficient disproof of "the now exploded theory of instinct":

"A prolonged stay in one place gave a diver an opportunity to test this intelligence further, and to observe the trustful familiarity of this variety of marine life. He was continually surrounded at his work by a school of gropers, averaging a foot in length. An accident having identified one of them, he observed it was a daily visitor. After the first curiosity the gropers apparently settled into the belief that the novel monster was harmless and clumsy, but useful in assisting them to their food. The species feed on crustacea and marine worms, which shelter under rocks, mosses, and sunken objects at the sea-bottom. In raising anything out of the ooze, a dozen of these fish would thrust their heads into the hollow for their food before the diver's hand was removed. They would follow him about, eyeing his motions, dashing in advance or around in sport, and evidently with a liking for their new-found friend. Pleased with such an unexpected familiarity, the man would bring them food and feed them from his hand, as one feeds a flock of chickens. The resemblance, in their familiarity and some of their ways, to poultry was, in fact, very striking. As a little chick will sometimes seize a large crumb and scurry off, followed by the flock, so a fish would sometimes snatch a morsel and fly, followed by the school. If he dropped it or stopped to enjoy his *bonne bouche*, his mates would be upon him. Sometimes two would get the same morsel, and there would be a trial of strength, accompanied with much flash and glitter of shining scales. But no matter how called off, their interest and curiosity remained with the diver. They would return, pushing their noses about him, caressingly in appearance if not intent, and bob into the treasures of worm and shell-fish his labor exposed. He became convinced that they were sportive, indulging in dash and play for the fun of it, rather than for any grosser object to be attained."

The concluding paper of a series which recounts the adventures of a party who were "prospecting" in South American woods for cinchona trees—and which, by the way, has been running through the *Tour du monde* during the past year, of course in French—is also worth reading; and the magazine reader will say the same thing of Miss Woolson's "Commonplace"; Miss Carpenter's "Winter's Reverie"; Mr. Reginald Wynford's "Country-House Life in England"; Miss Ita Aniol Prokap's "Forest of Arden." Mr. Mulford's "John Chinaman," albeit "thin," will have an interest for housekeepers, we suppose; any one who cares to go, Mr. Thomas Dunn English's "Jack the Regular" will carry back into the American literature of forty-odd long years ago, and it is an excursion not without a subdued and melancholy pleasure; finally, there is a lively little account of the adventures of a young gentleman who, without a passport, ran the gauntlet of two French custom-houses on the Swiss frontier, although the officials were at that time lynx-eyed for escaped Communists of various nationalities.

The book reviews—as of 'Songs from the Old Dramatists,' for instance, and of 'Gareth and Lynette,' are noticeably good in the February *Lippincott's*, and altogether the number is a good one.

The *Catholic World* opens with a translation of the Sixth Canto of the 'Purgatorio.' It is understood to be the work of Dr. Parsons, and, true or not, the statement certainly does not malign him. We commend also to the attention of the reader, whether Catholic or non-Catholic, an account of a steerage passage from England to this country written by a steerage passenger, who describes himself as a London clerk, thirty years old, who, for reasons not given, found himself compelled to seek his fortune in this country. The description is intelligent and clear, in no way sensational, and offers what is called "internal evidence" that it is truthful. There is to be another article or perhaps more than one continuing the subject. Another readable contribution is the description of a friendly visit paid to some Acoma Indians by an American party from Fort Wingate, Northern New Mexico. With these three articles in one number, the reader will see that there was no great call for the friendly advice which was given to the *Catholic World* the other day by one of our sweetest-tempered journals, and which was to the effect that it had better translate all its articles from foreign tongues.

It is a bold saying, but whoever reads Mr. John Burroughs's chronicle of his visit to Stratford-on-Avon will consent to call it about the newest and most agreeable thing that he has happened upon, whether in the *Galaxy* or anywhere else, for a long time. That what is seen depends upon who sees it quite as much as what is there to be seen, is very well proved by this intrepid traveller to Ann Hathaway's cottage, to the room where Washington Irving sat, to the much-travelled walls of Chester.

A little known writer, Emily Brontë, as to whom, indeed, many of her few readers would perhaps wish that she should still remain little known, is the subject of a careful and, as it seems to us, justly appreciative criticism by an anonymous contributor. Good service is done those who already know 'Wuthering Heights,' also to such persons as this criticism may prompt to read it, when it is suggested that there is a sowing of literary wild-oats, so to speak, as well as of other kinds, and that the unhuman and hateful character of that powerful story may be due to that fact. "When a woman's imagination posseses virile fire and power, it is apt in its first essays to project itself as far as possible from the beaten track of feminine grace and refinement, to delight in the sombre and the lurid, and to indulge in displays of strength which are too often uncouth and savage. There is a sowing of

wild-oats in literature and art as well as in life," etc. It is good service, too, to point out the extreme beauty of the pictures of open-air scenery—pictures with the air and space in them—which relieve the gloom of the novel. But nevertheless it is probable, we imagine, that the more strenuous and fiercer parts of 'Wuthering Heights,' and the stronger and more unconquerable strains of the poetry, better express the nature of the woman than the pictures do, or the verses expressive of the intimate feeling of the life of nature. We may, indeed, suspect nature to have been her refuge from herself. The article embodies much of the best of Emily Brontë's verses, and includes what we suppose will be pronounced the best, the poem called "Remembrance," in which she really speaks with perfect intelligibility and with great force to the common heart. But then her rare quality, unique we may call it, is perceptible in all she does.

To the sedater magazine reader the *Galaxy* offers a paper on "Life Assurance," and some "Casual Cogitations" by Mr. Carl Benson. Mr. Benson discourses on "American Impoliteness" and on the "Unmorality of the Scientific Dispensation"; and on the latter he discourses in much the same way as if it were not true that, however much science men may come to know, nevertheless so long as they live in this world touching each other's elbows whenever they move, a system of morals they will most inevitably have. Liars and thieves, we may be sure, will not be any more popular and admired when we all have spectroscopes in our coat pockets than they used to be when we all temerariously maintained that nature abhors a vacuum. Science may more probably modify certain dogmas of religion, either momentarily or permanently. The rest of the number is made up of some chapters of two novels—Mr. De Forest's "Wetherel Affair,' and Mrs. Edwards's "Vagabond Heroine"; another chapter of General Custer's "Life on the Plains" (and its bloody story will not please the Eastern philanthropist, whether of the true or the mock breed); "Women as Companions," by Mr. J. H. Browne; "The Norse Emigrant," by Mr. Boyesen, who is good, as is usual with him when he is Norwegian; some poetry by various writers, and a good deal of popular science.

GERMAN AND FRENCH.

HOLT & WILLIAMS,

25 BOND STREET, NEW YORK,

Publish most of the

TEXT-BOOKS

used at YALE, HARVARD, and many other prominent American Institutions. Correspondence is invited from educators and students.

BOOKS BY MAIL.

The Publisher of the *Nation* will hereafter forward by mail any book for which an order may be sent him, on the following conditions, which must be strictly observed:

1. That the money be forwarded in advance whenever the price is known.

2. That enquiries as to price or other particulars be accompanied by a stamped and addressed envelope for the reply.

3. That both money and books shall pass through the mails at the risk of the purchaser.

THE NATION,
5 Beekman Street,
P. O. Box 6732. New York City.

"*A Genial Exponent of the best sort of American Thought.*"—London Examiner.

BACKLOG STUDIES.

By Charles Dudley Warner, author of 'My Summer in a Garden,' 'Sauntering,' etc. 4to. With 21 illustrations by Hoppin. $2.

"The book will be read again and again with an ever enlarging sense of pleasure."—*Boston Advertiser.*

JAMES R. OSGOOD & CO.,
Boston.

BARRIERS BURNED AWAY.

"A novel of absorbing interest."—N. Y. Evening Mail.

"The leading characters are drawn not only with much skill, but with a clear insight into the workings of strong souls under the influence of the highest spiritual truths, as well as mere human sentiment."—Advance, Chicago.

"We congratulate Mr. Roe upon his story of the day. It is thoroughly national."—N. Y. Observer.

BARRIERS BURNED AWAY. By Rev. E. P. Roe. Large 12mo, $1 75.

Seventh thousand fast selling.

DODD & MEAD, Publishers,
762 Broadway, New York.

HARPER'S CATALOGUE. The attention of those designing to form Libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

THE MINISTER'S LIBRARY.

FIFTY DOLLARS' worth of Books.
Twenty Volumes for THIRTY DOLLARS.

This Collection includes

THE BEST WORKS OF

DEAN STANLEY—The Jewish and Eastern Churches. 3 vols.
CONYBEARE & HOWSON—St. Paul. 2 vols.
DR. W. G. T. SHEDD—Sermons to the Natural Man. 1 vol.
DR. J. A. ALEXANDER—Sermons and Commentaries on Psalms and Isaiah. 5 vols.
DR. J. W. ALEXANDER—Consolation. 1 vol.
DR. BUSHNELL—Nature and the Supernatural. 1 vol.
REV. S. J. ANDREWS—Life of Our Lord. 1 vol.
DR. WILLIAM ADAMS—Thanksgiving Sermons. 1 vol.
DR. T. D. WOOLSEY—Religion of the Present and of the Future. 1 vol.
DR. GEO. P. FISHER—Supernatural Origin of Christianity. 1 vol.
DR. J. F. HURST—History of Rationalism. 1 vol.
DR. J. P. THOMPSON—Theology of Christ. 1 vol.
DR. JOHN LILLIE—Lectures on Peter. 1 vol.

TAKE SPECIAL NOTICE.

These volumes, if bought singly, would cost FIFTY DOLLARS. The Set is furnished for THIRTY DOLLARS. You can, therefore, buy the Library, and give away nearly half of it, and what you keep *will cost less* than if you purchased the volumes retained separately.

*** This Library sent free of charge upon receipt of the price by

SCRIBNER, ARMSTRONG & CO.,
654 Broadway, New York.

BANKING OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, Feb. 5, 1873

☞ The CHESAPEAKE AND OHIO, the CENTRAL PACIFIC, AND WESTERN PACIFIC BONDS, all of which have been negotiated by us, we believe to be among the best and most desirable investment securities in the market, which in time must become very scarce; especially as the Government will probably pay off, in gold, $300,000,000 FIVE-TWENTIES, and a large amount of money thus released from investment must find its way into this class of securities.

THE CHESAPEAKE AND OHIO SIX PER CENT. GOLD BONDS, the total amount of which is only $15,000,000, are secured upon a property worth $35,000,000 to $40,000,000, and are fully equal in intrinsic value to the CENTRAL PACIFIC BONDS. They are issued in denominations of $100, $500, and $1,000, coupon or registered, and at their present market price, 86½ and accrued interest, are very desirable.

THE CENTRAL PACIFIC SIX PER CENT. GOLD BONDS are too well known to require description or commendation. Their total amount is $25,885,000; they have for a long time ranged in market price near or above par. Their price to-day is 103 to 103¼.

The WESTERN PACIFIC SIX PER CENT. GOLD BONDS amount to $2,735,000. This road is now consolidated with the CENTRAL PACIFIC, and the payment of its bonds, principal and interest, is assumed by the latter. Coupon Bonds, $1,000 each. Their market price to-day is 91¾ to 92. As they have recently been introduced on the Stock Exchange, we expect to see them rapidly rise to the price of CENTRAL PACIFICS, being substantially the same in character and value.

We buy and sell, as usual, Government Bonds, receive deposits, on which we allow interest, make collections, and conduct a general banking business in all its branches.

FISK & HATCH.

THE LAND OF ISRAEL. A Journal of Travels in Palestine, undertaken with special reference to its Physical Character. By H. B. Tristram, M.A., F.L.S. 8vo. cloth. With a number of full-page Illustrations, Woodcuts, and Maps. Price $8.

THE NATURAL HISTORY OF the Bible. A Description of every Animal and Plant mentioned in Holy Scripture. By H. B. Tristram. Illustrated. 12mo, cloth, $3.

SCRIPTURE MANNERS AND Customs. Being an Account of the Domestic Habits, Arts, etc., of Eastern Nations mentioned in Holy Scripture. Illustrated. 12mo, cloth, $2 25.

THE BIBLE ATLAS OF MAPS and Plans to illustrate the Geography and Topography of the Old and New Testaments and the Apocrypha, with Explanatory Notes. By Samuel Clark. Also, A Complete Index of the Geographical Names in the English Bible. By George Grove, M.A. Large 4to, cloth, gilt edges.

Lippincott's Pronouncing Gazetteer of the World	10 00
Black's General Atlas of the World, with American Supplement	25 00
Haydn's Dictionary of Dates	5 00
	$52 00

Above will be furnished for $40.
F. B. PATTERSON, 27 Park Row, New York.

THE WEEK IN TRADE AND FINANCE.

FEBRUARY 3.

THE money market has remained active since our last report, with rates ruling at 7 per cent. currency and 7 gold; in some instances, $\frac{1}{64}$ commission in addition to the legal rate of interest was paid, which was the highest rate of the week. Balances at the close of business were loaned out, on one or two days, as low as 4 and 5 per cent., but these rates were entirely exceptional.

A fair amount of business has been doing in commercial paper, and we quote rates on prime names at 8 to 9 per cent. Transactions are reported at 7 per cent., but they were in bankers' acceptances. Paper of lower grades than either of the above is selling at 9 to 12 per cent.

The tendency of the European money markets, according to recent advices, is in favor of greater ease. The Bank of England rate of discount has again been lowered, and now stands at 3½ per cent. Money is easy on the Continent, and there are no indications, at present, that any unfavorable turn will take place in financial affairs. The Bank of England reports a gain of £235,000 in specie last week, and the Bank of France 500,000 francs.

The weekly statement of the New York banks is unfavorable, showing a loss both in specie and legal tenders, with an increase in liabilities in the shape of deposits. The loss in specie is accounted for, in part, by last week's shipment—that of Saturday, as we pointed out at the time, counted for but one day in the table of averages upon which the statement was made up, and the real condition at the close of the week was considerably weaker than the statement caused it to appear. We give below the statements for the two weeks ending January 25 and February 1, which show that the banks have lost $1,931,400 in their total reserve, and that their total liabilities have been increased $469,500. The banks now hold $3,246,925 in lawful money in excess of the 25 per cent. required:

	Jan. 25.	Feb. 1.	Differences.
Loans	$282,159,100	$286,879,600	Inc. $4,720,500
Specie	20,371,700	18,612,200	Dec. 1,759,500
Circulation	27,529,200	27,501,000	Dec. 28,200
Deposits	216,670,800	217,168,500	Inc. 497,700
Legal tenders	45,974,000	45,802,100	Dec. 171,900

The following shows the relation between the total reserve and the total liabilities:

	Jan. 25.	Feb. 1.	Differences.
Specie	$20,371,700	$18,612,200	Dec. $1,759,500
Legal tenders	45,974,000	45,802,100	Dec. 171,900
Total reserve	$66,345,700	$64,414,300	Dec. $1,931,400
Circulation	27,529,200	27,501,000	Dec. 28,200
Deposits	216,670,800	217,168,500	Inc. 497,700
Total liabilities	$244,200,000	$244,669,500	Inc. $469,500
25 per cent. reserve	61,050,000	61,167,375	
Excess over legal reserve	5,295,700	3,246,925	Dec. 2,048,775

The activity and buoyancy in the stock market, which commenced two weeks ago to-day and continued for the remainder of the week, seems to have been but temporary, and was not the forerunner of a regular "bull campaign." This bears us out in what we said last week, that it was occasioned by a few professional operators, who went in and bought only for a quick turn. The week just passed has been an unsatisfactory one to most operators, if not to the brokers, and the market has presented no special or interesting features. The operations in Atlantic and Pacific Preferred (the latest "fancy") have been upon quite a large scale, considering that there are not probably over 10,000 or 15,000 shares owned outside of Mr. Stockwell's party. The entire number of shares is 100,000, and the recorded number of shares sold during last week was 108,400—just 8,400 more than are in existence. Mr. William B. Duncan recently explained to the Ways and Means Committee his understanding of a "syndicate." He said that "'syndicate' is another name for what we call a 'ring' in New York, which manipulates the market in order to get rid of a thing, . . . by stimulating the market by numerous transactions, and *by inducing people to sell what they have not got or to buy what they do not want*, thus creating an unnatural demand." The "ring" in Atlantic and Pacific Preferred seems to be following out Mr. Duncan's definition. The dealings in this stock have been carried on to such an extent that the daily papers have been furnished with very amusing matter for their financial articles, and some of them have been posted up in the Exchange, where the point was readily seen.

The long-lost steamship *Alaska*, belonging to the Pacific Mail Steamship Company, has at last turned up, some twelve days overdue, at Hongkong. No cause has yet been given for the delay in her arrival. The first effect of the report of her safety was to send up the price of the stock, but the advance was not maintained, and at the close of the week the price is about where it started from. There has been a stronger feeling in coal stocks, as well as in the stocks of the railroad companies engaged in the coal-carrying trade, which is due to the recent rise in the price of coal, as indicated by the higher prices obtained at the auction sale of the Delaware, Lackawanna, and Western Railroad Company last week. The rise in Delaware, Lackawanna, and Western for the week was about 3 per cent., the closing sales being at 102 against 99⅛, the lowest price on Monday. The investment stocks have been in good demand. Chicago, Burlington, and Quincy sold at 120 on Friday, an advance of 5½ per cent. since the 25 per cent. bond dividend came off January 15. Chicago and Alton found ready sale at 114 to 115, and Michigan Central has been in demand at 109. The latter Company, it seems, has expended the money that would otherwise have gone to the stockholders as a dividend (the Company paid a stock in place of a cash dividend), in furnishing additional equipment to the road, and improving its road-bed. The President of the Company, in a circular to the stockholders, complains that connecting roads have not been able to receive all the business that the Michigan Central has had to give them, and he looks forward with pleasure to the completion of other new lines that will add to his road's ability to accommodate the business offered.

The range of prices for the week has been as follows: Central and Hudson, 104⅜ to 105⅝; Lake Shore, 94⅜ to 95⅞; Erie, 64 to 67⅜; Union Pacific, 34⅝ to 36⅜; Rock Island, 112⅝ to 114⅛; Del., Lack., and Western, 99⅛ to 102; C. C. and I. C., 38⅝ to 41⅛; Wabash, 73½ to 74½; Boston, Hartford, and Erie, 8½ to 10; Ohio and Mississippi, 47⅞ to 49¼; Western Union, 83⅜ to 87; Pacific Mail, 72⅛ to 74⅝. At the close on Saturday there was a more buoyant feeling than had existed during the earlier part of the week, but it was manifested in only a few speculative favorites like Erie, Western Union, and Boston, Hartford, and Erie, which all closed at the highest point of the day and week.

The united syndicates have published all the details of the negotiation of the 300,000,000 new 5 per cents which the public are expected to require, and on Tuesday the books of subscription will be opened here and in London, and remain open for three days only. Everything looks favorable to the success of the loan, especially in London, where so many of the old bonds, which will be paid off, are held. Before the present number of the *Nation* is published, it will be pretty well ascertained whether the new bonds will be taken. Meantime, we wish the agents success in their negotiations. The market for Governments has been strong. Prices are all up to and above par in gold. The Treasury was unable to obtain the $1,000,000 5-20s advertised for on Wednesday, only $208,900 being offered at 113 70 to 113 99. The amount accepted was $169,350 at 113 70 to 113 74¾. The price of gold at the time the offers were made was 114.

Beyond some transactions in Tennessee, Southern State bonds have been dull, and only a small amount of business was done in those of other States.

The market for good railroad bonds will be much benefited if the new Government 5 per cents are successfully negotiated, and the probability of their being all taken has already imparted to the market a stronger feeling. Next to a Government bond, there can be no safer investment than a first-mortgage railroad bond, provided that the road is bonded only to a reasonable extent, say $15,000 per mile or under, and that the railroad on which the bonds are issued is located so as to command business at all times. An intelligent examination into the following facts will be of great benefit to investors: The length of road, amount of bonds, amount of stock, amount of money *paid* upon the stock, character of managers, condition of rolling stock (and whether it belongs to the road, or is owned by an inside "ring" and rented out to the road), condition of road-bed, and likelihood of business when completed. All of these questions are of importance to investors in making purchases, and a closer investigation of the actual condition of the different companies that have placed bonds upon this and the European markets would have prevented the "floating" of such loans as the Rockford, Rock Island, and St. Louis Railroad Company and others that we could mention.

The gold market is weaker, in consequence of the favorable outlook for the syndicate operations. The shipments for the week amounted to $591,579, making the total for the year $7,402,734, against $1,542,344 for the same period in 1872, $3,405,523 in 1871, $2,932,695 in 1870, $3,788,603 in 1869, and $8,983,833 in 1868.

The General Superintendent of Wells, Fargo & Co.'s Express estimates the gold and silver production of last year at $62,236,943 against that of 1871, $58,284,059—showing an increase for 1872 of $3,952,884. This includes about $2,000,000 produced on the west coast of Mexico and in British Columbia. The total export for the year 1872 from this port was $70,550,000. So we have shipped from this port alone over $8,000,000 more gold and silver than the whole country produced, including the production of the west coast of Mexico and British America, which amounted to nearly $2,000,000.

TO INVESTORS.

To those who wish to *REINVEST COUPONS OR DIVIDENDS*, and those who wish to *INCREASE THEIR INCOME* from means already invested in other less profitable securities, we recommend the Seven-Thirty Gold Bonds of the Northern Pacific Railroad Company as well secured and unusually productive.

The Bonds are always convertible at Ten per cent. premium (1.10) into the Company's Lands at Market Prices. The rate of interest (seven and three-tenths per cent. gold) is equal now to about 8¼ currency—yielding an income more than one-third greater than U. S. 5-20's. Gold checks for the semi-annual interest on the Registered Bonds are mailed to the Post-Office address of the owner. All marketable stocks and bonds are received in exchange for Northern Pacifics *ON MOST FAVORABLE TERMS.*

NOW READY.

MANUAL OF MYTHOLOGY,
FOR THE
USE OF SCHOOLS, ART STUDENTS, AND GENERAL READERS.
FOUNDED ON THE WORKS OF
PETISCUS, PRELLER, AND WELCKER.
BY
ALEXANDER S. MURRAY,
DEPARTMENT OF GREEK AND ROMAN ANTIQUITIES, BRITISH MUSEUM.
With thirty-five plates on toned paper, representing seventy-six mythological subjects.
12mo, cloth extra, $3.

PROSPECTUS.

With the view of making the subject of ancient mythology accessible to the higher classes of schools, to art students, and to general readers, the plan and, to a great extent, the substance of the present book have been taken from the German work of Petiscus, entitled 'Der Olymp,' which has proved how well it is adapted for such a purpose by the fact of its having already reached a seventeenth edition. At the same time, while endeavoring to imitate the simple style of narrative to which the success of that work has mainly been due, it has been found necessary to reject many of the observations made by its author, and to adopt in their place the results of more recent research. This is particularly the case in regard to the Introduction, in which it is attempted to show how the belief in the existence of the gods originated, and to point out the influence of such belief with special reference to the ancient Greeks. The legends of the Greek heroes have also been given at a greater length, and in a manner, it is hoped, more worthy of the subject.

In addition to the mythologies of Greece and Rome, the present work will be found to contain an account of the Scandinavian and Old German, the Indian and Egyptian mythologies.

The above book sent by mail, post-paid, upon receipt of the price.

Complete in two handsome octavo volumes, half-mor. or half-calf, $12.

Sent to any part of the United States, carriage paid, on receipt of cash.

GEO. GEBBIE, Publisher,

730 Sansom Street, Philadelphia.

PROSPECTUS.

The purpose of this work is to present, in chronological order, examples of the acknowledged standards of English Poetry, from the dawn of English Literature to the present day.

Our aim in doing so is twofold: First, to furnish, in a comprehensive form and at a low price, a complete and systematically arranged work, consisting not only of the best pieces of the well-known Poets, but of every Ballad and Old Song which our editors may think worthy of a place in such a work.

The second part of our aim in this publication is to SUPPLEMENT THE EXISTING EDITIONS OF THE POETS. The best editions of the English Poets published (the Aldine, Bell, or Nimmo's) represent, at the most, not more than Forty Authors—no author being represented who has written less than sufficient to fill one volume; thus, the great store of anonymous poetry is overlooked entirely, and many a lone star (because it happens to be a solitary production) is allowed to slide into forgetfulness for want of company. We have gathered together a galaxy of such stars, and given them an appointed place; and where a history is attainable and interesting, we have inserted it among the biographical notices of Authors. Thus, we have representative pieces of *Five Hundred Poets*, with Biographies of the Authors—in contrast with the existing editions of The Poets—represented (as we said before) by *Forty!!*

It is not the wish, nor within the means of all, to possess themselves of a complete "Edition of the Poets" (imperfectly representing English poetry as they do), and those possessing them do not make such favorites of their possessions as to read them from Chaucer to Tennyson page by page; but we modestly believe that every page in this work will be read and re-read, and as the price puts it within the reach of everybody, it will soon become the HOUSEHOLD EDITION OF POETRY, practically and veritably.

The earlier Poets have been carefully compared with the best originals in the Library of the British Museum (from which great storehouse our editors are indebted for the greater part of this compilation), the reading of various versions has been collated, and, where differences existed, the criticisms of our first literary guides have been searched, and their judgments consulted before a decision was taken.

A word remains to say about the arrangement of these volumes. Biographical Notices of nearly all the Poets whose works are quoted precede the poems of each period. Prefixed to each one of the seven periods into which it is divided is a sketch of its poetry. Every poem has the name of the Author at its foot, with the date of his birth and death. The poems are arranged in chronological sequence, and the American poets are represented in the final sheets of the volume, with Biographies in the same method as the others.

CASSELL'S PRACTICAL DRAWING BOOKS.

Address NEW YORK TRIBUNE.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 13, 1873.

The Week.

MR. B. F. BUTLER has overreached himself with his Salary Bill by trying to tack it on to the Miscellaneous Appropriation Bill, and thus prevent direct debate on it. A motion for this purpose was therefore defeated with the aid of those who are favorable to the scheme on its merits. The Louisiana Committee of Investigation has reported that the votes in that State at the late election were not counted by anybody who had a legal right to do so, and Louisiana will therefore probably contribute nothing to the decision of the Electoral College. Except the passage of the bill in the Senate providing for the distribution of the *Alabama* damages by commissioners, and the return of Oakes Ames with his "memorandum book," there is little other news of importance from Washington. It seems more and more likely that nothing will be done at present about the *Alabama* damages, and that the money will pass into the Treasury and lie there indefinitely. Under the decision of both Houses, that the United States receive it in absolute ownership, there is no good reason why it should not; but about the effect of the performance on the national reputation there can, unhappily, be no doubt. Coming close on the Crédit Mobilier affair, one hardly knows what to say about it that can make it either look worse or better.

To complete the account of the Crédit Mobilier investigation, it ought not to be forgotten that one of the most curious features connected with it was the fate of J. B. Stewart, a stubborn witness, who refused to tell the Wilson Committee what he did with a quarter of a million of dollars given him by the Union Pacific Railroad in June, 1864—about the time when the act was passed by Congress making the Government loan a second instead of a first mortgage. Mr. Stewart—who is described as "sometimes of New York and sometimes of Washington, a lawyer of some prominence, a lobbyist of skill and daring, nearly seven feet in height, with an immense frame and an erect carriage," but of "slow and deliberate movements"—declined to tell the Committee anything about this money, notwithstanding that he had already before the Committee admitted the receipt of it; his manner was "defiant," while that of the Committee was "considerate and forbearing." His reason for refusing to testify was the "privilege of counsel," and although he was assured in the most gentlemanly way that this did not protect him, he remained as stubborn as ever, and would disclose nothing, though in a negative way his testimony pointed to "newspaper proprietors" as the recipients of some, at least, of the money. Mr. Stewart by this means has succeeded in getting himself brought with much solemnity before the bar of the House for contempt, in making an oration on the liberties of the subject and constitutional rights, and finally in being committed to the custody of the Sergeant-at-Arms, in which he will languish till the 4th of March, when he will proceed to business again. Throughout the whole affair no one has cut a better figure than J. B. Stewart.

The Wilson Committee has been examining the books of the Union Pacific Company in Boston; but the testimony of B. F. Ham, who is described as the auditor of the railroad and secretary of the Crédit Mobilier, as it appears in the newspapers, is so unintelligible that we must probably wait for the Committee's report before being able to unravel it. One of the things which the auditor undertook to explain was the loss of a quantity of Union Pacific bonds, now missing a long time. This loss is always described in the testimony as "shortage," the securities used up having been so great in amount, and having been sent round the country so much, "carried" and "placed" and "put up" and "deposited" to such a degree, that they gradually came to be regarded in the office of the Company as being in bulk, like wheat or oats, and liable to the same sort of vicissitudes; as for example, that of being on arrival found "short" in quantity—as lawyers say, "by the act of God." The shortage to which we refer is thus explained by Mr. Ham. In March, 1869, he was told to "lock up his safe and leave New York until he was sent for"; he did not return until July, when, on "making up his account, he discovered the shortage; large amounts had been deposited in various places as collateral, prior to his departure, and every effort had been made since to discover the holder of the missing bonds, without success." "The coupons," however, "were regularly presented and paid," and it seems impossible to avoid believing that the strenuous efforts made to discover the holder were something like those made by the younger Weller to discover and identify the elder Weller, when engaged in proceedings in contempt of court, in the trial of *Bardell* v. *Pickwick*.

Senator Pomeroy has made "the explanation" which our Washington correspondent says was looked for with so much curiosity. As might have been expected, it consists of a flat denial of everything, followed by a demand for a "Committee of Investigation"; and a committee has accordingly been appointed. As only seventeen working days of the session remain, and as the witnesses have to be brought from Kansas, and as Mr. Pomeroy returns into private life and thus passes beyond the jurisdiction of the Senate on the 4th of March next, it is pretty certain there will be no investigation whatever, and we greatly fear "the Christian statesman" knows this very well. However, let us be thankful that the rays of his piety will hereafter only illumine the immediate vicinity of his own home.

There has at last been an open breach between Mayor Havemeyer and the Republican Committee apropos of the new charter, and we are sorry to say that it does not seem to have been marked by much discretion on his part. Few thinking men not "inside politics" doubt the soundness of his position, but as long as the Custom-house publicists have the power of doing mischief, it was unwise to break with them openly, except in the last extremity. He chose for it, too, a very unfortunate occasion, viz., a visit of encouragement or condolence paid to him by the chiefs of the "Liberal Republican" party in this city, headed by General John Cochrane. If the General and his coadjutors be any more estimable politicians than Mr. Tom Murphy and his coadjutors, the public has not yet reached any such conclusion. The Mayor's *mot*, however, that the Custom-house publicists "pass the night gambling to cheat each other, and the day intriguing to cheat the public," was, apart from its possible effect on city politics, very happy, and has been received with considerable gusto by the community. Things at this writing go badly with the charter. The Republicans seem steadfast in insisting on making the Mayor share the appointing power with the Board of Aldermen, which will of course make the reform movement an utter sham, and give us two or three years hence the old jobbing.

The miscarriage of the Tweed trial still continues to be a prominent topic of discussion. Everybody agrees that it was the jury that did it, but the question in dispute is how the jury came to be what it was. We are informed that the bad characters on the jury were challenged by the prosecution, but the challenges, under the present law, being passed on by triers, and not as in the United States Courts by the judge, they failed. The panel for the Tweed trial, too, was only drawn the day before the opening, and not, as is the ordinary panel, fourteen days before, so that there was no time for enquiry as to the persons found on it. It is alleged that the Sheriff summoned only the bad characters, and failed to summon most of

the good ones, but it appears that the "bummer" who served was never summoned at all, but came to court of his own accord. The form the charge against Douglas Taylor, the Commissioner of Jurors, takes is, that although his duty is simply to make up the list of persons liable to jury duty and pass it to the Sheriff, nevertheless, as he has discretion in the matter of selection, he corruptly put on four or five thousand say of the class known to be favorable to Tweed, thus creating a probability that ten or more of them would turn up on every panel of one hundred. We see the Commissioner threatens to meet this charge by a prosecution, and we think he ought to do so. A man in his position cannot afford to lie quiet under suspicion of this kind. Tweed will be retried again before long, and we trust with greater precautions as to the jury. Although the penalty is only one year's imprisonment and a small fine, by multiplying the indictments the old "Boss" can be shut up for a good part of the remainder of his life.

The great strike in South Wales and the Russian advance in Central Asia are the two most prominent topics of English news. The strike continues, and is likely to continue, neither side showing the slightest sign of yielding. The colliers who are striking under the orders of their union enjoy the great advantage of having only 10,000 men to support, while keeping 60,000 more iron-workers out of work also. The iron-masters have thus far had the advantage in argument, as they have been able to show that they were only receiving nine pounds a ton for iron when the men thought they were receiving twelve pounds ten shillings; but the men met this by the declaration that their profits were nevertheless large enough to permit the payment of the old rates of wages, and that, at all events, this was a good opportunity to settle all questions in dispute between them and their employers. They desire, in particular, either arbitration or co-operative partnerships; that is, a concession to the workmen of a share in the profits. The masters, however, refuse resolutely to concede either demand, and their objections have been put forward with considerable force by Mr. Laing, a well-known authority. He cites two cases to illustrate the difficulties of any such arrangement. One is the Brighton Railroad, which for years paid 6 per cent. dividend, out of which arbitrators would probably have ordered 1 per cent. to be divided between capital and labor as "extra profits." It was discovered, however, that the dividends were really paid out of the capital, and during the ensuing four years there were no dividends, or only about one-half of one per cent. During all the time, however, the employees received the highest rates of wages. The second is the case of a Welsh iron company, a concern which for several years was worked at a loss, and ruined two sets of proprietors; the third has made it pay; but during all this time great buildings and machinery were put up, and the men were paid high wages—the difficulties and losses of the capitalists in no way affecting them. And now comes the most striking part of his story, which is worth the serious attention of all who are interested in the labor problem. When the price of iron rose, wages had to be raised 30 per cent., and the company were making great exertions to finish contracts taken at the old rates, so as to be able to take work at the advanced prices. For these two reasons, it was of the last importance to them to increase their production. But the effect of the advance of wages was to diminish production. The more the men received, the less they worked, so that the yield of the mine actually fell off from 44,000 tons a year to 36,000, while the interest on capital and the cost of machinery and horses and the rent and salaries remained the same.

About the Russian difficulty in Central Asia but little as yet is positively known. Count Shuvaloff has returned from St. Petersburg, after, it is said, a "friendly interchange of views," but without inducing the British Minister to depart from his position. What this position is has not been explicitly stated, but it would appear to be an expression of determination to maintain at all hazards the independence of Afghanistan and Persia. To make this effective, however, the Afghan frontier on the north has to be defined, and this will be the point on which there will be difficulty, if any arises. Afghanistan has not hitherto had any northern frontier, but has been separated from the khanates by a sort of debatable land or march in which nobody ruled, and caravans provided for their own protection. An alarm was raised by the English press a few weeks ago by the announcement that a secret treaty had been concluded between Persia and Russia, by which Russia had been allowed to erect a fortress on the Attrak, in Khorassan, on Persian soil. The Persian Ambassador writes to the London *Times* denying the existence of any such treaty, and the *Pall Mall Gazette* asks how then the existence of the fort is accounted for. The importance of this matter is due to the fact that in the opinion of many it is not by way of Afghanistan and the mountains that British India has reason to fear the Russian advance, but through Persia and down the Gulf, which, however, appears tolerably wild. It would seem that the British would be well satisfied if Russia would take the Amu River as her northern frontier, which she would perhaps be disposed to do as far as it runs west, but not beyond the northern bend at Kilif. The Russian press has been ordered to maintain strict silence on the whole matter, but the decree did not come till it had spoken out its mind, which is bellicose. The expedition beyond Khiva was at the last advices on the point of starting, was to consist of 12,000, in three columns, under the command of General Kauffman, and was made up with great care. This is as large a force as can safely move across the desert. The Khivan cavalry is said to be already in the field engaged in raids.

The Committee of Thirty of the National Assembly have completed their report, and it will be presented to the Assembly by the Duc de Broglie before this reaches our readers. The work of the committee was to define the relations between the Executive and the Chamber, and more particularly to settle the mode in which he should communicate with it. The committee went to work on two projects, one prepared by a sub-committee, the other by a M. Tallon. It is useless now to give the details of the negotiation, for the work of the committee has been largely negotiation with M. Thiers; but the general result is this: The President is to have a modified veto power, which is to enable him to suspend the operation of a law for the period of two months after its passage; he is to have the right to participate in the debates of the Assembly, not simply on bills, as was at first proposed, but on "interpellations," or questions addressed to the ministers by members, and other proceedings relating to subjects of general policy, and the council of ministers is to decide when his presence at the debates is necessary; but the Assembly is to adjourn immediately after hearing him—a provision which he vigorously combated. The parties are agreed as to the necessity of a Second Chamber, but, contrary to M. Thiers' wish, the Committee refused to provide for the creation of one now, or until the present Assembly is about to dissolve—in other words, the subject is remitted to future consideration. The conclusions of the Committee seem to be generally regarded as a break with M. Thiers, and there is a good deal of public excitement. But it is difficult for a dispassionate looker-on to avoid the conclusion that the Assembly is doing about the best thing under the circumstances of the case—that is, by holding on to power, maintaining order, creating little by little the machinery of a regular government, disregarding theories, and refusing, in a word, to commit the future of France to a body of wild theorists, each with a bee in his bonnet, assembled under the name of an "Assemblée Constituante."

In the meantime, the other members of the Assembly are busy forming constitutions. The "projet Tallon" is only one of hundreds. Nearly every member has produced one, which he has printed in pamphlet form and carries in his pocket. Some members produce three or four constitutions a week, which they distribute among their friends. The principal constitutions are those of M.

Passy, the Count de Chambrun, and M. Langlois. The great difficulty with all of them is to provide a Second Chamber. M. Passy gets his Second Chamber by dividing the present Assembly into two parts. The Count de Chambrun simply says that the Second Chamber "shall have power to fill its own vacancies," but does not provide for its birth, and M. Langlois composes it of the defeated candidates at the next general election, which is the most original mode of all. Still another method is suggested in the last *Revue des Deux Mondes*, viz., the election of the Upper House by the proprietors, professional men, merchants, and military and naval officers —the lower one being elected by universal suffrage.

The news from Spain is very important. Amadeus has grown tired of his rôle, and, in spite of all entreaties, has abdicated, the Zorilla Ministry being a little too much for him. What has precipitated his action is the support given by the Ministry to a General Hidalgo, an artillery officer of the radical school, who participated in an insurrection and in the massacre of his comrades in 1866. His antecedents in short are such that no officer of any army in the world would serve under him, and when he was appointed Captain-General of the Basque Provinces last November, the artillery officers protested, and sent in their resignations, but he retired and the storm blew over. The Ministry did not give him up, however, and appointed him recently to another command in Catalonia, whereupon the artillery officers protested and resigned, and the King sided with them, but the Ministers appealed to the Cortes, and obtained a strong vote of confidence. The King not unnaturally regards this determination to disregard his wishes, not on a question of state policy, but with regard to the interests of a simple individual, and this individual a military man guilty of the worst of military offences, as an affront, which if borne quietly would make his position contemptible as well as weak. The Cortes, on the other hand, has probably been more affected by the appearance of insubordination in the army than by any other consideration, for the army is the one power in Spain which has of late held the state together, and if it cannot be depended on to obey orders, there is a good chance of regular anarchy—not the "anarchy" talked of in the newspapers, but the real thing. Nevertheless, it would be hard to say which would be most prejudicial to discipline—Hidalgo's promotion, or the success of the artillery officers in resisting it. In the meantime, the session of the Cortes has been made permanent in order to control events. As we go to press, a dispatch from General Sickles to Secretary Fish announces the nearly unanimous adoption of a republican form of government.

The Liberal party in the Prussian Diet are beginning to discover that, with all the forms of a constitution, they have not yet secured the essence of a parliamentary government; that changes in the Ministry, instead of being made in obedience to the majority in Parliament, and to represent its views, are made in the secret councils of the Ministry itself, to meet the convenience or the wishes of individual members of the Ministry, or at the option of the King; that changes so grave as the transfer of precedence and responsibility from a Liberal to a Conservative leader, and the increase of the Conservative element by the creation of an additional Minister, may be made without so much as feeling the pulse of Parliament, and without any call from either House or from the country—may be concealed from the public for days, and no explanation of their grounds be vouchsafed even in answer to an open interrogation in Parliament itself. Bismarck retires; Von Roon succeeds him; Von Kamcke, an officer of Von Roon's type, is created Second Minister of War; Conservatism comes openly to the front, and the only answer that Lasker and other Liberals get to their enquiry as to the motive of these changes and their bearing upon the measures of reform and the relations of Prussia with Germany, is the assurance of Count Eulenburg that Prince Bismarck and Count von Roon have not quarrelled, and that time will show the identity of their policy.

Whatever be the exact meaning of Bismarck's retirement, it appears to be quite certain that the change did not mean any disposition on the part of the King to give way in the contest with the Papacy. This grows more truculent, as far as the civil power is concerned, every day, and is certainly all that Bismarck could wish it or would make it. The Minister of Ecclesiastical Affairs, or, as the French call it, of Public Worship, has introduced two bills into the Lower House, which are enough to make the Pope curse with redoubled energy. Since 1850, boys preparing for the Catholic priesthood have been allowed to receive their education in private schools or seminaries managed by the clergy, and at the university have been kept in ecclesiastical boarding-houses, and pursued their studies under ecclesiastical superintendence, and the examination at the close of the course was in the hands of the bishops. All this will be changed by the new bill. Boys going into the priesthood will have to attend the public schools, and at the university to follow the general course, or, if they live in Catholic colleges, will have to be examined by state officers in the classics, philosophy, history, and natural sciences, before being allowed to take a pastoral charge. But sterner than all are the provisions made to protect the priests thus educated from undue coercion at the hands of the bishop. No priest can be appointed to a charge without the approval of the Government; no priest can retain a clerical office after a civil tribunal has sentenced him to deprivation of it; no priest can be sent by his bishop to any penitentiary in which the penance is anything severer than prayer; and no priest can be detained in any such establishment against his will. If a priest is deposed by his bishop for obeying the civil law, he will have his action at law for redress, and the bishop will be obliged to fill his place with somebody of whom the Government shall approve, within one year, on pain of 1,000 thalers. Moreover, to show that he means fight, Bismarck has written to the *Staats-Anzeiger*, under his own name, informing the public that he has had to expose a nobleman at court for indulging in Ultramontane intrigues.

The order of the Prussian Government prohibiting the publication of the Pope's Allocution in Germany, and confiscating the journals in which a translation appeared, is known to have emanated from the King himself, who could not brook the idea of being accused before his subjects of ignorance, impudence, and infidelity. The personal relations of King William with the Pope had always been of a friendly character, and in formers years letters had passed between them in a spirit of good-will. The fierce and coarse denunciations of the Vatican wounded the sensibilities of the Emperor, and hence the order, the effect of which has been to acquaint every reader of a Prussian newspaper with the fact that the Pope had been saying something about the King so very naughty that the King was not willing to have it published, or so very strong that he was afraid to have it come to the knowledge of his subjects. It would be strange if such a prohibition did not stimulate curiosity, and if Romish priests could not find ways enough to elude the censorship in conveying to their flocks the pith of the Allocution in the homeliest German. Had the Allocution been left to the free discussion of the pulpit and the press the pride of the nation might have been roused against this insult to its head, and the Pope have been made to feel the shafts of ridicule, to which he is quite as sensitive as King William is to abuse. But this would argue a measure of freedom in the press for which Prussia is not yet prepared. The prohibition of the German version of the Allocution and the seizure of journals which published it, were covered by acts of Parliament under the provision of the Constitution; and multitudes of intelligent and liberal Prussians regard the daily censorship of the press—every journal being required to submit to the police an early copy of every number—as their own protection against abusive personalities, and the protection of the public from scandals and from spurious and sensational news. In this case, however, the Prussian censor has put a new weapon into the hands of the Pope, and he will strike again where he sees that his blows are felt.

SOME COMPARISONS OF SALARIES.

THE Judiciary Committee of the House of Representatives has reported a bill for the increase of certain salaries. These are the President's to $50,000, the Vice-President's and Secretaries' to $10,000, the Judges of the Supreme Court to $10,000, and that of Members of Congress to $8,000. The proposition is designed to seem fair on its face by being made to look like an even distribution between the three departments of the Government, but a moment's examination will show it to be one of those shallow artifices that so often come up in Congressional legislation.

The only objection that any one ever raises to an ordinary increase of salaries is that it will to that extent deplete the Treasury. Let us now see to what extent this proposed distribution of justice or generosity will affect the Treasury. The account will stand thus:

For nine Executive Officers, $41,000 per annum.

For nine Judicial Officers, $18,000 per annum.

For 367 Members and Delegates, $1,101,000 per annum.

Does this device really explain the unprecedented alacrity with which the House abolished the franking privilege? Is it a little bill to be paid for that isolated item of honest legislation?

An increase of Congressional pay brought forward at a proper time and kept within due proportions, very few persons who know anything about the expenses of living in great cities will object to; but we shall now endeavor to show that this proposed increase made at this time is beyond any decent approximation to what is reasonable, and that if the power of Congressmen to increase their own pay is allowed to run on unchecked, it will grow from a national scandal into a national danger.

The Constitution invests Congress with unlimited power to fix the pay of its members, or, to state the case more bluntly, gives the members unlimited power to fix their own pay. If we were remaking the Constitution now, we should in all likelihood limit this power in some way; but at the time the Constitution was made, such a limitation was deemed and was, in fact, altogether needless. The members of the First Congress, controlled and led by members of the Convention, spoke of the duty of establishing their own compensation as a most delicate and even painful duty. When they had enacted laws for the organization of the Executive Departments, the collection of the revenue, the government of the Northwest Territory, the registration of vessels, and had substantially agreed upon the well-known judiciary act, the amendments to the Constitution, and the pay of everybody else, they fixed their own modest compensation at $6 a day. We use the term "modest," not in relation to the value of $6 a day in these times, but in comparison with every other salary which the First Congress established. There was a sharp debate upon motion to reduce the amount to $5, and the committee which reported in favor of $6 explained that they had ascertained the pay allowed by the States to their delegates in the Confederate Congress, and had "struck an average," which was about $5 50, and taken it as their criterion. When the bill went to the Senate an amendment was made in it allowing senators $7. But so scrupulous were the men of that day in legislation which concerned themselves, that it was provided that this discriminating dollar a day should not begin until after the expiration of six years, that is to say, until the term of every senator who voted upon it should have expired.

What, then, was the pay which our first legislators assigned to themselves—which must be taken as the unit of comparison for all the other salaries that they established, and for all the changes that have been made since? It was $6 a day (without the franking privilege) for the three most laborious and arduous sessions that have ever been held, summing up five hundred and twenty days, and giving as a result only $1,560 a year. But even this result was too large for a precedent; for the First Congress had much more work to do, and of a more perplexing kind than was expected to fall upon its successors. The Second held but two sessions, footing up three hundred and eighteen days, and giving a result of $954 a year to its members. The Fifth Congress held three laborious sessions, and advanced some salaries—among others the Comptroller's to $3,500—and yet the members received but $1,200 a year. We may therefore conclude that in the First Congress $1,000 a year was about the estimated average pay of members.

When these men who estimated the value of a Congressman at about $1,000 a year, and who certainly had sufficient brains to frame intelligible statutes, came to the consideration of other salaries than their own, they showed a statesmanship, a breadth of comprehension, that must make every American who looks back to the past blush anew for the ignorance, demagogism, and moral cowardice that now prevail in Congress. The President's salary, it was said, must be commensurate with the dignity of his high office—no citizen could desire it to be less. The committee charged with the duty of ascertaining the proper amount enquired what had been the expenses of former Presidents of Congress—the position coming nearest in dignity to the new Presidency. It was found that their expenses had varied from $7,000 to $13,000 a year. Apparently the style in which they had lived was not thought sufficiently suitable for the President of the United States, and $20,000, with furniture, servants, horses, carriages, etc., was suggested. The House determined to strike out these perquisites, and then $30,000 was proposed. This was thought too high, and was reduced to $25,000, and the furniture already purchased for the use of the President. But the enactment was avowedly an experiment—if the salary was not sufficient, it was to be increased. "No one," it was well said, "knows better how to unite dignity with economy than the illustrious person who is now President." In four years the statute expired, but was then re-enacted, so as to establish the permanent salary of the office.

But it was chiefly on the subject of judicial officers that this early statesmanship was evinced. Elbridge Gerry seemed to anticipate some modern occurrences. "Your legislature may be corrupt," he said, "and your executive aspiring; but a firm, independent judiciary will stop the course of devastation—at least it will shield individuals from rapine and injustice." Some of the remarks incidentally show the moderation of professional incomes in those days, which to a certain extent must have furnished a standard for the judicial salaries. Fisher Ames said that, speaking for the four New England States, $1,500 a year for the Chief-Justice of the United States "would be an object sufficient to excite the attention of men of the first abilities in those States." Mr. Vining said: "There are many gentlemen in the practice of the law whose abilities command a greater income than $3,000 per annum; can it be expected that such persons will relinquish their lucrative professions merely for serving the United States?" With such statements as these before them, Congress fixed the salary of the Chief-Justice at $4,000, and of the Judges at $3,500—*the avowed purpose being to secure the most eminent lawyers by paying more than they could make in their private practice.*

Let us now look at the proceedings of the last seven years. In 1855 the salary of the Judges of the Supreme Court was fixed at $6,000, and in 1856 that of members at $3,000. Since then Congress have raised their own pay *sixty-six* per cent. (in 1866), and that of the Supreme Court *thirty-three* per cent. (in 1871). The next move proposed by the Judiciary Committee is to increase the former from its present rate *sixty* per cent., and the latter *twenty-five* per cent. We thus have on the one side an advancement at the rate of sixty-six per cent. and sixty per cent. against thirty-three per cent. and twenty-five per cent. How long will it be at this rate before the whole body of three hundred and sixty-seven members and delegates will be receiving higher pay than the Chief-Justice of the United States?

But it is not only the extent of this disproportionate advance and its significant rapidity; the manner of it must also awaken some apprehension. In 1856, the judicial salaries had been first raised, and the measure to increase the pay of Congress was brought forward in a separate bill standing upon its own merits. In 1866,

the measure was sprung upon the public as an amendment to some other bill; it was coupled with some meritorious matter, and it was introduced by a doubly dangerous arrangement in which the two opposing parties nefariously agreed to silence the political press by equally sharing the infamy. The new project is in like manner coupled with a proposition to increase the pay of an officer whose present salary dates back to the first year of the Government, and of judges whose responsibilities exceed those of any other tribunal in the world, but whose pay is about what this city gives to a justice of the peace.

There are two conclusive reasons, if no more, why the pay of Congressmen should never approach the pay of our judges; first, because their great numbers will make the aggregate of high pay a serious drain upon the Treasury; second, because the laws of the United States forbid the judges to engage in other avocations, and require the sacrifice of their entire time. Of members of Congress there is no such exaction. Mr. Dawes keeps open his law-office in Pittsfield, and runs home after adjournment to argue cases. Senator Carpenter receives for a week's work in the Supreme Court as much as the annual pay of each judge who decides his cases. General Butler has brains enough—we have his word for it—to make two or three incomes outside of Congress. Mr. Oakes Ames could win the admiration of his countrymen by building the Pacific Railroad. An increase of Congressional pay may come, but it must come last, and by itself. And if the trick of 1866 be attempted of throwing half of the blame on the Democratic members, we trust it will awaken the public mind to the fact that the party in power is responsible for the legislation of Congress, and that it should never be allowed to transfer that responsibility to the minority.

THE IMBROGLIO IN CENTRAL ASIA.

THE upshot of the negotiations which have been pending for the last three years between Russia and Great Britain seems likely to be that Russia will capture Khiva, and if she evacuates it after having liberated her subjects held in slavery, and exacted proper guarantees against outrages on them in future, England will abstain from remonstrance or interference; but that if Russia should see fit to stay at Khiva, which is not at all unlikely, inasmuch as it is very difficult of access, she will be called on to draw the line which is to mark the limits of her advance, for the present at least, on the south. That she will engage in a conflict with England in India, just now, there is little likelihood. It is with difficulty she can push even 12,000 men over the desert to Khiva, or anywhere south of it. England can meet her with 100,000 men who are longing for active service, and who would have behind them the resources of a vast and populous empire. It is, therefore, most probable that the difficulty about the frontier will be amicably arranged; but the Russian advance in Asia will, nevertheless, continue to be an event of immense importance, and one likely to exert great influence on the whole Mussulman world.

There is probably nothing in modern history more curious and interesting than the part which the populations of the mysterious, and until within the last thirty years little known, table-land on which Russia is now operating have played in the affairs of the more civilized nations around them. Although, properly considered, a vast desert, it appears for two thousand years at least to have been the source from which great swarms of men flowed in every direction. The uneasiness of the German tribes under the Roman Empire, and the impulse which finally carried them over the border, are supposed to have been due to the pressure from behind of the mounted hordes of Central Asia, and in the first historical glimpse we get of the modern world we find the Tartars raiding in every direction in great multitudes. They overwhelmed eastern Europe and pushed across the French frontier in the ninth century, and during the following five centuries they contrived to overrun Russia and Hungary every two or three years in vast hosts. Under Timour they descended into India, captured Delhi, and founded a Tartar empire, which extended from the frontiers of China to the Mediterranean, and from the Frozen Sea to Cape Comorin, fighting great battles, and suffering tremendous losses, apparently without in the least degree diminishing their resources, either in men, horses, or courage. In fact, combined with the Turks, who are only another branch of the same great family, they may be said to have been for five or six hundred years the scourge and terror of Christendom. They have within the last two centuries been gradually driven back and cooped up by the growth of Western science, and nothing that one now sees, either of them or their country, reveals the secret of the great organizations which conquered under Genghis Khan and his successors. In fact, they, rather than the Jews, constitute the great "Asian mystery."

They did not lose their fanaticism with their aggressive power, however, and the old faith, which underwent obscuration by the conquests of the British in India and the subjection of Stamboul to European influences, continued to burn as brightly as ever at Bokhara and Samarcand. Until within twenty years no infidel could enter those cities, except in disguise or as a slave, without danger to his life; and from this quarter, as well as from Central Arabia, devout Mussulmans have drawn much of the inspiration which has within the present century produced the great Mohammedan revival, of the strength and reality of which there appears no longer to be any doubt. The Russian conquests are mainly interesting to the Western world in view of their probable effects on the progress of this remarkable movement, although it will doubtless have an important influence on trade also, by opening up both new markets and new sources of supply in certain natural products—cotton, for instance.

We gave some account of the Mohammedan revival in India when reviewing Mr. Hunter's book on the troubles in that country, some months ago. There it has given, and continues to give, the Government great anxiety, particularly as it derives a good deal of stimulus from the reduction of the Mussulmans from the position of a ruling caste to one of equality before the law, as well as from the Wahabee crescentade in the beginning of the present century. But it has been going on actively in Turkey also, where it has been fed by a steady flow of Mussulman immigration from the Russian territory both on the shores of the Caspian and of the Black Sea. There is hardly a doubt that the effect of conquest on the people of the three khanates of Central Asia will also be a considerable intensification of faith, and that their subjection to the infidel, by restoring their long-severed communication with the rest of the Mussulman world, will cause a great quickening of zeal through the whole of Islam. The tide has undoubtedly turned in Turkey, in spite of the growth of "modern improvements" at Constantinople and of the waning of the Mussulman population of the European provinces. On the Asiatic side there has been a veritable revival. Within twenty-five years mosques have been built and repaired to an extent unknown for a whole century. The schools established for all denominations have been slowly but steadily monopolized by the Turks; there has been a great diminution of drinking and other infidel practices and a great increase of rigidity on the part of all classes in the observances of the Mussulman ceremonial. Prayers have not for a hundred years been so numerously and punctually attended, nor the Mussulman colleges so crowded with young men. Moreover, the foreigners who swarmed in all branches of the public service almost ever since the beginning of Mahmoud's reforms, have been slowly but surely pushed out, and their places taken by true believers of the ancient race. It has been observed, too, that the old beys and their sons, who built up the Turkish Empire and spread the terror of the crescent up to the walls of Vienna, begin to take service once more in the army. In other words, there are signs, and not a few, that though the Orientals take our machinery and rifles freely enough, they do not take our ideas, and that the East is still nearly as impervious to Western thought as it was when the Romans sought to absorb or assimilate it—when, as the poet says:

"The brooding East with awe beheld
Her impious younger world.
The Roman tempest swell'd and swell'd,
And on her head was hurl'd.

"The East bow'd low before the blast
In patient, deep disdain;
She let the legions thunder past,
And plunged in thought again."

What impression Christendom, with its jangle of contending creeds, and lukewarm and sceptical professors, its confusion of thought and practice on all questions of morality, the total want of stability in all its systems and organizations, and its growing devotion to material ends and aims, can oppose to this revival, remains to be seen. Probably very little. When it worsted the Mussulman before, it worsted him with a faith as fiery as his own, but that contest cannot be fought over again. Islam can never again be a temporal dominion, because science has come to the aid of the infidel; but it may possibly show in its subject state how much it suffered from its temporal successes, and what wonders it can work in adversity. Indeed, it is hard to see with what weapons the Western world can assail a creed which contains nothing but the assertion "that there is no God but God, and that God alone is great," and whose disciples are willing to die for it. There are weak points in Mahomet's history, it is true, but he owes his greatness in the eyes of his followers to his having been chosen to preach the simplest of all forms of theological belief.

INVESTIGATIONS AND INTRIGUES.

WASHINGTON, Feb. 8, 1873.

BUT for Pomeroy's ignominious downfall in Kansas, the last fortnight could scarcely have satisfied the morbid appetite for scandalous revelations which seems to have seized upon political society here. The proceedings of the two Crédit Mobilier Committees were comparatively dull. The refusal of "Joe Stewart" to testify, based upon the plea that an attorney may bribe Congressmen, and then screen himself behind his professional character and "fiduciary capacity," and the failure of the Hon. Job Stevenson, who evidently was in too great a hurry "to catch the Speaker," served indeed to relieve the monotony a little; but Pomeroy was the great feature of the day. His discomfiture was a sweet morsel which everybody enjoyed, except, perhaps, Mr. Harlan and General Howard, who had so emphatically vouched for Mr. Pomeroy as a pure patriot, a Christian statesman, a truly good man, and a self-sacrificing benefactor of the human species. Mr. Harlan still gives vent to his dissatisfaction with this bad world in his paper, describing in articles overflowing with high morality the depraved character of "that man Yorke" who seduced the good Pomeroy to bribe him, and then, as the base instrument of a wicked conspiracy, betrayed the generous confidence of the unsuspecting and much persecuted victim. That there was a "conspiracy" nobody doubts, but it is also thought that such conspiracies are utterly harmless to candidates for the Senate who do not buy votes with bribes; and there is a touch of humor in Pomeroy's case which cannot fail to be appreciated. Such men as Colfax and Patterson are profoundly pitied by almost everybody, and when Gen. Butler, in his brutal way, in debate recently alluded to Mr. Garfield as one of the dead, he only excited the disgust of his hearers, for Butler is certainly not the man to sit in judgment on other people's morality. But when the news arrived that the old bird Pomeroy had gone into a trap which, from his familiar knowledge of such things, he ought to have seen through, there was a broad laugh all over town, and people seemed inclined to congratulate each other on the fact that knaves will sometimes be greater fools than honest men. There is an impression spreading that the hand of fate is upon the rascals, pushing them on with irresistible power to self-destruction. Indeed, the conduct of most of those who are to-day disgraced and ruined men was such as to make one believe that they were not in their senses. Pomeroy went lustily into the bribing business while the investigation of his colleague Caldwell's briberies was going on, and everybody had his eyes wide open; and those who had taken Crédit Mobilier stock, knowing that Oakes Ames had it in his power to expose them, and knowing also that he desired to "let them off" if they only permitted him to do so, annoyed and irritated and drove him with their insulting insinuations and assertions, until finally he was forced in self-defence to bring forward the proof which crushed them. Their worst enemies could not have managed their cases more disastrously for them than they did it themselves. Some of them have at last learned wisdom enough to hold their tongues, but Mr. Colfax seems resolved to try his fortune once more, while here scarcely anybody doubts that such an attempt will only more deeply involve him. Mr. Pomeroy arrived a few days ago, and shut himself up with his sorrows; but it is announced that he will soon appear in the Senate and "explain everything," a performance which is looked forward to with great curiosity.

It is now rumored that the Senate Committee which investigated the Caldwell Bribery Case will produce two reports, one signed by the majority, headed by Mr. Morton and supported by Mr. Trumbull, in favor of punishing—probably expelling—Caldwell, and a minority report exonerating him, to be championed by Mr. Carpenter, who seems determined to add to the unenviable notoriety he achieved in advocating the admission of Mr. Abbot, of North Carolina, to a seat in the Senate, in spite of the undisputed fact that the latter had received only a minority of the votes in the legislature. The special committee appointed to investigate the charges against senators, based upon the testimony taken by the Crédit Mobilier committees of the House, is not expected to do much. The senators composing it are known as very honorable but mild-tempered gentlemen, who are not likely to be very severe in their treatment of a fellow-senator as long as they can possibly avoid it. The committee was appointed by Senator Anthony, the President *pro tempore* of the Senate, who is believed to be rather averse to harsh proceedings. No report will probably be had until immediately before the expiration of this Congress, when all whose names appeared in the Crédit Mobilier investigation, except Mr. Logan, will escape from the jurisdiction of the Senate, and the matter may be suffered to disappear in the hurly-burly of the last days of the session. The special committee which investigated Mr. Clayton's proceedings in Arkansas remains also mysteriously silent. The Republican majority in the Senate does not appear very eager to vindicate the honor of that body.

The steamship-subsidy jobs are killed, for this season at least. After the defeat of the Australian line in the Senate, it is not likely that another scheme of the same kind will be passed. The chances of the internal improvement jobs, some of which will come up in the House on February 13, when the Committee on Commerce has leave to report, are equally poor. The advocates of the postal-telegraph scheme are also reported to be in a despondent frame of mind, and will probably not attempt to push it now. But all these things are merely adjourned, not given up. They will reappear next winter, when it is expected that the fit of virtue which the Crédit Mobilier investigation has brought forth will have spent itself. But the bill to raise the salaries of the President, the members of the Cabinet, the judges of the Supreme Court, and the members of Congress, which was a few days ago reported by Gen. Butler from the House Committee on the Judiciary, is continually gaining strength. Its advocates count already upon a majority of votes in the House of Representatives. In the Senate the proposition was twice brought forward in a less complete shape by Mr. Hill from Georgia, and was bashfully voted down by large majorities. But it is thought that, when the same thing appears again in the more respectable form of a bill already adopted by the House, the number of senators who will overcome their scruples will not be small. It is very doubtful, however, whether it can pass. If we could have honest legislation at that price, it would be a profitable investment; but to give us that will require other things than a mere raising of salaries. Mr. Sherman's specie payment and free banking bill will come up again on Senator Stevenson's motion to reconsider the vote laying it on the table. That motion will probably carry, and it is then not unlikely that the bill will pass the Senate. The vote, however, will be very close, and nothing can be predicted with certainty. As I am informed, its defeat was not owing to a combination of hostile interests, to which it was ascribed by some newspapers. The strongest "interest," that of the banks, is rather in its favor. But the opposition arose from a general apprehension that the scheme would not only not accomplish the object for which it is professedly designed, but might lead to fluctuations and abuses worse than those under which the business interests of the country are now suffering. Even if the bill should carry in the Senate, it would in all probability fail in the House. There are many who are earnestly in favor of as speedy a return to specie payments as possible, but will not support a plan so uncertain in its effects.

The regular business of the session is so little advanced that it will require an extraordinary effort to dispose of it before the 4th of March. It is said that some members of the House are systematically retarding its progress for the purpose of rendering an extra session necessary. This design is particularly ascribed to a Democratic leader, who thinks that by continuing the investigations now and during the recess the majority party can be severely injured, and to General Butler, who believes things in a favorable condition to defeat Mr. Blaine for the speakership, to get a speaker of his own making, and to establish himself as the leader of the new House of Representatives, the investigations having "killed off" almost all the prominent

men among the old members. I have some reasons for believing that such schemes exist. But it is also certain that a large majority of the Republicans, as well as of the opposition, desire to adjourn on the 4th of March, the former because after the unpleasant experiences of the last two months they want to have some breathing time, and the latter because they think that the situation as it stands is favorable enough, and should be left to develop itself. There seems to be a disinclination on both sides to disturb by partisan demonstrations that sort of good feeling which has sprung from the curious circumstance that, after the opposition had been defeated in the Presidential election, the victorious party began to destroy itself. This circumstance has imparted a peculiarly mild and conciliatory tone to the intercourse of the men who but a few months ago so fiercely assailed one another, and may be of good influence when new ideas come up for discussion. But if an extra session should be called, which, although improbable, is by no means impossible, nobody knows how long it will last, and what may happen before its close.

ENGLAND.

LONDON, January 24, 1873.

THE chief topic of conversation during the last fortnight has been the death of the Emperor Napoleon. On the strength of the good old maxim about speaking no evil of the dead, the papers have, as a rule, said much more in his favor and indulged in much less hostile criticism than would have been thought becoming a fortnight ago. I need not consider the propriety of their conduct, as the whole matter falls rather beyond my province. The same maxim, however, has been invoked in behalf of two Englishmen of mark who have died within the last week. The friends of Dr. Lushington indeed had little cause for appealing to our compassion. He had long outlived all the animosities which may have been provoked by his early career as a strenuous partisan of the old Radicals. Born in the year when England acknowledged the independence of the United States, he was universally respected as a venerable link to a past generation. His last act was to travel from a considerable distance to Oxford in order to record his vote in favor of Dean Stanley's nomination as a select preacher. With him dies the last hope of obtaining any new information as to the history of Lord Byron's domestic difficulties. He might have given important evidence for or against Mrs. Stowe's narrative; and it has been suggested that the death of the persons chiefly interested should have released him from the pledge of secrecy. I, for one, am grateful for his reticence; I fancy that the world can get on pretty well without stirring up the unsavory scandals of the past, however grievous may be the lamentations of Dryasdust. Our other loss makes a more sensible gap to the general public. Lord Lytton died suddenly the other day, and has been the subject of innumerable eulogies from the daily press. Of course such praises are apt to be pitched in too high a key; and yet it is impossible to deny that Lord Lytton was a man of very remarkable and very varied powers. He had the art, whatever it may be, of success. The last illustration of his power is curious. It turns out that he was the author of 'The Coming Race,' a fact which was so carefully concealed that, though I have heard much speculation on the subject, I do not know that I ever heard it given to Lord Lytton. Many authors of reputation would find it a very dangerous experiment to publish their last book anonymously; but Lord Lytton certainly showed, in this instance, that the popularity of his later works was not due to the prestige of his name. And yet, whilst we are all lamenting his loss, and admitting that he fully deserves the honor of a burial in Westminster Abbey, one cannot but feel that there was something hollow in his reputation. He was scarcely one of the writers of whom one could predict with any confidence that they are likely to reach posterity. Amongst his other titles to fame, he was a fairly successful politician, and had a considerable reputation as an orator. I happened to hear what must have been nearly his last performance in that capacity, a speech on the last Reform Bill. The House was crowded and deeply attentive, and everybody came away convinced that we had been listening to an excellent piece of rhetoric. The sentences were admirably polished, and imbued with a certain scholarlike flavor. It was a good set speech, fully realizing one's traditional notions of parliamentary eloquence, and yet, in any higher sense, it was not really a speech at all. Not only did it belong to the species of oratory which never turns a vote—for in that species are certainly included ninety-nine out of a hundred in all the best speeches uttered in Parliament—but it was curiously devoid of any contagious influence. It had the frigidity of a calculated work of art; it had the form but none of the fire of genuine rhetoric; and for all practical purposes we might as well have been listening to an essay from Addison's 'Spectator' read by a well-trained elocutionist. The same defect seems to me to be characteristic of all his productions. They might be used by a judicious lecturer as an excellent illustration of the difference between talent and genius. That he was full of talent is as undeniable as that he had turned it to the very best account; but I fancy that one might read through all his novels and plays and poems and essays without meeting a single instance of those sudden illuminating flashes of thought which are characteristic of a really great writer. And thus Lord Lytton has of late enjoyed rather an anomalous reputation. His popularity has been very great, and great with a class which aspires to a certain amount of cultivation and of literary taste; but the greater part of his work has already become old-fashioned, and is regarded with considerable indifference by the critics who aspire to be our modern leaders of taste. In short, he is as distinctly below the first rank of our writers as he is above the ordinary run of literary craftsmen. We shall bury him in the Abbey, and compose a good deal of laudatory matter about him, and then, I suppose, we shall gradually settle down to a definite opinion as to his merits. I doubt very much whether, as the *Daily News* of to-day rather doubtfully suggests, he will be placed in different departments of literature beside Macaulay, Dryden, Addison, and Dickens; but, at any rate, he deserves the rare praise of having made the most of his abilities, and if any one values the result more highly than I do, I shall not quarrel with him. Lord Lytton, I may notice, was the contemporary at Cambridge of Sir Alexander Cockburn, both of whom were members of the same small college. A tradition survived there for a long time of his fame as a member of the well-known debating club, the Union, which has listened to the juvenile eloquence of a great many men distinguished in later life. It is customary to ridicule eminence in that arena, and indeed the students themselves generally have a British contempt for premature oratorical fluency. So far, however, as my experience has gone, the indication of talent thus afforded is by no means contemptible. Perhaps in a country where speech-making is more generally valued one might form a different opinion of the significance of the symptoms; but when a young Englishman overcomes his natural shyness sufficiently to talk fluently to an audience of any size, it generally shows that he has in him a good proportion of the essential qualities of vigor and self-assertion.

To turn from such questions, there are just now some serious topics for reflection. A strike is occurring in Wales which promises to take an important place in the history of the long warfare between labor and capital, from the magnitude of the interests involved and the bitterness of the feeling already produced. The iron-workers and colliers have refused to submit to a reduction of the rate of wages. The masters declare that the prices which they at present receive are insufficient to enable them to carry on business at a profit. Thereupon the men demanded an arbitration, and to this the masters have absolutely refused to consent. They say that they are willing to allow of an inspection of their books in order to prove the accuracy of their statements, but they will not, under any circumstances, continue to pay what they have hitherto been paying. The professed willingness to submit to arbitration gives a certain advantage to the men in the controversy. The masters, however, regard this offer as illusory, and believe that the men would repudiate an award unfavorable to their claims. They have firmly made up their minds, at any rate, that they cannot afford a concession, and are clear that no arbitration can convince them that they can afford it. Who is right in the dispute is a matter upon which no outsider can speak with any confidence, and I am profoundly ignorant upon the whole subject. The serious consequences of the warfare now waging are, however, obvious to everybody. The Welsh population had hitherto been rather behind the times, and this is the first case in which their industry has been affected by a strike. A great majority of the workmen do not even as yet belong to the Union, but the Unionists are able to stop the working of the collieries, without which the business cannot be carried on. Meanwhile, the men on strike are supported by the Unionists of the North of England, and the Union seems to be sufficiently prepared to carry on the struggle for a very long time to come. A large population, undeniably dependent upon them, is meanwhile reduced to misery, and there are grievous accounts of the suffering which has already been produced, and which will, of course, grow more intense as the struggle is prolonged. According to the report, most of the men thrown out of employ would be willing to accept the masters' terms, and it is said—I know not with what accuracy—that if the question could be submitted to a ballot to-morrow, there would be a great majority in favor of returning to work. However that may be, the Union succeeds in maintaining its position for the present, and even if it should be beaten in this struggle, it is generally admitted that the effect will be to increase its power in the long run, and induce outsiders to join it in the hopes of a more successful contest at some future time. In short, it seems that we are merely at the beginning of a campaign which will certainly lead to great misery for the present, and which will, in all probability, bring about increased bitterness between classes, and be prolonged for an indefinite period. We have heard so much lately from Mr.

Mundella and others of the marvellous efficacy of arbitration that this result is not a little disappointing. It looks too much as if arbitration were only possible by way of smoothing over little difficulties when both sides are convinced that some compromise is necessary. When either masters or men fairly feel that they have been backed to the wall, and that fighting is a less evil than concession, arbitration has as little influence as it has under similar circumstances in an international difficulty. Meanwhile, the outside public is beginning to realize with unpleasant distinctness that, whilst masters and men are wrangling, consumers are in all cases suffering. When the laborers at the gas-works endeavored to strike the other day, Londoners felt that no possible grievance could justify their being left in the dark; and a dispute which threatens to screw up the price of coals even above the present intolerable level comes home to everybody's hearth. Altogether, I need only say that we are beginning the new year without much promise of an increase of brotherly love.

I will only add that the education quarrel seems to be blazing up more fiercely than ever. Mr. Forster's well-meant compromise between Dissenters and Churchmen shows symptoms of breaking down in every direction. The League, who represent secular education, and the Union, who stand up for the church, are beginning to use very hard language of each other, and there are materials for a very pretty fight. A quaint illustration of the spirit of some of the school boards was afforded at Birmingham the other day, where a board was elected with a small majority of Church of England members. When they had to select teachers, the other members of the board amused themselves by cross-examining the unlucky candidates as to their religious principles. Roman Catholics and Wesleyans took turns in enquiring into the views of the teachers as to their views about the atonement, justification by faith, and other abstruse doctrines, and the result was not particularly edifying or conducive to religious harmony.

EUROPEAN OPINION ON THE DEATH OF NAPOLEON.

PARIS, January 23.

WHEN these lines reach America, the death of Napoleon will have ceased to move Europe as much as it has done during the last few days. I may, therefore, without being accused of want of discretion, and of the sad courtesy which surrounds every tomb, be allowed to make a few remarks on the character of the emotion which this event has produced in Europe. There is a very striking contrast between the attitude of France and that of her ancient allies, England, Italy, etc. The Bonapartist press is very emotional. The *Pays*, the *Ordre*, etc., appear every day surrounded with black lines, and enter into the minutest details concerning Chiselhurst; they are trying to make political capital out of the very event which for the present destroys their hopes; but there is something artificial in this very excess of descriptive power, in this attempt to rebuild a party with the promiscuous names of the Frenchmen who are now in England. The Bonapartists must feel that the Empire is gone with the Emperor, at least for many years; it was not likely that, broken as he was by the most painful illness, unable to show himself on horseback, Napoleon III. would try to make a "return from the Island of Elba," but the great mass of the French people did not know how ill he was. This illness had been very carefully concealed in 1869, when the Emperor had a terrible attack of his malady, and could only preside at the Cabinet Council in his bed. Very few people knew that at that time the Emperor was carried to the Bois de Boulogne and placed with great difficulty on a very quiet horse, in order to pass a great review of the army, which was considered a necessity. The consultation of the doctors which took place some time before the war remained a secret till the last few days. The Emperor was always so quiet, so silent, so sphinx-like that even the visitors who lately saw him at Chiselhurst did not suspect that there was under his increased apathy anything else than the sadness of defeat and exile. He was still in the people's imagination as he had appeared in the old days when he reviewed the Crimean army, or returned with the Italian army. The country could not forgive him the loss of Alsace and Lorraine, nor the humiliation of Sedan; but it cannot be denied that whenever the troubles of France became too acute, when her dissensions seemed too dreadful, when the expected saviour was called in vain, the eyes of many were secretly cast on the exile of Chiselhurst, who had shown himself able for eighteen years to struggle successfully with the spirit of revolution. The picture of Napoleon III. in various attitudes has never disappeared from the shop windows of Paris. There is in the French popular mind an innate, and what I must suppose a Celtic, disposition to give a legendary form to history, and to be drawn towards excessive misfortune as much as towards excessive prosperity. Napoleon III. had rapidly become legendary after Sedan; the dramatic incidents of his life could not be forgotten, and there was so much in it which seemed like the work of fatality that the people would perhaps have accepted any new chapter of a book which seemed written by the hand of Destiny. But the book will have no more chapters; the legend of Sedan seems already as distant as the legend of Waterloo. The two Napoleons will meet in the popular imagination, one as silent, as reticent, as melancholy as the other was ardent, fiery, and eloquent, looking like the types of two different races, seeming, however, like the instruments of the same will, both usurpers, both emperors, conquerors, both surrounded with a court of princes and kings, and finally dying on English soil. When France feels uneasy, what help can she expect from the young student of the Woolwich Academy? If the Bonapartists call him Napoleon IV., they only make us think of Napoleon II., who died so young and in exile. Will the hopes of the Bonapartist party gather round the Empress or Prince Napoleon? They are both unpopular. The Empress is justly accused of having for years advocated the war with Prussia, and to have been the soul of the military and anti-liberal party during the latter years of the Empire. Prince Napoleon has a clear intelligence, a very accurate perception of the forces now at work in Europe, and he is handsome and eloquent; but all his gifts seem to be lost in his hands. He stands somewhat in the position of the would-be usurper before the Prince Imperial his cousin; he has allowed his enemies to doubt his personal courage and to accuse him of avarice.

Notwithstanding the assurances of the Bonapartist press and the efforts of the old partisans of the Empire, it seems to me that the death of Napoleon is a crushing blow to their cause. Such is the general impression in France, and this impression might partly explain the apathy of the French public. Indifference is contagious as well as enthusiasm; and even among the Bonapartists there are many who only mourn the Emperor in order to pay, as it were, their debts, and who will from this time consider themselves quite free. This is especially true in the army, where the Emperor had won many personal friends by his great courtesy and his almost unbounded generosity.

If we turn to foreign lands, we see Italy officially mourning the Emperor, a subscription raised to place his statue in Milan, the first great Italian town which was delivered by his arms. King Victor Emanuel has sent several of his aids-de-camp to the funeral of the Emperor, who was, as he said himself, his brother in arms. Nothing could be more natural and proper than this conduct. If any country owed a debt of gratitude, it was Italy. He first delivered Lombardy, and he allowed all the terms of his own peace of Villafranca to be successively broken. He was the first instrument of the alliance which allowed Italy to seize on Venetia, even after her own defeats of Custozza and Lissa. The Italians, with their usual caution, have waited, however, before raising him a statue in Milan, till he was in his grave, till he could do no more for or against their cause.

In Roumania there have been also great demonstrations of popular gratitude. Napoleon III. invented, as it were, Roumania after the Crimean war. In the Congress of Paris he advocated the union of the two principalities under one prince. This union only took place afterwards. A young Prince of Hohenzollern is now trying to make a new nation on the banks of the Danube, an attempt which seems somewhat difficult, situated as is this nation between two great and ambitious countries. The peasantry of Roumania is still in a state of barbarism. The inhabitants of the great towns are singularly French in their affinities. Owing to their Latin language, they wear our fashions and mourn our monarchs.

The sensation produced in England by the malady and the death of Napoleon III. is, perhaps, the most difficult to analyze correctly. Before all, it must be said that Napoleon III. was known to be an Anglomaniac. The memories of Waterloo, of Saint Helena, the traditions of the First Empire with regard to England, had not only died out in his heart during his long sojourn in England, but had given place to feelings of deep sympathy. There was nothing of the Corsican in Napoleon III.; his was a slow, solid Dutch nature; he admired power, money, rank; he found himself at home with the lords and with the city men; he lived in the clubs, he liked a run across country, he dressed like an Englishman. Lord Palmerston was the first to perceive how useful Prince Napoleon might become to England; he applauded the coup d'état of the Second Empire. Then came the Crimean war; Kinglake in his History has very well told how much England did at that time for the Empire, if he has said as well how much the Empire did for England. From a purely French point of view, the Crimean war was a mere absurdity; it only served for a time the interests of England. The English alliance became from that time the centre of the Emperor's politics; he always acted with England; during the American war, he went directly against all the traditions and interests of France, and he espoused the hostile feelings of England against the Government of Washington. He imposed the treaty of commerce with England on an unwilling Chamber, and he was probably less influenced in this circumstance by economical principles than by the desire to secure the friendship of

England, and even of the English Radicals. At the time of the great rebellion in India, he allowed the English troops to go across France and to embark at Marseilles, instead of going through the Straits of Gibraltar. There was but a single cloud in this blue sky; after the attempt of Orsini, thirty colonels of the French army signed an address to the Emperor, in which they asked to be led against a nest of political pirates and assassins. The Emperor was contented with this war of words, and consoled himself easily with the momentary retirement of Lord Palmerston, who had proposed a new extradition bill. The volunteer fever was not of long duration, and the English are now fully persuaded that Napoleon had never for a moment dreamed of invading England. They only remember his services; they forget that it was their alliance which first gave the Empire a certain respectability and standing in Europe. They forget that the Emperor had constantly projected the invasion and seizure of Belgium, which would have been a fatal blow to the prestige of England; they forget the Benedetti treaty, which the *Times* first revealed to the world. Ever since the Emperor left captivity and came to England, the English seem to have had no other object than to repay him with their hospitality for the hospitality they received from his hands at the Tuileries. They seemed to remember only in the history of the Second Empire those brilliant fêtes, those theatrical scenes of the Tuileries and the Hôtel de Ville, where the best places were always reserved for those who bore English names. There is, I am afraid, also another feeling visible in the great concert of admiration and almost of adulation which has surrounded the exile of Chiselhurst: a secret contempt for everything which is not English. Would any Englishman not consider the Bonapartist system of government as intolerable in England? Would he not only object to its most cruel practices, but also to its centralization, to the régime of the press, to the tyranny of its prefects? All this, however, seems natural when the scene is in France. The lot of French men, apparently, is to obey some Bonaparte, as the lot of Britons is to be free.

Correspondence.

MUNICIPAL REFORM IN PHILADELPHIA.

To the Editor of the Nation:

Sir: In your notice of the Presidential pardon of James Brown, in the *Nation* of to-day, you remark, "There is reason to believe that the political state of Philadelphia is worse than that of New York in the days of the Ring, and the apathy of the citizens gives reason to fear that it will continue for some time." Will you permit me to make a brief comment on this statement?

That the municipal corruption of Philadelphia is as deep-seated and as all-pervading as that of the Tammany rule in New York will hardly be doubted by any one familiar with the details of our government; but I should regret to be forced to agree with you as to the "apathy" of our citizens. There is with us, as elsewhere, far too little of that healthful and righteous indignation at misgovernment which is the only security for popular institutions, and yet it is growing in a very hopeful way. We cannot, however, look for a revolution so sudden and successful as that which has purged New York—and this for several reasons, besides the more sedate and less impulsive character of our population. Malversation of public moneys with us has not been conducted on that grandly dramatic scale of which the development at once arrested the attention of every taxpayer, and showed even the most unthinking that a very few years more would plunge the whole community into bankruptcy. We have plenty to disgust the thoughtful, but not to startle the careless.

Again, the principal cause which led to the success of Reform in New York was the fact that the Ring was Democratic, while the country at large and the National Administration in particular were Republican. Tammany was the last stronghold of Democracy, and the energy of the great and triumphant Republican party was concentrated upon its overthrow. Moral influences are not to be overlooked in politics, and those influences told fearfully upon the last desperate struggle of Tammany in November; while perhaps even more important was the material assistance derived from the Enforcement Laws in the able and energetic hands of Mr. Davenport. But for the machinery of the United States Government, it is safe to say that Tammany would have counted itself in as it had done more than once before.

In Philadelphia the career of Reform is vastly more arduous because the corruptionists to be reformed are part and parcel—the representatives, indeed—of the great Republican party in a city which, ever since the dark days of the war, has boasted itself as the Gibraltar of loyalty. It is not every one who has the moral courage to revolt against party dictation when he is told that to secure the local advantage of good government he may be imperilling general principles for which he stood forth so bravely from 1861 to 1865. With civic pride, pardonable if mistaken, we imagine ourselves to have been one of the pillars of the Government during the war, and it is not given to every one to perform the part of Samson Agonistes. Thus the moral influence which in New York was in favor of Reform, in Philadelphia is against it with tenfold strength.

The material influences are even more unfavorable. The National, State, and Local Governments are united; there are no opposing forces to be pitted one against the other. The Democracy is too demoralized and disheartened to count as a political force in such a contest, especially as its local managers are thoroughly distrusted by the more intelligent of the rank and file, and are believed to be in secret league with their ostensible opponents. But, most of all, the machinery of elections is under the complete control of experts as able and unscrupulous as Tammany, with the enormous advantage over Tammany that they likewise control the operation of the Enforcement Laws. That the October election was carried by fraud, in spite of its enormous apparent majorities, I think scarcely admits of a doubt.

I mention these facts to explain the slow progress of Reform with us and the seeming "apathy" of our people. Yet we do not despair. Though God's work will surely be done, we do not intend to sit down and wait for it. We have every reason to hope that the Constitutional Convention now in session will render the task more easy, and give us a fairer vantage ground in our portion of the eternal struggle of Right against Wrong.

Very respectfully, L.

Philadelphia, Feb. 6, 1873.

Notes.

A. D. F. RANDOLPH & CO. will issue a 'New Cyclopædia of Illustrative Anecdote, Religious and Moral,' condensed; also, a 'Cyclopædia of Missions,' giving a comprehensive view of the missionary field, without regard to sect or party, together with facts, incidents, etc.——The supplement to Mr. Leypoldt's *Publishers' Weekly* of last week contains a useful Alphabetical Reference List of Works recorded in that publication during the past year. It is both an authors' and a subject catalogue.

—In no State do the relations between the State and learned societies seem to be better established than in Wisconsin. To the liberal provisions of its Legislature we owe the sixth volume of the Collections of the State Historical Society, and the first of the Transactions of the Wisconsin Academy of Science, Arts, and Letters. The latter is a volume of 200 pages 8vo, fairly representative in its contents of the Academy's aims. Among the papers of special interest to students we should name the report of the President, Dr. J. W. Hoyt, which, in giving the reasons for the organization of the Academy, makes a pretty thorough survey of "what had previously been done by and in behalf of Wisconsin in the sciences, in the arts, and in letters." This embraces the bibliography of each of these divisions, which will be found useful for reference to all investigators of the history and progress of the Northwest. Prof. W. F. Allen contributes a very clear and instructive article on "The Rural Population as Classified in Domesday Book," with especial regard to the status of the socmen (*sochemanni*), whom he concludes to have been descendants of the Danes. Prof. J. B. Feuling offers some forcible considerations on "The Place of the Indian Languages in the Study of Ethnology." The collections of the Historical Society embrace in the present issue the reports and papers of four years (1869–72), the former being inspiring reading, and calculated to excite envy and emulation in the bosom of most other societies of the same kind. Three papers, "The Northwest in 1817," by Samuel A. Storrow (from a rare pamphlet); "Journal of a Voyage to the Falls of St. Anthony in 1819," by Major Thomas Forsyth; and "Captain Jonathan Carver and Carver's Grant," by Daniel S. Durrie, are of first-rate importance. The pretensions of the false Bourbon and his biographer are amusingly exposed in "Eleazer Williams and the Lost Prince," by Hon. John Y. Smith. It is stated in the 18th Annual Report that "the average increase of the Massachusetts Historical Society, the pioneer institution of the kind in the country, has been 625 volumes, while ours, since its reorganization, has averaged 2,800, and, during the past six years, but little short of 5,000 annually." The 19th Annual Report just issued shows an increase for 1872 of 2,166 volumes and 1,528 documents and pamphlets. Of the former, 404 were newspaper files, making a total number of 2,044, distributed in the three centuries as follows: 54 in the seventeenth, 146 in the eighteenth, and

the remainder in the present century. The library is also strong in containing 360 volumes on genealogy alone; 865 local histories of towns and counties; and 175 local histories of churches. On the 17th and 18th of June next the Society will celebrate at Prairie du Chien the 200th anniversary of the discovery of the Mississippi by Joliet and Marquette.

—The late Matthew F. Maury, formerly Commander in the U. S. Navy, who died on the 1st inst., was first brought prominently into notice as Superintendent of the Naval Observatory at Washington, to which position he was appointed by John Y. Mason, on the completion of the observatory in 1844. Here he devoted himself not to astronomy but to the collection of material for the study of the winds and currents of the ocean. He endeavored, with partial success, to engage the commercial marine, not only of America but of the whole world, in the work of recording systematic observations of ocean meteorology on a uniform plan. The results of these observations were published in successive editions of his 'Sailing Directions,' the eighth and last of which was in two quarto volumes, published in 1858 and 1859, and also in his 'Wind and Current Charts,' which were intended to show at a glance both the currents and the prevailing winds of every part of the ocean. His work was brought to a sudden termination by his desertion to the rebels, on the secession of Virginia, in 1861. The great industry and ability he displayed in organizing the scheme of observations referred to gave him a world-wide reputation, while the number and extent of his publications made him very popular, especially in the South. But he was held in very low esteem by the scientific men of his own country, all affiliation with whom he avoided. With all his native ability, he was entirely deficient not only in education but in scientific training and in elevation of character. He collected facts with great industry and ability, but his explanations of them were faulty, and his theories often fanciful in the extreme. We may cite, by way of example, his doctrine of two winds blowing in different directions at the same time and in the same place, one of them carrying its dust along without any interference from the other, which he stoutly maintained to the last. His labors have added to the knowledge of ocean currents and meteorology, but he is entirely forgotten as a scientific investigator.

—There is an association of ladies in this city, formed only a year ago, for the purpose of visiting the almshouses, hospitals, and other public charitable institutions of the city and State. After a year's weekly inspection of Bellevue Hospital they were so impressed with the abuses, disorders, and neglects produced by the low character of the nurses, who are "all illiterate, some immoral, and others intemperate," that they determined to make an effort to establish a training-school for nurses in connection with the hospital, on the model of those established in England by Miss Nightingale, from which eventually a supply of educated and intelligent nurses might be procured not only for the hospitals but for the sick in private families. In England, the women who have entered this service are mostly drawn from the same class as the "upper servants," but the ladies here believe they can get their recruits from women of a higher grade—from "the large class of conscientious and laborious women whose education and early associations would lead them to aspire to some higher and more thoughtful labor than household service or work in shops—such as the daughters and widows of clergymen, professional men, and farmers throughout New England and the Northern States, who have received the good education of our common schools and academies, and are dependent on their own exertions for support." The Association proposes at first only to undertake the control and nursing of six wards of the Bellevue Hospital, and afterwards to extend its field of operations, and finally hopes to establish a college for the training of nurses, which will issue diplomas to persons whose qualifications have been properly tested. They have had one report made to them on the English training-schools by Dr. Wylie, and they propose to send over their own lady superintendent, to make herself familiar with the details of her work at St. Thomas's Hospital in London, and at the Liverpool Infirmary. They have the cordial co-operation of the medical staff at Bellevue Hospital, and will undoubtedly have that of all the other medical men of the city. The enterprise, which hardly needs a word of commendation, of course needs money. There has to be a home provided for the nurses, and the head nurses who will train "the probationers" will have to be well paid. The Association, therefore, asks $20,000 of the public to start them, and of this they have received already about $3,000. Subscriptions may be sent to Mr. Henry G. Stebbins, 50 Exchange Place, or Mrs. Hartman Kuhn, 237 Fifth Avenue. The scheme not only appeals to the charitable and humane, but to all those who feel the great shame and scandal of our time, the corrupt and inefficient administration of our public institutions, and the strong and widespread tendency to slovenly, inadequate, or dishonest work.

—More than a common degree of general interest attaches to the last Annual Reports of the President and Treasurer of Harvard College. The great fire in Boston had for one of its noticeable results a reduction of the University revenues, and to this fact public attention has been widely called by an appeal for aid addressed by the corporation to the friends of American education. In the second place, some remarks of the President in regard to a proposed abolition of compulsory attendance on recitations in the College proper have caused a good deal of newspaper discussion, and the change suggested has been very much criticised, both favorably and unfavorably, but favorably less often than otherwise. So far as we make out from the report before us, the case of those who are friendly to the change is substantially as follows: The average age of the young men admitted to the College is now somewhat above eighteen years, and the age at graduation is consequently between twenty-two and twenty-three. "It is conceivable," says President Eliot, "that young men of eighteen to twenty-two should best be trained to self-control in freedom by letting them taste freedom and responsibility within the well-guarded enclosure of college life, where mistakes may be remedied and faults may be cured, where forgiveness is always easy and repentance never comes too late." And he adds that, "whenever it appears that a college rule or method, of general application, is persevered in only for the sake of the least promising and worthy students, there is good ground to suspect that that rule or method has been outgrown." The report does not say so—for the reason, as we suppose, that nothing has yet been definitely settled in the matter—but, judging from some of the newspaper statements and argumentation, the practical working of the new plan, if adopted, will be that the recitation-rooms will be regularly open, and instruction from the teachers will be regularly obtainable by such pupils as may prefer the old method of study; but that such pupils as prefer to pursue their required studies by themselves, with the help of a tutor of their own selection, will be allowed to do so, and to absent themselves from the class-rooms and prepare themselves for the examinations in their own way. A complete abolition of all possibilities of instruction by means of recitations we do not understand to be intended; an abstinence, permitted by the Faculty, if the student chooses to run the risk of getting up his subjects after his own fashion, we take to be the whole meaning of the change proposed.

—By those persons who are unfriendly to the new movement numerous objections are urged, some of which are reducible to the time-honored principle of "*nolumus mutare leges*," while others are more specific—as, for instance, it is objected that the moral training of the undergraduates in habits of regularity and order is a main end of the college course, and that this end is better subserved by the old system than it can possibly be by the system suggested. To the more general objection the Report makes an anticipatory reply by setting forth a probable good to be got from the change, saying that it is reasonable to expect in the undergraduates, when they are freed from the compulsion of attending upon recitations, lectures, and religious exercises, less of a "certain schoolboy spirit which is not found in the professional schools," where attendance is optional. An improvement in this respect would be a great improvement, and one well worth trying to secure. As for the specific objection above mentioned, experience will be necessary before the question of the relative moral salutariness of the two systems can be settled. That the old system, however, has been a highly salutary system it is easier, we suspect, to say than to prove. The Report makes, as regards this point, a distinction between former generations of undergraduates, of an average age of fourteen and fifteen years at the time of admission, and the older undergraduates of the present day, and it is a distinction which no doubt should be borne in mind, whatever may have been the history of recent classes working under the compulsory plan. Another specific objection to President Eliot's scheme, and one which is urged by President McCosh of Princeton, is that it will most likely lead to "cram"—that is to say, to monthly and bimonthly cram, as distinguished from daily cram on the one hand, and on the other from the patient and thorough mastering of text-books. It is an objection which calls for consideration, and much consideration, and which may probably at last be found to call for nothing less than a careful consideration of two very different schemes of college life, and two almost contradictory notions of what should be the student's relation to the seat of learning at which he is resident. It is not an easy question; perhaps not a question which any one of our colleges can settle for any other; and profitable as any discussion of it might be, we dare say a year or two of carefully limited practical experiment may be, of all discussions, the very best and most conclusive. Instructors might pray, we should think, that the event might be prosperous.

—We note that in pursuance of the determination that every degree conferred by the University shall have "a serious meaning and a real value,"

the Academic Council—a body composed of the professors and assistant professors of all the faculties—will hereafter confer the three degrees of Master of Arts, Doctor of Philosophy, and Doctor of Science, in accordance with a scheme established last year, and which in its main features is as follows: Any Bachelor of Arts graduated at Harvard College may obtain a doctorate of philosophy by pursuing at Harvard University for two years a course of liberal study (approved by the Council) in philology, or philosophy, or history, or political science, or mathematics, or physics, or natural history; provided that the applicant shall have presented a satisfactory thesis on his chosen subject, or some branch of it, and shall have passed a thorough examination. Other Bachelors of Arts than Harvard men must satisfy the Harvard Faculty, by examination or otherwise, that their degree of Bachelor is a true equivalent for the same degree given at Harvard. And in the case of Harvard men, the Academic Council will, in its discretion, dispense them wholly or in part from residence at the University. The Doctorate of Science is to be given on much the same terms, relatively. The intending doctor of science must be a bachelor of science; must have pursued during three years a course (approved) of scientific study embracing at least two subjects, and have passed an examination upon them, showing in one of the subjects special attainments; and, finally, must have made some contribution to science, or some special scientific investigation. But if a man is a bachelor both of arts and of science of Harvard University, his course of study need be but two years long—the other requirements remaining the same, we suppose, in his case as in that of others. For obtaining the degree of Master of Arts there is requisite for bachelors of arts, or of law, or of divinity, one year's course (approved) of liberal study in law, or in theology, or in some other branch of liberal learning. This, it will be seen, is the extension to applicants for these higher degrees of the same system which has been applied to the applicants for bachelorships. And, apparently, while it is not different *in genere* it will be a system much severer *in specie* than our colleges and universities have hitherto known.

—The scientific activity of Harvard College, aside from monographs that professors and students from time to time publish, is perhaps best represented by the 'Illustrated Catalogue of the Museum of Comparative Zoology.' Of this, begun in 1865, seven numbers have appeared: I. Ophiuridæ and Astrophytidæ. By Theodore Lyman. 1865. II. North American Acalephæ. By Alexander Agassiz. 1865. III. Monograph of the North American Astacidæ. By Hermann A. Hagen. 1870. IV. Deep-sea Corals. By L. F. de Pourtalès. 1871. V. The Immature State of the Odonata; Part I. Sub-family Gomphina. By Louis Cabot. 1872. VI. Supplement to the Ophiuridæ and Astrophytidæ. By Theodore Lyman. 1871. VII. Revision of the Echini. By Alexander Agassiz. 1872. In No. VII. Prof. Alexander Agassiz discusses at length the difficult subject of nomenclature alluded to by Mr. Lyman in No. VI. It is to be hoped, judging from the way in which Prof. Agassiz approaches the subject, that science will receive help from the museum in bringing symmetry and reason into the naming of specimens. At present, we should say not only, with Prof. A. Agassiz, that the student engaged in the study and naming of single specimens would find it difficult to rise to general laws, but that the only outcome of his studies would be general desperation. As to the rest, each number (except the second, which has woodcuts by Prof. A. Agassiz's own hand) is illustrated by lithographs, the last containing also photographs of much beauty taken by the Albert-type and Woodbury processes. The numbers differ considerably in size, No. V. containing 17 pp. of text, and No. VII. 378. Each is prefaced by a bibliography of the subject treated. The tendency appears to be, wisely we should think, not to limit the account of specimens to those the museum may have now, but, with an eye to the growth of the museum, to extend the account to the present state of science. The catalogue appears to indicate that solid and faithful work is being done at the museum.

—Charles the Great, or Charlemagne, is one of the great men of history whose fame is rather enhanced than diminished as he comes to be better known. He is ranked with the great conquerors, but he was rather an organizer and a lawgiver than a conqueror; and, after all, his best claims to renown rest upon his constant and successful efforts to advance all the highest interests of humanity. His empire broke to pieces, as he must have known it would; society fell back into anarchy and decay; but he had given it a breathing space of almost fifty years of order and good government. M. Francis Monnier, author of an excellent treatise on the Carolingian epoch, has just published a thin book entitled 'Charlemagne Législateur,' devoted to elucidating that side of this great man which is, perhaps, least appreciated. It is written in graphic style, and at the same time incorporates the results of careful study of the original documents, in some points differing from the views of the best German authorities. A valuable special feature is the description of the provinces of the Missi Dominici.

—The literature relating to the Creole dialect is now voluminous enough to make the study of it both interesting and profitable, and it may be worth while to enumerate the principal publications on this subject. 'The Theory and Practice of Creole Grammar" by J. J. Thomas (Port of Spain, Trinidad, 1869); an essay on the 'Philology of the Creolé Dialect' by the same, of which extracts were given in *Trübner's Literary Record* for December 31, 1870; 'Guide to Hayti,' by James Redpath (Boston, 1861); 'Slave Songs of the United States,' Creole of Louisiana (New York, 1867); an article in the *Athenæum* of December 31, 1870, on the dialect of Mauritius; and 'L'Histoire de Cayenne et la Grammaire Créole,' by M. de Saint-Quentin, (1872?)—these works and articles, to which we may perhaps add our own notes in Nos. 240 and 293 of the *Nation*, cover nearly the whole field. The Guiana Dialect, described by M. de Saint-Quentin, arose originally from the intercourse between the French Colonists, their negro slaves, and the more or less subject natives (Galibis), whose contribution to the Creole was the names of plants, animals, and implements peculiar to the country. Other Indians, fleeing from the hard servitude of the Portuguese settlements on the Amazon, brought with them a large number of expressions derived from their late masters; and here and there occur a few words traceable to contact with vessels from England, Holland, and the South of France, like *chouit*, palatable (Eng. sweet), *nomsèk*, namesake. Among the phonetic changes, we recognize the customary Creole elision of *r*, and the fusion of the definite article with the noun, as in *lapôte* (porte); and *u* becomes *i*, as in *larim* (rhume), *diven* (du vin), with which compare *dilo* (de l'eau). Where in Trinidad they say *moèn ca manger* (I am eating), in Guiana they say *mo ka* [*ca*] *mangé* [*manger*]—with only a difference in the pronoun, and that but slight. In like manner the imperfect is formed with *té* (*etait*) in both countries. "Talheure [toute à l'heure] mo vini,' Mauritian for I shall come, contrasts with "mo oua [*qu.* va?] manger," I shall eat, in Guiana. All words are invariable, unless we except the article *la* sing. *iéla* plur., which stands always after the word it determines, and sometimes at the end of a phrase. The genitive may be expressed by *di*, but this is habitually neglected. The second person of the pronoun is *to* as in Mauritian, or *ou* (Maur. *vous*), and *zot* (vous autres). The relative word is *ki*. *Que* after the comparative is expressed by *passé*. The superlative is often formed by mere repetition, as *louen, louen, louen*, etc., for *très-loin*. (See the cover of No. 623 of *Le Tour du Monde*, December 14, 1872.)

— A paper read at a conference of missionaries of the Rhenish Missionary Society in Hongkong last summer by Ernst Faber, one of their number, has since been printed there in a pamphlet of 74 pages, with the title 'Lehrbegriff des Confucius.' It is an attempt, the first of the kind, to digest into a system the teachings of Confucius as they appear in the 'Analects,' 'The Great Learning,' and 'The Doctrine of the Mean.' The pamphlet contains a very full collection of extracts, which are given in a simple translation or paraphrase, followed in most cases by the original Chinese text, but with little additional discussion or comment. In a purely philosophical point of view the result is not very satisfactory. Confucius was too practical in the constitution of his mind and in his aim to make it possible, even if his teachings were more fully reported to us than they are, to construct out of them a well-developed system. As an analytical concordance, however, of his views on ethical subjects, the pamphlet will be found very convenient. To place, as Mr. Faber has done, 'The Great Learning' and 'The Doctrine of the Mean' as sources of authority on a level with the 'Analects' is an error, though fortunately, with his treatment of the subject, not a serious one. The nearer approach to a systematic form into which the former have been cast is the work not of the master, but of his disciples. The 'Analects' are the 'Memorabilia' of Confucius, the uncolored report of his sayings and doings. Mr. Faber is usually just to Confucius, but not always. In the closing summary of the errors and defects of his teaching, he finds him guilty of untruthfulness on quite insufficient evidence. Among the cases cited in proof, the only one worthy even of a moment's consideration is that quoted also by Dr. Legge with like disapproval, where Confucius excused himself from receiving an unwelcome visitor on the ground that he was sick. But the example of Confucius, we venture to say, will be quite harmless if only copied in full, for as the messenger was leaving the door, Confucius, to leave him in no doubt as to the real motive of the refusal, took a musical instrument, and sang to it. On the other hand, the sincerity and truthfulness on which Confucius elsewhere so strongly insists, *e.g.*, 'Analects' ii. 22, "I do not know how a man without truthfulness is to get on" (Dr. Legge's translation), Mr. Faber makes to be only confidence or faith in others (*Vertrauen, Glauben*), which though a frequent meaning of the Chinese word here used is certainly not its sense in this and other similar passages. Mr. Faber in his preface informs us that he has nearly ready in manuscript a translation, with introduction and commentary, of the works of the two leading Tauist philosophers of the fourth century B.C., Lieh Yu-K'au and Chwang Chau, which

he pronounces the best philosophical works in the Chinese language. They have never before been translated, and though possibly not quite deserving of the praise here given them, we hope that some patron may be found generous enough to assume the expense of publication.

AMERICAN ORATORIOS.*

THE appearance of two new works by American composers, both highly cultivated musicians, and both young men from whom much more may be expected, is an event of some significance. True, they do not enter fully into the domain of absolute music, the symphony, but content themselves with the comparatively limited conditions of the oratorio—a form of music in which the chorus is everything, and the nature of the text confines the composer to a narrow, emotional range. The oratorio, or sacred cantata, is for the present the only available sphere for the development of the American composer, for the public is not yet far enough advanced to understand music not explained by words; and, at the same time, the composers themselves have not had the elementary training, especially the unconscious absorption of a musical spirit from a surrounding musical atmosphere, in childhood, which would fit them to give their germinal ideas an easy development in the form of the symphony. The two composers with whose works we have at present to do have the rare merit of being accomplished scholars in church-music, and therefore familiar with all the best work yet done in this school.

No one can turn over the pages of Mr. Paine's 'St. Peter' and not see everywhere the work of an excellent musician. It is without doubt the most important musical work yet produced in this country. Nevertheless, one must be very much in love with Bach, and very little influenced by the modern taste for lyric forms, not to find a certain dryness in 'St. Peter.' The real false step in the book, it appears to us, is the text—the libretto. It ought to be mere truism to say that the first essential quality of text for musical illustration is *emotion*. Music is emotional if it *is* music. True, a Schubert or Mozart can write tunes for any words, however matter-of-fact they may be. But modern taste requires of vocal music something more than mere melody; it imperatively demands a true interpretation of the dramatic element in the text. This, in its fullest element, one finds in the admirable little songs by Franz and Robert Schumann, and in the operas of Wagner, though with perhaps less regard to the exclusively *musical*.

The old oratorio was too devotional, too monotonous in its emotional range, to serve as an amusement. It was an act of high religious rapture, a lifting up of the heart to God. One sees this in the 'Passions Music' of Sebastian Bach and the 'Messiah' of Handel. In Haydn's 'Creation,' the "worldly" element, of which Franz Brendel speaks, comes to the front. Here descriptive instrumentation becomes more noticeable, and an air of almost operatic tenderness pervades the third part. Mendelssohn gave a fuller "concert" character to the oratorio. In order to relieve the pious monotony, he introduces his choruses of unbelievers who cry to Baal and otherwise disport themselves in an ungodly manner. At the same time the modern orchestra employs its full resources to give a brilliant and characteristic coloring to the whole. This is especially true of the moment when fire descends, and of the chorus, "He watching over Israel," in 'Elijah.' Mendelssohn likewise recognized the need of the lyric element as affording suitable moments of repose. True, Bach had the same idea and relieved the tedium of his orotorios with chorales, in which all the audience joined; as if a modern audience should sing in the three parts of the 'Messiah': "Blow ye the trumpet, blow" (to Lenox), "Rock of Ages, cleft for me" (to Toplady), and "All hail the power of Jesus' name" (to Coronation). Mendelssohn, indeed, introduces chorales far more sparingly than Bach, and that, too, in a purely artistic way, for the audience now "assists" in the French sense only. But the lyric element is far more developed in Mendelssohn's oratorios than in Bach, for we find it in all the airs and most of the concerted pieces. Bach's melodic ideas almost refused to flow into lyric forms. He was not without a sense of dramatic fitness, else he could never have written the remarkably effective "Thunder and Lightning" chorus in the 'Passion Music according to St. Matthew.' But the airs for solo voices are so broken up with unessential ornamentation and long orchestral interludes as to be merely tedious to modern ears accustomed to a more positive passion in singing. These of Bach's are meditations and not airs in the modern sense.

To whatever extent Mendelssohn carried the melodious in his oratorios, it is always chaste and religious in tone—cold if you will—the melody of angels rather than of men and women. This cool and celestial melody is wanting in Costa's oratorios; here we get a smack of the warm sensuousness of the Italian opera. At the same time we descend from the highly dramatic characters of the 'Messiah' and 'Elijah' to the comparatively commonplace heroes *Eli* and *Naaman*. And with this descent comes a wonderful diminution of the general nobility of the music. Culture and ripe musicianship remain; we have more beautiful vocal effects than the old oratorios attempted, and the rich sensuousness of the modern orchestra in Italian hands. But the old religious fervor has departed. Yet not of oratorio only is this true. Since Beethoven and Schumann all music has become deeper and more poetic. Many of the slow movements in Beethoven's sonatas have a depth of the religious, the "repose which is typical of the Divine Permanence," such as can nowhere be found even in the most solemn moments of Bach and Handel. And Schumann by his short pieces gave an immense enlargement to the emotional scope of instrumental music. So that just as religious art has become more secular, secular art has become more religious (always excepting the Italian opera, which we must be excused for regarding as, in Western parlance, "a gone case").

From this greater richness of modern music arises a new demand upon the text of oratorio. Since the work is no longer an act of devotion but a work of religious art, it must abide the test of a criticism enlightened by all the triumphs of composers of the last hundred years. The religious art of Bach and Handel was the best art their time admitted. It not only had *religious* fervor, but it had by all odds the most *musical* inspiration of any contemporary works. It is also instructive to observe that of all the oratorios of that period only the 'Messiah' of Handel can be said to be really alive, in the sense of having the ear of the public. And this has been saved, in our opinion, by the glory of the text, which gave the composer such a wealth of inspiration that in several points he reaches emotional heights otherwise impossible. "Lift up your heads," "Hallelujah," and "Worthy is the Lamb" are the masterpieces which have saved Handel's 'Messiah.' The much bepraised air, "I know that my Redeemer liveth," is far too long and too broken by orchestral interludes. It has been kept alive by the efforts of great singers, who have found in its simplicity and noble melody an opportunity for new triumph. Besides, the musical texture of the 'Messiah' is somewhat monotonous when tried by the standards of modern music. It must travel down the ages in the strength of its sublimity and true nobility, in which sphere it is without a rival. It will be useless to attempt to rival it, for the spirit of the age is different, and the subject itself is the only one admitting the perfection of this particular emotional element.

Our new composers do well, therefore, when they seek more modest flights, and confine themselves more to the common level of human life; for here they are at once within reasonable reach of their abilities, and find scope for the tenderness and poetry now required. The lyric element is one of the most vital. By lyric forms in music are meant those songlike strains where the melodic ideas fall into symmetrical sequences of phrases, exactly as verses fall into stanzas, and where a particular emotional experience finds its full expression in two or three stanzas. The key of the song is its very first line, and this is particularly true of the song in melody. The opening phrase is the pith of the subject, and to this we often and finally return. It admits not of reasoning or dramatic progression, and cares little for mere elegance. It is the instantaneous picture of a moment of the human heart. The song is comprehensible without study. And so the lyric moment in an oratorio is at once the moment of greatest passion to the singer and most complete repose to the listener; complete repose, because the often-returning melodic phrases convey their own interpretation, and the conviction that the singer has at last quit "fooling around" in recitative and settled down to a steady pull at singing, is especially reassuring to the average listener.

A good oratorio text must have dramatic interest and sentiment, and there must be moments of great passion, otherwise there can be no climax. The chorus is of first importance. But to employ a chorus to express words or musical thoughts which could just as well have been done by a single singer is to violate the principle of artistic economy. The chorus text *must* be such an elevated emotional state as to furnish its own justification for the employment of large resources. In the arias we find room for the tender and poetic, and in the recitatives we look for dramatic painting. The great law of contrast should be observed. A soft piece relieves a loud one; the tender, the bold and heroic. The dramatic and broken are relieved by the lyric; conflicting voices of the individuals are complemented by the union of all—the chorus.

Tried by such tests as these, the libretto of 'St. Peter' is found wanting. It is divided into two parts, and each of these again into two scenes. I. "The Divine Call"; "The Denial and Repentance." II. "The Ascension"; "Pentecost." The first division embraces eight numbers. No. 1, chorus, "The time is fulfilled," Mark i. 15; No. 2 (Rec.), "Now as Jesus walked by the Sea of Galilee," Mark i. 16, 17, 18; No. 3 (Air Sop.), "The

* 'St. Peter: an Oratorio. By John Knowles Paine.' Boston: Ditson & Co. 1872. 'The Forty-sixth Psalm. Composed for Chorus, Solos, and Orchestra, by Dudley Buck.' Boston: Ditson & Co. 1872.

Spirit of the Lord is upon me," Isaiah lxi. 1, 2; (Rec. tenor) "And he called his disciples together," Luke ix. 1, 2; No. 4 (twelve male voices and choruses), "We go before the face of the Lord," Luke i. 76–79; No. 5 (choral), "How lovely shines the Morning Star!" No. 6 (Rec. and twelve male voices), "And he asked his disciples saying," Matthew xvi. 14–18; No. 7 (Air, bass), "My heart is glad," Psalm xvi. 9–11; No. 8 (chorus), "The church is built upon the foundation of the Apostles and Prophets," Eph. ii. 20, Ps. cxviii. 23. No. 5 is taken from the German, so that the only remaining opportunity for lyric or emotional writing in this part is in the third number, which Mr. Paine has somewhat singularly given to a female voice. The air is a very good one indeed, really lyric, and at the same time not commonplace. The opening chorus is set to a very unpromising text, but the musical result is creditable in a high degree, and, we judge, effective for voices. It works two subjects throughout in a masterly manner. The great objection to the entire last part of the work is the undue length and dryness of the recitatives. The text in this part embraces about forty verses of St. Peter's sermon, delivered on the day of Pentecost. Of this, in a musical point of view, the best we can say is, "warranted evangelical."

It is likely that Mr. Paine's 'St. Peter' would not be entirely available for public performance. But with judicious omissions we see no reason why it may not prove of permanent value. It is very unfortunate that the text did not include words suitable for at least one genuine musical chorus in each part. Whatever we have here we have in spite of the libretto. Nor do we find in this work enough attention to the tender and simply *musical* for the best impression upon the public; but we do find such a degree of cultivation and high musical intention as to be uncommonly creditable to the composer and American art. And we might properly add further, that we have given way to so long a digression on the matter of the text solely with reference to after-coming composers, who might be in danger of adopting an unsuitable libretto for want of proper instinct or consideration of the disadvantage at which they thereby place themselves with the public. The libretto of 'St. Peter' is probably quite as good as that of 'St. Paul,' or many of those set to music by Handel.

Mr. Buck's Psalm is not an oratorio, yet it is so much allied to one as to be properly noticed under that head. It is divided into seven numbers, which are so diversified in treatment as to afford an agreeable and appropriate variety. Mr. Buck's standpoint of writing is different from Mr. Paine's. The former is more devoted to the dramatic aspect of the text; the latter, to the demands of counterpoint and the Bach principles of writing. Mr. Buck also gives himself up now and then to mere sweetness, quite in the French style. On the whole, he has produced exactly what he set himself to do, namely, a work in oratorio style, long enough for half a programme, and within the ability, with good study, of average singing societies of forty to a hundred members. The dramatic conception of the text is excellent. The form of the music is admirable, and the melodic ideas are judiciously assigned to suitable voices. From a high musical standpoint the work appears to us to be open to the suspicion of crudity, or abruptness, or want of finish. Yet it is very difficult to say exactly why. Perhaps the slight imperfection arises from too strict a following of the Wagner theory of a close dramatic interpretation of the words. In any case, the Psalm is a desirable acquisition to the repertory of choral societies, and to their tender mercies we now dismiss both works.

SOME NEW FRENCH BOOKS.*

IN his latest work, the author of 'Ladislas Bolski' and the 'Revanche de Joseph Noirel' reveals himself in a fresh literary aspect. His new volume of 'Studies in Literature and Art' is made up of essays entitled (1) "A German of the Olden Time"; (2) "A German of To-Day"; (3) "Germany's Militant Poets"; and (4) "Nine Letters on Art." The German of the olden time is Lessing. The German of to-day is Strauss (not to be confounded with the composer of the "Blue Danube"). The militant poets are those of the new German Empire, from Redwitz and Geibel down to the immortality-destined Kutschke, with his

> "Was kraucht da in dem Busch herum?
> Ich glaub', es ist Napoliam."

In this chapter are some pleasant pages on Uhland and the *Geharnischte Sonette* (sonnets in armor) of Rückert, with a glance at the early patriotic poetry of the Liberation war.

Those of our readers who know M. Cherbuliez only as a brilliant novelist will be surprised at the extent and solidity of his acquirements in German literature. His 'Lessing' is an admirable study, with incidental criticisms on Goethe, Schiller, Winckelmann, and Voltaire. In discussing the ancient quarrel touching Lessing's estimate of the French dramatic classics, Corneille and Racine, M. Cherbuliez makes it evident that Geneva is nearer to Paris than to Weimar. The German of to-day, Dr. David Strauss, author of the 'Life of Jesus,' is an essay semi-biographical and semi-critical, in which the Doctor's worth is analyzed and appreciated, and some account given of 'Ulrich von Hutten' and his other works. The letters on art afford the writer a field in which his pen has somewhat freer play. The letters on sculpture especially merit attention.

M. Edmond About's last production is what the French would call a *livre de circonstance*, and is mainly interesting for what it tells us concerning its author. We all know how exceedingly clever he is; yet this book will not add to his reputation. Writing from personal observation touching the occupation of a conquered province by a victorious enemy, Edmond About would almost certainly be found keen of observation, picturesque in description, and reasonably well provided with useful information—provided only that the conquered province be not Alsace, and the victorious army other than Prussian.

Born at Dieuze, a small village of Lorraine, and long a resident of Saverne (Alsace), where, as he says, "I have passed fourteen years of my life, written three-fourths of my works, and which is the birthplace of four of my five children," we can well understand how the Prussian invasion affected him personally. In September, 1871, on his return home after the cessation of hostilities, our author finds the country filled with Prussian troops, and the native population in the bitterness of defeat manifesting toward the conquerors all the animosity of actively engendered hatred. He listens to the thousand highly colored stories current concerning Prussian insolence, Prussian vulgarity, Prussian avarice, and Prussian cruelty, which his friends and acquaintances pour into his ears, gives them shape and form in letters to *Le Soir*, and of this staple the work is made up. Had M. About been writing in Poland and Ireland, his knowledge of the world and of mankind would have qualified him to witness calmly the natural resentment of a conquered people, and to eliminate with judgment the exaggerations and inventions springing from the intense hatred of a disarmed population, which in default of swords and guns takes refuge in pens and tongues. But in the case of Alsace—and we make it no reproach to our author—all the circumstances of the case disqualified him from being its historiographer at such a crisis. Cool observation, careful research, or impartial judgment were simply impossibilities to him, and his chapters therefore possess merely the interest of a succession of pictures taken from a single standpoint. We have the animus of the whole work in the dedication (a legacy of hatred): "*A mon fils—Pour qu'il se souvienne.*"

The chapters on Strasbourg, Muhlhouse, Belfort, etc., are filled with details of the organized passive resistance of the Alsatians to the conqueror, which extends, it seems (where a Prussian is concerned), even to the denial on their part of any ability to comprehend or speak the German language. Any one who has ever heard Alsatian French spoken, or read its delicious reproduction in the pages of Balzac, may have some faint idea of the irresistible comicality of hearing an Alsatian refuse to understand a Prussian, with the explanation, in French of formidable accent, "*Moi Vranzais, moi pas safoir Allemand,*" or again, "*Pas poufoir Allemand*" (*Ich kann nicht Deutsch.*) This is legitimate. So also is this: "We reply to Prussians, who accost us politely in French, with a strict, ceremonious, and special politeness which makes them keep their distance. If they ask for information or one of those slight services that no one can refuse, we respond obligingly, but accept nothing in return—not even a simple 'I thank you.'" This is reported of Saverne, but at Strassburg, About hears stories in which the glacial politeness is totally absent:

"The German who chances in a French shop is exposed to a thousand impertinences—all the keener that they are witty and in good taste. A dealer who is obliged to answer a Prussian, persistently lowers his eyes and fixes his gaze on the stranger's long feet. That is sufficient. Attacked in his weak point, the Prussian hesitates, stammers, and generally rushes out bargainless and furious."

Another:

"A German lady enters a *magasin de nouveautés* to purchase a dress and trimmings. 'You understand,' she remarks, 'I do not wish to look like a Frenchwoman.' She is answered with much politeness: 'Have no fear, madame, it would be impossible to effect that.'"

Yet another:

"The wife of a Prussian functionary coming out of a shop in great agitation meets a friend, and bursts into tears, with 'Oh! this is horrible. I can never exist here. My husband must change his post or resign.' 'What is

* 'Etudes de Littérature et d'Art, par Victor Cherbuliez.' Paris: Libraire Hachette et Cie. New York: F. W. Christern. 1873.
'Alsace, 1871-1872. Par E. About.' Paris: Libraire Hachette. New York: F. W. Christern. 1873.
'Vingt Mois de Présidence.' Paris; J. Hetzel et Cie. New York: F. W. Christern. 1872.

the matter?' enquires the friend. 'Nothing—everything. I went in there. A pretty, graceful girl of sixteen was waiting on a French lady with the greatest possible politeness. At the sight of me she appeared to grow at least two feet taller—put on the air of an offended queen—turned her head away while listening to me, threw me my purchases as one might pitch a bone to a dog, and pushed my money into the drawer with a piece of paper.'"

"Voilà comment les Alsaciens vendent aux Allemands," is M. About's somewhat unphilosophical commentary.

But we must do our author the justice to distinguish between the requisitions of journalistic and permanent literature—between the preparation of a serious book and the hurried transcription of a letter amid the excitement of passing events. For the publication of some portion of this work originally in the *feuilleton* of *Le Soir*, M. About was, as our readers may remember, arrested at Saverne, sent under guard to Strassburg, and there imprisoned to await trial by a court-martial order of the Minister of War at Berlin. The crime charged was high treason. This was in September, 1872. The accusation was founded on the *feuilleton* of *Le Soir* of Oct. 26, 1871. How a French subject could be held answerable to a foreign tribunal for an article written and published in France, M. About naturally professed himself unable to understand. He was answered that the tribunal considered the crime as committed wherever the paper was circulated, and *Le Soir* was circulated in Prussian territory. Under the Prussian system, the accuser in this case was not brought personally before the court, which was composed of two civil judges and three military officers, but was tried on written testimony and his own answers to interrogatories propounded by an official nearly equivalent in functions to our judge-advocate. M. About has no words but of praise for the consideration, care, and politeness with which this officer discharged his duties. The accused underwent two interrogatories, the last one terminating in a manner so eminently characteristic of the respective nationalities of prisoner and judge as to merit reproduction.

M. About said in his justification:

"How can I be guilty of treason towards you? I am not of yours. I am your enemy. I hate the conquerors of Lorraine and Alsace. I hate them not only as a citizen, but as an individual. You have annexed my native Lorraine village, which never was German, where no one speaks German but your functionaries. There my father lies buried. His tomb is your property. You have annexed the place of my adoption, Saverne. The cradle of my infants belongs to you! Why, if I were not your enemy, I should be neither a son, a father, nor a man. Put down in the interrogatory, if you please, that I am your enemy!

"'*Natürlich*,' replied the judge, with the imperturbable serenity I had already admired, says M. About; and he dictated to the clerk: 'I am your enemy. I hate the conquerors of my country.'"

'Vingt Mois de Présidence' is a history of the Government of France, and more especially of the administration of President Thiers, from the 17th of February, 1871, to the end of October, 1872. The work addresses itself mainly to the demonstration of two propositions: First, that the Republic is the solution of the French political problem; and, second, that the administration of President Thiers has been eminently capable and successful. Those observers who have watched with attention the late scenes of the 13th of November, 1872, in the National Assembly, will find special interest in its statements. The book has been attributed to M. Thiers himself. From internal evidence we greatly doubt this, but think that it very likely may have been inspired by him. The author, whoever he may be, professes entire impartiality.

"All," he says, "agree on one point, that for nearly a century the malady from which France suffers is revolutionary in its nature. Are the doctors who have taken their degrees in the Faculty of Authority still convinced, as they were yesterday, that compression is the best method to manage steam? The machine has exploded too often to permit us to believe that the employment of the same processes will not ensure like explosions. We have been subjected to all the varieties of monarchical treatment—the First Empire, traditional monarchy, constitutional monarchy, dictatorship, Second Empire. All these passing governments decreed each in its turn that the era of revolutions was closed, and yet invariably, after the lapse of a few months, each governmental apparatus exploded, leaving the soil covered with its ruins.

"Monarchical régime, if it survives monarchical faith, is order on the surface and revolt at heart—revolt which, one day or other, appears in the form of revolution. Aided by compression, things may go on apparently well for a short time, but, at the moment when least looked for, reality appears, and with its iron hand sweeps away the artificial edifice. All the old processes failing, the most vulgar common sense counsels a different method; instead of compressing, allow expansion; instead of unavailing dykes and dams for a resistless current, give it a canal. The canal of revolution is the Republic.

"I am aware," continues the author, "that the word Republic frightens many good people, and most alarms those who do not know what it is; for the Republic can hardly be said to have experimentally lived in France. Was that terrible epilepsy of 1793 the Republic? In 1848, drawn to and fro by the ambition of pretenders, it was a phantom. The day when the doors of the National Assembly and of France were opened to Louis Napoleon, the Republic was dead. What we beheld from the 4th of September, 1870, to the 7th of February, 1871, was no more the Republic than it was monarchy; it was the dictatorship of a group, a dictatorship born of a catastrophe. The weakness of the Monarchical party, then, being demonstrated by a shipwreck five times repeated in half a century, let us, once for all, have done with this principle if we desire to have done with revolution."

The writer concludes, of course, for the necessity of adopting the Republic, if the country is to be saved and its government placed on a firm basis. So much for the preface. The remaining two hundred and fifty pages of the work may be looked upon as the administrative and diplomatic history of France down to within a period of now six months. On the 8th of February, 1871, seven hundred and fifty National Representatives of France assembled at the Grand Theatre of Bordeaux—Legitimists, Absolutists, and Moderate Republicans of every hue, Orleanists and Indifferents, and, possibly, some lingering Imperialists. These last soon found their faith sorely tried. On the 1st of March, a member (Bamberger of the Moselle) denounced the name of Napoleon III. as one eternally "nailed to the pillory of history," a sortie followed by immense applause and the appearance of a member "from the depths of the Right," his face as pale as a spectre. This was M. Conti, who had the nerve to ascend the tribune and undertake an apology of Napoleon III. All he gained by it was the immediate passage, amid tumult "à son comble," of the proposition of Bethmont, that the misfortunes, defeats, and ruin of the country were caused by the Empire, and that therefore the Empire should be for ever accursed—"l'Empire doit être à jamais maudit."

After successive defeats and the melting away of several armies, soon came the "humiliation suprême" of the entry of the Prussian army into Paris. Every nerve was strained, every device exhausted, to avoid this crowning calamity. But Prussia was inexorable, although this work asserts that, by way of compensation, she gave up Belfort, which was originally included in the cession of Alsace, and also diminished the indemnity by a considerable amount. Then follow the more exciting incidents of Paris and the Commune, and parliamentary discussions on all the great questions which underlie the administration of every modern state—conscription, the army, the navy, commerce, agriculture, national finance, etc., etc.—giving to this brochure, as a book of reference, a decided historical value.

How I Found Livingstone. By Henry M. Stanley. With maps and illustrations after drawings by the author. Published only by subscription. (New York: Scribner, Armstrong & Co.)—If we may judge by its effect on ourselves, the reading of this book is calculated to win back for Mr. Stanley a good deal of the respect which he had forfeited by his behavior since his return to civilized parts. In straightforward, unaffected narrative, only disfigured by reporters' rhetoric, he describes the intelligent manner in which he prepared himself for the long and toilsome march from the seaboard to the interior; the obstacles, dangers, and common incidents of the route; the happy meeting with Dr. Livingstone; their joint exploration of the north end of Lake Tanganika; their venturesome return through an unexplored country to Unyanyembe; their leave-taking; and the safe arrival of the *Herald* expedition at Zanzibar. There is no effort, on Stanley's part, to make a hero of himself. On the contrary, the reader might even be led to underrate his courage, forgetting that his was an undertaking in which tact was more essential than daring, and that he showed throughout an exceptional knowledge of human nature, without which he might easily have been foolhardy, but with which he could as easily afford to appear less courageous than he really was. His resolution and his self-reliance never failed him, and undoubtedly he had made up his mind to succeed or perish. No feature of his African mission seems to us more creditable to him than the fact that it was accepted in spite of a personal indifference on his part to Livingstone, whom he had entirely misjudged; and there are no pleasanter passages in his work than those in which, with evident sincerity, he pays a really loving tribute to the character of the veteran explorer as revealed to him most unexpectedly in their four months' intercourse. One perceives that the chill given to this ardent attachment when Stanley was once more in the midst of jealousies and heart-burnings of which Dr. Livingstone was unjustly the object or unconsciously the cause, almost of necessity threw him into an antagonistic frame of mind towards the Doctor's countrymen. This was rather confirmed by the to him amazing conclusion of the Dawson expedition not to proceed any further, on learning what he had achieved; and prejudice gave way to anger when, partly owing to the mystery in which his early movements were shrouded, he found the British public unprepared to believe him. A little more judgment, a little better knowledge of the *Herald's* reputation for sensational journalism, would have enabled him to turn these doubts and suspicions into what they actually were—the highest compliment that could have been paid him. He would thus have spared himself those

exhibitions of bad taste, sensitiveness, and bad breeding which we can now partly forgive to his loyalty to Dr. Livingstone and his employer.

Mr. Stanley's book unquestionably takes rank with those of Burton, Grant, Speke, and all other travellers in the same district of Africa, in so far as it is a truthful and trustworthy account of what he saw, heard, and did. In scientific attainments he was inferior to all his predecessors, in descriptive power as well, though his narrative is anything but dry reading, and contains many excellent descriptions of scenery. He was peculiarly fortunate in several respects. When only a month out from Bagamoyo, he heard authentic news of Livingstone; four months later he was again cheered by similar tidings; and three months later still, on the final march to Ujiji, all doubts were removed of his finding the Doctor if he could reach that place. Had he experienced fewer delays in coming up from the coast, he might have anticipated the latter's arrival, and either turned back in despair or missed him in further searching. He had also the singular felicity, when returning to Bagamoyo, to receive on the way copies of the *Herald* containing his letters forwarded months before. This return trip, we ought to add, was towards the close perhaps even more perilous than the advance had been.

The publishers will permit us to call their attention to the awkward position of the general map of the expedition. Placed in front instead of at the back of the volume, it cannot be consulted without great inconvenience, which leads the reader, or led us at least, to tear it out and spread it near by.

Talk and Travel; or, Two Strings to Your Bow. By Biceps. (London: D. Ogilvy.)—An English traveller, who hunts lions and wild boars, and amuses himself with philology and anthropology, has written a book and printed it under the above title. The "Travel" is in Northern Africa, and will serve as a guide to the sportsman and tourist in Algeria and Tunisia. It certainly gives no very enticing view of the country—wretched quarters, long and fatiguing marches, and little or no large game. The "Talk" is a warm protest against the theories and nomenclature which transform "Englishmen" into "Dutchmen," and "Britons" into "Teutons." He speaks up for the Normans. He thinks that the inhabitants of England at the Norman Conquest were an effete race, who would have come to nothing. Englishmen owe their eminence to their Norman blood. He estimates the accession to the 2,000,000 so-called Saxons to have been 500,000 French—in fact, one quarter, and by far the most intelligent and powerful of the whole population of England; and of the whole population of Great Britain and Ireland he puts the Teutonic element at one quarter only. The organization of church and state, the military spirit and power, the architecture, the literature—all are Norman. The language is mixed. As to the vocabulary, it seems there are 43,500 words in Johnson's Dictionary, and 29,000, more than two-thirds, of them are of Romance origin. As to grammar, the collocation of words, the formation of the plural, gender, comparison, and derivation are either French or half French. So he argues in an off-hand fashion, citing Schlegel, Grimm, Marsh, Thommerel, and a long, and good, and less familiar passage from Hardy's 'Descriptive Catalogue of Materials relating to Great Britain and Ireland.'

He garnishes his statistics and arguments with lively assaults on travelling Teutons who claim the English *"lankwitch as no pedder as progen Sherman,"* and on the "violent Germano-mania (or flunkeyism) of the last thirty years" in England, and especially Mr. Freeman and the *Saturday Review*, as its prominent representatives. Among other things, he gives a specimen vocabulary of the new language, the *lingua Freemannica*, which Englishmen of the old school will now be obliged to study, from which we pick the following: Charlemagne, *Karl the Gross;* A Briton, *A Dutchman;* nearly, *well-nigh;* Popular tradition, *Folk lore;* Anglo-Saxon, *O.E.;* Freeman, *infallible;* everything non-Freemannic, *misleading, confusing, blundering.*

At "well-nigh" the same time with this little book comes a number of the *Saturday Review*, with an article in it on the *Nation's* criticism of Dr. Morris's use of the phrase *Old England*, which is full of misapprehensions that we should like to set right. But what can be said to a reviewer who fathers views upon us which are just opposite to those we express; who applauds a classification of English authors which unites Chaucer with Beowulf, and separates him from Spenser; who thinks that the current word in America for *Englishman* is *"Britisher,"* and that "commencement orations" are speeches of the Pilgrim Fathers; and when the *Nation* says that we may still speak of both races of our ancestors (Saxons and Normans) under the names which have so long resounded in Fourth-of-July orations, takes it all gravely, and enlarges at learned length on the political reasons which lead us to ban the word *English* and praise *Anglo-Saxon;* who is not content with rebuking the *Nation* for using the words *Anglo-Saxon* just as all the rest of mankind do, and have done for generations, but ventures to suggest that we say *commencement* when we mean *beginning*—*e.g.*, Harvard commencements, for Harvard beginnings—and that we have the elements of the Anglo-Saxon question still to learn? Perhaps 'Talk and Travel' gives him all the answer he deserves. Perhaps it might do him good to read and digest the remarks in the last number of *Kuhn's Zeitschrift* to the effect that there is little study of Anglo-Saxon in England, and what little there is is unscientific, and that America affords a cheering contrast in both particulars. This is an authority surely which all "Germano-maniacs" are bound to respect. Let this be followed by a study of the parable in the Hitopadesá, or Hending, or elsewhere, which tells how a certain foreman of a jury made his complaint of the eleven obstinate jurymen who were standing out against him.

History of Lexington, Kentucky: Its Early Annals and Recent Progress. By George W. Ranck. (Cincinnati: Robert Clarke & Co. 1872.)—It is a hundred and sixty years since Lexington, Mass., was set apart from Cambridge and incorporated under its present name. Five years ago its historian, Hudson, could reckon twenty-two counties, cities, and towns "scattered over every section of our wide, extended country, including the Pacific States," which had been called after it on account of its Revolutionary fame. Of these, Lexington, Kentucky, was the earliest; and it is the only one which has acquired national distinction, if we except the Missouri town whose capture by the Confederate General Price in 1861 was an event of some significance and great notoriety at the time. Except in name, however, there is no relationship between the Lexington of April 19, 1775, and the Blue Grass Lexington. The latter was essentially a Virginian settlement, and its true parentage was shown when the conflict of Puritan and "First Family" principles compelled it to take sides with one or the other. Its allegiance was divided between the Confederacy and the Union, and its citizens enlisted in both armies; but this was a Border State necessity, and we judge from Mr. Ranck's discreet allusions to the subject that its Confederate contingent was the darling one, and that it is still fashionable in Lexington to mourn over the "lost cause." We are not aware that the Massachusetts volunteers actually faced and fought their Kentucky namesakes on the field of battle, though this would doubtless have been peculiarly agreeable to the latter. Their opposition, however, was none the less real.

Mr. Ranck has adopted the plan of treating each year's events by themselves, skipping from one topic to another without warning or any mark of discrimination, and sometimes with very ludicrous effect. The biographies accordingly are scattered throughout the book, which thus loses what might have been a fairly imposing feature. For we have glimpses here of the Marshalls, the Todds, the Breckinridges, and the Clays; of the Gratzes and Gratz Browns; of Amos Kendall; of Jeff. Davis, who was educated at the Transylvania University; of good Bishop Asbury and Peter Cartwright; of James Wilkinson, once the General of the United States Army, to whose neglected grave in Mexico the Secretary of War has just called the attention of Congress; of Daniel Boone, Robert Patterson, and other pioneers—not to speak of a large number of eminent lawyers, politicians, and inventors such as any town historian might rejoice in. Next after the late Horace Greeley, Henry Clay had no worshippers more devoted than his neighbors, the people of Lexington. They carried their reverence so far that, in 1845, instead of mobbing his kinsman, Cassius M. (then editing an anti-slavery paper called the *True American*), gutting his home, tar-and-feathering him, and throwing his press and materials into the Elkhorn, they appointed a committee "to safely box up the articles and ship them to Cincinnati, after which Mr. Clay was notified of the address of the house to which they had been sent subject to his order, with all charges and expenses paid." They even cheerfully paid $2,500 additional to indemnify two of the committee, against whom Mr. Clay subsequently obtained judgment for their forbearing and courteous treatment of his property.

It would be easy to make interesting extracts from Mr. Ranck's ample store of anecdote and tradition, did space permit. In these days of Crédit Mobilier, however, we must make room for the following example of the delicacy which, according to Messrs. Oakes Ames, Bingham, Brooks, and Kelley, it is absurd in a public officer to profess:

"Commissioners were appointed [1792] by the House of Representatives to select a permanent seat of government, then a matter of great jealousy and contention between the people of the opposite sides of the Kentucky River. Five gentlemen were chosen, any three of whom might fix upon a location. Their names were Robert Todd, of Fayette; John Edwards and John Allen, of Bourbon; Henry Lee, of Mason; and Thos. Kenneday, of Madison. The commissioners met soon after their appointment, when it was found that two were in favor of Frankfort, and two for Lexington. The matter was decided by the vote of General Robert Todd for Frankfort.

Why General Todd decided against his own town has long been a mystery to many, but it is known that he regarded his position as a delicate one, inasmuch as he owned a large amount of land in this vicinity, and feared if he gave his vote for his own place of residence, it might be attributed to motives of personal interest" (p. 175).

Journalism in the United States from 1690 *to* 1872. By Frederic Hudson. (New York: Harpers, 1873.)—The subject of this book is so important that the book itself deserves attention, but we cannot say that Mr. Hudson has succeeded in accomplishing the task set before him. We have as the result of his labors a thick volume stuffed with every imaginable kind of newspaper history, gossip, and anecdote. In such a collection there is of course a large amount of valuable information, but it has been collected and put together in such a way as to leave the history of Journalism in the United States still unwritten. Some idea of Mr. Hudson's style may be gathered from his Introduction, in which he has brought together a number of quotations from various authors bearing directly or remotely on journalism. In this collection we find the quotation, "Give me the liberty to know, to alter (*sic*), and to argue, freely, according to conscience, above all liberties," attributed to "John Milton, the Cromwellian Editor." The lines

> "'Tis pleasant, sure, to see one's name in print;
> A book's a book, although there's nothing in't,"

have given them for an author "Byron after the newspaper critics." "That mine adversary had written a book" is quoted from "Newspaper critic after Job"; Puck is referred to as the "first telegraph operator," and we find that the verse

> "How doth the little busy bee," etc.,

is taken from "Isaac Watts's Eulogy on newspaper reporters." It is needless to say that Mr. Hudson's style was formed in the office of the *Herald*.

Mr. Hudson divides the history of journalism in this country into six periods. "First, the first American newspapers, 1690–1704; second, the Colonial Press, 1704–1755; third, the Revolutionary Press, 1755–1783; fourth, the Political Party Press, the Religious Press, the Agricultural Press, the Sporting Press, the Commercial Press, 1783–1833; fifth, the Transition Press, the Cheap Press, 1833–1835; sixth, the Independent Press, the Telegraph Press, 1835–1872." Any one can see for himself, however, that these divisions are of the loosest and most arbitrary kind. The Political Party Press did not come to an end in 1833; nor indeed did the Religious Press cease in that year to issue newspapers, nor the Agricultural Press, nor the Sporting Press, nor the Commercial Press; and we must suspect the "Transition Press" to have been invented for the purpose of bridging over the chasm between the fourth and sixth divisions, rather than because it defines any definite school of journalism. We doubt very much whether it is profitable to attempt such a classification at all; at any rate, it should be done from a more philosophical point of view than that indicated here. But Mr. Hudson does not pretend to be a philosopher. Inflated gossip of the "reportorial" sort is his vein, and both the inflation and the gossip are amusing.

Incidents in my Life. By D. D. Home. (New York: Holt & Williams. 1872).—We had a right to expect from Mr. Home at least an interesting book. From time to time we have heard so much of this gentleman's accomplishments, as shown, for instance, in his gift of physical self-elongation and of contraction at will, of floating in and out of fifth-story windows, and of sportively transcending the most uniform physical laws, that we looked with some confidence to this book, the second in the series of Mr. Home's confessions, for some hint respecting the nature of his miraculous gifts. The introduction assures us that Mr. Home "writes as a man thoroughly in earnest, and who has himself no doubts of the phenomena which attend him." It tells how these phenomena commenced in his childhood, how they have been with him ever since, except during a few brief intervals, and how, while bringing him public notice and some valuable friendships, they have been "in some respects an inconvenience and a misfortune, and betoken conditions that do not promise length of days." Of the inconveniences and misfortunes to which Mr. Home's experiences as a medium have subjected him, we have already heard a part at least in Mr. Browning's poem, called "Mr. Sludge the Medium." Mr. Home admits that he has "reason to believe that Mr. Browning did intend his fancy portrait of Mr. Sludge to represent me"; but he is "unable to discern what characteristic of poetry" these verses possess other than the fact "that they were *made* by Mr. Browning." With his admission that he was the original Mr. Sludge the interest of his criticism ceases. He gives us no arguments or data by which to refute the arraignment by Mr. Browning, so that we must conclude that, although "Mr. Sludge the Medium" may be a very poor poem, yet it is a damaging attack upon Mr. Home.

We approach the chapter upon "Elongation and Compression" in a mood of somewhat heated expectation. Mr. Home, however, does not tell us a single word respecting the way in which he was "elongated" and "compressed," but a witness who calls himself Mr. Jenkin says, that on one occasion "Mr. Home lengthened to about 6 ft. 9 in., and then he shortened down below his normal height to about 5 ft. He then asked me to hold his feet, which I did by planting my foot on his instep whilst Mr. —— held his head, his left hand being placed on his left shoulder. We carefully measured the extent of elongation against the wall—it showed 8 in." The rest of the book is hoplessly dull. Nearly two hundred pages are occupied with a depressing account of the chaucery suit which arose from Mrs. Jane Lyon's bequest to Mr. Home of "twenty-four thousand pounds cash," and £6,798 17s. 4d. three per cent. consolidated bank annuities, equivalent to the further sum of six thousand pounds cash." Our readers will remember the result of this litigation, but the present volume breaks off abruptly with Mr. Home's lawyer's blame of Mrs. Lyon for "stating that she did not love the defendant." In the "Third Series," which we are led to expect as a pendant to the present volume, we hope that we shall learn who got the thirty thousand pounds, and something about the way in which Mr. Home practises "elongation" and "compression."

Die Rhetorik der Griechen und Römer, in systematischer Uebersicht dargestellt. Von Dr. Richard Volkmann. (Berlin, 1872, pp. 505. New York: B. Westermann & Co.)—This is a welcome contribution to the history of a lost art. Not many scholars outside of Germany have leisure to read and digest for themselves the twelve good-sized volumes of rhetoricians in the collections of Walz and of Spengel, Cornificius, Cicero's rhetorical books, and Quintilian, all as an aid to more important studies. Ernesti's Lexicon is antiquated, and its lexical form does not admit a scientific and systematic exposition of the subject. The most that has been done since Ernesti's day lies scattered round in commentaries, if we except the 'Hermagoras, oder Elemente der Rhetorik,' by the same Dr. Volkmann, published in 1865. The new work is entirely rewritten. In commending the book we do not mean, of course, to imply that any text-book on rhetoric can ever make speakers. Even the new-fledged German orators must find their inspiration in the real issues of the day, and may not be sensibly guided by the rules of the ancient rhetoricians. But for an intelligent appreciation of the Greek orators, of Cicero, and of the literature of the Roman imperial age, when rhetoric was the groundwork of education and touched life and letters at so many points, an exhaustive work of reference is almost indispensable.

A Concordance to the Constitution of the United States of America. With a Classified Index, and Questions for Educational Purposes. By Charles W. Stearns, M.D. (New York: Mason, Baker & Pratt. 1872.)—The title of this work sufficiently indicates its scope, and we need only add that it contains the full text of the Constitution preceding the analysis of it in the classified index. The plan adopted seems to meet all the requirements of ready reference, and the mechanical execution of the book leaves nothing to be desired. Legislators of all grades, lawyers, editors, and school-teachers, will find it convenient and useful.

TAINE'S PHILOSOPHY OF ART.

Uniform with 'The Ideal in Art,' 'Art in Greece,' etc., etc. 16mo, $1 25.

This volume contains the course of lectures on the principles of art which was preliminary to the other courses contained in the author's volumes on 'Art in Greece,' 'Art in the Netherlands,' and 'The Ideal in Art.' In the later volumes 'The Philosophy of Art' is constantly referred to.

TAINE'S WORKS.

ITALY (Rome and Naples). Fine edition, royal 8vo, gilt top, cloth, $2 50.

ITALY (Florence and Venice). 8vo, uniform with the above, $2 50.

THE PHILOSOPHY OF ART (just ready). $1 25.

IDEAL IN ART. 16mo, cloth, $1 25.

ART IN THE NETHERLANDS. 16mo, cloth, $1 25.

GREEK ART. 16mo, cloth, $1 25.

ENGLISH LITERATURE. 2 vols. 8vo, cloth, $7 50. The same, condensed, $2 50.

ON INTELLIGENCE. 8vo, cloth, $5.

NOTES ON ENGLAND. With a biographical sketch and a steel portrait of the author. Post 8vo, $2 50.

FLEURANGE. By Mrs. Craven.

Leisure Hour Series. 16mo, $1 25.

"A novel of society containing highly dramatic situations and scenes of concentrated, if pure, passion, which girls may read . . . and which scholars can enjoy, . . . worthy of the most précieuse drawing-room, and yet it has power and 'go' enough to satisfy the ogre of the day who bolts his three volumes of criminal mystery in an afternoon."—*London Saturday Review.*

"Mme. Craven's works are not 'goody.' They are profoundly religious, but they strike deeper into human nature, they touch more subtly-sounding chords, than those which are stirred by our English 'religious' novel-writers."—*London Spectator.*

"'Fleurange' is notable, not only for its intense interest, its pathos, its simple and unadorned style, but for several excellent sketches of Italian, German, and Russian life and character."—*London Graphic.*

THE LEISURE HOUR SERIES.

I. *MY LITTLE LADY.* $1 25.

II. *SMOKE.* By Ivan S. Turgénieff. $1 25.

III. *FATHERS AND SONS.* By Ivan S. Turgénieff. $1 25.

IV. *FLY-LEAVES.* A volume of verses by C. S. Calverley. $1 25.

V. *THE MAN WITH THE BROKEN EAR.* By E. About. $1 25.

VI. *HERMANN AGHA.* By W. Clifford Palgrave, author of 'Travels in Central Arabia.' $1 25.

VII. *JOSEPH NOIREL'S REVENGE.* By Victor Cherbuliez. $1 25.

VIII. *GOETHE'S ELECTIVE AFFINITIES.* $1 25.

IX. *LIZA.* By Ivan S. Turgénieff. $1 25.

X. *FLEURANGE.* By Mrs. Craven. $1 25.

HOLT & WILLIAMS, Publishers,
25 Bond Street, New York.

FINE ARTS.

ROBERT SOMERVILLE will sell by Auction on Monday and Tuesday, 17th and 18th instant, at the Somerville Gallery, 82 Fifth Avenue, the large and valuable stock of fine Oil-Paintings and Water-Colors belonging to Messrs. Williams & Everett of Boston, who, in consequence of the late conflagration of their city, have determined to dispose of their Art Treasures as above at the Somerville Gallery, where they are now on exhibition free.

HARPER'S CATALOGUE.

The attention of those designing to form Libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

ENCYCLOPÆDIA OF ENGLISH

and American Poetry, from Caedmon to Longfellow. Edited by O. S. BEETON.

Complete in two handsome octavo volumes, half-mor. or half-calf, $12.

Sent to any part of the United States, carriage paid, on receipt of cash.

GEO. GEBBIE, Publisher,
730 Sansom Street, Philadelphia.

PROSPECTUS.

The purpose of this work is to present, in chronological order, examples of the acknowledged standards of English Poetry, from the dawn of English Literature to the present day.

Our aim in doing so is twofold: First, to furnish, in a comprehensive form and at a low price, a complete and systematically arranged work, consisting not only of the best pieces of the well-known Poets, but of every Ballad and Old Song which our editors may think worthy of a place in such a work.

The second part of our aim in this publication is to SUPPLEMENT THE EXISTING EDITIONS OF THE POETS. The best editions of the English Poets published (the Aldine, Bell, or Nimmo's) represent, at the most, not more than Forty Authors—no author being represented who has written less than sufficient to fill one volume; thus, the great store of anonymous poetry is overlooked entirely, and many a lone star (because it happens to be a solitary production) is allowed to slide into forgetfulness for want of company. We have gathered together a galaxy of such stars, and given them an appointed place; and where a history is attainable and interesting, we have inserted it among the biographical notices of Authors. Thus, we have representative pieces of *Five Hundred Poets*, with Biographies of the Authors—in contrast with the existing editions of The Poets—represented (as we said before) by *Forty!!*

It is not the wish, nor within the means of all, to possess themselves of a complete "Edition of the Poets" (imperfectly representing English poetry as they do), and those possessing them do not make such favorites of their possessions as to read them from Chaucer to Tennyson page by page; but we modestly believe that every page in this work will be read and re-read, and as the price puts it within the reach of everybody, it will soon become the HOUSEHOLD EDITION OF POETRY, practically and veritably.

The earlier Poets have been carefully compared with the best originals in the Library of the British Museum (from which great storehouse our editors are indebted for the greater part of this compilation), the reading of various versions has been collated, and, where differences existed, the criticisms of our first literary guides have been searched, and their judgments consulted before a decision was taken.

A word remains to say about the arrangement of these volumes. Biographical Notices of nearly all the Poets whose works are quoted precede the poems of each period. Prefixed to each one of the seven periods into which it is divided is a sketch of its poetry. Every poem has the name of the Author at its foot, with the date of his birth and death. The poems are arranged in chronological sequence, and the American poets are represented in the final sheets of the volume, with Biographies in the same method as the others.

SCIENCE FOR THE PEOPLE.

CHEAPER THAN CHAMBERS'S.

Four American Institute Lectures, complete, with illustrations, on one sheet, for 3 cents.

TRIBUNE LECTURE EXTRA, No. 3, now ready. Contains: Brain and Mind, by Prof. B. G. Wilder; Chemical Discoveries of the Spectroscope, by Prof. G. F. P. O. Box 6732. New York City.

NOW READY.

A STRIKING POEM BY A NEW POET.

THE BROOK and OTHER POEMS

BY WILLIAM B. WRIGHT.

One vol. 12mo, $1 50.

From the N. Y. Daily Tribune.

"The author's name is not familiar to our memory, and we know not the influences which have inspired his heart with so devout a passion for Nature, and moulded his rhyme into forms of such subtle delicacy and grace; but no one can mistake the presence of the loving soul, the plastic eye, and the cunning hand which have woven so beauteous a wreath of poesy from the commonest materials of rural life. He comes before us not as a rude, brawny Berserker from the woods, flinging around the trophies of giant barbaric strength with defiant lavishness of gift, but as the man of gentle and gracious culture, conversant with the great masters of song, informed with the wealth of lettered knowledge, and studious of artistic effect in the choice of expression; but crowning all with the high spontaneous faculty that evokes fresh conceptions from familiar scenes, and interprets the ancient suggestions of Nature by living images which give them a new voice and deeper significance."

A NEW AND CHEAPER EDITION OF

THE FŒDERALIST.

In 1 vol., cloth, crown 8vo, price reduced to $2 50.

THE FŒDERALIST, as reprinted from the original text, under Mr. Henry B. Dawson's editorial supervision, has been generally received as the final edition of this very valuable work. It is now printed in this smaller form and less expensive style, in order to secure for it wider circulation, especially among the students in our colleges and higher schools, many of which have placed it upon their lists of works for reference.

Either of the above works sent, prepaid, on receipt of price by the publishers,

SCRIBNER, ARMSTRONG & CO.,
654 Broadway, New York.

SPECIAL NOTICE.—The Publisher of the NATION will hereafter forward by mail any book for which an order may be sent him, on the following conditions, which must be strictly observed :

1. *That the money be forwarded in advance whenever the price is known.*
2. *That enquiries as to price or other particulars be accompanied by a stamped and addressed envelope for the reply.*
3. *That both money and books shall pass through the mails at the risk of the purchaser.*

HISTORY

OF

English Literature

BY

H. A. TAINE.

"I am about to write the history of a literature, and to seek in it the psychology of a people."—*Introduction.*

"Possibly it would be better to leave my task to those who are at home in England; . . . but . . . a stranger has one advantage—custom does not blunt his perceptions; he is unconsciously struck by the principal characteristics, and treats the subject with reference to them. This, then, is my whole excuse. I offer it to the reader with some special confidence, because, when I pass in review my own ideas about France, I find many which have been given me by strangers, and by none more than the English."—*Preface to Translation.*

CONTENTS.—Volume I.

BOOK I. THE SOURCE.—Chap. I.—The Saxons. II.—The Normans. III.—The New Tongue.

BOOK II. THE RENAISSANCE.—Chap. I.—The Pagan Renaissance. II.—The Theatre. III.—Ben Jonson. IV.—Shakespeare. V.—The Christian Renaissance. VI.—Milton.

BOOK III. THE CLASSIC AGE.—Chap. I.—The Restoration.

SPECIAL NOTICES.

BACK NUMBERS of the Nation wanted.—Nos. 2, 5, 10, 85—for which 20 cents each will be paid if sent at once. Box 6732, New York.

EVENING EMPLOYMENT wanted by a young man of good literary abilities. "DELTA," Sabin & Sons, 84 Nassau Street, City.

A HARVARD STUDENT desires Private Pupils. Address Box 123, *Nation* Office.

A GRADUATE of one of the best Eastern Colleges, with ten years' experience in Public School and College Teaching, desires a situation. High-school preferred. Best references. Address PRINCIPAL, *Nation* Office.

WANTED.—A Gentleman of culture and successful experience as an educator and disciplinarian, to take charge of the Boarding Department of a well-known and successful School for Boys. It is patronized by wealthy people, and limited in numbers. The income is liberal, the location is excellent, the reputation of the school is enviable, and the opportunity to the right man is most rare. Address P. O. Box 3,445, N. Y.

A HARVARD Senior, intending to remain in Cambridge, desires pupils to fit for College after the present (College) year. References if desired. Address J. R. A., Cambridge, Mass.

A GENTLEMAN of thorough classical and scientific education, and of extended experience in teaching, is willing to receive a pupil for two hours a day. Address W. A. A., Box 71 *Nation* office.

AN experienced American Lawyer, now in Europe, tenders his services to those having legal or business negotiations in Great Britain or on the Continent. Refers to Winslow, Lanier & Co., Bankers, or Ivison, Blakeman, Taylor & Co., Publishers, New York. Address WILLIAM C. REYNOLDS, care City Bank of London, England.

DE VEAUX COLLEGE, Suspension Bridge, N. Y., near Niagara Falls. Church School for Boys. Cadet organizations. Registers with full details.

S. AGNES' SCHOOL.—The third year will begin, God willing, October 2. The School will move into the new building November 1. Terms, $300 per annum. Application for admission should be made at once to MISS CHASE, S. Agnes' School, Albany.

FIRE IN WEST EATON, NEW YORK.

A WOOLLEN MILL THAT WOULD HAVE BEEN BURNED BUT FOR A

BABCOCK EXTINGUISHER.

WEST EATON, N. Y., January 9, 1873.

F. W. FARWELL, Secretary, 407 Broadway, N. Y.

DEAR SIR: Please send us another Babcock Extinguisher at once. The one we recently purchased of you saved us last evening from a large loss, perhaps the destruction of our entire mill.

The fire was caused by the accidental dropping of a kerosene oil lamp from the hands of a boy who was passing through the carding-room. The oil spread over the floor and took fire, running rapidly among the loose wool and machinery, and fanned by the revolving wheels. We brought the "Babcock" to bear upon the flames, and *within one minute the fire was put out.*

With the one now ordered we shall have three machines, and will probably want more.

Respectfully,

BARNES, MITCHELL & HOWE.

NOVEL READERS

SHOULD ENQUIRE FOR

'THE LAWRENCES

The Book Trade supplied by

THE AMERICAN NEWS COMPANY.

TWO READABLE BOOKS,

PUBLISHED BY

HURD & HOUGHTON, NEW YORK,

THE RIVERSIDE PRESS, CAMBRIDGE.

I.

A MEMORIAL OF ALICE AND Phœbe Cary. With some of their later Poems. By Mary Clemmer Ames. Illustrated by two Portraits on Steel. In one volume crown 8vo, cloth, extra, $2.

"The story of the life of these sisters is touchingly and beautifully told, and though the biographer laments the difficulties and the imperfections of her work, we are convinced that it could not have been committed to better hands."—*The Churchman.*

"It is a book of which we shall be fond—of which we shall be proud; because it portrays two rare and exquisite souls whose genius shed lustre upon American letters—whose saintly virtues sanctified and ennobled all womanhood."—*Chicago Post.*

II.

FOR THE AMERICAN TRACT SOCIETY.

HOMES AND HOSPITALS; or, Two Phases of Woman's Work, as exhibited in the Labors of Amy Dutton and Agnes E. Jones. In one volume crown 8vo, cloth, $1 50.

"Here is a book that will be read with unflagging interest by all. It is a simple story of how two women worked among the poor and forlorn, and it exhibits two ways in which they made themselves useful. One, Miss Dutton, went day by day from her own home to minister to the distressed in their wretched homes. She still kept her place in the circle of friends to which she belonged. The other, Miss Jones, gave up home, and all the attractions of the society of those she loved. She put herself under a systematic course of training at the celebrated institution at Kaiserswerth, and then went into hospitals and workhouses in Liverpool and London. Her life is one of the most remarkable of its kind. Her devotion was intense, and her accomplished results wonderful. The remarks of Miss Nightingale, in the introduction, are only a just tribute of one hard worker to the memory of another."

BIBLIOTHECA AMERICANA.

BANGS, MERWIN & CO., 694 Broadway, cor. of Fourth Street, will Sell at Auction, Monday, February 17, and following days, at 4 P.M., a Large and Valuable PRIVATE LIBRARY of Books, Pamphlets, and Manuscripts, illustrating American Antiquities and General and Local History.

THE WEEK IN TRADE AND FINANCE.

February 10, 1873.

NO improvement has taken place, since our last report, in the condition of the money market, which has remained active at 7 per cent. to 7 per cent. and a commission of $\frac{1}{16}$ per diem added. A fair quotation for the week would be 7 per cent. gold to $\frac{1}{32}$ interest. Loans were made as low as 4 per cent., but they were exceptional and late in the day. Money is easy on call in Boston, where a large amount has been accumulating in preparation for the expected requirements of building purposes in the spring; but there is no disposition to loan much out on time at anything like the call rates. In New York "time money" is the cheapest, provided borrowers take it for 5 or 6 months—a great deal having recently been loaned at 7 per cent. and 7 per cent. gold for that time.

Owing to a scarcity of commercial paper, the market has been dull. A large amount was taken by buyers last month at the higher rates then prevailing, which pretty well cleared the market, and there has been, since then, very little making. Rates for first-class commission names are quoted 7½ to 8½ per cent., and for good names 9 to 12 per cent.

The condition of the European money markets has undergone no change. The Bank of England rate of discount remains at 3½ per cent., with money in the open market still lower. The Bank of England reports a gain of £379,000 in bullion, and the Bank of France a loss of 250,000 francs.

We regret to say that little progress is being made in the Legislature, apparently, towards the repeal of the usury law. A bill has been introduced in the Senate repealing the present misdemeanor clause, and providing that when more than 7 per cent. per annum is charged for the use of money the lender can be forced to forfeit all interest, but obtain payment of the principal. There is some probability that a law will be passed exempting bonds and mortgages from taxation; but it may only apply to the Counties of New York, Kings, and Westchester.

The bank statement is again unfavorable, showing, when compared with that of the previous week, a falling off of $271,200 in the reserve, and an increase of $3,150,300 in the liabilities. The banks now hold $2,188,150 in excess of the legal reserve, against $3,246,925 last week—a falling off of $1,058,775.

The following are the statements for the two weeks ending February 1 and February 8:

	Feb. 1.	Feb. 8.	Differences.
Loans	$286,879,600	$293,939,000	Inc. $7,059,400
Specie	18,612,200	19,035,400	Inc. 423,200
Circulation	27,501,000	27,520,600	Inc. 19,600
Deposits	217,168,500	220,299,200	Inc. 3,130,700
Legal tenders	45,802,100	45,107,700	Dec. 694,400

The following analysis of the above shows the relation between the total reserve and the total liabilities:

	Feb. 1.	Feb. 8.	Differences.
Specie	$18,612,200	$19,035,400	Inc. $423,200
Legal tenders	45,802,100	45,107,700	Dec. 694,400
Total reserve	$64,414,300	$64,143,100	Dec. $271,200
Circulation	27,501,000	27,520,600	Inc. 19,600
Deposits	217,168,500	220,299,200	Inc. 3,130,700
Total liabilities	$244,669,500	$247,819,800	Inc. 3,150,300
25 per cent. reserve	61,167,375	61,954,950	
Excess over legal reserve	3,246,925	2,188,150	Dec. 1,058,775

The Stock market has been active. The predictions made by the newspapers and parties favorable to the success of the syndicates relative to the placing of the new 5 per cent. bonds, at the time of the opening of the subscription books, caused quite a buoyant feeling to be manifested on the Stock Exchange, and prices started up on Monday in the most encouraging manner for the "bulls." As the week wore on without any reliable information as to the success of the loan, there was a halt in the upward movement, and the market became weak and unsteady, finally closing on Saturday ½ to 3½ per cent. off from the highest quotations of the week.

The principal dealings have been carried on in Western Union Telegraph, the total transactions for the week footing up 458,000 shares. The opening price on Monday was 87½, from which point there was an advance to 94½. It is now pretty well ascertained that Commodore Vanderbilt has been a large purchaser with the view of obtaining the control of the Company. The following explanation of the movement in the stock, last week, is given in the New York *Times* of February 7:

"For some years past the policy of the administration of the Company has been to apply their net earnings to the purchase and withdrawal of their own stock; to reduce the capital of $40,000,000, which would be made to pay only a moderate dividend at the time on this sum, to (or below) $30,000,000. Pursuant to this conclusion, the stock to the amount of $10,500,000 has been gradually purchased and withdrawn. But it transpires that the profits of the concern justified the purchase of and payment for only about $8,000,000, or 80,000 shares of the stock, in cash, and that on 25,000 additional shares the Company were borrowers of about $1,000,000 cash (report says $950,000) on pledge of the stock. The loan was made through the Stock Exchange house of Mr. Horace F. Clark, and the stock was supposed to be tied up, or hypothecated for the loan. When the present *Bull* movement for control of the Company was made apparent on the street, it was not only *not* favored by the President of the Company, or by Messrs. H. F. Clark, Augustus Schell, and John Steward, but the suspicion was current that they were really hostile to the advance, having sold their own stock, if not *short* on the market. On Sunday last, Mr. Orton, the President, then at Chicago, seeing the price up to 88 *a* 89 per cent., telegraphed to his Vice-President to resell 15,000 shares of the stock, previously retired by the Company, through Clark's Stock Exchange brokers, Messrs. George B. Grinnell & Co. He had no authority to do so, as the stock was wholly under the control of the Executive Committee of the Company, Messrs. E. D. Morgan, Banker, A. B. Cornell, Clark, Schell, Steward, Palmer, Greenleaf, Wesley, and Durkee. The 15,000 shares were not withdrawn from the 25,000 hypothecated stock with Messrs. Grinnell & Co., but were issued directly from the office of the Company, and the proceeds (not needed in the current finances of the concern) were reloaned to Clark's firm on other stock collateral. When Mr. Vanderbilt and his friends discovered, yesterday evening, the surreptitious sale of the stock of the Company at 88½*a*87¾ per cent. on Tuesday, without the shadow of authority, and that heavy *short* sales had been made on 'private information' that 'the Company were selling,' they jumped to the not unreasonable conclusion that the same brokers who had advanced less than 40 per cent. on the other 25,000 shares belonging to the Company had possibly lent the stock out on the Street to parties hostile to the recent advance. The result was a rise, in a few hours, of 5*a*6 per cent. above the prices of Tuesday."

The Pacific Mail Steamship Company "has broken another shaft," but notwithstanding this additional calamity the stock suddenly improved about the time the news came in the Street and jumped from 72 to 75, continuing to advance till Friday, when the price reached 76⅞. Erie, next to Western Union, has been most actively dealt in. The fluctuations of the week in the active stocks have been as follows: N. Y. C. and H. R., 106¼ to 104⅝; Erie, 69¼ to 65¾; Lake Shore, 96½ to 94⅝; Rock Island, 114⅛ to 113⅛; B. H. and Erie, 10¼ to 8⅝; Ohio and Miss., 49⅜ to 48⅛; C. C. and I. C., 43¼ to 40¼; Western Union, 94½ to 87½; Pacific Mail, 76⅞ to 71¾.

The Treasury has given notice that $100,000,000 5-20's of the issue of 1862 will be redeemed, and interest will cease upon them on and after March 1. This is considered as evidence that the syndicates have succeeded in negotiating the sale of at least a like amount of new 5 per cents. The exact amount of subscriptions cannot be ascertained for some days, and in the meantime the members of the syndicates keep very quiet regarding the success of the loan. Considerable opposition has been met with from certain of the German bankers, who were "left out in the cold," by their operations in the foreign markets on bonds, and also in our gold market, which tended to discourage subscriptions on both sides of the Atlantic.

The State and railroad bond markets have been dull and free from any important movements beyond an advance in Central Pacific Railroad bonds to 104¼, which is, we believe, the highest price for any 6 per cent. railroad bond in this market, and is due to their popularity as an investment in Europe—principally in Germany. The earnings of the road show a handsome increase over those of last year. Tennessee bonds are lower.

The gold market is strong, the price having touched 114¼ on Saturday and closed at 114. The German bankers, before referred to, have been making desperate efforts to create the impression of a failure of the syndicates in their operations, and, in order to do so, have taken hold of the gold market and run up the price. The continued shipments, however, have something to do with the advance. The amount shipped last week was $1,642,370, making the total amount shipped since January 1, 1873, $9,045,104, against $1,022,353 for the same period in 1872, $4,310,675 in 1871, $3,674,417 in 1870, $5,130,172 in 1869, and $9,752,227 in 1868.

BANKING OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, Feb. 5, 1873.

☞ The CHESAPEAKE AND OHIO, the CENTRAL PACIFIC, AND WESTERN PACIFIC BONDS, all of which have been negotiated by us, we believe to be among the best and most desirable investment securities in the market, which in time must become very scarce; especially as the Government will probably pay off, in gold, $300,000,000 FIVE-TWENTIES, and a large amount of money thus released from investment must find its way into this class of securities.

THE CHESAPEAKE AND OHIO SIX PER CENT. GOLD BONDS, the total amount of which is only $15,000,000, are secured upon a property worth $35,000,000 to $40,000,000, and are fully equal in intrinsic value to the CENTRAL PACIFIC BONDS. They are issued in denominations of $100, $500, and $1,000, coupon or registered, and at their present market price, 86½ and accrued interest, are very desirable.

THE CENTRAL PACIFIC SIX PER CENT. GOLD BONDS are too well known to require description or commendation. Their total amount is $25,885,000; they have for a long time ranged in market price near or above par. Their price to-day is 103 to 103¼.

The WESTERN PACIFIC SIX PER CENT. GOLD BONDS amount to $2,735,000. This road is now consolidated with the CENTRAL PACIFIC, and the payment of its bonds, principal and interest, is assumed by the latter. Coupon Bonds, $1,000 each. Their market price to-day is 91¾ to 92. As they have recently been introduced on the Stock Exchange, we expect to see them rapidly rise to the price of CENTRAL PACIFICS, being substantially the same in character and value.

We buy and sell, as usual, Government Bonds, receive deposits, on which we allow interest, make collections, and conduct a general banking business in all its branches.

FISK & HATCH.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 20, 1873.

The Week.

THE President has sent a message to Congress, calling for legislation to put the criminal procedure in Utah more completely in the control of the Federal courts and officials, so as to avoid the results of the selection of juries under the laws of the Territorial legislature, which a recent decision of the Supreme Court has declared to be the valid mode. He recommends that the preparation of the jury-lists be placed, if not in the hands of the United States Courts and their officers, at least in the hands of persons entirely independent of "those who are determined not to enforce any acts of Congress obnoxious to them"; and he also calls for some remedy for the interference of the Mormon Probate Courts with the administration of criminal justice by their issue of writs of habeas corpus. There ought not to be any difference of opinion as to the expediency of acting on these recommendations, but they will doubtless be prejudiced by the belief that there exists a desire on the part of large numbers of Christians to get hold of Mormon lands and mines, and that they have succeeded in bringing a strong Methodist influence to bear on the President on the subject of Mormon enormities, and are warmly in favor of the root-and-branch method of dealing with the polygamists, and have done something towards that conversion of the United States Court into a missionary organization of the Mohammedan or Jewish type on which we commented last year. Some of the very best observers of Mormonism are, however, strongly of opinion that the sword of the Lord and of Gideon, and especially the sword of Gideon, had better, just at present, be kept in the sheath; that all the forces of civilization are working against Mormonism much more effectually than legislation could ever do; that the case is a very peculiar one, which requires considerable patience and self-restraint on our part; and that noble a thing as a crusade on behalf of chastity and monogamy might be, crusaders, in our day, are so apt to be lewd rascals that the longer they are kept at home in some dull, honest calling, the better, even if in the meantime the heathen indulge in a little exultation.

The Butler bill regulating the award of the *Alabama* damages has passed the House, but it differs from the Senate bill in remitting the work of distribution to the courts instead of a commission. There will, therefore, be a conference, with what prospect of agreement we do not know. A letter was read in the course of the debate from Mr. Fish to the American Counsel at Geneva, warning them not to pledge the Government to any particular mode or principle of distribution, and this was evidently considered in the House as settling the question of the absolute power of the Government over the fund. In reality, it affects the question in no degree whatever. The relation of the Government to the award is regulated not by what Mr. Fish said to the Counsel, but by the reasons the Counsel gave the Tribunal, in their evidence and pleadings, for asking for the money, and the reasons the Tribunal gave for awarding it. All attempts to govern it by other considerations are simply quibbling of a not very reputable sort. The claims of the insurance companies were submitted to the Tribunal in virtue of those principles of general commercial law which it is now proposed to repudiate, and a new rule of distribution, of which nobody ever heard before, is introduced, which acknowledges the right of insurance companies which have voluntarily undertaken war risks in the regular course of their business, to compensation out of the Government treasury if their ventures have not turned out well. Congress ought now in decency to impose this rule on the courts, and abolish the doctrine of subrogation, and make the companies' claim to salvage depend upon the result of the year's business.

As we go to press, the Crédit Mobilier affair is in the hands of no less than three committees. First, the Poland Committee, charged with the duty of investigating the accusations against individual members of the House; second, the Wilson Committee, having in hand the investigation of the entire Pacific Railroad business; and third, the Senate Committee, to whom the cases of Senators Harlan, Patterson, and Wilson have been referred. Harlan's reputation was damaged in this way: from the undisputed testimony of Durant, it appeared that two checks for $5,000 each, payable to Harlan's order, were sent to him when he was engaged in getting himself elected to the Senate from Iowa, for the good of the cause, or, as Durant says, because he wanted to see good men in the Senate. Harlan has not found himself able to give any definite account of this money (which, it is worth observing, came in reality from the United States, through the hands of Durant acting for the Union Pacific); but he has given a very amusing picture of a Western Senatorial election, in his endeavor to explain why so much money was necessary. According to his account, the interest taken by the people when a Senatorial election comes off in Iowa is so intense that they throng together from all parts of the United States to the State Capitol. They come in such haste that they forget to bring money with them for their current expenses, and, when the contest is over, there are several hundreds of prominent lawyers, judges, generals, railroad men, and citizens of all grades, absolutely unable to get home again, unless somebody pays their hotel, and carriage, and washing bills. The victorious Senator settles these, and any one can see that there is no bribery or corruption about such little offices of Christian kindness as this. In this way, Mr. Harlan spent $10,000, or, as he thinks, rather more.

Oakes Ames has produced his memorandum-book, and corroborated his statements about the implicated members by the exhibition of the original entries, made at or about the time of the transactions with them. This evidence, which no attempt has been made to impeach, is of a very high order, and makes it pretty clear that Ames's first story was a tissue of prevarications, and that, when he was brought "to bay," his statements were true. Mr. Colfax has made a desperate effort to explain the check payable to "S. C.", dated June 20, 1868, and his deposit of $1,200, made June 22, 1868; but without much success. He has proved (to give him the full benefit of his own evidence) that he received $1,200 some time in June, 1868, in two amounts of $200 from his father-in-law, Mr. Matthews, and $1,000 from one Nesbitt, of New York, who sent it in a thousand-dollar bill as a contribution to the political expenses of the campaign of that year, imploring Mr. Colfax to say nothing about it. There are no dates or vouchers for this; but the most singular thing of all is that the whole matter should have been entirely forgotten by Mr. Colfax when it was most necessary for him to recollect it, that is to say, when his bank account first came to light, although he now says that the receipt of this money affected his mind at the time as a remarkable and astonishing fact.

Senator Patterson's case is a pretty clear one; he does not deny that his signature to the receipts for Crédit Mobilier dividends is genuine, but he says his confidence in Oakes Ames was so entire that he probably signed without reading them, supposing all the time that his money had been invested in Union Pacific securities—a likely story, which has been rendered still more probable by the discovery of Mr. Patterson's certificates of stock endorsed to him by Oakes Ames in the safe of Morton, Bliss & Co. of this city. Mr. Morton has testified that the certificates were left with his firm for safekeeping (apparently in 1871), in an envelope, and put away without his knowing or thinking anything more about it, he having no account with Senator Patterson in Crédit Mobilier. He has an impression they were left there by Oakes Ames. Oakes Ames

swears that he did not leave them; but all this is child's play, except so far as it serves to clear Mr. Morton of complicity in these transactions. Mr. Morton had formerly stated that he had no shares in Crédit Mobilier for Mr. Patterson; the fact being that he did not at the time know of this envelope in his safe.

Perhaps the most extraordinary, most shameful, and most depressing of all the incidents of the "exposures" of the last three years has been the appearance of a United States judge as a common "striker" and lobbyist, in the person of Mr. C. T. Sherman, the brother of the Senator and of the General of that name, and Judge of the District Court of Northern Ohio. It appears that hearing that the New York Stock Exchange wished to procure the repeal of the tax on borrowed capital, he made an arrangement with one of its principal members, Mr. Lockwood, since dead, to aid in bringing about the repeal; and, after the repeal had been effected, demanded $10,000 for his services, saying that "he had gone to work, and had an interview with John Sherman, Chairman of the Senate Finance Committee, with Mr. Garfield, and other prominent members of Congress, and the result was that it became the policy of the Administration to repeal not only the tax in question, but the stamp and other taxes, and that he thought this result was brought about by discussions raised and influences used by him." Being brought before the Committee of Ways and Means, however, he denied point-blank that he had had any interviews with the gentlemen named, or had "raised discussions," or "used influences," or had anything to do with the repeal of the tax, and that he wanted the money for Judge Bartley, his brother-in-law, and Mr. R. C. Parsons, the Marshal of the Supreme Court, to whom he had handed over the job in question, and who did it. It appears plain, therefore, that the Judge has been guilty, on his own statements, either of corruption or of lying and obtaining money under false pretences. If the sense of honor and sense of shame be dead among men in public life, there is nothing for it but to strike terror by some means, and the obvious and imperative course to be pursued with Judge Sherman is to impeach him without delay for one of the two offences; he might even be allowed to elect on which he would go to trial.

One of the most extraordinary of Mr. Boutwell's assertions was one he recently made before the Committee of Ways and Means in Washington, that "our credit is better than that of any other government in the markets generally, better than that of England"; that "the price of consols is not due to the value of English credit, for they do not sell on the Continent at all"; and that "English consols do not sell out of Great Britain." The London *Economist* has taken the matter up, however, and shows that the India Four and Five per cents, and the Canada and New South Wales and South Australia Fives, sell in London at 102, 110, 102, 106, 106, respectively, and the English Three per cents. bring 92, while the American Fives only bring 100. The *Economist* further adds, that Mr. Boutwell's notion that the price of consols is kept up by forced investments of "trust funds" is "a delusion," and that if he meant, as we think he did, that consols do not sell out of Great Britain "because foreigners have some misgivings about the quality of the security itself," it (the *Economist*) cannot but pity the state of mind into which Mr. Boutwell has fallen, and still more deeply pities the country which has such a man for its finance minister! The main reason why consols are not dealt in on the Continent is, that they are not transferable by delivery, a fact of which Mr. Boutwell is probably ignorant, but then why should he have ever burdened himself with the knowledge? He has certainly never found himself at any step of his career hindered by the want of it.

The New York charter has at last been reported to the Legislature, substantially as the Republican Committee drafted it. There is a Mayor and Board of Aldermen, all elected by the city at large, the Board renewable by thirds, which is a great advance on the old system and is a serious blow to "ward politics." The Mayor nominates heads of departments, and the Aldermen confirm if they please; if they cannot agree, he and they go into "joint convention," in which he has only one vote. The various departments are all independent of each other, though their organization is generally approved of. The elections are to be held in the fall along with the others. In fact the whole instrument is as good as is consistent with the grand plan of giving the Republican party the control of the city offices. A majority of reformers voted for Mr. Havemeyer last fall, in the belief, which was strongly preached by the *Times*, that he was a rare man, of long experience and the highest character, whose name more than covered the weakness of the Republican politicians who adopted him as their candidate. We are now informed by the same authority that he is a very weak sort of body, tells lies, is full of treachery, and is far more anxious about the revival of the Democratic party than about the good of the city. Such is the uncertainty of this life. We also learn from the same source that Mr. Tilden, who was popularly supposed in 1871 to be the principal actor in the reform movement, is also a liar, and very cowardly and tricky, and had nothing or next to nothing to do with the reform movement.

The arguments by which the refusal to the Mayor of the appointing power is defended show that we are still very far from any radical reform. In one breath we are told to "trust the people," that they will set things to rights, but in the next we are warned that if the Mayor be allowed to make the appointments, he will be able to re-elect himself and do various other bad things as much as he pleases; or, in other words, will completely bamboozle "the people" and set them at defiance. Then we are told that the Board of Aldermen must share the appointing power, because the United States Senate shares it with the President, as if the mode of appointing subordinate ministerial officers was something fixed by absolute principle, and did not depend on time and place and circumstances. It may be proper to restrain a king or president by a council chamber, but very ridiculous to shackle a mayor or bank president in the same way. All our efforts are, or ought to be, directed just now to the extirpating of the notion which has worked all our woes that the city is a political community, and obtaining recognition of the fact that it is a commercial corporation. The best model for its government is, therefore, that of a bank or a factory, and not either that of the German Empire or the American Republic or the British Monarchy, or any other great state of ancient or modern times. If the Mayor should, through the appointing power, seat himself so firmly in the executive chair that he could not be got out by "the people" at the end of his term by a regular vote, why, we should appeal to arms. The custom-house tocsin would ring out wild and clear, and we should rally under Murphy and Gardiner and Bliss and Davenport, and overthrow the tyrant in the City Hall, and cut off his wicked old head.

The surveyorship of this port was left vacant by the election of Mr. Cornell to the State Legislature. The case was clearly one for the application of the civil-service rules, so clearly indeed that the friends of the reform felt that it would prove a crucial case, coming as it did after "the suspension of the rules" in the case of the Chicago and Princeton postmasterships, and were greatly troubled when they found the President hesitating about the course he should pursue. Mr. Curtis, we understand, went to Washington, and labored with him successfully to overcome the influence of the "Republican Ring," for such is the name given to the little clique of four men who have succeeded Tweed, Sweeny, Hall, and Connolly in the government of the city and State. The result was that Mr. Benedict, the Deputy Surveyor, was nominated under the rules to the vacant place, and there was considerable rejoicing in the reform camp over this happy result. More than a fortnight ago, however, the members of the Ring who were violently opposed to the rules began to brag openly that they had the President's promise that the name should be withdrawn. It now turns out that they were right; the name has been withdrawn, but the reform is never-

theless to work, for the new nominee is to be selected by examination from the present Custom-house employees.

There is a large body of people, and they are usually present in great force in political conventions and in legislatures, who are never easy unless they are "hailing" somebody or something with "delight" or "joy" or "pride" or "satisfaction." Indeed, some of them pass half their time looking for something to "hail." The Spaniards, who have shown themselves thus far the most ungovernable people in Europe, except the French, and are inferior to the French in other ways, have just set up a republic, owing to their king, poor fellow, having run away in disgust. If they do not succeed any better with a republic than with a monarchy, they have a sorry future before them; but, at all events, their best friends must admit that the experiment is dubious, because nothing is surer than that a people which cannot work one kind of government is apt not to be able to work another. Therefore, we may venture to remind the Massachusetts Legislature, which has a "hailing" resolution under consideration, that the time to congratulate the Spaniards will be five years hence, when they have shown that they can make a republic work by preserving order and paying their debts and making roads.

Prince Bismarck made in the Reichstag, on the 25th, an explanation of the late ministerial crisis, which has been reprinted, as the official version of the transaction, in the *Correspondance de Berlin*, by which the German Government keeps its diplomatic agents informed of what is going on in home politics. He said, in reply to questions, that the reason of his retirement was a great deal more simple than it seemed; that the truth was that the Department of Foreign Affairs, the Chancellorship of the Empire, and the Presidency of the Prussian Council were too much for him; that as years rolled on, and his nervous force declined, he felt that he must cut down his work on one side or the other, and that he found that the Prussian Presidency was what made the heaviest demands on his strength and involved most responsibility; that it was this he could lay aside with the least loss of influence, and influence was a thing he could not surrender; that no differences of opinion in the Ministry had led to his retirement; that in all recent discussions in the Ministry he had always voted with the majority. He discussed in a very interesting way the differences between the English and Prussian Constitution, as regards the composition and responsibility of the Ministry, but pronounced strongly against the applicability of the English theory or practice to Prussian politics, and maintained that responsibility to the King and not to Parliament, and government through the men of his choice, and not through persons thrown to the head of affairs by a parliamentary majority, was the form best suited to the present stage of political development in Germany.

If the Ministry as now constituted perfects those reforms in church and state which the Liberal programme calls for, the result will go far to justify the Prussian system of a collegiate ministry, responsible to a personal sovereign, in preference to a prime minister who is amenable nominally to parliament, but really to a party majority. It is this system which is now on trial—a system which combines all shades of politics in the actual government, gives to minorities their share of influence, and secures to the king his personal co-operative activity in the affairs of state. If it shall bear the test of a change of leadership in face of the country and of Europe, with no perceptible shock to public interests, it may succeed in combining moderation with progress and in making of government, the representative of the whole nation, instead of the tool of a party. This is the ground which Count von Roon himself took in his parrying speech of January 9th in the Chamber of Deputies. He likened the ministry to an orchestra executing a symphony, in which each member played his own part, and the momentary discords only made the final harmony the more enjoyable. Besides, the degree of apparent harmony might depend very much upon the ear or the mood of the listener. Old parties, he said, were vanishing, issues were changing, and he would promise nothing more than fidelity to the constitution and the king, with constant deference to the wishes of that great party, "the honored people." Though the new President gave no hint of his policy for the future, he demanded that the Government should be sustained by confidence, and not restrained by distrust.

The measures for the control of the Catholic clergy by the state, introduced into the Prussian Parliament, to which we referred last week, though they look toward the cultivation of manliness, independence, and patriotism in the clergy, and the protection of Catholic subjects in their civil rights, are in some points so arbitrary as to raise doubts of their constitutional validity. Accordingly, the commission to which the bill was referred have thought it advisable to propose certain changes in the Constitution, which shall qualify all rights and privileges conceded to the church by an explicit declaration of the paramount authority of the state, and its right to supervise the education and the discipline of the church. These changes must be agreed upon by a majority of both Houses, by two distinct votes of each, with an interval of twenty-one days between the first and second approval. The amendments, however, are likely to prove only another juggle of words, by which, in the event of the separation of church and state, both parties would be seriously embarrassed in defining their liberties and rights.

The love for "investigation" has made its way into Prussia, but it does not there, as here, bring a torrent of dirty abuse on the head of anybody who proposes it. The Prussian Government owns some of the existing railroads, and constructs most of the new ones out of the treasury, and this of course affords opportunities of jobbery, which, it is now said, have in some cases been improved. Herr Lasker recently declared in his place in Parliament that for several years the contracts for the state railroads had been corruptly awarded, and accused the Minister of Commerce, Count Itzenflitz, of having bestowed them on a certain Herr Wagner, a privy councillor, who in his turn sublet them at a handsome profit, and demanded a committee of investigation. The Minister had not much to say in reply, but the Government, instead of setting its champions to call Lasker a "liar," and "adventurer," and a "dog," or fence off enquiry, has promptly appointed a commission of its own to examine the whole matter. We venture to predict, too, that the commission will try to find things out, and not to accumulate materials for whitewash.

The question of the great increase of emigration from Germany, which it was thought some time ago the Government would take some active means of checking, has been brought up in the German Parliament, and with very satisfactory results. Count Eulenberg, the Minister of the Interior, acknowledged the fact, and deplored it, but declared there was no help for it, and attributed it freely to the war, in spite of all that the war has done for the glorification of Fatherland. In the first place, the enormous rise of prices has, as is usual, not been followed by a corresponding increase of wages, and the laboring classes are suffering severely, although the Treasury is bursting with gold. In the next place, the small capitalists, who, it appears, are the class which is contributing most largely to the tide of emigration, have been seriously alarmed by the loss of life in the French war, and by the great uncertainty about the political future created by the new rôle which Germany has undertaken on the Continent, and which makes another tremendous conflict one of the everyday contingencies. They are, therefore, afraid to embark or continue in business, and are hurrying off with their little all to the only country in which the field of enterprise is not troubled by wars or rumors of wars, and where the worst enemies the industrious man has to fear are the "workers" and "operators." As a remedy for the growing scarcity of agricultural labor, the Minister recommends the increased use of machinery.

HUMAN SACRIFICES IN THE REPUBLICAN PARTY.

WE have probably got to the end of the "Crédit Mobilier" scandal. Oakes Ames has come back with his "memorandum book," and has revealed nothing new; one of the Committees has closed its labors, and the other will shortly do so, but nobody looks to their reports with much interest or anxiety, or waits for them in order to make up his own mind. Congressional Committees of Investigation have long ceased to have anything judicial about them, and are usually employed simply to put a good face on matters which seem likely to damage "the party" in the eyes of the public. It is the evidence they take which interests people out-of-doors, and from this evidence in the Crédit Mobilier matter the country has reached certain conclusions which the report of the Committees will do nothing to modify. One thing is perfectly clear, and that is that a number of men, of high standing in the Republican party, deliberately got up last summer, during the Presidential canvass, and made statements which contained suppressions of the truth, or suggestions of falsehood, mixed in various proportions, and the object of which was to spread the belief that they had had no connection of any kind whatsoever with the Crédit Mobilier, and that the story told by McComb was a pure fiction, used by the Liberal Republicans for campaign purposes. About this there is, unhappily, no doubt. Not one of those charged, except Mr. Blaine, has succeeded in clearing himself at least of the offence of disingenuousness, which, on such a matter, is a serious offence. Now why did they commit it? Certainly not because there was anything in their eyes particularly wrong in owning Crédit Mobilier stock, or in taking it from Oakes Ames. Mr. Ames was a man of excellent standing in the commercial world, at the time these transactions took place; and according to the code which has of late years obtained among politicians, the right to deal in all sorts of commodities, and take commissions to help other people's dealings, is among the "inalienable rights" of every American citizen, which he carries with him into every position. This doctrine was broadly laid down by even so eminent an authority as the late Horace Greeley, when the matter of General Schenck's connection with the Emma Mine was under discussion. According to it, the American man is above all things a trader, or a commission agent, and remains such under all circumstances, and ought not to be asked to divest himself of that character for any purpose whatever. Nobody has ever objected to a Congressman taking stock in iron-works or in a cotton-mill, and then voting for an increase of customs duty that would add enormously to his own dividends. We doubt very much, therefore, whether public sentiment was in such a condition last summer as to make the charge of holding Crédit Mobilier stock a very serious one, unless it could be shown to have directly affected legislation. What made it a serious charge, and therefore led to the flat denials of it or evasive answers to it, was the time at which it was made; that, coming out in the midst of the canvass, it of course suggested bribery in connection with the Union Pacific, and this influence it would have been impossible to upset in time for the election; and the standing of the persons against whom the charge was made was such that "the party" must have seriously suffered at a critical moment from their silence or confession. So to save the party, rather perhaps than to save themselves, they rose one by one, and calmly assured the country that the whole thing was "a Greeley lie." In every one of these statements, it is true, a sharp casuist could, by careful reading, detect a little hole, through which a gentleman in danger of conviction for falsehood could wriggle out; but then the public is not in a casuistical frame of mind during the presidential campaign, and the denials did excellent service as "complete refutations." The party moralists took them as the text of essays on the value of "character," and when all was over, Mr. Colfax used them to point the moral of some reflections contributed by himself to the *Independent* on the question, "Does Calumny Pay?"

In this sacrifice of themselves to the party by individuals there is nothing very new or remarkable. The Republican Congressmen and the Vice-President have only done on a greater scale and with considerable aggravation what the wretched Voorhees of Indiana did after the Greeley nomination at Baltimore. He at once repudiated the convictions solemnly avowed two short months previously, and began to utter a whole string of falsehoods, and to confess himself a cheat, without honor or self-respect, or even common intelligence, simply to help the party in persuading the country that the nominating convention had not done a foolish thing. It must be admitted, too, that a process of "natural selection," or "survival of the fittest," has long been going on in politics, and preparing us for the Crédit Mobilier and similar scandals. Men of independence of character, of high sense of honor, and of strong self-respect, which make them prefer their own opinions to other people's, who will dare to say what they think, and will not do dirty jobs, have for years past found themselves being gradually and carefully removed from public life as impracticable and "antiquated," and have seen the pliable, shallow, adroit, "genial," or unscrupulous tricksters or rhetoricians working into their places, and taking possession of public affairs. Nothing for a long while past has been punished with such sternness as want of fidelity to the party or want of amenability to its discipline—witness the treatment of Trumbull and Grimes and Fessenden during the impeachment trial, and that of Schurz and Trumbull when they voted for investigation last spring. The party has been, in fact, long preparing for itself a rich harvest of shame. Far from execrating the Crédit Mobilier victims, it ought to sit down by them, like Mrs. Bulstrode with her husband in 'Middlemarch,' and weep with them over the common disgrace. If we want to have men in public life who will not have Oakes Ameses hanging about them and offering them little pecuniary favors, and who when charged with cutting down our cherry-tree will stand up and own it, we must put them into public life, and when they are in it keep them in it.

There is one feature more in this miserable business on which a word must be said before passing away from it, we hope finally, and that is the amount of cant and hypocrisy it has brought out on the part of some of the party organs. Last spring they made savage attacks on Mr. Schurz, because he had taken open payment for honest work rendered to the Republican party as a campaign orator, and accused him of shameless greed; they ransacked his accounts at the State Department to try to prove that he had overdrawn his account while in Spain. They then turned on poor Doolittle, and followed him for doing, or appearing to do, a perfectly legitimate thing, in obtaining a cotton permit for a friend during the war, and writing a ridiculous letter in support of his own claim to a share in the profits. But in the Crédit Mobilier revelations they can hardly see any impropriety, and look on at them for the most part in mournful silence, and at last one of them actually avows itself "shocked" by the eagerness with which the public gloats over these painful stories.

Mr. Colfax's defence as that of the Vice-President of the United States, and of the most resolute and sweeping of the deniers of last summer, deserves a word of separate mention. That it could be completely successful, after the discovery that he had prevaricated in his speech at South Bend, he himself can hardly have ventured to hope. The rule of "falsus in uno, falsus in omnibus," if not absolutely fair or correct, is one which is sure to influence people in weighing testimony. He accordingly was at a considerable disadvantage, even in a simple "conflict of veracity" with Oakes Ames, but he was all but completely overwhelmed when the deposit of $1,200 was discovered in his bank account. Now it must be admitted that he did not meet this formidable addition to the proofs against him like a man conscious of his innocence. The emergency was one which a man of honor would have faced with real ardor, in which he would have refused all delays, and discarded all pleas in abatement, and rejected all technical aids. Instead of doing this, however, or anything like this, Mr. Colfax at once became cautious and dilatory. He went before the Senate and asked for a Committee to investigate a simple matter of fact on which another Committee was awaiting his explanation; which he can hardly have

expected the Senate to grant. He employed a lawyer, too, and then went off to attend religious and moral meetings, *apparently* in the hope of weakening the case against him by drawing demonstrations of sympathy from his supporters. Worse than this, he remained silent for ten days; and worse still, he refused to put in his answer till Oakes Ames had come back, and it had been ascertained by cross-examination that he was not likely to submit any previously unsuspected proof. All this strengthened the prejudice against Mr. Colfax, and weakened, what was in itself weak, the testimony of his own family, that, some time in June, he received through the mails a $1,000 bill from a man now dead, and who has left no trace of the donation, from which Mr. Colfax wished to have the inference drawn that this was part of his deposit on the 22d, although he made another deposit of over $1,500 a fortnight later. The other $200 his father-in-law swears he paid him on the 15th of June, or thereabouts, drawing his salary from a government office for the purpose. The strongest piece of evidence in Mr. Colfax's favor is his sending, on the day following his deposit, a draft for political purposes to the West. But then it is exceedingly difficult, if not impossible, to get people to believe that Oakes Ames began as long as five years ago, to prepare checks and memoranda for the purpose of ruining the leading men in the Republican party, and it has to be borne in mind that, since he began his accusations, his documentary evidence has for the most part borne out his assertions. On the whole, as far as Mr. Colfax is concerned, the affair wears a very hopeless outlook. He has killed himself for "the party," and we hope his fate will be a warning to others.

THE SPANISH REVOLUTION.

THE birth of the Spanish Republic is one of those incidents which any people which had not drunk deep of the cup of degradation would find very humiliating. The Republic exists in Spain because the king, though a courageous and well-meaning man, who came on the invitation of Spanish notables, was so sick of the business of governing the nation that he ran away. He has not been annoyed by opposition to the exercise of arbitrary power, for he has not attempted to exercise it, and, in fact, has suffered from none of the usual mishaps of ambitious monarchs. He has simply found that the turbulence, disorder, want of coherence, and want of loyalty, not to him only, but to any man, principle, or system whatever, were too much for him, and having found it, like a sensible person, he took his departure, leaving, however, the Carlist troops almost in sight of the capital. His disappearance, moreover, has made only two changes in Spain. Justice will now be administered "in the name of the people," and not in the name of the king, and the Spanish state will be called a "Republic." The men who will compose the Cortes will be just the same sort of men as before; the people who elect them will be the same too; the army will probably be a little worse. The amount of virtue, and political sense, and self-restraint in the country has not, perhaps, been diminished by the revolution, but it has not been increased. The good elements in Spanish society were certainly not kept down by a monarch who, it appears, could not even prevent a promotion in the army. Now, it is natural enough that rhetoricians like Señor Castelar should flatter themselves and try to persuade others that a new era has dawned in Spain. He is one of a large band of Latin politicians, upon whom the sound of their own phrases seems to act as a kind of laughing-gas. As the words "people," "justice," "fraternity," "liberty," "humanity," "eternity," "solidarity," "universe," "Man," "Woman," "equality," "development," roll from their lips, a vision of unsurpassed national happiness and splendor opens before their eyes; they see industry flourishing, the law supreme, the taxes rolling in, and the surrounding states crazy with envy. All the mists of tradition and superstition disappear, and the golden sunlight of truth bathes the whole landscape, and the air resounds with patriotic poems and orations, and the applause of vast audiences. Any one, indeed, who read the telegrams, and letters, and speeches which now come in every hour from Spain would imagine that Amadeus had been a bloodstained despot, who had been holding the nation in bondage. Señor Castelar and his friends doubtless do not think so, but they are all possessed with the idea which has had for so many years so powerful an influence on French politics, that there is something malefic in the word "monarchy," and something beneficial and transforming in the word "republic." It is this idea which always makes the removal of the royal insignia from public buildings, and the erasure of the royal name from streets, the earliest work of French revolutions—something to which everything else has to be postponed—and which diffused, even among soberminded Frenchmen, the curious belief, in 1870, that the proclamation of the Republic would change the fortunes of the campaign and drive the Prussians over the frontier; and it is at the bottom of the Spanish rejoicings and excitement over the abdication of Amadeus.

It would be very unfortunate if anything which came from this side of the water, from those who really know what a republic means, and what it needs, should help to strengthen this delusion. Encouragement the Spaniards need, heaven knows, for they are in a very sorry plight, but there ought not to be anything in the form of our encouragement to lead them to believe that when a people calls itself a republic, it has done anything very hopeful or remarkable. When a man who has failed half a dozen times in business, and has spent a large portion of his substance in riotous living, announces his intention to keep a hotel, and takes a house for that purpose, his friends may feel gratified, but they do not fling their caps in the air and surround him with shouts of felicitation. They wait awhile to see how he gets along, and take good care not to assure him that when he puts up a sign is the same thing as making his fortune. As Dickens has well said—"coming out" is nothing very great after all; it is by staying out that a man shows his ability. Any band of knaves and madcaps, as we well know, is competent to set up a republic; it takes statesmen and sober, industrious, self-restrained, and far-seeing people behind them to make a republic last, and any congratulation or uproar which leads men to forget this are mischievous. It may be laid down as a general rule, that any people in the world which is now capable of carrying on a constitutional monarchy is capable of carrying on a republic, and could any day start a republic with a certainty of success. We have no doubt that Holland, Belgium, Denmark, Sweden and Norway, England, and even Italy, might be converted into republics tomorrow without serious tremor or convulsion, and without seriously interfering with the course of their calm and orderly progress; and we believe also that one great reason why there is in none of these countries any strong desire for a republic, is the confidence of the people that they might establish one if they pleased. In other words, the growth of the capacity for self-government has in all of them reduced monarchy to a form which causes little or no real inconvenience, while it furnishes a link, oftentimes useful, with the past.

The desire for a republic, on the other hand, and the blind confidence that it will supply a general remedy, is usually found strongest in those countries which have shown themselves most incompetent to administer any government whatever. Indeed, it is strikingly analogous to that craving for "gratuitous credit," as they call it, among that school of socialists who think the state ought to lend every man money without interest, and which is always strongest among persons who have least ability or desire to create capital in the ordinary way of producing and saving. There are no countries in Europe in which the seeds of anarchy and social desolation are so deeply sown as Spain and France, none in which the work of government is beset by such awful difficulties, and it is accordingly in these two countries that the rampant and furious republicans most abound.

To both these countries the great value of the republic lies in the fact that it brings them down, to use the mining phrase, to "hard pan." It brings them into actual and unmistak-

able contact with their own weakness, or, in other words, furnishes them with undeniable experience of their own qualities. As long as they have a monarchy, there is always somebody on whom the blame of public disorder can be safely thrown, always somebody who is hindering the new day from dawning, and keeping the poor man from growing rich and the plain girls from finding husbands. The king or the emperor driven away, the hard facts of the situation come out in a clearer light, though not always in a perfectly clear one. Satan by no means quits the scene along with the frivolous and profligate courtiers. In France, the "Right" is still keeping the Left from introducing perfect happiness, and we have no doubt the Carlists, or it may be the army, will retard the millennium for some time to come in Spain. Few persons ever yet failed in life—according to their own story—owing to any defect in themselves. There is usually some unscrupulous though utterly paltry B. who gets the situation, or wins the prize, or secures the business, which Eternal Justice intended for A.; and in all nations which have not yet acquired the virtues in which the foundations of greatness and prosperity are laid, there is sure to be a knot of bad men hindering the right from triumphing. But, nevertheless, in a republic less of this self-deception is possible than under any other system, and Spain will gain much in education, if she gains at first in no other way, from trying the experiment.

INTERCOLLEGIATE EMULATION.

MR. T. W. HIGGINSON'S proposition touching "Intercollegiate Scholarships," in the January number of *Scribner's Monthly*, is perhaps worth a few more words than we spent upon it in reviewing the magazines of the month. The essential part of his plan is as follows: that funds be provided for the encouragement and support of scholars during a definite period of their education, without limitation either as to the institution at which their preparation shall have been made, or as to where they shall continue their study; it being thrown open to the students of all colleges to compete for the benefit of the foundation, and the successful competitors being allowed to get their further instruction where they please, in this country or abroad. So far as this goes, we are in hearty sympathy with the scheme. Liberally endowed and carefully administered scholarships are, as no one will doubt, among the most efficient attainable means for the advancement of the higher education in our land; if we want thoroughly educated and profoundly learned men, we must help those who have the capacity and the disposition to make themselves such; and if wealthy patrons of sound learning can be discovered, with wide enough views to be willing to offer such aid to the deserving, whatever their antecedents, and if organizations can be found to administer the trust properly (a practical difficulty of no small consequence, which Mr. Higginson's suggestions do not go far toward solving), the friends of American education will have reason greatly to rejoice.

But Mr. Higginson has brought forward this unexceptionable scheme in a form and connection which seem to us open to serious animadversion. The grand result, to his mind, will be the intellectual rivalry, the contest in competitive examination, of the different colleges. The leading motive with the applicants is to be the credit which they shall bring to their own nursing-mothers, by whom they are to be specially trained and fitted, in preparation for their measuring themselves against rivals from other quarters. Something like a grand national forcing-system is to be inaugurated; competition is to have its sphere raised and extended, and its inciting influence enhanced. The proposer is "satisfied that no academical emulation now known among us equals that which a system of Intercollegiate Scholarships would create." The "first scholars" in classes, who, having left their competitors behind, are now "lonely beings," would then still have some one to fight against, and their distressing sense of solitude would be relieved. We are referred to the English universities as examples of what can be accomplished in this direction. They are far ahead of our institutions in the organization of intellectual as well as athletic rivalry. In the latter, it is true, we have made a good beginning. Our general regattas are a gratifying exhibition of how college can be pitted against college, to the glory of one above the rest; we have only to utilize the same principle in a grand contest of emulative learning, and the rapid improvement of our education is assured.

In all this, we regret to find ourselves quite at variance with the proposer of the scheme. What he regards as its prominent recommendation is to us its chief drawback. We fear that, if it is carried out, there will be too much disposition to regard its prizes as means of distinction, as insignia of victory. The principle of emulation, which he would fain organize and render effective in the highest education, we look upon with distrust, almost with dislike, and would rather see it restrained and depressed to a yet lower place than it now occupies. True scholarship may be initiated, but can never be carried through, by such means. Among children and half-grown youths, emulation is doubtless a useful auxiliary, and its influence not to be rejected. But it belongs essentially in one category with the birch and the ferule, and all education is of a boyish cast until it is got rid of. Even before the end of the ordinary college course, it needs to be outgrown. Studying for a place at the head, for marks, in order to beat some one else, is an acknowledged bane of our higher institutions; to cast it out, and put in its place study for the true objects of study—the love of knowledge, the desire of self-culture, the ambition to find out and do something for the benefit of mankind—is the eager wish of every enlightened educator. We repudiate the example in this regard of the English universities. They are in far too great a degree places where, under the false stimulus of emulation, men are drilled in narrow lines of study to a tactical perfection which finds its chief reward, first in a place on a comparative list, and in personal and collegiate credit thence accruing, and then in an idle scholarship, held for personal benefit. Hence, in great measure, their barrenness as fields for the increase of knowledge, their great inferiority to the German institutions as concerns the amount of work done in them and the number of great scholars produced. Let us by all means avoid their evil example in the conduct of our education. By the time our students leave college, if not before, let us cease to foster in them a disposition to glory-seeking, either for themselves or for others. There is a legitimate satisfaction in well-earned fame, and in the reflection of that fame upon one's surroundings; but it has its roots in the lower part of our nature, and is only legitimate when thoroughly kept down in a subordinate place; in the weakness of humanity, it tends always to rise above what is better, and our organized effort needs to be directed to its repression rather than its encouragement.

What is least to our mind, however, in Mr. Higginson's paper, is the way in which he glorifies the competitive athletic interest, and its most conspicuous result, the intercollegiate regatta. Surely he greatly overstates and misstates the case when, speaking of the contest of last July, he says that "at night, when the news came that Amherst had won, the name of this modest institution was uttered from a thousand lips with more flattering emphasis than if it had been announced as having given birth to a new Shakespeare"; and again, "The man who pulls his oar or trains his crew with such success as to send the name of his college flashing over the wires, so that the poorest schoolmaster in a Western log-hut may look up with pride and say, '*Et ego in Arcadiâ*,—I also am a son of Amherst'—he is and must be the hero of his little world, while human nature holds its own." Here is almost ludicrous exaggeration. If the effect of Amherst's training is such that this is true of her alumni, she is not at all entitled to the name of "modest," since modesty implies a certain foundation of merit. A schoolmaster of the kind here contemplated would indeed be of the poorest, with little chance of ever emerging from his log-hut. There are doubtless those to whom a successful athlete is more than a second Shakespeare; but, in discussing educational questions, we ordinarily leave the opinions of that class entirely out of the account. An international prize-fight, in like manner, attracts a wonderful amount of interest, and is more flashed over the wires than any purely intellectual contest would be; thousands are willing to risk their money on its result, and perhaps even the best of us, much as he may be ashamed of himself for it, feels a wish that our champion may win, and is mortified if he is beaten. Now we do not at all mean to put boating-matches on a par with prize-fights; and yet there is an undeniable analogy between them. The low-minded and brutal are those who watch the latter with the keenest eagerness, and the interest in the other is likely to be inversely as an appreciation of the true objects of college life. A college is something better than a training-place for athletes; it needs, indeed, a good hearty and healthy physical training to accompany and aid its intellectual work, and should take all due measures to encourage such; but whether the intercollegiate regatta is a desirable means to this good end is not a little doubtful, and the college authorities may yet be obliged to suppress it, out of regard to higher interests. It may prove such an unnatural and harmful outgrowth of the manly art of boating, as is the prize-fight of the equally manly art of self-defence, or the race-course of the efforts to improve the breed of horses. The three are alike in the incidents of wild excitement, unruly conduct, and desperate betting; and they are alike in their essential tendency to produce a breed of highly trained animals, whose whole education is to culminate in the execution of a tremendous effort of strength and skill during a few minutes. Every considerable college has within its own limits the means of sufficient emulation to keep up its boating system to the desirable point of efficiency; and the more this is varied and spread through all grades of all classes, the better.

If the regatta crews could be drawn by lot from the body of undergraduates, so that the chance of selection would call out a general physical education, the whole aspect of the case would be very different. As it is, the accidents of available material and a successful professional training are most likely to determine the result of any trial, with all its consequences. The excitement and strain which, if divided up among a whole college community, would be healthy and animating, is concentrated in a limited number of individuals, to their detriment. At a meeting of the Yale Alumni Club in Philadelphia, a few years ago, a representative of the boating interest was alleging on its behalf that it did not interfere with study, instancing as a proof the respectable-standing of even the university crews in their classes; when Professor Hadley, who was present, remarked in his quiet way that he acknowledged the fact, and had always thought it the reason why Yale was so often beaten. There can be no question that the true interests of education often suffer in our colleges, as they most conspicuously do at Oxford and Cambridge and the great public schools of England, by an exaggeration of the interest in physical training.

Mr. Higginson does not formally take sides with the worshippers of athletic skill, preferring to "waive the question [as if it were a question!] whether the precedence given to the boatmen over the bookmen be a good or an evil." But the influence of his paper is cast strongly with the athletic interest; he would not check the intensity of muscular competition, but only put beside it a mental competition which should outbid it. By thus, as it were, tolerating the turning of the underside of college life uppermost, and proposing to mend the matter only by bringing the lowest motives of intellectual exertion to the top, he is in danger, as it appears to us, of doing more harm than good. If we are to have our system of Intercollegiate Scholarships, let them be instituted under the government of sounder and purer motives.

THE NEGRO PROBLEM IN VIRGINIA.

HAMPTON, VIRGINIA, Jan. 29.

THIS little town, which is now half-buried in dirt and débris, and haunted by the very spirit of desolation, was once, in the distant days "before the war," a fashionable Virginian watering-place, and by virtue of its charming sea surroundings and its near neighborhood to Fortress Monroe was a favored resort of the First Families, of whose roomy, out-at-elbows, unthrifty houses one or two have outlived the peril of fire and shot. Its claim to antiquity of origin dates, however, from a time when First Families were not, for from its position it became the headquarters of the colonists who landed here after their weary Atlantic voyages, and made it the base of operations for their expeditions up the various rivers which empty into the Chesapeake Bay. The present St. John's Church of Hampton was built between 1660 and 1667, and the records of the court, which date from 1635, furnish evidence of a still earlier church, in whose graveyard the scions of many an old English house found refuge from hardships too great for even British hearts of oak to endure. The town was sacked in the war of 1812, and had scarcely forgotten the wounds then inflicted on it when the rebellion was declared, and the two contending armies settled their parti-colored swarms upon this ill-fated corner of the sacred soil. Along the eastern shore of Hampton Creek the Union lines were entrenched all through the long years of the war, and here was issued the world-famed order of General Butler, which declared black fugitives to be "contraband of war," and covered every inch of the soil protected by the guns of Fortress Monroe with the hastily erected cabins of escaped slaves. The largest number collected at any time in this district was 10,000, and as only a small proportion could be employed by the Government, the suffering among them was so great as to create a demand upon the philanthropic energy of the nation at large, which was first answered in an organized form by the American Missionary Association, whose missionary, Mr. Lockwood, came into the contraband camps in 1861, and, under the favorable régime of General Butler, succeeded in establishing primary schools of the simplest description in the midst of the almost hopeless ignorance of the ex-slaves.

The result of this first incomplete educational effort bids fair, at the present time, to make Hampton the scene of an experiment of national importance. It required no keen eye to see, five years ago, that one-half of the Southern problem would be solved when a class of skilled laborers should be created, to whose hands the material wealth of the country could be entrusted, and, further than this, to perceive that for the present such a class could be drawn, in the nature of things, only from the superabundant colored population. It was these considerations which led, in the years directly following the war, to the establishment among the freedmen in the neighborhood of Fortress Monroe of a school on a larger scale than anything then in existence, which was incorporated in 1870, by the General Assembly of Virginia, under the name of the "Hampton Normal and Agricultural Institute," and put under the direction of a body of trustees fairly representing both Northern and Southern sentiment. One hundred and twenty-five acres of good farming land were bought, buildings put up, and a remarkably complete manual-labor system adopted, in which has been embodied the best experience of our own and of other nations, with certain adaptations to the peculiar exigencies of the position which speak well for its originators. The success of the school, which is now beyond a doubt, has been marked by three distinctive features, all of which are significant of a hopeful future, and encourage the belief that the education of the negro is entirely practicable, if undertaken upon a reasonable basis. The first noticeable fact in the history of this experiment has been the eagerness of the blacks themselves to take advantage of the opportunity offered them, and their appreciation of the value of education, for the sake of which they are willing to make real and great sacrifices; while as a result in part of this has grown up the second special advantage of the system, viz., that the broadly inclusive training that is provided manufactures from the raw material of the students a class of graduates which exactly meets the demand of the Southern market. This demand is at present principally for primary colored-school teachers, who, without having passed through any extensive academical course, are still well-grounded in the ordinary branches of English education, who can support themselves in vacations, etc., by the labor of their hands, and can supply general practical information to their pupils and the people among whom they live. The Hampton graduates, of whom a large number are already in the field, so nearly fulfil these requirements that the testimony of the Virginia school superintendents (all of whom, of course, are Southern men) is almost unvarying as to the ability which they gain from their three years' experience of a carefully applied manual-labor system. It must be remembered, also, in estimating the value of this school as an educational centre, that it is the principal source from which several State governments can draw this class of employees, and the ratio of illiteracy throughout Virginia and North Carolina is directly in proportion to the educational facilities which Hampton is enabled to offer. The third fact which substantiates the correctness of the theory upon trial is, that it looks so manifestly towards the development of Southern resources that already any fear of political opposition is done away with, and all intelligent Southerners who know anything of the school are more than favorably inclined towards it. The State itself has given to Hampton, in its character of an agricultural college, one-third of the land scrip, amounting to about $95,000, and the present Legislature will probably make a handsome appropriation for the immediate emergency.

The special meeting of the trustees which took place a few days ago, gave a striking illustration of the possibility of the better class of Northern and Southern politicians and philanthropists meeting upon common ground for common work. There were present on that occasion ten trustees and five curators (two of whom are colored men) representing a wide diversity of opinion, and ranging from the members of the American Missionary Association to Col. Robert W. Hughes, a fire-eating rebel, and whilom editor of the Richmond *Enquirer*, whose courteous manner and high place in the records of Southern chivalry fairly qualify him to represent the old school of Virginia gentlemen. The first speech of the day was made by Dr. W. H. Ruffner, State Department of Education, who is doing good service by his devotion to the cause and the liberality of his views in respect to the common-school system of the State. This expression of opinion was remarkable as coming from a Virginian, addressing upon Virginia soil an audience four-fifths of whom were negroes, while one-half of the remainder were Northern men and women. The spirit of it was most encouraging to the students who listened to him, for he not only wiped away much of the obloquy of their past, but held out to them the promise that here, in their own home and among their own people, work was waiting for them which would make their citizenship a reality and an honor. Gen. Howard followed Dr. Ruffner in a characteristic speech, and, before the close of the meeting, a resolution was carried, in view of the marked success and rapid growth of the school, appointing a committee of gentlemen to proceed at once in the erection of a system of college buildings that shall cost not less than $130,000, and altogether surpass anything of the kind yet attempted south of Washington. The public men of Virginia are showing a grasp of the points at issue, and an amount of common sense in dealing with them, which place their State in advance of most of its sisters, and are really admirable and deserving of recognition. The feeling here is that nothing would go so far towards propitiating the South, or producing the gradual political reconciliation which is so much to be desired, as the bestowal of a Cabinet position upon Virginia, and there are certainly men within the borders of the State who could accept such rank with the intention and capacity to do loyal service. In any case, the endeavor of the State government to initiate certain practical reforms, among which the popular-

ization of education stands foremost, is worthy of note, and while it is evident that, for some time to come, much must be done by Northern men and Northern money, yet the inclination of the Virginian people to receive such assistance and to do their share towards its permanent utilization is most satisfactory. That such an institution as Hampton should have taken root and flourished on Virginia soil does credit to its founders and to the State, and an examination of the theory which practice has proved to be so successful may go far towards elucidating some of the more serious problems of Southern politics and society. M. F. A.

DUMAS'S FEMME DE CLAUDE.

PARIS, Jan. 30, 1873.

THERE is a small village near Dieppe, called Puys, where only a few fishermen live in winter. The Marquis of Salisbury has found its situation so charming, that he has built a large house on the cliff which overlooks the sea, where he lives in complete retirement, with his children, in the warm season. The place was, however, not *discovered* by him, and not far from his beautiful country place is a small house which Alexander Dumas *fils* built, many years ago. The name of Alexander Dumas is just now in every mouth, since the appearance of his new piece, "La Femme de Claude," and I may, perhaps, be permitted to apply to him the method of Sainte-Beuve, which consists in studying the man before the author. It is no libel to say, what everybody knows, that Alexander Dumas the father lived all his life, to his very last day, outside of the rules and conventions of the world. His son is not legitimate; from his early years, he was accustomed to see his father surrounded with men and women of pleasure, spending money as fast as he made it. Alexander Dumas the father had all the charms and all the defects of the race to which he belonged; he was gay, thoughtless, generous, fond of all the luxuries of life, a child in character, a materialist in philosophy. His son did not inherit his character; the sight of disorder made him very orderly; the extravagance of his father taught him the value of capital. He became soon the protector, the banker of the famous novelist; he has carefully acquired for himself a good fortune. He is almost melancholy in his disposition, with a decided tinge of bitterness which is found in most natural children. Notwithstanding his name, he had great difficulty in making his way in the literary world; he has not the easy manner of his father; he works slowly, with difficulty. His first books were hardly noticed, and they certainly were vastly inferior to his later ones. He has been constantly working, improving his style, enlarging his ideas. But the most curious trait of his character is this: born and educated, as it were, out of the pale of religion and of morality, he has gradually constructed for himself a system of morality. He considers himself, and he is, to a certain extent, an inventor. Just as the once famous Caussidière said that he had, during a revolution, made order out of disorder, Dumas has extracted virtue out of vice. His merit, in this respect, can only be well understood by those who have had some insight into the famous *demi-monde*, which he has attempted to paint, and in which he has spent the greater part of his life, with the extraordinary society so well depicted already by Balzac, which combines adventurers, journalists, literary men, modern Aspasias, rich bankers, demoralized foreigners of every race. The *Rastignacs*, the *Bixious*, the *Mesdames Marnesse*, of Balzac, have multiplied tenfold during the Empire; they form a dangerous freemasonry of wit, of beauty, of elegance, of scepticism. The younger Dumas's genius has drunk all the poisons of the Parisian hot-house, and, by a curious law of contrast, these poisons have finally produced in his mind a mania for preaching and moralizing; only he preaches on the stage. He has not the austerity of an apostle, neither does he wish to render vice attractive, but he knows that vice is often attractive.

His conversion has been a slow one, and it has been long unconscious. There is a curious development from the "Dame aux Camélias," where his heroine is still made interesting and lovable, to the "Femme de Claude," who is an incarnate devil, black with every crime. How was this conversion operated? Not by religion. Dumas has not been influenced by the lessons of the church; he has only learned the hard lessons of life; but this would not have been enough. He has been converted to virtue by science, and the originality of his morality lies especially in this fact that it is scientific. I must explain this expression: Dumas, like Sainte-Beuve, like Taine, like Renan, has been very attentive to the discoveries of science. The doctrine of development, the theories of Darwin, have a deep connection with social questions. Darwinism, which has assumed in England a strictly scientific character, has been applied in France to the development of races, of the human mind, finally of human societies. If there is any truth in a theory which has found anatomical links between mankind and the simian tribe, there must surely be also relations which are not of a physical order. In a word, it may be said that there is still an animal in man, that in every one of us there is the simian department of instinct and the human department of intelligence, of will, and of morality. The analysis of the passions has been undertaken from this new point of view, and it has been carried very far by physiologists as well as by philosophers. I may perhaps be allowed to cite, in connection with this subject, a few lines from the preface of the second edition of 'Les Problèmes,' which has just appeared:

"Darwin has shown how the smallest advantage assures the supremacy of an animal variety. But where is the animal which can himself conquer any instrument of supremacy? Man only can do it; he can modify his body by hygiene, by medicine, by exercise, by dress, by architecture; but he can conquer other advantages than strength, stature, health, fecundity; he has an all-powerful arm, intellect, which he can sharpen. . . . There is a natural selection of man, but human liberty is one of the forces which rule this selection; and the more civilization advances, the more this force predominates. . . . Science shows man, peoples, races, that existence is a perpetual struggle; it does not invite them to laziness, but to work; its teachings are the same as those of morality, which orders self-command, sacrifice, order, moderation, stoicism."

From an Epicurean, Dumas, under the influences of science, has become finally a moralist; he has learnt that in the passion of love, which chiefly concerns the novel-writer and the dramatist, there is something vile and simian mixed up with something which may be called divine. There are various stages of this passion, as well as of any other, which at a given time get personified and embodied not only in individuals but in nations and in races. In his last curious book, called 'L'Homme-Femme,' he classifies women thus: Women of the temple, women of the fireside (the home), women of the streets—saints, matrons, and sinners. Now, all his dramatic theory is founded on the belief that these three classes, which are convertible by the slow action of selection, are totally inconvertible at a given time. He goes even farther; just as Agassiz has called prophetic types those types which in the palæontological succession appear, so to speak, before their time, Dumas believes that there are always types of the simian age, even in the most cultured and moral societies. The "femme de Claude" is one of those types. She is the mere slave of instinct; she follows her career of adultery, of crime, of vice, without any remorse, without any doubt; she cannot be converted. This Calvinistic doctrine of total depravity has somewhat horrified the French public. It goes directly against those pleasant milk-and-water theories of sin and repentance. Your guilty wife, your bad mother, your "femme de Claude," who robs the scientific secret of her husband in order to sell it herself, is fallen from grace; kill her! And he does kill her at the end of the fifth act; her husband becomes her judge and her executioner.

This dénouement asserts, however, the dangerous doctrine of the right of individual justice. I doubt if Dumas himself would seriously advise any of his friends to behave like his Claude. His piece is really a plea for divorce; but if he cannot get the right of divorce for an outraged husband or an outraged wife, he falls back on the natural rights of self-defence.

The public of the first representations in the Parisian theatres is not so much distinguished for its severity in morals as for its cleverness; the new piece of Dumas was not very well received by it. The frivolous judges of both sexes were shocked by the brutality of the husband, by his insensibility to all the blandishments of his treacherous wife, by the horrible logic which showed so many sins following each other in a fatal succession, and seeming to indicate that maternal cruelty, murder, and theft are the natural children of adultery. But the new piece has been better received by the French bourgeoisie, which is, on the whole, very moral. It is certainly a painful fact that adultery should play such a part in modern pieces; yet it is no longer treated like a mere farce but as a heinous crime. There is an evident desire in Dumas's piece to build up a better code of marriage, and I cannot find fault with his desire to introduce divorce rather than adultery as the remedy for unhappy unions.

I have read with much pleasure an article of one of your travelling correspondents on the French stage. He has done full justice to our admirable school of actors, and among others to Mademoiselle Desclée, who plays the painful and difficult part of "la femme de Claude." When I was at Florence a few years ago, she belonged to a small French troupe which was giving representations in Italy. She was then quite unknown in France. Private theatrical representations were then the fashion in Florence, and Mlle. Desclée had the good fortune to be admitted to several houses, where she acted as a theatrical adviser, and I have no doubt that she acquired there that admirable ease, the manner of a woman of the world, for which she is now so much admired. She is not an actress, she lives her part, as it were. She is the very type of the modern woman, who is all nerve, and vibrates, as it were, with every new sensation and emotion. How different from Rachel, who was so *statuesque*, so calm and melodious even in her passion; but how admirable in her way. She is now, with Madame Pasca, who is in St. Petersburg, the most perfect actor of the modern drama and of character.

She is not handsome, but her face is like a mirror of intelligence and passion; and she seems, if I might say so, more real than if she was very handsome. She personifies the anxious character, the complicated features of our modern civilization, the predominance of the nervous over the vascular system. Dumas may consider himself very happy to have found such an interpreter for his bold character. Your correspondent has justly praised the school of actors of the Théâtre Français; the Gymnase now ranks second on the list, though it receives no subvention from the state. But I have often noticed that even at the most inferior theatres there are very remarkable actors. Ought we to consider this perfection of the French stage as a mark of superiority? or is there something of the simian instinct in this perfect faculty of imitation? I leave this to the philosophers to decide.

Notes.

WE have received what purports to be on its titlepage a "new edition revised and corrected" of Mr. Richard Grant White's 'Words and their Uses' (New York: Sheldon & Co. 1872). In a circular which accompanies it the publishers also speak of it as a "new and improved edition," and "carefully revised and enlarged." This appears, however, to have been true in 1870, when the present plates were made, rather than now, as we are unable to detect any alterations or additions. Time has certainly not brought wisdom to Mr. White on the subject of his eleventh chapter, "is being done," and thirty of the weakest pages in the book are retained in spite of the frequent exposures of his fallacy concerning "exists existing." He has, by the way, as we expected he would in due time, fallen foul of the perfectly well-established phrase "had rather," which he tears to pieces in the January *Galaxy*. A writer in the *American Educational Monthly* for February has had no difficulty in confuting him on this topic also.——In our review of the magazines for February (No. 393), when speaking, on p. 100, of the notorious Spanish Jesuits Escobar and the rest, we allowed our pen and the types to say that none of them had ever set foot in *Spain*. Most of our readers, we dare say, made the proper correction of "France." Another error in the same number was less obvious, but quite as complete. The author of the *North American Review* article on the "Rise of Napoleonism in France" is Professor C. K. *Adams*, not *Kendall*.——Mr. Froude, it is announced, will contribute a series of historical articles to *Scribner's Monthly*.——The Boston Public Library has at last been opened on Sunday, but only as yet in the afternoon and evening, and with access only to periodicals and books of reference. The attendance has been large, orderly, and respectable, and the selection of reading (as it could hardly fail to be) eminently proper and edifying.——We were more than usually forgetful in omitting to mention last week, among the sources of information on the Creole dialects, Mr. Addison Van Name's comprehensive paper on the subject, published in the Transactions of the American Philological Association for 1870.——J. R. Osgood & Co. have become the American publishers of the *Practical Magazine*, of which the first number (for January) has reached this country. It would be a long story to enumerate its contents, and we had best borrow its own account of itself as "an illustrated cyclopædia of industrial news, inventions and improvements, collected from foreign and British sources, for the use of those concerned in raw materials, machinery, manufactures, building, and decoration." This broadly includes all mankind, but the magazine is not exactly designed for general reading, nor for uneducated producers, workers, or carriers. Professional men and the heads of great industrial or commercial houses will find in it plenty of suggestion and information. The magazine is handsomely printed and illustrated. The opening article is a history of the Rothschilds, with numerous portraits and other woodcuts.

—A correspondent writes us as follows: When one's friend has been for years indulging a fond belief in his ownership of some rare and choice volume—if not unique yet in all possibility "the only copy in this country"—it seems a pity to disturb his happiness; but when one boasts publicly of possessing such a treasure it is perhaps worth while to be a little more critical. Referring then to your comments upon a "A Literary Curiosity" in the February *Atlantic*, I can state that there is one copy of "Goethe's Correspondence with a Child: For his Monument" in the Mercantile Library of Brooklyn, and I am confident of having seen one or more copies mentioned in foreign booksellers' catalogues. The writer of "A Literary Curiosity" may, however, have been nearer right in his conjecture than the authors of most of the paragraphs one sees going the rounds of the press with reference to "book rarities." Many persons, especially in the rural districts, count themselves the possessors of something rich and rare if they discover some old printed heirloom one hundred and fifty or two hundred years old, whereas the article may be of no earthly account. These "heirlooms" are sometimes queer things. Mr. Quaritch, the eminent London bookseller, states that he has more than once been offered a copy of one of the original Shakespearean folios, which the very respectable families who had doubtlessly very unwittingly concluded to part with it, assured him had been in their possession for more than one hundred years, but which upon examination proved to be the *reprint* of the first edition, worth as many dollars as the original is worth hundreds of dollars. Experienced book-buyers do not need to be told that a book is not necessarily valuable for having been printed in the sixteenth century, and as for "incunabula" they are much more numerous in this country than the average newspaper paragraphist has any idea of.

— The report of the proceedings at the farewell dinner given to Professor Tyndall in this city is in course of preparation, and will, we believe, be shortly issued by the Messrs. Appleton. It will contain also a letter of considerable length from Professor Henry, who was expected to preside, but was obliged to decline at the last moment. The dinner was perhaps one of the most interesting social collisions—if we may use the expression—between natural science and theology which has yet taken place, and was marked by perfect good temper and good feeling on both sides. Professor Tyndall's speech was especially interesting, being neither more nor less than a long sermon, seasoned by the experience of a most laborious and successful life, and it appropriately closed a visit which has left, we believe, most delightful memories in his mind, as well as in those of the thousands who listened to him here and learned to love him. He proved one of the luckiest as well as most deserving of lecturers.

—A bill passed the House on Tuesday week, lowering letter postage to two cents—a change which we deem uncalled-for, if not unwise and wasteful—and making newspaper postage payable in advance at the post-office of the place of publication—to which we see no objection. The mode in which this prepayment is to be made (after July 1) is left to the Postmaster-General; but from the language of the bill (which speaks of "collection"), we infer that the use of stamps is not contemplated. The embarrassment which this would cause, especially to the daily press, would be incalculable. We hope, also, that the department itself will not be expected to stamp "prepaid," as now, upon newspapers brought directly from the publishing office. Unstamped papers from any other source ought not to be received at the post-office; all unstamped papers *so* received ought to be forwarded as quickly as they can be assorted. To mark them "prepaid" would be entirely superfluous. Even now, for the small proportion of matter thus marked, the delays occasioned are most vexatious. What would they be if the daily and weekly metropolitan issues had to be separately handled and stamped! We take it, therefore, that the post-office will deal hereafter, as heretofore, with the newspaper subscription-mail in the gross—in bags and parcels—and not in detail. It remains for the Postmaster-General to establish regulations which shall protect the Government against fraud. In place of the present shiftlessness of the newspaper service, we should expect a methodical book-keeping that would require of every newspaper a frequent statement of its mail circulation—averaged, of course, and certified in some formal manner—and prompt settlements; of the post-office, exact accounts. Then let us see whether the delivery of papers cannot be made to vie with that of letters, even for the most distant points.

—A word more on the inequitable provision, which we trust the Senate may strike out, by which weekly papers will continue to circulate free in the county in which they are printed. Let us treat this whole matter from a business point of view, or let us take for *all* papers the sentimental ground which now accrues to the benefit of country weeklies alone. It is notorious that the law is so construed by the department that the delivery of weekly papers in large cities has to be prepaid even when the city and county limits are identical, as in New York.

—Mr. Charles Reade's latest novel, or rather tale, 'The Wandering Heir,' contains a rather graphic bit of description of love, card-playing, low-life-above-stairs society in Ireland in the last century, which it seems is, for the most part, a paraphrase of some of Swift's 'Journal of a Modern Lady.' For instance, Swift says:

> "The modern dame is wak'd by noon.
>
> . . . . . .
>
> She stretches, gapes, unglues her eyes,
> And asks if it be time to rise;
> Of headache and the spleen complains;
> And then to cool her brains,
> Her night-gown and her slippers brought her,
> Takes a large dram of citron-water.
> Then to her glass; and, 'Betty, pray
> Don't I look frightfully to-day?
> But, was it not confounded hard?
> Well, if I ever touch a card!
> Four matadores and lose codille!'"

while Mr. Reade says:

"At 12 next day Miss Gregory was prematurely disturbed by her lap-dog, barking like a demon for his breakfast. She stretched, gaped, unglued her eyes, and rang for Betty. . . . 'Here child. Let in some light. Nay not so much: wouldst blind me? I'm dead of the vapors. Get me a dram of citron-water. So. Now bring me a looking-glass. I will lie abed. Alack! I look frightfully to-day. If ever I touch a card again. Didst ever see such luck as mine? Four Matadores, and lose Codille!'"

These similarities, and others quite as striking, having been pointed out in the *Athenæum* of January 4, by a writer under the signature of "C. F.," Mr. Reade retorts that the 'Wandering Heir' is one of the best books that he, Charles Reade, ever wrote; that as for plagiarism, if you adopt such a test as "C. F." proposes, Shakespeare was a plagiarist; and further that "C. F." is a "pseudonymuncule" (petty writer, using a pseudonym), and a "skunk." "C. F." has now written again to explain that "C. F." are her real initials, that she is a lady living a retired life in a quiet English village, having no interest, except a literary one, in the matter, and reminds Mr. Reade, in a very modest way, that it is never too late to mend.

—"But, whiles he thought to steal the single ten,
The king was slyly finger'd from the *deck*."
Third pt. K. Henry VI., act 5, sc. i.

Johnson gives, as one definition of "deck," "Pack of cards piled regularly on each other." This definition has come down to the last revised edition of Webster, in which it appears on the authority of "Hoyle"; and yet nothing is more evident than that the being "piled regularly on each other" is no part of the original denotation of "deck." To deck—A. S. *decan*, Germ. *decken*—is "to cover," "to conceal"; and, as a heap is what is heaped, a pile what is piled, a store what is stored, a deck is what is *decked, i.e.*, covered, hid. Applied to a pack of cards, it denotes primarily the *hidden store* from which each player receives his portion; the cards before they are *faced* or shown to the players. Massinger, in 'The Guardian' (iii. 3), writes:

"And for a song I have
A paper-blurrer, who on all occasions,
For all times, and all seasons, hath such trinkets
Ready *in the deck*";

meaning, notes Gifford, in "the *heap*, or, technically speaking, the *gross*"; and quotes from 'Selimus, Emperour of the Turks' (1594):

"Well, if I chance but once to get the *deck*,
To deal about and shuffle as I would," etc.

In the former passage "a heap or pile of ballads is so called"—not, as Nares thought it to be, "in allusion to a pack of *cards*," but in the sense in which the word was commonly used in Massinger's time—a reserved or hidden store. Two or three instances of this use of the word by writers who certainly did not borrow a figure from a pack of cards may be given here. They have apparently escaped the notice of all the commentators. Thomas Cartwright, the Puritan—Shakespeare's senior by thirty years—in 'A Confutation of the Rhemists Translation' (first printed in 1618), commenting on the parable of the good Samaritan, speaks of the two pence given to the host, as to be "reserved *in the Decke* untill circumstances draw it forth" (p. 180). The Rev. Thomas Hooker, of Chelmsford, Essex, and afterwards of Hartford, Connecticut, in a treatise on 'The Application of Redemption,' printed in 1659, wrote:

"If a man's confession be of the right make, not counterfeit, but currant, he shal not only have mercy reserved for him *in the Deck*, but he shal have the use of it, find the sweet of it, he shal find mercy pardoning," etc. (p. 626).

"—of this rauk [those who strive to hide their sins] are these, when the stals of Conscience and the pressure of their spirits constrain them to confess, and seek for ease, their complaints are like lapwings' cryes, farthest from their nest or their bosom-distempers which lye *in the deck*, . . . and therefore they conceive that they are under a safe cover, little shame will fall to their share," etc. (p. 654).

Mr. Richard Grant White, in a note on Shakespeare's "from the deck," regards the derivation "from A. S. *decan*, to cover, because one card covers another," as a fanciful and unsatisfactory etymology. It might be such if no better reason could be found for it than "because one card covers another," or, as Johnson has it, because the cards are "piled regularly." The cards in a pack, before they are dealt to the players, are "decked," *i.e.*, covered, *unseen;* like the songs of Massinger's paper-blurrer, they are "ready in the deck."

—The new Latin Pronunciation, or the Old Latin Pronunciation—just as one chooses to call it—has at last received an official or semi-official sanction in England. At the request of the Headmasters of Schools, a 'Syllabus of Latin Pronunciation' has been prepared by Professors Edwin Palmer and H. A. J. Munro. The Syllabus itself is of no special interest, the pronunciation recommended differing only in a few unimportant particulars from that laid down in the little pamphlet of Professor Lane. But as the advocates of the "lost cause" in this country appeal to English usage as an unanswerable argument for retaining the English sounds in Latin, we cannot forbear quoting the introductory words of the English "Syllabus":

"The Headmasters of Schools, at their conference held in 1871, declared the system of Latin pronunciation prevalent in England to be unsatisfactory, and agreed to ask the Latin professors of Oxford and Cambridge 'to draw up and issue a joint paper to secure uniformity in any change contemplated.' This request they repeated at their meeting of 1872. As we are ourselves agreed in all essential points, and find that there is a considerable body of opinion in the universities and elsewhere in harmony with our views, we beg to offer the following brief suggestions, etc., etc."

—We take from the *Perseveranza* the following figures, showing the population of the four countries named, the number of troops in arms (exclusive of officials and gendarmes), and the ordinary war-budget for 1873, as voted by the respective parliaments:

	Population.	Standing Army.	War-budget.
Italy	26,801,154	173,413	148,356,585
France	36,102,000	425,000	430,973,300
Germany	41,058,196	401,659	337,659,365
Austria-Hungary	35,904,435	245,090	222,733,893

From this it is easy to calculate that there is in Italy one soldier for every 154 inhabitants; in France, one for every 85; in Germany, one for every 102; in Austria-Hungary, one for every 146. The cost of this soldier is in Italy 855 francs; in France, 1,014; in Germany, 840; in Austria, 909. The most efficient and most thoroughly equipped service in Europe thus appears to be also the most economical; and further, it is clear that whatever sense of security or insecurity Italy may have, the peace of the Continent is least menaced by her, while France exhibits, as of old, a disproportionate and unnecessary armament, maintained at an expense which ought (taking Germany as a standard) to ensure her 14 defenders per 1,000 inhabitants, instead of about 12.

CONTEMPORARY ENGLISH ART.*

WHAT might have been the use of criticism to art is a problem of which we yet possess no element of solution, as published criticism has been retrospective to such a degree that there is no instance on record of any, even partial, influence of literary work in making a genuine school of art, or even of such influence preserving a school from that apparently inevitable decadence which waits on perfect fulfilment. A naturalistic school of *painting* might respond to purely intellectual demands, but one of genuine art has not as yet done so, in spite of the intimate relations which are kept up between the arts in our own day.

And of the criticism of the two nations which now show most markedly the presence of genuine artistic genius (in the art of design be it understood), the French and English, the influence of criticism is equally idle, or, at best, retrospective and laic. The sources of art inspiration are no more in one than the other opened by logical or scientific investigation, but rather choked, and art forms, instead of being perfected by the knowledge of laws and canons, are simply petrified. The French, by dint of schools of fine arts of the academic type, succeed in making many good draughtsmen and mechanists. The English flounder on in greater technical ignorance, but in no more complete ineffectiveness, and what the Royal Academy does not do in depraving art by its shopkeeping exclusiveness, the school at South Kensington does by its finical and mole-eyed fan-and-furniture abominations of designing.

Yet there is as wide a difference between the schools of criticism as of those of art—the English, chaotic, contradictory, now unintelligent to a degree almost incredible, now sympathetic and erudite, but always the expression of individual tastes and preferences, only with no more reason for its liking than the art it studies has for existing; the French with a tone and character, a rational tendency and scholastic coherence which no other art-literature possesses, and as faithfully paralleling the art; and in one as in the other, the criticism is always child of the art and not its instructor.

But as between the two schools of criticism, there is this to be said for the Gallic, that one rarely gets from it opinions without knowledge or formed without reference to some cardinal principles of criticism. There is a certain coincidence even in its differences, and whatever may be the views of the critic as to the sects of painters, one does not meet with such blind deference to unintelligent and uneducated public opinion, or such ignorant admiration of the bizarre and vulgar in painting, as one meets constantly in the journalistic criticisms of art in England. Low as is English art, in the large majority of its manifestations, English criticism is still lower in its laudation of those manifestations.

'English Artists of the Present Day' is a fair sample of book-making, and contains more than average examples of English art criticism, the most interesting articles being on Millais and Holman Hunt, respectively by Sidney Colvin and F. G. Stephens, perhaps the most thoroughly philosophical being that on Cave Thomas, by J. L. Tupper. The book as a whole is, to

* 'English Artists of the Present Day. Essays by Bearington Atkinson, Sidney Colvin, F. G. Stephens, Tom Taylor, and J. L. Tupper, with 13 photographs.' London: Sealey, Jackson & Halliday.

outsiders, marred by the primary necessity, for a book addressed to the English public, of showing that the English painters of the day in reality are great artists—on the whole quite fit to be paged with Titian and Michael Angelo. As this does no harm to the world at large, there can be no special reason shown for its not being done; and so the public is fully persuaded that Landseer is the greatest of animal painters, and Millais another Velasquez, with an added nineteenth century polish. As Mr. Colvin well and fairly puts it: "For the Academy public, now and for some years past, it may be said that this artist (Millais) has passed as being above criticism, and that which he has done as beyond demur." The truth is, however, that Millais's great virtue consists in his power in wielding his brush and his execution of details, and in this the main reason of his facility is that he is embarrassed by no larger aims and diverted by no prior necessity either to obey any ideal or consult the greater unities. Millais's triumphs in rendering what he sees are all the more surprising as well as complete from his seeing only the surface—as the eloquence of some orators is surprising until we come to consider what they have said. A single sentence in what Mr. Colvin says, speaking of Millais's connection with pre-Raphaelitism, will show what is the weakness of modern English art: "The common effort of the brotherhood (in so far as they formulated it to themselves) was to set aside the traditions of the schools (by which painting was taught to copy other painting), and to break for the art a new path, just as the first Italian painters had done by self-teaching and the copying of what they saw."

It is impossible to say that the "brotherhood," if that was their aim, were wrong, for so far as Millais and Holman Hunt are concerned, their aims and talents are far more naturalistic than artistic; and what they or their followers might do was of no great importance *as* art, whatever it might be in imitation of nature, in which direction they have unquestionably given a strong lead. But to talk of setting aside the traditions of art in favor of imitation of nature, is like going back from Beethoven and Mozart to bird-songs and nature music. Art is (and this the modern English school does not seem to be able to comprehend) not an imitation of nature, but systematic and harmonious expression of the emotions which rise in the human mind, be nature the cause of the emotion or not. The Italian painters did but continue, not break, the earlier traditions in lovelier forms, and with a new zest, but there is no break, save advance, in all the progress of true art. What it was with the Greek it was with the earlier Byzantine, and when the Byzantine had become stereotyped from excess of reverence, the Italians did but adapt the old themes to new liberty of thought, and by slow enlargement widened the range of harmonies and multiplied the themes. It remains hardly a question for doubt if nature ever did inspire a true art. Where religious emotion is not its well-spring, art for art's sake is its minor source, for art has always been the same in every essential, from the Archaic Greek to the great Venetians; and, in it all, the law is nature for art's sake, and art is the vehicle of the expression of all those emotions of which the human heart is possessed, by access of eye, ear, or sympathy. So when men turn their backs on the traditions of art, and go to nature to construct new ones, they are like those who should say, "Go to! let us make a new religion," which, when made, is good by just as much as it holds of the vitality of the old one. Art is kept in its traditions and its masters, as the religion in its revelations and its prophets.

In Mason, a charming painter and one of the few true artists the Academy possessed, dead since this book was written, Mr. Colvin has a more gracious subject of eulogy; but when he sees in him the qualities of Jules Breton, one is disposed to doubt his perception of art, and when he uses for him phrases which are more befitting Giorgione, we only say the public will have it so, knowing that the critic is mistaken less in kind than degree.

Mr. Stephens has the ungracious task of dealing with Landseer, of whom by far too much has long ago been said, but he is recompensed by having to tell us about Holman Hunt what we have never had so well told before, and, parenthetically, the history of the Pre-Raphaelite movement. Hunt is a mystical and intellectual painter, not an artistic one—realistic in a painter's rather than a scientific sense, and whether his aims are proper ones for a painter or not is a question not of absolute but comparative and personal import. His possession, however, of the high artistic faculties will hardly be maintained on general principles.

For the rest of the subjects of the essays, Boughton is in no sense an English artist, Cave Thomas almost a German one, while the others, except Woolner, who is almost as much of a sculptor as the age can be expected to produce, are not well enough defined yet to be made the subjects of collective criticism or enthusiastic laudation, except on the policy of making them gods for a day, to be dropped into a deeper oblivion when that day is done. A man overrated in his time must expect that the whirligig of time will bring about the inexorable revenge at no distant to-morrow.

American Pioneers and Patriots. Miles Standish, the Puritan Captain. By John S. C. Abbott. Illustrated. (New York: Dodd & Mead. 1872. 16mo, pp. 372.)—Mr. Abbott's book is simply a popular history of the settlement of Plymouth Colony, compiled from well-known sources and decorated with his characteristic fine writing. Of course we do not expect any new facts in such a work, and should the book obtain a large circulation we may feel sure that its readers will get a fair knowledge of a very interesting part of our history. There is, however, no reason for the title adopted. Miles Standish is not the central figure in the history, and his name is placed on the book probably as a means of availing of the temporary interest taken in the proposed monument at Duxbury. We have already expressed in these pages our opinion of the labored enthusiasm and forced eulogy which were the main features of the celebration last year. So far as Mr. Abbott adopts the same style of description of the probable thoughts, words, and acts of Captain Standish, he disfigures the pages of an otherwise creditable book. We notice, on pp. 35–37, some remarks about the ancestors of Miles Standish which might well have been omitted. No doubt the worthy emigrant thought, as he stated in his will, that his great-grandfather was heir to certain property, but he did not claim Standish Hall nor the representation of the family. As his descendants have never recovered any property, it is worse than useless to repeat and enlarge these stories, and especially to couple them with charges of fraud.

Although the whole book is evidently a compilation, the most whimsical instance is given in chapter xiii.—"The Courtship of Miles Standish." The poem is used as a basis, and very large extracts are given, but the whole is interspersed with the explanations and comments of Mr. Abbott. Wherever in his judgment the poet had failed to infuse the due amount of "agony," the biographer supplies the deficiency. It is Longfellow read by Silas Wegg.

History of New York City, from the Discovery to the Present Day. By William L. Stone. (New York: Virtue & Yorston.)—As a reprint of sketches, incidents, and documents, which are in themselves interesting, the volume before us possesses a certain value which we are quick to recognize. But it is not a history as we understand the term, and it is only because Mr. Stone has seen fit to give it to the world as history that we have studied its length and breadth in order to discover some traces of the connection of causes and effects, and with the reasonable expectation of meeting with the natural fruits of industry and research. We are gravely disappointed, and close the book, having obtained from it a knowledge of New York's real history in about the same ratio as a railway traveller gets a notion of a foreign country by stopping at the way stations on his flying trip through it.

The work is divided into three periods. The first covers sixty-five years, in seventy-six pages. It opens with the miraculous descent of Hudson upon Manhattan Island complete in one paragraph. Three pages are then devoted to a sketch of the island, quoted entire from Miss Booth's history. And eighteen of the remaining pages are given to the reproduction of Diedrich Knickerbocker's burlesque of Dutch customs and social manners, which, like the story of the three black crows, has been repeated until it has lost somewhat of its original drollery, and is accepted by many as history. Thus the Dutch era, which we had supposed a wide field for the painstaking historian, is summarily disposed of. We should have been glad to have learned something of the two great Dutch commercial corporations which made such a noise in the world about that time, and to which New York owes its origin. We should have been grateful for a little light thrown upon the infancy of the great city, showing why it was kept so long in swaddling-clothes, and what manner of men ruled its destinies. In short, we should like to have found some materials from which to draw general lessons of moral and political wisdom.

The second period embraces one hundred and nine years, and is served to the reader in one hundred and ninety-four pages. It starts off with seven pages devoted to a ramble about New Amsterdam in 1661. Eleven pages are given to a quotation from the journal of two Labbadist travellers, in the Long Island Hist. Coll. (Vol. I.), while one paragraph of less than a page disposes of the Revolution of 1689 and all its attendant consequences, good and evil. Again, we find a copious extract from the journal of an English lady, Miss Knight, and an article occupying four pages, from the New York *World* of March 17, 1868. And a little further on, some ten pages are devoted to a gossipy letter from Madame Riedesdel, detailing her personal experiences in Northern New York at the time of the battle of Saratoga, while twenty pages suffice for the whole eight years' continuance of the great American Revolution!

In like superficial manner are treated the important events since that era. The third period covers the ninety years from 1783 to 1873. It con-

tains a sketch of the Federal Procession of 1788, which was published some years ago by the father of Mr. Stone; an extract from the *Journal of Commerce* of 1855, in reference to the Tontine Coffee-house; and seven or more pages of Chief-Justice Daly's discourse before the Century Club on the death of Gulian C. Verplanck, descriptive of the Trinity Church Riot. Reminiscences of the New York fires of 1811, 1835, and 1845, by Hon. G. P. Disosway, cover thirteen pages; a sketch of the city by Francis Wayland, two pages; the reception of Gen. Lafayette in 1824, ten pages; and the Erie Canal Celebration, twenty-three pages. These two last are from the pen of Col. Stone, the father of the author, as are also the accounts of Washington's Reception and Inauguration Ball. Some reminiscences of the city, by Gulian C. Verplanck, fill thirty-six pages; an extract from *Harper's Magazine* for October, 1872, tells us about the New York Post-office in five pages; and a quotation from Miss Booth's history, again, of nine pages, enlightens us in regard to the riot of 1851. The columns of the New York *Herald* contribute fourteen or more pages to this remarkable history; an address of Chief-Justice Daly, entitled "The Origin and History of the New York Fire Department," is laid in entire, covering twenty-five more pages; there are several quotations from 'New York Illustrated,' and the work closes with nineteen pages from Dr. Osgood's address before the New York Historical Society, on the occasion of its Sixty-second Anniversary in November, 1866.

The volume is handsomely illustrated with twenty engravings on steel, and with over eighty wood-engravings, all very good in themselves; but while there is such a wealth of material in existence relating directly to New York, we can hardly see the pertinence in introducing portraits of the nation's Presidents and of foreign generals, and still less pictures of the battles of Lexington and Bunker Hill.

The Life and Times of Sixtus the Fifth. By Baron Hübner, late Ambassador of Austria at Paris and at Rome. Translated from the original French by James F. Meline. 12mo, pp. 180. (New York: The Catholic Publication Society. 1873.)—Mr. Meline is best known by the exposure he has made of the alleged misrepresentations in Mr. Froude's account of Mary, Queen of Scots. It is surprising, therefore, that he should allow a misstatement to stand upon his own titlepage. This book is not Baron Hübner's 'Life of Sixtus V.'; it is not even an abridgment of it; it is an independent work of Mr. Meline's, merely based upon Hübner's, and drawing materials from it. The preface, to be sure, sets this all right, but this is no excuse for a titlepage which cannot fail to excite a false expectation. Surely if Mr. Froude, as has been said, does not know the meaning of inverted commas, Mr. Meline is equally ignorant of the meaning of the word *by*. More than this: it is unjust to the distinguished historian to make him responsible for this book in anything but the facts. The work before us differs totally in character from its original. Baron Hübner's work is a history of the first rank, pronounced by a Protestant reviewer to be "calm and unimpassioned, penetrating and logical"; in short, composed in a purely scientific spirit, and indeed upon the basis of the labors of the Protestant Ranke. Mr. Meline's book is a strictly sectarian one. As such we have no fault to find, either with its general spirit or its execution, but we protest against its passing under the name of Hübner.

This book, therefore, belongs to the class known as denominational literature. It is designed to afford good and instructive reading to Roman Catholics; and for this end it is very well designed. It might advantageously have been expanded to double its bulk, but even as it is, it is interesting, and by no means offensive in its denominational spirit. It will convey at least some idea of the character and acts of the man who ranks as probably the greatest pontiff of modern times; a man who was not merely great as a pontiff and as a ruler over Rome, but who exercised a powerful and decidedly salutary influence on the history of his time; the Pope who is, perhaps, more than any other identified with what Mr. Meline calls "the great Catholic reaction of the sixteenth century." It is, however, rather as the man and the head of the church that Mr. Meline's readers will become acquainted with Sixtus V., while Baron Hübner dealt principally with the statesman. And when we consider the stirring events of this short pontificate, which commenced just after the death of William the Silent, and ended shortly before the final triumph of Henry of Navarre—the revolution of the Netherlands, the war of the Henries, the execution of Queen Mary, the Invincible Armada, the assassination of Henry III.—it must be confessed that Mr. Meline has slighted this aspect of his hero's character. And in what he has said, his view is incomplete and misleading by its incompleteness. He tells us that Sixtus personally disliked Philip II., and that he was offended by the arrogance of his ambassador. He does not tell us that his policy was really opposed to the intolerant Catholicism of the Spanish Court. Sixtus V. was an earnest Catholic, as it was right he should be; he sympathized with Mary against Elizabeth, and with Farnese against the States of the Netherlands; but he did not sympathize with the Duke of Guise and Philip II.—rather with that broad and conciliating temper so pitifully represented by Henry III., and which afterwards triumphed with Henry IV. If it was any one man it was Sixtus V.—although he did not live to see the fruits of his own work—that won over Henry of Navarre to the Roman Church; and this, whatever we may think of the genuineness of the conversion, secured at once a great kingdom to the fold of the church, a measurable toleration for the reformed faith, and religious tranquillity for France for nearly a century.

We do not suppose that this aspect of the place of Sixtus V. in history is that which would be most acceptable to the Jesuit-ridden church of the present day. We have as little doubt that it will be his best claim to the gratitude and admiration of posterity—that he will be remembered a hundred years hence as the wise and able ruler who, while Bishop of Rome and head of one section of Christendom, had nevertheless in his mind a conception of a genuine *Catholicism;* a conception which appears to have vanished from his church at the present day.

The Mountain. From the French] of Michelet. By the translator of 'The Bird,' with fifty-four illustrations from designs by Percival Skelton. (London and New York: T. Nelson & Sons.)—M. Michelet's method of observing nature is so well known that minute criticism of these translations is hardly necessary. We may say, in one word, that M. Michelet is untranslatable when he writes about such subjects as 'The Mountain.' He is a Frenchman of the Frenchmen; his whole style and the color of his mind are French; and when you change the language you change the thing itself. For example, when one reads such sentences as these: "These lakes—these dumb confidants of the glaciers, which achieve through their agency a passage out of the darkness—were regarded by our Celtic forefathers with terror and worship. They seem full of mystery; a savage charm invests them. He who has ever beheld, for ever remembers them. I do not feel greatly surprised at the efforts of a courageous fish to revisit them every year, in the season of love's potent impulses" (p. 60)—one cannot help a feeling of amused contempt for a mind which is capable of producing them, and yet, in French, they would not be so absurd. We learn from the translator's preface that 'The Mountain,' 'The Bird,' 'The Insect,' and 'The Sea' were written "in partnership with Mme. Michelet"; from the author's preface, that 'The Mountain' continues a series of "analogous" books (those just mentioned), the publication of which began in 1856; also that "the public, from that epoch, has felt an entirely new interest in natural history"; that it was the singular fortune of 'The Bird' to bear upward upon its wings both the public and the press; that these three books had the rare success of being the cause of many others. "A new branch of literature has sprung into life since that epoch." "For the first time, men learned the peculiar mystery of the bird—the peculiar mystery of the insect." The reason why the public was so much impressed by these books was that "the only books which have powerfully affected them are those which appeal to the soul." The preface concludes with this apostrophe: "Living spirit of regeneration! True heart-cordial in these days of too general decadence! May this book, while strengthening ourselves, steady others upon the slopes, where, through weakness or melancholy, so many fall! If it need an epigraph, it shall use this word—*Ascend!*"

Old Landmarks and Historic Personages of Boston. By Samuel Adams Drake. Profusely illustrated. (Boston: James R. Osgood & Co.)—This is a valuable book, and we advise any one who is at all interested in American antiquities or history to get it. Boston is one of the few cities in America which are worth studying minutely—one of the few cities which have at once the advantage of being old, and having kept alive some of their individuality with their increasing years. No doubt, too, the time is coming, and is even now at hand, when Boston also must go the way of her predecessors, and become modern; now that the walls of Quebec are being pulled down, there is little hope for the rest. What with fires, and alterations of buildings, and widenings of streets, the old part of Boston has been already a good deal changed, and "Young Boston" is becoming accustomed, as the youth of other parts of the country had already become accustomed, to regard local traditions as simply so many obstructions in the way of improved corner-lots. Still, though Faneuil Hall has been enlarged, and a mansard roof, or to speak more accurately, a box-roof, has been put on top of the Old State House, and the Old South Church is in danger of demolition, and Hanover Street has been widened, and Fort Hill levelled to the ground, and a dozen old streets lately burnt up—nevertheless, Boston is still Boston; Boston traditions are still different from those of New York, Philadelphia, or Baltimore, and they are well worth collecting and preserving.

Mr. Drake has a pleasantly unpedantic way of imparting knowledge, and has certainly spared neither time nor labor in accumulating his materials. The book is not a product of the recent fire, having already gone through the press before the burning began.

Fine Arts.

THE INTERNATIONAL WATER-COLOR EXHIBITION.

THE display at the Academy of Design is scarcely one that water-color art would choose to be judged by, as the American work is all confessedly tentative in its nature, and the English department is obviously weak in representative names, the best British specimens being in fact lent by American owners from their galleries, and exposed among the pictures of our own Society. The English contributions are represented as having come "spontaneously" in answer to a cable message that they would be received, and are from the class of men who always have something nice on hand for the market, the other class, who can readily sell all they make, being hardly represented. We may go to the shops of any of our importers, and see a dozen water-colors better than the best dozen here. But, for our own part, this respectable mediocrity suits us about as well as a grander show would have done; in judging of a national school, and especially of just such a school as English water-color aims to be, we can best gauge it as it shows at its broad level, without too many astonishments and pyrotechnics. The Academy gives us between five and six hundred handsome pages; the South Room is evenly covered with English sheets, to the number of a hundred and thirty, imparting a tone to it entirely different from that of any of the ordinary collections which enter there, and perfectly satisfactory as showing the peculiar decorative effect of cartoon pictures, in their broad spandrils and shallow frames. The result goes to convince us that English water-color must have been created out of influences and impressions of English landscape to which it fits as the lining fits one's hat; wherever the eye turns it rests upon some glimpse that is both cheering and tranquillizing, "telling a tale not too importunate" of meadows and elms and park-oaks, of fields like those that stretch from Stratford to Shottery, of *motifs* which, both in the subject and the vehicle, gratify the taste without demanding rapture. The suddenness and felicity of water-color effects—the ease, almost mechanical, with which a broad wash struck on a coarse paper will secure transparency and atmosphere—are precisely adapted to a Nature which is capricious, showery, dainty, and as it were domestic. The sketchy brightness of aquarelle is the complement of the British climate.

The figure subjects which are present turn out to be from the hands of a very few artists, but they are sufficient in number to show that the school by no means abandons the representation of human expression. In looking at both figures and landscape we are struck by the air of fecundity which British cartoon-art displays; we think of its short date, and the velocity with which it has shot forth, and drawn up its sap, and spread out its foliage, and vignetted a whole country with its prolific and agreeable ornaments. Nothing is plainer, though, than that the figure department of the art, represented by such things as Faed's "Sir Walter Scott and his Friends," Robertson's "Venetian Councillor," and many others, is a totally different sort of study from the landscape department, represented by Skinner Prout's "Cathedral," Arthur Severn's "Algerian Cemetery," Mrs. Murray's "View of Rienzi's House," and other such specimens. To understand this marked bifurcation we need not indeed go as far back as the cartoons of Raphael, which, long owned and admired in England, may have inspired the ambition of making grand paper-pictures. We can find all that we want in the corridors of the Louvre, where hanging near together are a piece by Bonington and a piece by the elder Isabey. Bonington, an English artist of the first merit, educated and adopted by the French, gives, in his view of the Colleone statue at Venice, the best possible prophecy of the English water-color landscape school, as its happiest works define it; his "Colleone Monument" is a study in aquarelle, broad, washy, intense, and bathed in fluidity and light: all that water-color need usefully attempt is explained or indicated there. The Isabey, which represents fashionables of the First Empire lounging through the Louvre, is another sort of art, derived from vellum-painting, fan-paintings and snuff-box painting; it is touched with minute stippling until the labored impression becomes painful; and *that* is the kind of thing from which English water-color figure-painting evidently dates. Mr. Blackburn's collection gives us only too few specimens of figure-art, but Faed's group of poets shows what it becomes in the hands of an expert, Robertson's "Councillor" shows it in the hands of respectable mediocrity, and there are several ladies present who have been quilting away at the human countenance with the finest pencils borrowed direct from Miss La Creevy, showing adorable and deplorable patience, and, alas! an abundant ingredient of futility. When we see the labors of such humble, persevering, neat-fingered creatures, we long to ask them who their teachers were, and how they ever came to think it a duty to cover their representations of the human figure with a fine pattern of prickly-heat. And if we could find those teachers, supposing any of them to survive, we should be fain to embolden ourselves, and, grasping the misleading guides with firmness, to say: What has got into you, brave Englishmen, that you exaggerate the stipplings from miniatures all over the surface of your large compositions? Nobody does it but you! The Italians are painting lovely figure-subjects, full of gaiety and sunshine, but in no face by Pascutti or Detti or Simonetti will you find other than broad tints, broadly laid on. The French are excelling in their new taste for aquarelle, but Vibert, Castres, Detaille, and the rest never model a countenance except in the flattest *plans* of color, a tint for each surface, preserving the sharpness of the drawing and the transparency of the hue. Why should a head in water-color, the size of an orange, be covered with a rind like an orange's or a network like a musk-melon's? Is it not evident that this is just the way to destroy the luminousness, that suddenness and flash of tint which is the peculiar glory of cartoon art, and its special reason for existence? And how can any boldness of modelling be preserved by an artist whose attention is expended on making the neat granulation cover the whole flesh with one handsome and regular crust? The English have been going on in their corner at this persevering work for perhaps fifty years, while the live schools in France, Brussels, Italy, and even Spain have demonstrated, whenever they chose to adopt water-color, that the miniature and snuff-box-lid method was no more necessary to paper than to canvas, and that Windsor and Newton's cake-paints could be laid on with touches as square as the touches of Horace Vernet or Meissonier.

The method we speak of does not surprise us in a picture so old as that of Faed, but it astonishes us in work so recent and so intellectual as that of E. K. Johnson ("The Rival Florists"), where the old men are as full of character as old men by Zamacoïs, while the diaphanous damsel in white, shading the multiplied stipplings of her cheek with a muslin hat starched with body-color, is more of an enamel than an aquarelle. The free use, by the bye, of this body-color or *gouache*, even in the pictures showing greatest training, will be an amazement to most of our young men here, who thought they were sitting at the feet of British water-colorists in their posture of resolute denial of all the temptations of white streaks and *blanc d'argent* high-lights. While our American tyros will painfully wash all around the intended luminous spot, so as to save the glow of the Whatman paper in its purity, their English leaders are scumbling away at their ease, and mending all with a few magisterial touches of body-color, which, as we are taught, may turn black in the course of years. Hardly any of the English exhibitors present are free from a very ready use of *gouache* whenever it will save them trouble, and perhaps none from occasional touches of it—specks of plaster fallen on a composition of stained glass. The American contributors, we think, are much more cautious in thus mixing styles. Of course the pictures which profess to give distemper effects are to be judged by a standard of their own: Mr. Matt Morgan, for instance, who is a scene-painter, shows a "View near Cadiz," with oxen and figures modelled in impasto most skilfully, reminding one of some of the chalky effects of Eastern sunshine lately given out by Pasini; and the village picture of the French artist Piette, plastered in *gouache* until the embossments catch the light like repoussé work, is very well in its way. The real objections to body-color are when Mr. E. K. Johnson paints several dozen roses with it, not because they will thus look rosy, but because it saves trouble, and when Faed anoints the foreheads and noses of his poets with it in particular places, until they shine like knockers new-polished or with the startling aggressiveness of buttons on a just-uniformed page. How far a *scraping* process is allowable for the development of white need not be here discussed; when artistically done it justifies itself, while when mechanically done it is poverty confessed; but we are hardly of those who give water-color such importance as to insist on a rigid purism and unmixed method. White paint is freely used by Detaille, in his magnificent sketch of a Prussian soldier, on tinted paper, which the hangers of the exhibition have mysteriously put into a corner, while the centres are occupied by various paintings, very handsome and very yellow, in the finest frames yet contributed to American-picture displays. The study by the author of "Nos Vainqueurs," a masterpiece of character, is touched with *gouache* on the flesh and the pipe-clayed trappings; yet in the mode of applying the color, we could hardly wish for a better example of good aquarelle, or a more convincing argument against our friends the stipplers. This calm and honest face, where a limited round of ideas can be as clearly seen as bottom-pebbles of a brook, is carved out in little facets and breadths, like a sculptor's sketch or like a study by Gérôme; the gain in precision and solidity by this quick and

handy method of modelling can be instantaneously seen on comparison with any of the brigand chiefs and gipsy mothers who are showing their porous-looking and pitted faces around it.

Of American pictures there is a truly creditable display and we own we think, that quite as many of our native artists are indicated as prosecuting water-color as we should fancy to be necessary. They are without exception, we believe, practitioners of other methods in addition, the sole employment of water-color being hardly known in this country's practice. Mr. Gifford has some foreign scenes which are truly luminous and pure, such as his view of a *koubba*, or marabout's tomb, near Tangier. Mr. Tiffany has a quantity of oriental sketches, very bold and showy, but evidently the work of an amateur, who is pressing after the secret of light as he is pressing after the mystery of anatomy. His perseverance strikes us as a good sign, and his courage, in the face of some half a dozen French masters in his specialty, the names of whom he knows as well as we do, indicates the true American grit; it must be said, however, that his success in the present exhibition is not any one of his Eastern views, but the quiet and faithful copy of nature in the scene at New London, where the water is seen stealing unexpectedly amongst the meadows of the land, and white sails flash strangely behind the dark scrub-oaks and against the deep sky. The little mountain studies by Richards, showing hill-perspectives drowned in azure and faint green, have a peculiar airy beauty, coupled with the anatomical exactness in which his landscapes are apt to excel. Mr. Thomas Moran exhibits nothing but studies, but studies in great variety, from dark caprices apparently printed off from an inky sponge, and very suggestive in their way, to the caprices of Yellowstone scenery, which strike the eye as odd and nothing more. Our figure-painters are mostly unrepresented, neither Mr. Johnson, Mr. Homer, nor the portraitists contributing; but Mr. Bush, the author of some excellent pen-drawings for Hawthorne's romances, exhibits fifteen illustrations to the *Scarlet Letter*, which are truly appreciative and suggestive if they do show force rather than subtlety. The artist's effects are different from the poet's effects, and if Mr. Bush seems to confound the high-peaked Puritans with the dwarfs who tempted Rip Van Winkle, he at least gains in some of his contrasts and in some of his Rembrandt-shadows the mystery which is the nearest of what art has to the literary mystery of Hawthorne.

The work of some able foreign designers hung in the corridor, and showing the methods of such admirable draughtsmen as Doré, Fildes, W. Small, J. D. Linton, and DuMaurier, are full of brilliancy and expression, capable of teaching our own designers what refinements are possible on the wood, in expression and texture, and teaching our engravers that imagination and interpretative originality are expected of them, too. Altogether the exhibition, though it ought to have been much more deliberately and exhaustively collected, is fit to give our public much pleasure and our artists much encouragement and some hints.

A New Novel by Turgenieff.

ON THE EVE.

BY IVAN TURGENIEFF.

16mo (Leisure Hour Series), $1 25.

"In our opinion he is equal to any living novelist; or, if that estimate be disputed, he is at any rate one of the greatest, and on that account his writings demand attentive consideration."—*The Nation.*

"Two or three of his characters would be sufficient stock in trade for the entire professional career of an ordinary novelist."—*London Spectator.*

"Unites the skill of the surgeon with the vigor of the executioner. . . . Reminds us of some of the best passages in Thackeray, whom, indeed, Mr. Turgénieff strongly resembles."—*London Athenæum.*

Banking Office of Fisk & Hatch,
No. 5 Nassau Street, New York, Feb. 17, 1873

☞ The CHESAPEAKE AND OHIO, the CENTRAL PACIFIC, AND WESTERN PACIFIC BONDS, all of which have been negotiated by us, we believe to be among the best and most desirable investment securities in the market, which in time must become very scarce; especially as the Government will probably during the year pay off, in gold, $300,000,000 more Five-Twenties, and a large amount of money thus released from investment must find its way into this class of securities.

THE CHESAPEAKE AND OHIO SIX PER CENT. GOLD BONDS, the total amount of which is only $15,000,000, are secured upon a property worth $35,000,000 to $40,000,000, and are fully equal in intrinsic value to the Central Pacific Bonds. They are issued in denominations of $100, $500, and $1,000, coupon or registered, and at their present market price, 87 and accrued interest, are very desirable.

THE CENTRAL PACIFIC SIX PER CENT. GOLD BONDS are too well known to require description or commendation. Their total amount is $25,885,000; they have for a long time ranged in market price near or above par. Their price to-day is 104¼ to 104½.

The WESTERN PACIFIC SIX PER CENT. GOLD BONDS amount to $2,735,000. This road is now consolidated with the Central Pacific, and the payment of its bonds, principal and interest, is assumed by the latter. Coupon Bonds, $1,000 each. Their market price to-day is 94¼ to 94½. As they have recently been introduced on the Stock Exchange, we expect to see them rapidly rise to the price of Central Pacifics, being substantially the same in character and value.

We buy and sell, as usual, Government Bonds, receive deposits, on which we allow interest, make collections, and conduct a general banking business in all its branches.

FISK & HATCH.

THE LAND OF ISRAEL. A Journal of Travels in Palestine, undertaken with special reference to its Physical Character. By H. B. Tristram, M.A., F.L.S. 8vo, cloth. With a number of full-page Illustrations, Woodcuts, and Maps. Price $8.

THE NATURAL HISTORY OF the Bible. A Description of every Animal and Plant mentioned in Holy Scripture. By H. B. Tristram. Illustrated. 12mo, cloth, $3.

SCRIPTURE MANNERS AND Customs. Being an Account of the Domestic Habits, Arts, etc., of Eastern Nations mentioned in Holy Scripture. Illustrated. 12mo, cloth, $2 25.

THE BIBLE ATLAS OF MAPS and Plans to illustrate the Geography and Topography of the Old and New Testaments and the Apocrypha, with Explanatory Notes. By Samuel Clark. Also, A Complete Index of the Geographical Names in the English Bible. By George Grove, M.A. Large 4to, cloth, gilt edges.

THE WANDERING HEIR. A Novel. By Charles Reade, author of 'Hard Cash,' 'Put Yourself in His Place,' 'Never Too Late to Mend,' 'Foul Play,' etc. Illustrated. 8vo, paper, 25 cents; cloth, 60 cents.

7.

THE REVISION OF THE ENGLISH VERSION OF the New Testament. With an Introduction by the Rev. P. Schaff, D.D. 618 pp., crown 8vo, cloth, $3.

This work embraces in one volume:

ON A FRESH REVISION OF THE ENGLISH NEW TESTAMENT. By J. B. Lightfoot, D.D., Canon of St. Paul's, and Hulsean Professor of Divinity, Cambridge. Second edition, revised.

ON THE AUTHORIZED VERSION OF THE NEW TESTAMENT in connection with some Recent Proposals for its Revision. By Richard Chenevix Trench, Archbishop of Dublin.

CONSIDERATIONS ON THE REVISION OF THE ENGLISH VERSION OF THE NEW TESTAMENT. By C. J. Ellicott, D.D., Bishop of Gloucester and Bristol.

8.

THE STRANGE ADVENTURES OF A PHAETON. A Novel. By William Black, author of 'Love or Marriage?' 'In Silk Attire,' 'The Monarch of Mincing-Lane,' 'Kilmeny,' etc. 8vo, paper, 75 cents.

9.

A PASSION IN TATTERS. A Novel. By Annie Thomas, author of 'Maude Mohan,' 'Denis Donne,' 'False Colors,' 'Played Out,' 'The Dower House,' 'Theo Leigh,' 'Only Herself,' 'Playing for High Stakes,' etc. 8vo, paper, 75 cents.

10.

NORDHOFF'S CALIFORNIA. California: for Health, Pleasure, and Residence. A Book for Travellers and Settlers. By Charles Nordhoff. Illustrated. 8vo, paper, $2; cloth, $2 50.

11.

BREAD-AND-CHEESE AND KISSES. A Christmas Story. By B. L. Farjeon, author of 'London's Heart,' 'Joshua Marvel,' 'Grif,' 'Blade-o'-Grass,' etc. Illustrated. 8vo, paper, 35 cents.

12.

DR. WAINWRIGHT'S PATIENT. A Novel. By Edmund Yates, author of 'Black Sheep,' 'Land at Last,' 'Wrecked in Port,' etc. 8vo, paper, 50 cents.

13.

TALMAGE'S SERMONS. Sermons by the Rev. T. De Witt Talmage, delivered in the Brooklyn Tabernacle. 2 vols. 12mo, cloth, $4.

14.

A WOMAN'S VENGEANCE. A Novel. By James Payn, author of 'Carlyon's Year,' 'Cecil's Tryst,' 'A Beggar on Horseback,' 'Bred in the Bone,' 'Found Dead,' etc. 8vo, paper, 50 cents.

15.

FOR THE KING. An Historical Novel. By Charles Gibbon, author of 'For Lack of Gold,' 'Robin Gray,' etc. 8vo, paper, 50 cents.

☞ HARPER & BROTHERS will send either of the above by mail, postage prepaid, to any part of the United States, on receipt of the price.

☞ HARPER'S CATALOGUE mailed free on receipt of Six Cents in postage stamps.

MACMILLAN & CO.'S

NEW BOOKS.

A New Contribution to the Darwinian Controversy.

CALIBAN: The Missing Link. By Daniel Wilson, LL.D., Professor of History and English Literature in University College, Toronto. Crown 8vo, $2. [*This day.*

New Volume of "The Sunday Library."

ANGELIQUE ARNAULD, Abbess of Port Royal. By Frances Martin. Crown 8vo, cloth, $1 75.

Tenth Annual Publication.

THE STATESMAN'S YEAR-BOOK. A Statistical and Historical Annual of the States of the Civilized World. Hand-book for Politicians and Merchants for the year 1873. By Frederick Marten. Crown 8vo, cloth, $3 50.

PLAYS AND PURITANS, and other Historical Essays. By Charles Kingsley, Canon of Chester. With Portrait of Sir Walter Raleigh. Crown 8vo, cloth. [*On Friday.*

THE FOOL OF QUALITY; or, The History of Henry, Earl of Moreland. By Henry Brooke. Newly revised, with a Biographical Preface, by the Rev. Charles Kingsley. Crown 8vo, cloth. [*On Friday.*

New Edition, with Portrait.

MICHAEL FARADAY. By J. H. Gladstone, F.R.S. Second Edition, with Portrait, engraved by Jeens. Crown 8vo, $1 50.

New and Much Revised Edition.

WORDS AND PLACES: or, Etymological Illustrations of History, Ethnology, and Geography. By the Rev. Isaac Taylor. *Third edition revised and compressed,* with Maps. Globe 8vo, cloth, $1 75.

New Book by Sir William Thomson.

REPRINT OF PAPERS ON ELECTROSTATICS AND MAGNETISM. By Sir William Thomson, D.C.L., F.R.S., etc., Professor of Natural Philosophy in the University of Glasgow. 1 vol. thick 8vo, cloth, $9.

New Volumes of the Clarendon Press Series.

THE ELEMENTS OF NATURAL Philosophy. By Professors Sir William Thomson and P. G. Tait. Part I. 8vo. [*On Friday.*

GERMAN CLASSICS. Vol. III. *Minna von Barnhelm.* A Comedy. By Lessing. Edited, with English Notes, etc., by C. A. Buchheim, Phil. Doc., Professor in King's College, London. Extra fcp., 8vo. [*On Friday.*

Macmillan's New Catalogue post free, on application.

MACMILLAN & CO.,

1873.

ECLECTIC MAGAZINE,

TWENTY-NINTH YEAR.

SCIENCE. The ECLECTIC devotes a considerable portion of its space to an exposition of the latest discoveries and speculations in the scientific world, and claims to be more comprehensive and complete in this department than any other magazine not exclusively devoted to the subject. Its articles are prepared by such men as Profs. HUXLEY and TYNDALL, RICHARD PROCTOR, B.A., Prof. OWEN, Dr. W. B. CARPENTER, MAX MULLER, and Mr. J. NORMAN LOCKYER.

LITERATURE. While presenting the freshest and most valuable scientific papers, the ECLECTIC finds room for an array of instructive and entertaining articles in general literature, which is surpassed by none of the literary monthlies. Its selections are made from all the English periodicals, and occasionally from those of France and Germany, and cover a literature incomparably richer and more productive than any other to which the reader can find access. Recent issues have contained articles by JAMES ANTHONY FROUDE, MATTHEW ARNOLD, CHARLES KINGSLEY, FRANCES POWER COBBE, ROBERT BUCHANAN, KATHARINE S. MACQUOID, ALFRED TENNYSON, ARTHUR HELPS, and others equally eminent. During the coming year special attention will be paid to translating, and the best of the admirable articles which have given fame to the *Revue des Deux Mondes* will appear in our pages from time to time.

FICTION. The ECLECTIC offers its readers the best serial stories to be had, together with the short stories for which the English Magazines have a high and deserved reputation. The leading attraction in this field for 1873 will be a new story, entitled "Too Soon," by the author of "Patty," which, by special arrangement with the author, will be published from advanced sheets.

EDITORIAL DEPARTMENTS. The Editorial Departments are LITERARY NOTICES, FOREIGN LITERARY NOTES, SCIENCE, ART, and VARIETIES, and they are made as comprehensive and complete as possible. LITERARY NOTICES deal with the books published at home; FOREIGN LITERARY NOTES give the freshest information about literary matters abroad; SCIENCE supplements the longer articles with brief paragraphs covering the whole scientific field; and in VARIETIES will be found interesting odds and ends from a multitude of sources. No other eclectic publication attempts anything of this kind.

ENGRAVINGS. No other Magazine is so artistically illustrated as the ECLECTIC. Each number contains a fine Steel Engraving on some subject of general interest—usually a portrait. These engravings are of permanent value, and add much to the attractiveness of the Magazine.

TERMS: Single Copies, 45 cts.; One Copy, one year, $5; Two Copies, one year, $9; Five Copies, one year, $20. Agents wanted to get up Clubs. Address,

E. R. PELTON, PUBLISHER,

108 Fulton Street, New York.

THE WEEK IN TRADE AND FINANCE.

FEBRUARY 17, 1873.

THE money market has shown no signs of improvement during the past week, and, indeed, rates upon call loans have been higher than for the previous week, having ruled between 7 per cent. per annum and ⅛ per cent. per diem. The average rate of the week was $\frac{1}{32}$ and interest. Balances were loaned out on one or two days, late in the afternoon, as low as 4 and 5 per cent. but, of course, these rates were entirely exceptional. There is a report—and, judging from the weekly bank statement, a well-founded one—that a large amount of legal tenders has been "locked up" by speculators for the purpose of affecting the stock market. It is also reported that the leading "bull" operators in gold contemplate withdrawing $5,000,000 from the market in order to bring about what is known in Wall Street as a "squeeze" in cash gold, *i.e.*, compelling borrowers to pay exorbitant rates for its use. The situation of affairs in the money market is far from satisfactory, the poverty of the bank reserve placing it within the power of a few speculators to create a still more unsatisfactory one. The present low condition of the bank reserve is due partly to the large gold shipments of last year to pay for excessive importations, but principally to the withdrawal of $20,000,000 3 per cent. certificates since January 1, 1872, which the National Banks were allowed to count for three-fifths of their face in the reserve; the cancellation of that amount is, therefore, equal to the contraction of $12,000,000 legal tenders. Besides this, the new National Banks established since that date have issued notes which require a reserve to be held against them, so that the effect of the law for their establishment has been to increase liabilities, at the same time diminishing the reserve. The Bank of England reports a decrease of £355,000 in bullion, and the Bank of France a decrease of 250,000 francs. The Bank of England rate of discount remains at 3½ per cent., while money in the open market is quoted at 3 to 3¼ per cent. Should no trouble arise from the unsettled condition of affairs in Spain, it is not improbable that in view of the existing ease in the European money markets, a considerable amount of foreign capital will be directed towards this country. We hear of negotiations pending in this city for the loan of a large amount of sterling to leading operators in Wall Street.

The sale of commercial paper is naturally interfered with by the activity of money upon call, and holders are disposed to wait, until the flurry has passed, in preference to effecting sales at rates which they would now be compelled to accept. Prime names are quoted 8 to 9 per cent.

The Bank Statement for the week ending February 15 is very unfavorable, showing a loss of $4,903,800 in the total reserve, and a decrease of only $5,666,600 in the total liabilities. The reserve is now $1,299,000 below the 25 per cent. required by law.

The following are the statements for the two weeks ending February 8 and February 15:

	Feb. 8.	Feb. 15.	Differences.
Loans	$293 939,000	$291,520,700	Dec. $2,414,300
Specie	19,035 450	16,461,000	Dec. 2,574,400
Circulation	27 520,600	27,539,800	Inc. 19,200
Deposits	220,299 200	214,613,400	Dec. 5,685,800
Legal tenders	45 107,700	42,778,300	Dec. 2,329,400

The following shows the relation between the total reserve and the total liabilities:

	Feb. 8.	Feb. 15.	Differences.
Specie	$19.035.400	$16,461,000	Dec. $2,574 400
Legal tenders	45,107,700	42,778,300	Dec. 2,329,400
Total reserve	$64,143,100	$59,239.300	Dec. $4,903,800
Circulation	27,520,600	27,539.800	Inc. 19,200
Deposits	220,299,200	214,613,400	Dec. 5,685,800
Total liabilities	$247,819,800	$242,153,200	Dec. $5,666,600
25 per cent. reserve	61,954.950	60,538,300	
Excess over legal reserve	2,188,150		
Deficiency in legal reserve		$1,299,000	Dec. $3,477,150

The speculation in stocks has been interfered with by the activity in money, and small and weak holders have been forced into selling, which has imparted a heavy feeling to the market; this was especially the case after the publication of the bank statement on Saturday. Lake Shore was exceptionally strong all the week, with the report current that an effort was being made by parties outside of the present direction to carry the next election by purchasing a controlling interest in the stock. Union Pacific has been weak upon the expectation that the Government would take some action in regard to the money due by the Company to the former on account of interest paid upon the subsidy bonds. We hear that there have lately been some short sales made for account of Washington parties, which may indicate that "something is up" in regard to the relations between the Government and the Company.

The price of Delaware, Lackawanna and Western has advanced to 103; this improvement is due to the legalization by the New Jersey Legislature of the terms of the agreement made between that Company and the Central Railroad Company of New Jersey relative to the consolidation of the earnings of the two roads. How long such an arrangement can be made to hold between two large corporations like these is a question, and we are inclined to think that the present forced settlement of the differences between them is but temporary.

Mr. Stockwell's Atlantic and Pacific Preferred fell back on Tuesday, in the easiest manner possible, from 36⅛ to 30½, since which time the dealings in it have been on a very moderate scale. It turns out that the sale of Western Union Telegraph Stock belonging to the company was made for the purpose of providing means for the purchase of a controlling interest in the Cuban telegraph line. The action of the President in disposing of the stock was approved at a subsequent meeting of the Board of Directors by an almost unanimous vote. The great element of weakness to the stock market just now is the absence of any considerable short interest. The "bears," having a vivid recollection of their experience in the Northwestern "corner," seem timid about selling short; the "bulls" have found but a limited market for their stocks when they have advanced prices, and outside operators are acting in the most prudent manner possible, by leaving the market to the professional speculators of the street. At prevailing prices there is no incentive for the outside public to buy, and, all things considered, we are inclined to believe that the market will fall considerably before any well-established rise can take place.

The following shows the highest and lowest sales of some of the leading stocks at the Exchange during the week ending February 15:

	Monday.		Tuesday.		Wedn'day.		Thursday.		Friday.		Saturday.	
N. Y. C. & H. R.	104¼	105¾	103¾	104⅝	102¾	104⅝	103	103⅝	103⅛	103⅞	102⅞	103⅞
Erie	65½	66⅜	65⅛	66¼	63	65½	63¾	64⅜	64⅛	64⅜	63⅜	64⅛
Lake Shore	95¾	96¾	96⅜	97⅜	94⅞	96⅜	95⅞	96½	96¼	97¼	96½	97⅜
Rock Island	113	113⅝	112⅞	113⅜	111⅞	113	112¾	112¾	112¾	113⅛	112½	113⅜

Western Union	87⅞	91	87⅛	89¼	86½	87⅝	87⅜	88⅜	87⅛	88¾	87½	89
Pacific Mail	73⅞	75¼	74	75	73½	74⅝	74½	75⅛	74⅜	75½	72⅞	75

The cash subscriptions to the new 5 per cent. bonds are stated by the syndicate to have amounted to over $100,000,000. That they amounted to no more is a matter of regret, and we may say of surprise, to the public. It by no means follows, however, that the bonds will not be taken before the option of the syndicate expires, for the members of it are amply able to take what remains, and they would probably do so should outside subscriptions not absorb the loan, in preference to having it published to the world that they had failed in their negotiations. The market for Government bonds has been rather dull in consequence of the unsatisfactory and conflicting information received relative to the negotiations of the 5 per cents. Prices have slightly fallen off, and at the Treasury bond purchase on Wednesday the entire amount of 5-20s advertised for was purchased at and under par in gold.

There has been rather more business doing in Southern State bonds, but no important changes have taken place. Tennessees are lower in consequence of a recent decision that the new issues of bonds will probably be made receivable in payment for taxes and debts due the State, thus reducing the cash payments. The matter will be definitely settled by the decision of a higher court to which it has been taken.

The railroad bond market has been active, with a good demand from investors for the better class of bonds dealt in at the Exchange. New loans are reported to be in better demand by the agents engaged in their negotiation.

The gold market continues stormy, being still manipulated by a clique which is said to hold twenty millions. On Saturday the price reached 114⅝. The imports of the last week are the largest this year, amounting to $11,304,000, and are said to be "about the third largest in the history of our foreign trade." The shipment of specie for the week was $759,802, making the total since January 1, 1873, $9,804,906, against $1,777,183 for the same period in 1872, $5,481,229 in 1871, $4,350,863 in 1870, $5,352,395 in 1869, and $10,686,491 in 1868.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 27, 1873.

The Week.

THE Poland Committee's Report, submitted on the 18th, is hardly worth discussing. They find—1st, That Oakes Ames was guilty of selling stock in the Crédit Mobilier to members of Congress at prices much below its real value, with intent to bribe. 2d, That James Brooks procured fifty shares, well knowing that he got it in order that his vote and decision might be influenced both as a member of Congress and as Government director. Mr. Blaine they exonerate *in toto*. Mr. Dawes took his stock and something in the way of dividends, but then "backed out," settled, and received as a net result of the operation only ten per cent. for his money. Mr. Scofield took some stock, received some dividends, backed out, and settled, though on what basis the Committee are unable to report. Mr. Bingham kept some of his dividends, but returned his stock; Mr. Kelley also received and kept dividends, as did Mr. Garfield. None of these men, however, had any corrupt motives in buying the stock, or knew what sort of a concern the Crédit Mobilier was; the Committee accordingly recommend the expulsion of Brooks and Ames. The question with regard to the other members, whether, inasmuch as they did know that the Union Pacific was to be built in great part by Government money, they were not in common decency bound to enquire what the Crédit Mobilier was, is not discussed.

With regard to jurisdiction, the Committee decide, what is undoubtedly the case, that the House has power to punish for offences committed by its members prior to the election. General Butler, however, who is said to have been retained by Ames in the matter, does not think that the House has jurisdiction. When the Poland report was submitted, Mr. Butler got a resolution passed directing the Judiciary Committee (of which he is a member) to ascertain if there was anything in the evidence making necessary the impeachment of any officer of the Government. Under cover of this direction, the Judiciary Committee (the fourth, if we remember right, to which the Crédit Mobilier has been referred) reported through Mr. Butler that the House had no jurisdiction, and cannot expel anybody. The characteristic impudence of the manner of getting in this argument—in a report in which it was as relevant as it would have been in a chapter in Luke—at first rather distracted attention from the monstrous character of the doctrine laid down, which is in effect that if a member of the House is caught picking pockets in a Washington horse-car, the House may not expel him, because the act would be merely an immoral act, and immorality is not authoritatively laid down as making a man constitutionally ineligible to Congress. Bloody murder, incest, and parricide are other causes of disqualification which the Constitution ought to mention. Of the committeemen who acquiesced in this attorney's plea in behalf of Oakes Ames, one, Bingham, is deeply in the Crédit Mobilier mire himself; another, Voorhees, "The Tall Sycamore," etc., goes out of Congress in a few days; a third, Eldridge, is another Democratic legal light of small magnitude; a fourth is Butler. What will be the upshot of all the confusion into which this national disgrace has now been brought no one ventures to say. The Wilson Committee report the "in trust question" in favor of the Government, which practically declares the Union Pacific bankrupt.

The case of Mr. Colfax has, with each new bit of evidence, grown worse rather than better. In his attempt to explain the deposit to his credit of the $1,200 on June 22, 1868, he has been obliged to show that he was in the habit of receiving from Nesbitt, about that time, sums of money, partly for his own expenses, and partly for the expenses of the campaign of that year. Nesbitt was a contractor, who furnished the Government stamped envelopes, and his motive in sending $4,000 to Mr. Colfax (to give that gentleman the full benefit of his own evidence) was his ardent admiration for Mr. Colfax's success as being in some sort the apotheosis of a practical printer, Mr. Nesbitt having been of that craft. Unfortunately for the Vice-President, his story about receiving part of the $1,200 in a $1,000 bill seems to be rendered even more doubtful than it originally was by the fact that the only thing that he can prove he received from Nesbitt at the time was a draft or check for that amount. His deposit on June 22, however, was in bills. Altogether, Mr. Colfax's reputation is in a hopeless condition.

All accounts agree in confessing that the delegation of Kansas politicians who have been on at Washington testifying about Caldwell and Pomeroy were not a comely and prepossessing lot of gentlemen; but, if we may trust the best Administration correspondents, they must have been physically and morally loathsome in a marked degree. What has helped Caldwell, says one correspondent, is the appearance of the Kansas witnesses and attorneys. One of these creatures, it appears, has been heard to say that in case Caldwell could be expelled the Senate, he, the attorney, or "the man Simpson," as the correspondent calls him, was going to succeed him; and the correspondent remarks that the sight of this Simpson walking about under the eyes of senators has done something to reconcile senators to the continued society of Caldwell. Simpson is also a "conspirator," the object of his plots being Caldwell. For these and other reasons it is now thought that the injured Caldwell will not be allowed to abandon his seat. By-and-by, when a man wants to get expelled from the Senate or House, and really means business, he will cause to be published in one daily newspaper printed in the county in which he resides, and one daily newspaper printed in the District of Columbia, a notification to all men that on such a day, at such a place, articles of agreement were signed between him, Samuel C. Pomeroy, or Oakes Ames, or Alexander Caldwell, or Schuyler Colfax, or whatever his name may be, party of the first part, and So-and-so, party of the second part, to perform certain acts of bribery and corruption, and that such acts have been performed before So-and-so, a judge of a court of record.

The contest for the Massachusetts senatorship appears to be of doubtful result so far, and to be arousing a great degree of interest. Not that the people are so much excited, we suppose, but among the politicians, and in the newspapers, deep is calling unto deep at a great rate—the Massachusetts Club, the Custom-house, the Third House, the *Advertiser* and the other journals, the Post-Office, and various other institutions, making a great noise. According to the *Commonwealth*, which has relations with the Treasury Department, Mr. Boutwell, whom the *Commonwealth* asserts to be "like the wise father of a large and diverse family," so good is he at composing jars and quarrels, is found fault with by some people because, being a natural-born peacemaker, he consents to be on good terms with "an impulsive or even an audacious member" of his happy but diverse family. This accusation, as we gather from the journals which oppose Mr. Boutwell, refers to the alleged fact that Mr. Boutwell and the impulsive Butler have been colloguing together, and have made a pact which shall enure to the benefit of both gentlemen, help Judge Richardson into the Treasury when Mr. Boutwell

goes out, and put an end to that "localization of Butler in Essex County" which the decenter Massachusetts politicians have only with much vigilance and diligence maintained. The *Advertiser*, which may perhaps be against Boutwell from dislike of Butler and aversion to a Butler-Richardson-Boutwell political syndicate, is in favor of Dawes, and declares that if things go on for a fortnight longer as they have been going since the Legislature came together, Boutwell will lose his vaunted strength, and Dawes will be elected on the first ballot. But to say so, and to urge this result, the *Advertiser* appears to think it necessary to take so ingenious and so peculiar a view of the Crédit Mobilier business, that exactly what weight to attach to its vaticinations we do not know.

According to the *Advertiser*, had it not been for the courage and far-sighted faith of Mr. Oakes Ames, we should not have had our Pacific Railroad; or, at all events, we should not have had it so soon as we did get it, and, on the whole, our displeasure at Mr. Ames's pecuniary transactions is one more melancholy proof of the ungratefulness of republics; while the popular conviction that numerous Congressmen have been guilty of corruption and of falsehood, or something so very much like these things as to baffle casuistry, is, according to the *Advertiser*, a most cruel and perverse piece of injustice. Meantime, while the fight rages between the Boutwell men and the Dawes men, there is some talk of compromise candidates. Of these one is Mr. Sanford, Speaker of the House, known as yet to local fame only, whose friends are circulating a printed appeal in his behalf. Another is Mr. William Whiting, a gentleman of wealth, a lawyer of some sharpness and small political experience, a member of Congress elect, a former Solicitor of the War Department, and the author of a not much admired book on the war power granted by the Constitution to the General Government, and which advocates some very dubious extensions of that power. But we hear little serious talk of any candidate whose election would maintain and advance the credit of the State, although Judge Hoar, for one, is mentioned. Whether or not Massachusetts owes the country some such man may perhaps be profitably considered in the light of such a list of recent Massachusetts statesmen as this one: Mr. Oakes Ames, Mr. John B. Alley, Mr. N. P. Banks, Mr. B. F. Butler, and Mr. Ginery Twichell, not to mention the Crédit Mobilier stock held by one of the candidates for the vacant senatorship, and that held by the wife of the outgoing senator. We should recollect, too, that it was Massachusetts that furnished Kansas and the country with Mr. Samuel C. Pomeroy, who has just covered us all with such glory.

The Hon. Ginery Twichell of Massachusetts has given the latest illustration yet made public of the extent to which Congressmen have become demoralized by the habit, now long prevalent, of going to their places not as lawmakers acting for the public interests, but just precisely as before their election they used to go down to the counting-room of their shoe and leather house, or salt-works, or rolling-mill, or bunting manufactory, or other tariff-favored industry, whatever it might be. Mr. Twichell is a practical "railroad man," and he is in Congress as such; that is to say, he knows thoroughly that branch of the railroad business which largely consists in opening up by means of a railroad a new region which needs opening up or does not need it, but the opening up of which in any case leads to the possession by the railroad company of large quantities of public lands bestowed upon it by Congressional grants, which its officers in Congress beg and buy. Of one such road Mr. Twichell is the President, and the bill which he brought in he was very anxious to see passed—"as it would effect a saving to the Government," or for some other sufficient reason. He was so anxious that he is reported as having gone down to the tellers where members were passing through to be counted on the "Nay" side of the vote, and personally expostulated with honorable gentlemen and begged them to change their votes. Upon this one Democratic member is reported to have remarked that "he had no objection to a railroad president's voting for his own bills"—and we dare say most mem would say this without a trope—but that he thought lobbying for them was a little too much. Another Democrat, Mr. Cox, of New York, said that until then he had never seen anything so disgraceful during the whole term of his Congressional service. Mr. Twichell had previously been rebuked by the point of order made against him that a member should not vote in favor of measures which would affect his pecuniary interests, but it was the second rebuff that abashed him; and what probably abashed him even more was that his bill failed to pass.

Never before in the history of the country have there been three United States judges liable to impeachment and removal, but sure enough that is our case now. Judge Durell in Louisiana has been incidentally investigated by the Senatorial Committee on the affairs of that unhappy State, and although three reports were made, of varying tenor in several respects, they all agree in charging him with usurpation of power and an outrageous stretching of his jurisdiction in setting up the Kellogg or Custom-house government. Judge Sherman's case continues as lamentable as ever, and no hope for him, or rather for the bettering of his defence, is visible. That he or Durell are to suffer, however, there is not at present any certain indication. Worse off appears to be Judge Delahay of Kansas, an old gentleman of extraordinary humors, who is undoubtedly to be impeached, unless he resigns, which latter course his family are urging upon him, without as yet securing his assent. The senator-elect from Kansas, Mr. Ingalls, has testified that on one occasion when it was very necessary that certain processes should issue from the judge's court, he found the judge drinking heavily and the court regularly shut up each day without any business transacted. After asking the officers of the court and many other persons what he should do, he was at last informed that he had better give five thousand dollars to the judge's son-in-law (now Governor of Kansas) as an inducement to him to get the old gentleman into the court-house. This was accomplished, and the processes issued one evening after dark. We may add that Mr. Osborne was paid by a draft on Mr. Ingalls's clients, which they repudiated, and Mr. Osborne brought suit. Altogether, what with Kansas judges and governors and lawyers, and other official gentlemen in various places, we may conclude that Dr. Cumming has some color for asserting as he does that his powers as a prophet ought not to be discredited; for though the world is not destroyed yet, we are justified, he says, in considering the past year rather remarkable.

The last year has been fruitful in revelations of the rascality that infects nearly every American Legislative Assembly from Topeka to Charleston, and from New Orleans to Washington, and Harrisburg, and Albany, and Boston; but, after all, the case of the New Jersey lobby and the reading clerks who put the eighth section into the Stanhope Railroad Bill has hardly been surpassed. Our readers will recollect that we commented on this at the time, and that our columns contained some correspondence on that subject under the head of "A Five Million Dollar Swindle." We see that the courts have just given the job a quietus, temporary or permanent. We have no opinion to offer on the important question which may probably have been at the bottom of this particular piece of knavery. That New Jersey should have a general railroad law, and that the Pennsylvania Central road should not be allowed a monopoly of the railroad transportation across the middle section of New Jersey, are propositions to which assent may be given or withheld. But the way in which it was sought to give a share in this business to the corporation which got the Stanhope Bill

through the Legislature last winter, was a way about which there can be only one opinion. What the Corporation's methods were is not publicly known; but it is known that the House and Senate passed a bill for its benefit, and that when the presiding officers of the House and Senate had certified the bill and the Governor had given it his approval, it was found that between the bill's passage by the House and its signature by these three officials a section (the eighth) had been interpolated, with nobody's knowledge except that of certain outsiders and a clerk or two. This section changed the legislative grant of very petty powers into a very large and liberal grant, and made the little Stanhope railroad charter a charter under which the corporators could do pretty much everything, and certainly could make themselves a very dangerous rival of the Pennsylvania Central Company. This latter corporation at once brought suit, and it may be supposed and hoped that the clever and sagacious gentlemen who asked for a popular subscription of five millions to their stock did not get much money from the public. The Vice-Chancellor of the State has just voided the charter, not, however, on the ground of its fraudulent obtainment, but without going so far as to touch that matter, which, we believe, is to be the subject of a criminal investigation. The interpolated section would in any case be void, the Vice-Chancellor says; charters must be strictly construed, as already has been thoroughly laid down; any ambiguity in the terms of the grant must be construed against the corporation; and this charter is made up of half a dozen grants for various specific purposes, and of these purposes the carrying passengers and freight through from New York to Philadelphia was not one.

The Committee of Seventy held a great meeting on Tuesday evening to protest against the new Charter now before the Legislature at Albany. The resolutions, which were originally drafted by Mr. Dorman B. Eaton, and subsequently adopted, with modifications, by the Committee on Legislation, warn the "workers," "engineers," and "wire-pullers," and "rings" of all parties, that "the higher public opinion" in politics, and especially municipal politics, can no longer be safely disregarded; and that the municipal machinery cannot be used any longer for party purposes, and condemn without qualification the proposed mode of making appointments, the proposed mode of removing heads of departments with the consent of the Aldermen, and the proposed removability of subordinates without cause assigned; call for a union of the Department of Public Buildings and the Fire Department, for the bestowal of the Comptroller's power on a Finance Department, composed of several members, and for the selection of the Public Administrator and the Counsel to the Corporation by some judicial authority; condemn the proposal to give the Police Board power to make unlimited and arbitrary examinations of citizens and to give the Superintendent the right to keep "a band of spies" under his own and sole control, and the bestowal of such extensive powers on a single Commissioner of Public Works—a device copied from Tweed. The fact is, however, as we have before remarked, and as the resolutions admit, the Charter is as good as is consistent with a fixed plan to keep the city offices for the Republican party, or rather for the new "Ring." If you object to any of their schemes, however, they turn round and impudently ask you to submit a Charter yourself if you do not like theirs. But if you did, they would swarm up to Albany and fight it to the last.

The reader of our daily papers might be excused for believing that the "amended charter" is the work of patient and sagacious reformers sedulously thoughtful of the welfare of the municipality; or, on the contrary, for believing that it is the work of a small gang of thieves. The reader should know, however, that we have many writers for our daily press, and that some of them get their wages from one sort of person and others of them get theirs from persons of another sort, and that each works accordingly. There is, however, a very general and vehement suspicion that the truth is about as follows, and it is none the less credited because few people are in a position to make oath to it in detail: The chicanery of the "Custom-house" Republicans is endeavoring to impose upon the Legislature at Albany a charter which will hand the city over to a new Ring government composed of Murphy and his friends, in alliance, more or less open, with O'Brien, the original Reformer who published the figures which ruined Tammany. This scheme of government for us dates back as far as last summer or autumn, and was then part and parcel of the Presidential campaign. Thus, it was commonly said last October and earlier that Mr. Commissioner Davenport was to have as a reward for his energetic suppression of Democratic false registry in this city the post of Superintendent of Police, and it is now openly avowed that he is to have that place. Mr. Havemeyer the Ring people do not dare to legislate out of office, perhaps because they are very well aware that he would be voted in again forthwith, as he was voted in against the Ring's former candidate O'Brien. He is not an ideal mayor, perhaps; and doubtless he represents a certain amount of old-fashioned prejudice, but just at present the old-fashioned prejudice in favor of honesty and against public plundering is strong in the community, and that also Mr. Havemeyer represents excellently. Apparently the Ring people's best reliance, next to secrecy and expedition, is the incredible purblindness of party zeal among the Republican country members. Zeal it must be called, unless we are to call the whole legislative body corrupt. Husted, a politician of a variegated record, who manages the Charter on its passage through the House, tells the members that it is a Republican measure, a measure brought to Albany by Republicans, a measure urged by Republicans, and a measure designed to favor Republican rule, and the House votes obediently.

The condition of "metropolitan journalism" is still very entertaining to the light-minded and still draws sighs from the judicious. The *World* has again called the editor of the *Times* "Jennings," and an "exotic and fat-witted fibber"; to which the *Times* replies that the *World* is a "low and wretched organ" and "a brownstone organ." The editor of the *Times*, too, having been invited to a public dinner where he met the editor of the *Evening Post*, was dissatisfied with a speech made by the latter in response to a toast, and took an early opportunity of abusing it as a "school-boy performance," containing "musty quotations," and as "boyish nonsense"; and announced a series of articles by himself on the Charter, which would save all the editors, and in fact everybody else in the community, the trouble of further discussion, and advised the *World* to borrow money enough to pay the expense of copying them. Whereupon the *Post* called attention to what was coming, and bade "the whole earth keep silence," and "the city lend its attentive ears," while "we thankfully learnt from the oracle the secret of our destinies." It also aggravated these observations a few days later by sarcastically declaring that the *Times* had at last explained that it was it (the *Times*) which had first published the Ring accounts. This maddened the *Times* beyond endurance, and it forthwith "invited" the editor of the *Post*, as the French say, "to buy a nail brush, put on a clean shirt, or at least that strange article which he believed was called 'a dickey'" (this uncertainty is very funny), and "refrain from spouting boyish nonsense at public dinners, take a bath, and go to bed for a week or two"; and, in the meantime, "left him to revel in a congenial state of muck." The resemblance of this stuff to the swill which old Bennett used to empty on the heads of the "Little Villain," and "Massa Greeley," and the "Chevalier Webb," is strikingly suggestive, and we commend it to the attention of reformers and philanthropists.

PUBLIC OPINION AND THE CURRENCY.

THE session is drawing to a close without any steps having been taken towards a return to specie payments. Indeed, beyond the introduction of Mr. Sherman's and Mr. Hooper's bills, Congress has given no sign of any interest in the subject, and these bills have attracted but little attention, owing to the certainty every one felt that there was no chance of their passing. The President is said to have set his heart, when he took office, on distinguishing his Administration by two exploits. One of these, the settlement of the *Alabama* question with England, has been successfully accomplished; the other, the redemption of the Government paper in coin, still lies in the list of things longed for but not greatly expected. Very unfortunately, too, the solitary sign of interest in the matter which has been shown by the Executive branch of the Government since General Grant's re-election has been an illegal expansion of the currency by the Assistant Secretary of the Treasury, with the subsequent approval or condonation of his chief. It is now rumored, but we hope untruly, that General Grant means to give this performance his own sanction also, by nominating Mr. Richardson for the Secretaryship in Mr. Boutwell's place, should the latter be elected to the Senate. Why this would be a very regrettable step, and why the retention of Mr. Boutwell in office so long is also to be deplored, we think it is not very difficult to show, assuming that a return to specie payments is desirable.

Perhaps no public question has ever been surrounded with such clouds of verbiage as the currency question, and this has had a good deal to do with making it so repulsive to many people that they will not look into it at all, and so hard of comprehension to the majority that it has been almost impossible to form anything like a well-defined public opinion upon it. There is, however, one great fact which governs, or ought to govern, all reasoning on the subject, and which goes far to furnish the key to the right policy with regard to it, viz., that what happened when we suspended specie payments was, that we *sold* to foreign nations the gold and silver which we had been previously using as our circulating medium, and determined to get on as best we could with a cheaper and less effective currency, namely, marked paper, which is of no value to anybody but ourselves, and which is liable to violent changes in quantity at the hands of the legislature. Now, returning to specie payments means *buying back* from foreigners, or taking out of our own production—which is the same thing—the quantity of gold and silver necessary to serve as before as a circulating medium. There is, therefore, no mystery about the process whatever in its essential features. There is a great deal of mysterious talk over the matter, and much use of sonorous epithets, but the thing itself is plain as a pikestaff. We are in the position of a peddler who, having been in the habit of travelling and carrying his goods in a wagon drawn by a horse, on being overtaken by adversity sold the horse and tried to get on with a donkey, and then, his troubles being over, is debating with himself whether he shall not put aside a portion of his profits and buy back the horse, so as to do more business over a wider area and with greater punctuality. In other words, our difficulty now is mainly a mental one. The advantages of gold and silver currency are obvious to everybody; the means of getting back are as simple as the means of purchasing a steam-engine; the questions we are debating, or ought to be debating, and would be debating if the quacks, schemers, and cloudy rhetoricians would let us, are: Are we willing and ready to buy and pay for as much gold and silver coin as we shall need? and, Shall we buy it gradually and by instalments, or all at once? Now, there is no doubt we can afford to do it. The surplus revenue devoted by Mr. Boutwell to the redemption of bonds not due, since General Grant came into office, would have supplied the means for it had we been in the right state of mind—that is, had there been a decided *animus* on the part of the community in that direction.

No such *animus* has hitherto existed, and for a variety of reasons. The paper currency was most unfortunately connected in the public mind with the war and its results, and for some years after the war all attacks on it were looked on with suspicion, as possibly dictated or colored by copperheadism. In the then heated state of the nation, it seemed that the concession that the greenbacks were bad currency involved the concession that Congress had no power to issue them, and loyal men therefore avoided one as much as the other. Moreover, the minute the paper fell below the value of gold, two powerful classes were arrayed against all attempts to go back to a gold currency—one the debtor class, who had borrowed in greenbacks and agreed to pay in greenbacks; the other the trading class, who had bought goods for greenbacks, and still held them. It is true these classes perhaps constitute only a minority of the community, but their interest in the promotion and maintenance of inflation is stronger, because more direct and personal, than that of all the rest of the nation together. A man who has bought cotton, corn, or real estate, or borrowed money, with gold at 114, is a match, as a "worker" against resumption, for fifty men who desire resumption on general, economical, or patriotic grounds. Moreover, the great "operators" and dealers in money do not take very much interest in the matter, and, so far as they use their influence, use it on the side of paper, because they are sharp and ingenious enough to take care of themselves under all systems, and indeed on the whole like the aleatory character of a paper currency, because it increases their materials for speculation and their chance of making happy strokes in the stock market. They like to feel, too, that they are not abandoned to the blind forces of nature when carrying on their "little games," but can, in case they are badly "cornered," get relief from Uncle Boutwell or Cousin Richardson. The class which cannot protect themselves against the consequences of a bad, cheap currency are the workingmen; but in this, as in many other things, these are the victims of their ignorance. They feel their malaise, but they do not know its origin, and so stand by silent, or occupy themselves with crackbrained schemes for enabling them to diminish labor without diminishing production, and to eat their cake and have it. Then, though last, not least, there runs through the whole community a secret, though slight, feeling—everybody experiences it—of dread about returning to specie payments—something like one's reluctance to plunge into a cold bath. They know it will be healthful, and that they will be better after it, but they hang back, and put it off, and think it will perhaps do as well next year.

To overcome all these obstacles, and rouse in the public mind an effective demand for gold and silver coin, some powerful and active agency was necessary, and in the absence of anybody in Congress who had any weight with the country as an authority on public finance, this agency could not have been so well supplied by anybody as by the Treasury. Had Mr. Boutwell, for instance, been a man familiar in any way with the history or problems of national finance, and had he thrown the weight of the Treasury from the beginning into the scale in favor of a prompt redemption of the greenbacks, as he threw it in in favor of the honorable redemption of the bonds, we do not doubt that by this time public opinion would have settled down into as strong a conviction of the necessity of coming back at the earliest moment to the use of gold and silver currency, as that into which it has settled as to the propriety of paying the bonds "dollar for dollar in gold." Another illustration of the unfortunate position taken up by the Administration towards resumption was afforded by the pains taken to get the decision of the Supreme Court reversed, binding corporations to fulfil their old contracts in gold. That decision was accepted by the country with pleasure; it exercised no disturbing influence on business; it asserted the claims of honesty, and it undoubtedly, if allowed to stand, would have helped to increase the amount of dealing on a specie basis, and to turn the public mind insensibly towards resumption; but the Administration, in the most reckless manner, and with great risk to the independence of the judiciary, procured its reversal, by way of provision for a contingency about as probable as an invasion of this continent by the Czar.

If Mr. Boutwell now goes to the Senate, or other place, it is to be earnestly hoped that General Grant will appoint a successor who is sensible of the overwhelming importance of giving the country a sound currency, and who is ready to labor for that end and that only, and will throw the whole force of the Administration into the business of preparing the country for it, and rousing the people into a sense of its necessity, and who will take up some plan for that purpose. What we need first and foremost is something which will commit the Government to the redemption of its overdue notes, whether by slow degrees or rapidly, and no longer leave it an open question whether it needs to redeem them at all, which has been the shame and scandal of the last eight years; and we have no hesitation in bespeaking for a scheme recently devised by Mr. J. S. Ropes, of Boston, the careful attention of all interested in the matter. Mr. Ropes proposes that the Government should call in all its legal-tender notes, which falsely promise to pay dollars on demand, and substitute for them other legal-tender notes, making promises the Government means to keep and shall prepare to keep, and then redeem these in instalments—say at the rate of $5,000,000 a month, beginning in January, 1875. This would be in fact a bona-fide attempt to purchase for the country gold and silver coin to be used in exchange, and to purchase it by degrees in such quantities as we could afford. Moreover, if the new legal tenders were redeemable on their face in this manner and at a day named, and in clearly manageable quantities, instead of at no time in particular, the Government and the public would be committed to a policy from which they could not recede without repudiation. To the argument that this gold and silver would go off again as before, we reply that it would not, if needed for the ordinary business uses of society—that is, if there was a corresponding diminution of other kinds of currency; and to secure this Mr. Ropes proposes to bring a process of pressure to bear on the banks, to force them to contract their circulation, of which we shall have something to say next week. But contraction is clearly part of the scheme, and has to be of any scheme of resumption, just as getting wet is an essential feature in taking a bath.

THE WAY CONGRESS DOES BUSINESS.

THE country is now in the midst of that period of legislative anarchy which, by the common consent of politicians, forms the concluding chapter in the history of every Congress. It must seem to the ordinary mind that the last days of a legislative body should be marked by unusual calmness, deliberation, and caution; for then its errors will remain beyond its own recall, and to a great extent practically beyond the correction of the succeeding Congress. But our professional politicians have reversed this self-evident proposition, and have deliberately decreed that during the last ten days of the session the "rules" may be suspended at any time, and that confusion, excitement, and reckless haste shall, so far as possible, characterize their proceedings. It is in this period that "jobs" and "riders" are "put through"; that commendable measures which have been slowly perfected and long awaiting action lose their precedence, to be jostled aside by bills that were introduced yesterday; and that legislation which the country needs has to go over because of the legislation under which the country groans. It is in this turmoil that upright men who really have the general welfare at heart become physically and morally exhausted and give up the struggle in despair; that "watch-dogs of the Treasury" like Mr. Washburn and Mr. Dawes cease to bark, or at best bark faintly—at the moon; and that the true professional who has learned to take advantage equally of rules and no rules, pounces upon his opportunities and makes his hay through these ten days of sunshine. The very multiplicity of the "jobs" and "riders" prevents public indignation from settling down upon any one, and throws an immunity around the author of each. Such phrases as "smuggled through Congress," "rushed through both Houses," confess the character of the legislation which courts and executive officers must afterward administer and all good citizens revere as "the law."

It was at this time that the *Tribune*, in the days of Mr. Greeley, used to thunder vigorously, and call upon the country to mark the men who were responsible for this and that job. But unfortunately this marking process, for several obvious reasons, never produced an effective result. In the first place, the skilful wire-pullers did not want to be marked, and managed to pass the most flagrant measures without the call of the yeas and nays. Consequently there was no one to mark, and every man except the mover was free to declare that he voted against the nefarious bill. In the next place, the election of the succeeding Congress was already over. Those members who were going out had little to care for being marked, and those who had been re-elected had a good two years before them wherein to rub out the marks and get up for themselves "a new record." There also remained the difficulty that the marking must after all be remitted to a member's local constituency, and there was a loose idea in the public mind that, if a member's constituency chose to send him up again, it was highly disgraceful to them, but did not concern the party generally. The adroit politician, too, took care that none of the jobs should directly injure his constituents, and if he could lobby-through a new post-office or custom-house or harbor or river improvement for his district, he was able to explain, *sotto voce*, that his peccadilloes were necessary to command the requisite support. Hence the policy of holding individuals to an accountability for the sins of Congress has never produced any practical benefit to the country, and has to all intents and purposes been given up.

But this want of political responsibility extends much further. The Republican Executive is not held to any accountability for the action of a Republican Congress, and though they be parts of the same political organism, a positive antagonism may exist between them. Thus, during the present Administration, we have seen Mr. Dawes denouncing the extravagant expenditures of the Secretary of the Treasury; the Postmaster-General's official recommendation for the repeal of the franking privilege pushed aside by his political friends in the Senate; the efforts of the President to reform the civil service treated with contempt and ridicule by his immediate supporters in both houses of Congress; the Postmaster-General's award in the Chorpenning case repudiated by a Republican Congress as fraudulent, but the Postmaster-General contentedly continuing to hold his office, and throwing the blame on a previous Republican Congress.

And this want of unity becomes even more noticeable in Congress alone. With the exception of the few revenue bills which the Constitution requires shall originate in the House, there is no approach to systematic labor. Yesterday a Republican Senate ratified the Alaska treaty, and a Republican House refused, or threatened to refuse, the appropriation necessary to carry it into effect. To-day we see the Senate originate and perfect and pass a bill for the distribution of the *Alabama* damages, and the House originate and perfect and pass an entirely different bill for the same object. Frequently the same bill will be introduced into both Houses about the same time, and will pass in each; but the Senate duplicate will not be acted upon in the House, and the House duplicate will not be acted upon in the Senate, and the measure will be lost, though both Houses voted for its enactment. There is somewhere in the reports of our Courts the history of a private claim of unquestionable merit, which was passed without opposition ten times by one House, and fourteen times by the other, and yet never succeeded in getting through both Houses of the same Congress.

Of the internal machinery of Congress, the parts that bear the closest resemblance to a directing intelligence are the Committees on Ways and Means, on Appropriations, and on the Judiciary. But these committees depend entirely upon the personal influence of their members. They are not accorded the authority nor held to the responsibility of providing legislative measures to meet public necessities. Occasionally when they do embark in the enterprise

of bringing in a well-considered and carefully-drawn statute, they find that their friends in the same House think nothing of cutting it to pieces, and that incongruous amendments hastily scrawled by members during the hurry of the two hours' debate will be tacked on to puzzle courts, and perhaps destroy the very thing sought to be accomplished. But apart from this danger, there are similar committees in the other House to be consulted, and they, though controlled by the same political party, may have the measure referred, and "smother it in committee," and treat it with as much indifference as though it related to the affairs of another planet. In Parliament, a member of the Opposition calls the attention of the "Government"—that is to say, of the majority—to some abuse, and it then becomes the duty of the Government to provide a remedy, and failure to provide one will be one of the sins for which the majority must answer to the country. In Congress, no one can be held to this direct accountability, and the country seems in danger of losing sight of the fact that the majority governs, and, if we would have it govern well, that it must be held to the responsibilities of government.

The business procedure of the two Houses is also made up of antiquated and complicated machinery not ill-adapted for the few intelligent and painstaking gentlemen that formed the first Congress, but entirely unsuited to our present condition of legislative affairs. The hall is not a place for deliberative debate, but a strange medley of reading, writing, and lounging rooms condensed into one. The rules seem designed to retard and complicate business and shut off all intelligent discussion. Hence it is that there is not a deliberative body in the world whose work is so little affected by the debates of its members; and hence it is that in Congress so many small minds acquire prominence and the control of affairs. As a great lawyer going into one of our police courts may find his solid learning speedily brought to naught by the quirks and quibbles of the quick-witted gentlemen who are familiar with the many small technicalities of the place, so a really intelligent mind in Congress, intent on some legislative end, finds that he is dazed by the Babel around and the legerdemain of rules and objections which it requires years of active practice to master. A leading position in Congress at this time does not imply any qualities of statesmanship, nor any knowledge of the affairs and events of the country, nor even any familiarity with statutes enacted by previous Congresses, but simply a nimble dexterity in the use of the means, with almost entire ignorance and incapacity as regards the ends, of legislation.

In the present excitement caused by the immoralities of Congress, it will be well for the public mind to be turned somewhat to the system by which these immoralities are nourished. As the case now stands, we furnish some three hundred and fifty men with the material for corrupting themselves in the form of subsidies, excessive imposts, and paper-money inflation; and we then enable them to do it by a working system that facilitates every irregularity that we seek to repress. There are some changes that can only be brought about by an amendment of the Constitution, such, for instance, as the election of United States Senators by the people; but there are others which the Constitution cannot reach, and which are already within our power to control. There is no reason why it should be even possible to "smuggle" and "rush" bills through Congress. The scandalous practice is the conclusive evidence of a vicious or defective system. It is just as possible to reduce the routine business of Congress to the limits of method and order as the business of any other body of men. The yeas and nays, which now can only be ordered by a considerable number of members, and which, in the House of Representatives, require forty minutes of time, can be taken by mechanical means in a single minute, and should be taken on the final question of every amendment and every measure. The looseness which now allows a lobby or a ring arbitrarily to put aside the claims of a hundred poor men, to take up, without a minute's warning, the subsidy of a rich corporation, must yield to some system which, on the one hand, will do away with such surprises, and, on the other, will secure to every citizen some approach to equality before Congress. During the past four years the country has morally won the battle of civil-service reform, though the work is far from perfected; and it will not be surprising if, during the next four years, the professional Congressman should himself be attacked within his own entrenched camp, and reform be cruelly forced into the Halls of Congress.

ENGLISH OBJECTIONS TO CIVIL-SERVICE REFORM.

A YOUNG man who describes himself as "an American resident in England" for some years, has written a letter to the *Times*, of this city, stating what he is pleased to consider the objections against the competitive civil-service system brought to light by English experience. The letter does not make the main point very clear; but it is an undoubted fact that certain English critics have found fault with the competitive system, and their criticism is entitled to consideration, because England is the only country purely "Anglo-Saxon" in which the experiment of competition has been tried, and because the condition of the civil service before the reform was about if not quite as bad as the condition of the service in the United States at present.

The English objections to the system are, first, that competitive examinations result in the selection of men who are too good for their places; second, that they result in the selection of men not good enough for their places. The first objection is very easily answered. If it be true that the applicants for the lower grades of official employment in England are in many or in a majority of cases men of good education, who have been to college, and who are fitted for better work, all that it is necessary to say is, Why do they apply? Unquestionably, because, in their opinion, the certainty of tenure and of promotion, as well as the respectability of the occupation, and the interest which a political career possesses for every one, make up in their mind for the smallness of the salaries and the tedious character of the clerical work to which they are at the outset confined. This objection answers itself. It is in fact ridiculous to suppose that men voluntarily enter a profession which they know to be beneath their talents.

The second objection may be divided into two heads: first, that the competitive system, by taking intelligence as its prime test and leaving out of view the moral qualities of applicants, must in a great many cases result in the selection of dishonest men for responsible positions in which honesty is just as much a necessity as intellect; second, that even for intellectual qualifications competition is a bad test, because the school of preparation for it is inevitably a "cramming" school, the aim of which is the stuffing by professional "coaches" of the embryo civil servant's mind with all sorts of useless learning in the shortest possible time. His studies have not been digested and become part of his mental constitution; they have been rammed into his mind as a charge is rammed into a gun, to be discharged at a given moment, leaving the implement as vacant as before.

With regard to the moral objection, it would be quite safe to say that the surest means of securing an honest civil service is a rigid system of supervision, and immediate dismissal for malfeasance. It is admitted, of course, by everybody, that a certificate of good moral character, whether given by influential men in the community in which the candidate lives, or by his intimate acquaintances, or even by his clergyman, amounts, in this day and generation, to nothing at all; but it might as well also be admitted that the number of abandoned "scallawags," "bummers," or "whiskey thieves" who would enter the ranks of a reformed civil service, and, in constant danger of exposure and punishment, long remain there, would be very small. Besides this, the number of abandoned rascals of eighteen or twenty years of age likely to apply for vacancies in the Treasury or Post-Office Department, knowing beforehand that they have nothing to look forward to but a life of honest toil, is extremely small.

"Cramming" seems at first sight to be the worst stumbling-block of all. Here again, though, the objectors fail to remember that if the applicant shows after he has passed his examination that he is unfitted to perform the duties of his office, he would always be dismissed. "Cramming," too, is not an evil peculiar to civil-service examination. It is an evil which is sure to engraft itself upon any system which tests knowledge by examination. It has long been one of the difficulties of university education; and to-day, both in England and America, one of the most important questions connected with education is, how to get the benefit of examinations without at the same time enabling the student to coach himself through them. The only means thus far suggested of securing the object sought is that of concealing from the student the time of the examination as long as possible, so that he may be obliged to keep himself in a constant state of preparation. Whether this

would be practicable with the Government examinations may be doubtful, but we have never heard it suggested that universities should, because they cannot make examinations perfect, give up examining students altogether. As a matter of fact, all human examiners, whether the machinery they use be competitive or "pass" papers, are fallible, and all human examinations fall short of that perfect system of testing a man's fitness for his work in which the examinations, competitive and otherwise, come at absolutely unexpected and even startling moments, which lasts until the breath is out of the body, which is always ending and always beginning, and which we call life. No doubt the true way to make a perfect civil service for any country would be to admit no one whose reputation had not been finally established by death; as we cannot have an ideal service, it is just as well to have a tolerably near approach to a good one.

And this brings us to the real point in the whole discussion, and that is, that our only choice lies between the competitive system and the present "régime of corruption, ignorance, bribery, waste, and extortion." This is the alternative, as the very slightest consideration of the history of civil-service reform in England will show.

So long as the aristocratic period lasted in England, that is to say, so long as the country was really governed by the landed families, patronage was in the hands of those families and of the crown. The civil service of the country was not, down to the present century, very large, and the abuses of the system were not much felt. It seemed only natural that the families who were the real sovereigns of England should distribute the offices of England. Indeed, if they did not do it, who would? Therefore, whenever any offices fell vacant, in the army, the navy, or the church, or anywhere else (the military and ecclesiastical services were the real antitypes of the civil service of to-day), they divided them among their younger sons, their brothers-in-law, and their wives' cousins, or other political adherents, without fear or shame.

This state of society has completely passed away, both in England and in this country. The sovereign is the popular will, or, if you please, the complicated machine for getting at the popular will known as Parliament. The revenues of both countries have become enormous, and the corps engaged in the collection and distribution of them perhaps the most important of all the Governmental bodies. Official positions in it are valuable to any one. In a democratic age, too, in the theory of society, every one has the right to an equal chance in obtaining political as well as any other position, and the only question is, how to reconcile the necessities of this theory with the necessity of having the most important Government offices filled with the best attainable men. Competitive examination is one way, and it has been tried in England. Another way is that of appointment by an elective executive, without other means of information as to the character of the applicants than he may be able to gather by his own acquaintance with them, or from the advice he gets from those who know them better. This system is an utter failure; first, because the examination into the fitness of applicants would take up the whole time of the executive, if properly carried on, and, secondly, because the information he gets from senators and representatives to aid him is totally worthless, the senators and representatives managing their nominations exactly as the great English families used to manage theirs, with the difference that the English had at least the advantage of the presumption of political skill on the part of the nephews, wives' cousins, and brothers-in-law, while we have the disadvantage of the profoundest political ignorance. We have also the disadvantage of living in an age in which the possession of any political position is the easy means of acquiring a fortune. The English system is more successful, as it is more just and democratic than our own, and these are the two between which we have to choose. If not, what other can be suggested which is better?

ENGLAND.

LONDON, February 7, 1873.

LIKE all Englishmen of well-regulated minds, I read my *Times* every morning, and once a year I receive a shock of rather equivocal character. Once more the great tide of parliamentary eloquence has flowed back in an impetuous stream, as the so-called "bore"—a name of evil omen—rushes up the lower reaches of our rivers. The columns which yesterday were barren and desolate, where one had to pick one's way from one fragment of useful information to another, past dreary details of murders, accidents, and lawsuits, are now clothed to repletion with the rhetoric of our parliamentary leaders. Alas! the stream is very turbid and perplexed, or, to drop metaphor before it is worked to death, there is not much satisfaction to be derived either from the Queen's Speech or from the various comments to which it has given occasion. The proceedings on the first day of session are far from inspiriting. They are little more than a pompous parade of the hostile forces which precedes a general action. Perhaps it would be difficult to imagine a more uncomfortable position than that of the young gentlemen who are annually put forward to move the addresses in answer to the Queen's Speech. They are, in the first place, clad in some preposterous uniform, as deputy-lieutenants or officers in some militia regiment; and an Englishman in a uniform is always a prey to the most exquisite discomfort, unless he is kept in countenance by some hundreds of other victims. In this case he stands out in brilliant relief against the extremely free and-easy costume of his brother-members of Parliament, and the strongest conviction in his mind is that he looks like a fool. The chances are ten to one that his conviction is thoroughly well founded. Then he has to make a speech about things in general, and to take for his text the Queen's Speech, which is proverbially the most inane species of composition known to humanity. Nobody has ever been known, since the earliest beginnings of English history, to gain any higher success in this performance than is implied in being strictly inoffensive. However, dreary as it is, it is not much worse than the more elaborate display which follows. The leaders of the opposition make their curtseys, and are duly met by the leaders of the ministerial forces in the two Houses. But neither party really wishes to show its card at this early period of the session; and accordingly the argument diverges for the most part into some safe generalities, where the greatest amount of talk may be got through with the least danger of any practical application. Last night, for example, a great deal was said about the Geneva arbitration. I have not, I must confess, had the heart to read it through. I would as soon read the debates upon the trial of Warren Hastings or the repeal of the corn-laws. Doubtless, there were a good many opportunities for little personal remarks, which gave more or less satisfaction to the hearers; but the subject itself is dead and buried, and the less one sees of its ghost the better.

A hint or two, however, may be derived from the Queen's Speech as to the probabilities of the coming session. A good many subjects for legislation are briefly suggested; such, for example, as the formation of a Court of Appeal, the revision of our system of local taxation, and the alteration of certain clauses in the Education Act. Each of these may, so far as we can tell, lead to discussions of an important character, or they may lead to nothing. This time last year we were all expecting that an exciting session would follow, and that Government would be very fortunate if it avoided a complete upset. Those expectations were falsified, chiefly, as it appears, owing to the complications about the Washington Treaty. Equally unexpected developments may of course take place upon the present occasion. So far, however, as the wisest prophets can tell us, and their opinion seems to be shared by the Ministers, the real battle of the year will be waged upon the question of Irish University Education. All manner of fierce passions are waiting for the signal to get up as pretty a fight as has been seen of late years. All last session the difficulty lay in the background, and in spite of Mr. Fawcett's efforts to bring it to a discussion, Government was able to shelve it for the time. Now, however, Mr. Gladstone has to show what is his method of grappling with this most ticklish business that has hitherto presented itself. The question, indeed, of arranging a university system is not, at first sight, so great a problem for a statesman as the disestablishment of a church or the reorganization of an army. But the difficulty of such a question is proportioned not to the amount of detail necessary, but to the bitterness of feeling which is excited. When it was once settled that the Church should be disestablished, all that remained was to grapple with those complicated financial details in the mastery of which Mr. Gladstone has no rival. But here he will have to reconcile bigoted Ultramontanes and uncompromising Secularists, and to satisfy the conflicting aspirations of parties divided by curiously complex varieties of opinion. Will he go far enough to satisfy the demands of the priests? Then he will have against him not only the Protestantism of England, but also the thoroughgoing Radicals, who have hitherto given him their votes, though all the time watching him with ever-growing suspicion. Will he attempt to rally the Radicals to his standard once more? Then he must count upon alienating the Irish vote, and, moreover, he will shock the prejudices of his own High-Church supporters. The probabilities are, of course, that Mr. Gladstone will produce, as usual, some very complex and ingenious plan, intended to satisfy everybody. He succeeded more or less in steering such a course in passing the English Education Bill, although the compromise then effected seems to have had the fate of most compromises, and to have embittered rather than pacified the antagonists. We shall see whether he will be equally successful on the present occasion; if he is, it must be admitted that he will have given a signal proof of parliamentary dexterity, though it may still be a question whether he has shown the genuine statesmanship by which permanent victories are gained. One could wish that he had in his composition a rather stronger dash of the Bismarck vigor.

Meanwhile, some indications of the future may be gathered from a plan put forward rather ostentatiously in the *Times*, and which may be regarded as an attempt by a judicious spectator to forecast the probable action of Government. The real pith of the matter seems to be that the Catholic priesthood wish to obtain a complete command of the higher education. They want to have a Catholic university which shall be fully on an equality with the Protestant and secular colleges, and they then trust that their spiritual authority will be sufficient to force all Catholic young men into their own fold, and keep them at a safe distance from Protestant contagion. Of course, the demand is put forward in the name of religious liberty; and the question is how far their legitimate demands can be satisfied without establishing a spiritual despotism. Mr. Fawcett has maintained that a sufficient concession will be made by throwing open the endowments of Trinity College to all sects, and by forming a governing body in which the Catholics will be fairly represented. Catholics have long been admitted as students and to take degrees, but they have not been allowed to hold fellowships or to have a share in the government. Such a change, however, is declared by the priests to be totally insufficient. Trinity College would still be tainted with Protestantism, and they would not allow their young men to incur the danger of such association. They wish to have the Catholic University which has recently been founded put in every respect on a level with Trinity College. Well, it is said, let a university be founded in Dublin after the fashion of the London University. Such a body is simply an examining board, authorized to grant degrees to anybody who applies for them. No, it is replied, this is still insufficient. This scheme would leave Trinity College and the so-called "godless colleges" precisely in their present condition, with all their endowments and privileges. The degrees of the new university would be considered as inferior to those granted by Trinity and by the Queen's University, and Catholic students would therefore not be on a thorough equality with Protestants. We must then make a further advance. An actual endowment of a Catholic university is not indeed to be thought of, for English public opinion would not stand it, and the plan of concurrent endowment or "levelling-up" was rejected on occasion of the disestablishment of the Irish Church. But we might, in the first place, throw Trinity College open, as the proposal to do so has already been accepted by its existing governing body. Then we might form a national university, which should be something more than a mere examining board; it should affiliate all the existing colleges in Ireland, and have the sole right of conferring degrees; its governing body should be composed of the heads of all the subject and affiliated colleges; and, finally, it should receive considerable endowments, in order that it might bestow a sufficient quantity of prizes. These endowments might be derived partly from the existing endowments—that is to say, chiefly by taking a considerable slice of the endowments of Trinity College—and partly, it may be, from the balance left from the revenues of the disestablished church. This scheme, it is suggested, would give to the Catholics all they can fairly ask, without falling into the error of concurrent endowment; and it is urged, as against Mr. Fawcett's plan, that merely to open Trinity College in the way he proposes would still leave it infected by a certain Protestant flavor, and would therefore give a claim to the Catholics for an endowment of some of their institutions by way of balance.

I have dwelt upon this scheme, because it seems highly probable that something of the kind will be proposed by Mr. Gladstone, and because it illustrates the kind of demands which have to be satisfied. Any such scheme, however, would encounter a very large amount of opposition, for practically it would amount to making a considerable concession to the Catholic hierarchy. It would enable them to keep their students together under a strictly ecclesiastical system, and yet to obtain a considerable share of the endowments. It would seriously depress Trinity College, and throw a corresponding degree of influence into the hands of the priests. The proposal might be adopted in the name of toleration, but its natural effect would be to strengthen religious animosities by throwing difficulties in the way of a combined educational system. Catholics would be more than ever educated at one place and Protestants at another, and the concessions dictated by principle would be used against liberalism. But then, are we justified in looking behind the general principle, and asking in what spirit our concessions will be used? That is a very wide question, the discussion of which would lead to so many disputed points in political theories that I need go no further at present. I will conclude, therefore, with the remark that the materials of a very pretty quarrel are provided, and that there are plenty of people only too ready to take advantage of them. There seems to be a very general impression that this will be the last session of the present Parliament, and that the question of which I have been speaking will be the prominent topic for hustings speeches during the approaching autumn. And yet a political mountain so often gives birth to a mouse that no cautious observer would be very confident in such a prediction.

Correspondence.

PECULIAR USAGES OF ENGLISH—OBSERVED IN NORTH CAROLINA.

TO THE EDITOR OF THE NATION:

SIR: Thinking it may be of general interest, I send you the following list of words and phrases which I have heard in the central district of the State of North Carolina. Those marked † may be infrequent.

Many well-known Southernisms prevail here, such as, *a heap* for a great quantity, *to tote, to reckon, nary, right smart, rock* for stone, a *branch* for a brook, *mighty* for very, *Mistress* for Mrs., *like* for as if, *done* in such combinations as "done gone."

Among peculiarities of pronunciation are *fotch, chimbley, mushmillion, trozet* for towards, *horror* for harrow, *tuk* for took, *mought* for might, *east* for yeast, *untwil* for until, *hit* for it, *whingt* for wing, *to holp* for to help, *rense* for rinse, *rashuns* for rations, *whop* for whip, *crap* for crop, *scrop, strop,* and *wrop* for scrap, strap, and wrap, *pore* for poor, *Ivins* for Evans. Of peculiar accent are *artic'-le, vehic'-le, discip'-line,* the *contents'*.

The common salutation is *Howdy?* (rhyme with rowdy) instead of "How do you do?" It is also used substantively; as, to send howdy. *Christmas gift* is the holiday salute instead of Merry Christmas. *Tricks* is used for toys; *snack* for a lunch; *sorry* for poor-looking, as a sorry horse; *no-account* for worthless, as a no-account clerk; *trifling* of unsubstantial things, as trifling lumber which is too thin for service—also, cheap, inferior, spoken both of things and of persons; *deceiving* for deceitful, as a very deceiving hole in the road; *rapid* of a person instead of his utterance, as he was rapid at first, but cooled off soon; *worried* for wearied; a *rising* for a swelling; a *misery* for a pain; a *lick* for a bump, as the baby fell on the floor and got a big lick; *to go at a big lick* for to go at a rapid rate; *in cahoot* or *in kerwhop* † for in partnership; *to pleasure* for to please; *quit* for stop, as quit pushing; *turn me loose* for let go of me; *go to do* for intend to do; *to be bound* to do a thing which cannot be helped, although not desired nor intended, as to lose one's way; *catawampus* for crooked, as the shawl hangs or the row of corn is planted catawampus; *cataspin* † for correspond, as to make one side of a cart cataspin with the other; *must* for may in asking permission; *excusing*† for except, as all the horses excusing six or seven; *to let in school* for to open school, as the correlative to letting it out; *to back a letter* for to direct it; *to strip a building*† for to nail on strips or battens; *weather-board* for clapboard; an *outside* for a slab; *slab* for a piece of wood rived thin four or five feet long, serving as a shingle or as a fence paling, the word *paling* signifying a single picket. A fence is sometimes called a *walling*; a *running fence* is one in which the planks are attached horizontally to the posts; a *panel* is the section of a fence between two adjacent posts or one length of rails of a worm fence; *to lay the worm* of a zigzag fence is to arrange the lowest course of rails on the ground.

To ask *how much* an article is would not generally be understood to refer to its price, but to the size or quantity of it.

Which is sometimes almost equivalent to whereupon. "All ov em is marrid except Gineral B., *whitch* he has promist me when I cum down agin to make a visit with me to Racket Holler to see the girls."

The judge or solicitor of a migratory court is said to *ride* his district. A clergyman is said to *hold* a revival, to *have* a baptizing, and to *preach* a funeral. The first act of new converts is to *profess*. A wedding entertainment is an *infare*.

Among the constellations are *the Gates*†, *Peter's Plow-Hoe*†, *Job's Coffin* (the Dolphin), and the *Ellenyards* (Orion), supposed to be a corruption of *L and yard*. An hour *by sun* is an hour after sunrise or before sunset; *sun-up* is used for sunrise; *soon* for early, as I rose soon this morning; the *evening* begins at noon or dinner-time, and ends at dusk, after which it is night. Pleasant weather is called *pretty weather*; a rainy or snowy time is *falling weather*; clearing up is called *fairing off*. *A season* is a time when the rain wets the ground sufficiently for plants to be set out, though the farmer is sometimes said to make a season with his watering-pot.

From the gardeners we hear of *collards, cymlings, butter beans* for Lima beans, *snaps* for string beans, *ground peas, goober peas* or *goobers* for peanuts, *roasen* (*roasting*) *ears* for green corn, *greens* for boiled cabbage or collards, *sallet* (salad) for boiled turnip-tops, mustard, etc., *creasy*† (no plural) for cress, *baydases, moodases,* and *shipwrecks*† for kinds of sweet potatoes which originated from Barbadoes and Bermuda and which were taken from a wrecked ship, *English grapes* for Isabellas and other cultivated grapes, *Eng-*

lish currants to distinguish the cultivated fruit from a wild shrub, *English* or *garden peas* to distinguish common peas from *cow-peas* or *cornfield peas*, which are really a kind of bean; *pressed*† or pressed peaches or plum-peaches for cling-stones. Fruit trees are said to *hit* in those years when the crop is full.

Potato draws are the sweet-potato sprouts which are drawn for planting out of the bed where the seed potatoes have been buried; *grabbling* is taking out the large potatoes from a hill by hand, leaving the others to grow. *Chopping cotton* is hoeing it so as to thin out the overcrowded rows; the plants which are then left standing are called the *stands;* the crop is said to be *pitched*† when planted, and *laid by* when the work of its cultivation is over, and it requires no more care till picking time. *Rough feed* is the coarser kinds of food for stock, as fodder, shucks, or hay in contrast with corn and oats; *lightwood* (the *w* is usually silent, and the last syllable sometimes pronounced *urd*) is the heart-wood of pine, which by the checking of its growth has become very resinous; *doting-hearted* or *doty* wood is wood partly decayed; *wind-shaken*, used primarily of trees, is applied also to persons who are a little cracked; *stob* (for stub?), a peg driven into the ground (*to stob* is to stab); *glut*, a large wooden wedge for splitting logs; *blue stone*, blue vitriol; *second-low-grounds*, low grounds just too high to be overflowed by the stream; *ridge-land*, land on a ridge. The size of a farm is often indicated by the number of horses required to tend it, as a *one-horse* or *two-horse* farm.

A *fice*, a *ficed*, or a *fowst*† *dog* is a cur; a *yard-dog* is one used to guard a house-yard; a Newfoundlander is sometimes called a Newfounder. The meaning of *crap-critter* is illustrated by a dialogue reported as occurring in the office of the Raleigh Provost-Marshal just after the war. "I wants nothing from you," said the old lady, "but my crap-critter that was stole Thursday's a week ago by your thievish soldiers." "Well, madam, if you will tell me what a crap-critter is, and where I am to look for it, I will do my best to have it restored to you, whatever it may be." "Where are you to look for it? Why, look in your own cattle-pens, where you won't find much that hain't been stole." "Ah, I understand now: it's a cow that you've lost; can you identify it?" "Lord sakes, who but a Yankee ever heard tell o' tending of a crap with a cow! It's a mule, man, that I'm arter, not a cow."

Among common domestic words are *fire-dogs*, *fire-room* for a room containing a fire-place, *garden-house*, *hippins* (diapers), *to suckle* (to nurse is not in use as its euphemism), the *crawling* of children and the *creeping* of worms, *gummery* for camphor, *bleaching* for bleached cotton cloth, *Norrud spin* for cotton cloth made at the North, *spun cotton* or knitting cotton for cotton yarn, as a *coat* for a woman's dress and *under coat* for petticoat, *to dip* snuff, *to whip* as a general term for overcasting instead of for one particular kind of it, *a turn* for an armful, *to smut* for to crock; *trash*, applied to things that are small as well as worthless, as the chaff and dust that are blown upon uncovered meat and butter in the market, so that *poor white trash* is a very contemptuous epithet.

The usual *oven* is an iron pot to be placed in the middle of the fire, with a cast-iron cover having a raised rim to hold fire-coals upon it. A platter is called a *flat*†, sometimes a dish. Everything which Yankees call a pail is here known as a *bucket*. The *pail* is a kind of tub with one of the staves projecting above the others for a handle; the *piggin* is of the same shape, but rather smaller; the clause "used as a dipper" in Webster's definition may give a wrong idea of its size, for it holds about as much as a well-bucket. The *noggin* is smaller, holding about three quarts, has no handle and has upright sides, while the pail and the piggin spread upwards a little; it is used as a dish-tub, hand-basin, etc.

Meat is always bacon, except that pork is sometimes called fresh meat. A butcher while offering you beef and mutton will refer you for meat to the grocer's; and a man who had just breakfasted on chicken and steak remarked to me that he had not eaten a mouthful of meat for a month. *Clear-rib* side is a side of bacon from which the backbone has been cut off so that the ribs are clear of it. *Kettlings* are intestines which are soaked a good while in a kettle to prepare for cooking. *Cracklings* are scraps, that is, bits of pork from which the lard has been tried. All fat used in cooking is called *grease*.

Light-bread is the ordinary raised bread of the North, which is little used in comparison with biscuit. The word *leaven* is used in its old meaning; *rising* is an occasional term for yeast, and *sots* is recognized as a Virginia equivalent. *Soaking* is the final process in baking when the centre of the loaf hardens. Bread which is soaked is thoroughly done, as if the heat had soaked into it. A *pone* is primarily a kind of corn-cake, such as Webster defines it, but the word is also used for any loaf, and even the clay moulded for a brick is called a pone.

FISK P. BREWER.

CHAPEL HILL, N. C., Jan., 1873.

Notes.

THE 'Gazetteer' lately published by Geo. P. Rowell & Co. is, like their 'American Newspaper Directory,' an honest and useful compilation, mostly from original material procured at no little pains. It gives "a statement of the industries, characteristics, population, and location of all towns in the United States and British America in which newspapers are published." The entries in each case are very brief and to the point.——No. 41 of the Berlin Geographical Society's *Journal* is almost wholly taken up with Dr. Schweinfurth's diary of his journey to the Niam-Niam and Monbuttu, 1870; and an excellent map, drawn by the traveller himself, is appended, showing the Nile tributaries from the Bahr-el-Arab southward to the Welle—the stream which is fatal to the supposed connection between these tributaries and the Lualaba. This map, embracing the country to 3° N. latitude, lacks but a few degrees of being continuous with the map of the Livingstone-Stanley explorations which accompanies Petermann's *Mittheilungen* for January. In this number the objections to the Lualaba's flowing into the Albert Nyanza—objections derived from Dr. Livingstone's own narrative—are stated.——The Proceedings of the Fourth Annual Session of the American Philological Association (at Providence, last July) have been published in the usual abstract form, and will be found equal in interest to those of former meetings. A very wise and practical step was taken by the Association in establishing a Section of Linguistic Pedagogics, which will give all its attention to the improvement of the present modes of teaching languages, and whose decisions on text-books, pronunciation, etc., etc., will naturally have a good deal of weight. Mr. Lewis H. Morgan's paper on "Australian Kinship," briefly alluded to here, appears in full in the eighth volume of the Proceedings of the American Academy of Arts and Sciences, and has also been separately printed as a pamphlet extract. It should be read by every student of Darwinism, of anthropology, and, we may add, of American socialisms. The Oneida Community might take as the text of its evening conversations this sentence from Mr. Morgan's summing up: "In the light of this discussion some of the excrescences of modern civilization, such as free-love and Mormonism, are seen to be relics of the old savagism not yet eradicated from the human brain." We do not confound the Community with the free-lovers, though we incline to class them among the "excrescences" and "relics."——The London *Bookseller* mentions the Baltimore *American's* entrance on its hundredth anniversary as "a piece of antiquity which, we believe, is unparalleled in the States." This is not quite the case. The Newport *Mercury* was at least 110 years old last year, and we are under the impression that one or two other papers in New England have outlived a century.——Shepard & Gill, Boston, announce: 'Against the World,' by Miss J. R. Hadermann; 'The Life of Franz Schubert,' by Geo. L. Austin; a new edition of 'Seventy-five Popular Flowers,' by E. S. Rand, jr., and a large-paper edition, limited to twenty copies, of 'Bulbs,' by the same author; De Quincey's works in two editions; 'Another World,' by "Hermes"; and 'Tom Cringle's Log,' by Michael Scott.

—A greater loss than will be apparent to most readers American literature of the lighter kind has suffered in the death of Miss Caroline Chesebro. She was born in this State, we believe, and at the time of her death must have passed middle life, unless, indeed, she began publishing stories and sketches at an unusually early age, for we find her mentioned as a contributor to the magazines of 1848. With these first productions we are not acquainted; but judging them by Miss Chesebro's later works, they must have been decidedly superior to the common run of magazine stories. She never, so far as we have known her, descended to manufacturing wares after a pattern with which she had happened once to please the public, but always gave evidence of conscientiousness, and seemed to work as if persuaded that what she was writing was worth writing, and ought to be written with painstaking. Any one may see this who will look at her most important book, 'The Foe in the Household.' Few American novels equal its careful picture of "Father" Trost, the itinerant preacher, and of the Mennonite "bishop" whom Trost cannot but respect, but for whose creed he has a vigilant hatred, half of the sincere *odium-theologicum* variety, half of the pettier kind bred by rivalship. Very good, too, is the conception of one particular cause, and one particular result, of this hatred: Trost's privity to the marriage between the "bishop's" daughter and one of "the world's people," when her vows bound her not to marry, and then his withholding from her the certificate of marriage, and long years afterwards, when she had become the saintly wife of the new bishop, his preaching bitterly against the hypocrisy and concealed sins of the obnoxious sect. Praise will also be given to the portraiture of the young man whom the "bishop's" adopted

daughter at first loves, but afterwards finds unworthy; and of the local coloring, also, there will be praise, we imagine, from those whose knowledge qualifies them to speak. That appearance of care and conscientiousness which we have mentioned, and the reader's impression of freshness and power in the writer, may probably be due in part to the fact not only that Miss Chesebro had a natural unwillingness to do hackneyed work, but that the bent of her mind was towards the examination of developments of feeling somewhat morbid, and towards problems of life and conduct which are extremely rare, and thus—happily for the novelist, and not less happily for the rest of mankind—are unfamiliar though not inconceivable. Better than by trying to describe this aspect of Miss Chesebro's works, we can illustrate our meaning by saying that as a novelist she was of kin to a better known anatomist of rather abnormal psychology—Mrs. Rebecca Harding Davis. We do not recollect, however, that any of Miss Chesebro's writings fill one with anything like the same degree of that desire with which a novel by Mrs. Davis is apt to inspire one—the desire to inform the men and women figuring in it that, whatever they may think, they are wilfully pining in a dungeon very like that in which Mr. Artemus Ward's friend pined once for fourteen years or more, until one morning it occurred to him to open the window and walk out. And we may add, too, that we recollect none of Miss Chesebro's stories which will not nourish elevation of feeling. Distorted views of life and duty she doubtless may often be found setting forth; but one is not impressed as by the spectacle of torments to little end, or of self-tormentors who "enjoy ill-health." Let 'Dallas Galbraith' be compared with 'The Foe in the Household,' and the contrast of which we speak will not fail to be felt.

—Since our last summary, the number of new English works deserving attention has grown considerably. Beginning with the lighter reading, we have in travel and adventure: 'Slave Catching in the Indian Ocean: a Record of Naval Experiences'; 'Dhow Chasing on the East Coast of Africa,' by Captain George L. Sullivan, R.N.; 'Travels in the Eastern Caucasus, Persia, Turkey, etc.,' by Gen. Sir Arthur Cunynghame; 'Journey through the Caucasus and the Interior of Persia,' by Augustus H. Mounsey; a new edition of the late Captain John Wood's 'Journey to the Source of the River Oxus,' with an essay on the Valley of the Oxus, by Colonel Henry Yule; 'Spain and its People'; 'A Tour with Cook through Spain,' by John B. Stone—with photographs; 'A Winter in Morocco,' by Amelia Perrier; 'A Sail to Smyrna,' by Mrs. Baillie; 'From the Thames to the Tamar: a Summer on the South Coast of England,' by Rev. A. G. L'Estrange; 'Eleven Years in Central Africa,' by Thomas M. Thomas; 'To the Cape for Diamonds'; 'The Great Lone Land,' by Captain W. F. Butler; 'Field and Forest: Rambles of a Naturalist in New Brunswick,' by Dr. A. Leith Adams; 'The Arctic Regions,' by William Bradford; 'A Voyage to Spitzbergen,' by Captain Wells; 'Tent Life in Norway,' by Hubert Smith; 'Walks in Florence,' by Susan and Joanna Horner; 'Australia and New Zealand,' by Anthony Trollope.

—Among historical works, as seasonable as any is Vámbéry's 'History of Bokhara, from the Earliest Period to the Present Time,' from Oriental manuscripts. We note besides: 'A History of Greece,' by Geo. W. Cox, from original authorities; a translation of Jules Favre's 'Government of the National Defence'; 'History of Two Queens—Catherine of Aragon, and Anne Boleyn,' by W. Hepworth Dixon. In biography, we may give the first place to Mr. Geo. H. Lewes' 'Story of Goethe's Life,' adding the following titles: 'Life and Character of Erasmus,' by Robert B. Drummond; 'Holbein and his Times,' translated by Miss Bunnètt; 'Personal Recollections, from Early Life to Old Age,' by the late Mrs. Mary Somerville; 'Memoir and Letters of Sara Coleridge'; 'Political Women,' by Sutherland Menzies; 'Critical Examination of the Life and Teachings of Mohammed,' by Syed Ameer Ali; 'A Dictionary of Christian Antiquities and Biography, from the Times of the Apostles to the Age of Charlemagne,' by Dr. Wm. Smith; 'Lives of the Scottish Saints,' compiled prior to the fourteenth century, and a 'Life of St. Columba,' translated from the edition of Adamnan's Life. Mr. James Fitzjames Stephen's striking contributions to the *Pall Mall Gazette* on 'Liberty, Equality, and Fraternity' are to be published in book-form under the same title. In connection with it may be classed 'The Social Growth of the Nineteenth Century,' by F. R. Statham, and perhaps Owen Meredith's 'Fables for the Nineteenth Century.' Less general is the subject of 'An English Code: its Difficulties, and the Modes of Overcoming Them,' by Prof. Sheldon Amos. 'Unorthodox London'; 'Clubs and Club Life in London,' by J. Timbs; 'Memorials of Liverpool, Historical and Topographical,' by J. A. Picton, should be interesting reading; and as such also may safely be recommended 'Russian Folk Tales,' by W. R. S. Ralston; 'Arabian Stories and Legends,' translated by Mrs. Godfrey Clerk; and 'Tales Old and New,' by the author of 'Mlle. Mori.' For art we may turn to 'Modern Gothic Architecture,' by T. G. Jackson; 'Studies in the History of the Renaissance,' by W. H. Pater; and for art of a very curious and original kind, to 'Grotesque Animals,' invented, described, and portrayed by E. W. Cooke, R.A. Our science list is brief but select: Professor Tyndall's 'American Lectures'; 'Critiques and Addresses,' by Prof. Huxley; and 'Illustrations of the Power of Speech in Persons said to have been Deprived of their Tongues,' by the Hon. Edward Twisleton. Students of Shakespeare will read with profit Mr. R. G. Latham's 'Two Dissertations on the Hamlet of Saxo Grammaticus and Shakespeare.'

—The most noticeable thing in the second volume of Forster's 'Life of Dickens,' and almost the only amusing thing in that tedious volume, is the story about an incident which occurred at the funeral of William Hone. Or, we should say, rather, an incident which did not occur, for Mr. Forster's story, which he says he has often heard Dickens tell, appears to be a story of the kind that may be described as being, in great part, the fruit of the mahogany tree. Mr. Cruikshank has come out in print with a denial; so has a friend of Mr. Binney, the clergyman who figures in it; and now a book reviewer, writing in the *British Quarterly*, says of it that "he has fortuitously been able to test the accuracy of this story by the testimony of five persons, two of them members of Mr. Hone's family, and they all assert that it is entirely untrue, both in minor incident and in spirit." It was originally written to the late President Felton, although afterwards often related by Dickens, and, as Mr. Forster avers, with Cruikshank sitting by and admitting that it was "perfectly true." It runs as follows:

"We went into a little parlor where the funeral party was, and God knows it was miserable enough, for the widow and three children were crying bitterly in one corner, and the other mourners (mere people of ceremony, who cared no more for the dead man than the hearse did) were talking quite coolly and carelessly together in another; and the contrast was as painful and distressing as anything I ever saw. There was an Independent clergyman present, with his bands on and a Bible under his arm, who, as soon as we were seated, addressed C. thus in a loud, emphatic voice—'Mr. C., have you seen a paragraph respecting our departed friend, which has gone the rounds of the morning papers?' 'Yes, sir,' says C., 'I have'; looking very hard at me the while; for he had told me with some pride coming down that it was his composition. 'Oh,' said the clergyman, 'then you will agree with me, Mr. C., that it is not only an insult to me, who am the servant of the Almighty, but an insult to the Almighty, whose servant I am.' 'How is that, sir?' says C. 'It is stated, Mr. C., in that paragraph,' says the minister, 'that when Mr. Hone failed in business as a bookseller, he was persuaded by *me* to try the pulpit; which is false, incorrect, unchristian, in a manner blasphemous, and in all respects contemptible. Let us pray.' With which, and in the same breath, I give you my word, he knelt down, as we all did, and began a very miserable jumble of an extemporary prayer. I was really penetrated with sorrow for the family, but when C., upon his knees and sobbing for the loss of an old friend, whispered me, 'that if that wasn't a clergyman and it wasn't a funeral he'd have punched his head,' I felt as if nothing but convulsions could possibly relieve me."

—This, no doubt, made a very effective after-dinner story, and often did good service in Dickens's hands, but it now appears that Mr. Binney never wore bands; that he had no Bible under his arm, but used the family Bible which lay upon a table; that Cruikshank did not kneel beside Dickens, and that the fireplace was between them; that no one who ever heard Mr. Binney pray will ever believe that he could offer in the presence of his friend's afflicted family any such prayer as the story attributes to him; that "a paragraph respecting our departed friend," which Cruikshank had "with some pride" owned as of his composition, was not of his composition, but, as he stated at the time, was added without his knowledge or consent to a brief memoir of Mr. Hone which he had prepared, and which contained nothing offensive; and finally that the prayer did not, as the story asserted that it did, follow indecorously close upon the conversation, for before prayer was offered there was reading from the Scriptures, "so that if the conversation and the prayer were in the same breath the breath was a very long one." That Mr. Cruikshank, and the friends of Mr. Binney, and Mr. Hone's relatives, and those friends of his who were present (as "mere people of ceremony"), should all be indignant at the tale which Mr. Forster has published, is not surprising; but one may well enough be surprised at his maladroitness and want of consideration for the feelings of others. Dickens perhaps had the excuse of having embellished the story for the purpose of teasing Cruikshank; and perhaps his letter to Mr. Felton was written after the embellishing had been done; and in any case he was first of all a born caricaturist, who always let his faculty of caricature run away with him and make any wild work it liked. But as against biographers writing in cold blood, and setting up living people in a sort of pillory, all men, even Independent ministers, have rights to be respected, and this Mr. Forster appears to forget oftener than is to his own credit or that of his biography. Already he has needlessly offended some dozen or more persons by his undue deference to Dickens and himself, and his carelessness of the feelings and interests of

others; and he has before him several passages in the life of his hero where circumspection in this regard will be very necessary.

—A new edition (the third, 1871) of Gneist's 'Self-Government, Communalverfassung und Verwaltungsgerichte in England' affords an opportunity of calling attention to the only work which undertakes a complete systematic view of English institutions from a historical point of view. Characteristically enough it is a German that has done this invaluable service for the English. The author justly complains of the piecemeal character of the work done by the English in this field, and points out that it is for a lack of comprehensive knowledge of their own institutions that they have suffered their legislation and their administrative practices to run into such a mass of heterogeneous and contradictory detail. The state of things visible at the present day—the disintegration of communal life and complete transformation of the fundamental institutions of self-government—he attributes mainly to their neglect of the historical development of these institutions. A prominent feature of the book is the connection of the early English institutions with the primitive institutions of the Germans. The study which it urges of the historical development of institutions is no less necessary here than in England—whether or not it is possible to arrest this disintegration, or to turn it in a more healthy direction. We may, at any rate, well ponder the assertion that never, from the Middle Ages to the Reform Bill of 1832, were political rights granted that did not carry with them personal obligations. As Dr. Gneist himself points out, it is the new activity and altered relations of industry that have largely wrought the change in question. Apart from the history here traced, the book contains a very complete view of the actual working of the popular side of the English Constitution.

THE POEMS OF HENRY TIMROD.*

To such readers as have looked into any collection of Southern war poetry, the name of Mr. Henry Timrod is probably as well known as that of any Southern poet of his time. And such readers as recollect him with any distinctness will probably recollect him as a writer of pieces which, in more cultivated and polished verse than that of most of our war poets, Northern or Southern, expressed a rather more civilized and polished degree of "sectional feeling" than was usual in our war poetry, and especially in the war poetry produced in Mr. Timrod's part of the country. His verses show him to have been as well convinced of the justice of the Southern cause as were any of his contemporaries; as patriotic and as confident of success. But although he once predicts that grass will grow in the streets of New York, and several times stigmatizes the Northern soldier as a Hun and a Goth, and a "ruffian foe," he does such things less frequently than most other writers of his political creed; and nowhere, we believe, does he exhibit that indiscriminate bloodthirstiness of reprobation and disgust, the apparently sincere expression of which used to cause a good deal of sincere surprise among Northern people, and which, even to a good part of the Southern public itself, must, we imagine, have now and again caused the writing of its poets to seem fatiguing. Unless, indeed, there was a tacit understanding between poet and public that much of the verbal intensity of the poetry was conventional and rhetorical, rather than to be taken as the language of affidavits. Some such understanding there must have been, one would say, when one reads many of the appeals and denunciations of those unhappy days now, let us thank heaven, so remote and so much forgotten. That not very much of this tacit understanding was demanded in the case of Mr. Timrod, will be seen when we say that the following verses fairly represent his patriotic fervor in behalf of South Carolina and against the National Government. A long way, indeed, he comes behind most of the lyrical assailants of the Federal ravishers and robbers of 1861; and as for the poetical quality of the verses, we recall very little of our war poetry which can be said to excel them, the quotability of the fourth quatrain being alone sufficient to secure for Mr. Timrod a certain eminence in this not very exacting competition:

"The despot roves your fairest lands;
And till he flies or fears,
Your fields must grow but armed bands,
Your sheaves be sheaves of spears!
Give up to mildew and to rust
The useless tools of gain;
And feed your country's sacred dust
With floods of crimson rain!

"Come, with the weapons at your call—
With musket, pike, or knife;
He wields the deadliest blade of all
Who lightest holds his life.
The arm that drives its unbought blows
With all a patriot's scorn,
Might brain a tyrant with a rose,
Or stab him with a thorn."

* 'The Poems of Henry Timrod. Edited, with a Sketch of the Poet's Life, by Paul H. Hayne.' New York: E. J. Hale & Son. 1873.

Similar in tone to this "Cry to Arms" is "Carolina," "a Tyrtæan strain indeed," remarks Mr. Timrod's biographer, and "destined perhaps to outlive the political vitality of the State whose antique fame they celebrate." "I read them first," he continues, in language which may be taken as fairly representative of his editorial work of criticism and biography, "and was thrilled by their power and pathos, upon a stormy March evening in Fort Sumter! Walking along the battlements under the red light of a tempestuous sunset, the wind steadily and loudly blowing from off the bar across the tossing and moaning waste of waters, driven inland; with scores of gulls and white sea-birds flying and shrieking round me,—these wild voices of Nature mingled strangely with the rhythmic roll and beat of the poet's impassioned music." Then follows a citation which will be accepted as evidence that most readers outside of South Carolina need pay but little attention to Mr. Timrod's war poetry, cleverly turned though it is, and well as it doubtless served its purpose at the time when it was written. The stanzas cited are these, and "the very spirit, or dark genius, of the troubled scene," says Mr. Hayne, "appeared to take them up and repeat them":

"I hear a murmur as of waves
That grope their way through sunless caves,
Like bodies struggling in their graves,
Carolina!

"And now it deepens; slow and grand
It swells, as, rolling to the land,
An ocean broke upon thy strand,
Carolina!

"Shout! let it reach the startled Huns!
And roar with all thy festal guns!
It is the answer of thy sons,
Carolina!"

As war pieces of a gentler mood, of a less obvious and commonplace character, and of truer poetical merit, we may mention "The Cotton Boll" and "Ethnogenesis," while "The Unknown Dead," which is as obvious and commonplace as the unmarked graves themselves, and "The Two Armies," which is as obvious and commonplace as the self-devotion and high spirit of the women who helped the war on the one side or the other, will be appreciated and approved by very many readers for a long time to come.

It would, however, be an injustice to Mr. Timrod to test his ability as a poet by the lyrics extorted from him by a savage commotion, for partaking in which his sensitive nature entirely unfitted him. To quote again the peculiar language of his biographer: "Out of the refluent tides of blood, from under the smoke of conflict, and the sickening fumes of slaughter" (into which he had gone as a correspondent of the Charleston *Mercury*), "he staggered homeward, half blinded, bewildered, with a dull red mist before his eyes, and a shuddering horror at his heart." It is made manifest in his poems that his heart was not in the contest, and that his intellectual content and happiness were bound up in the prosecution of his studies and literary employments. A great contrast is at once visible if we turn from the "Carolinas" and the "Cries to Arms," and other such things, to the poem which Mr. Hayne has very judiciously placed at the beginning of the volume. Considering how graceful it is, and how pretty in all ways, whether we think of the occasion that called it out, of the tenderness of the sentiment, of the happiness expressed, or of the adequate and skilful method of expression, we shall be inclined to give this poem a high place in such recent minor poetry as really deserves to be called poetical throughout, in feeling, form, and texture. We quote a few lines. We may premise that such of the little happiness as our author appears to have experienced, apart from his delight in his much loved poetical pursuits, he experienced in his attachment for an English lady whom he afterwards married:

KATIE.

"It may be through some foreign grace,
And unfamiliar charm of face;
It may be that across the foam
Which bore her from her childhood's home,
By some strange spell, my Katie brought,
Along with English creeds and thought—
Entangled in her golden hair—
Some English sunshine, warmth, and air!
I cannot tell—but here to-day,
A thousand billowy leagues away
From that green isle whose twilight skies
No darker are than Katie's eyes,
She seems to me, go where she will,
An English girl in England still!

"I meet her on the dusty street,
And daisies spring about her feet;
Or, touched to life beneath her tread,
An English cowslip lifts its head;
And as to do her grace, rise up
The primrose and the buttercup!
I roam with her through fields of cane,
And seem to stroll an English lane,
Which, white with blossoms of the May,
Spreads its green carpet in her way!
As fancy wills, the path beneath
Is golden gorse, or purple heath:
And now we hear in woodlands dim
Their unarticulated hymn,
Now walk through rippling waves of wheat,
Now sink in mats of clover sweet,

Or see before us from the lawn
The lark go up to greet the dawn!
All birds that love the English sky
Throng round my path when she is by:
The blackbird from a neighboring thorn
With music brims the cup of morn,
And in a thick, melodious rain
The mavis pours her mellow strain!
But only when my Katie's voice
Makes all the listening woods rejoice
I hear—with cheeks that flush and pale—
The passion of the nightingale!"

Perhaps still prettier, with its delicately-turned compliment and playful tenderness, is the "Dedication," addressed to the same lady.

We have spoken of the ill-fortune experienced by Mr. Timrod. It was, in general, such as follows men of poetical temperament and poetical susceptibility, but without a poetical ability quite correspondent, who, born to poverty, are compelled to answer the harsh and unwelcome requirements of a practical life. Moreover, Mr. Timrod had to face these in a community whose cultivation was not only insufficient to appreciate and reward literary labors, but also, what is worse, was insufficient to ensure anything but a very crude and superficial culture to such of its members as desired it and had a natural aptitude for acquiring it. Add to all this that Mr. Timrod was a victim of consumption, of which disease he died at less than forty years of age, and that his last days were embittered by the dire poverty which, at the close of the war, inflicted such suffering on so many Southern families, and which left him stripped to the bone. It is a distressing story as Mr. Hayne tells it, and we bespeak for the enterprise of publishing this volume in the wealthy Northern market the consideration of all our readers who buy books of poetry. In this book they will not make the acquaintance of a great poet, but they will make the acquaintance of one who, amid some cheap and some imitative strains, and some that may jar on Northern ears unless the reader will make a little allowance, will give them some genuine and pleasing music.

LAUGEL'S NOTES OF TRAVEL.*

WE have always considered the observations of an intelligent traveller worth recording, even when his experience is confined to the beaten track and repeats that of innumerable others. We find something eternally fresh and delightful in all first impressions of foreign scenes, and we confess that the outpourings of even the most ingenuous tourists always strike in us a sympathetic chord. Of course these productions are very likely to be diffuse and trivial—to neglect the essential for the accidental, and to hold the minute detail so close to the eye as to conceal the general view. These are common faults with literary tourists; but M. Auguste Laugel, in his charming little volume on Italy and Bohemia, seems to us to have completely escaped them. His book is a model for travellers inclined to publish their "impressions." Brief, compact, rapid in style, and yet expansive enough to be occasionally very vivid and pictorial, it is equally free from idle detail on the one hand and pretentious generalization on the other. In the art of putting literary material into form the French certainly excel us, and M. Laugel's volume is a capital example of this accomplishment. He has selected, condensed, retouched, and harmonized with extreme taste and discretion, and the result is one of those infrequent performances in which every sentence counts and there is not a sentence too much. M. Laugel is a general observer; he appreciates and describes the picturesque aspect of things with as much force and point as if they were his especial study, and yet he constantly strikes the moral note, the note of reflection, with a felicity unusual in the devotees of the picturesque—especially in France, where these gentlemen are fond of passing for unbridled Pagans. Of the deeper thoughts—not all cheerful—suggested in Italy at every turn, he is a particularly eloquent interpreter. We have rarely found the moral impression of Naples, for instance, as happily defined as in the few lines in which he resumes it:

"Beneath this admirable sky, before this nature with its pure forms and solemn lines, this blue sea which nothing can pollute, lives a people without ideal, indifferent to the morrow, begging, crying, gesticulating, never still, whose religion is all in feasts and images, with no art, no country, debased by absolutism and servitude, with no gods but chance and force, vile, miserable, foul in its sensuality. Can liberty ever give back the least nobleness to this degenerate race? So long as the *frutti di mare* are cheap on the quay of Santa Lucia, so long as the *improvvisatori* are there to entertain them, as there are jugglers and tumblers to make them laugh, a sun to dry their rags, music, processions, and feasts to amuse them—do they need anything more? Their life is a long laugh, a perpetual grin. From the windows of the convent of San Martino, which overhangs the city from such a height, you hear the deafening hum of this shrill street life, tumultuous as the sound of a powerful tide. The great line stretches round the vast gulf; the houses are hung upon the rocks, among *cacti*, oranges, and aloes; you must raise your eyes to the summits of Vesuvius and to the highest crests of the Somma to find a space that man has respected. And yet, go down from these heights through the crooked streets which slope away in every direction, and in this large city you will not find a corner, an asylum, a church, a palace, a work to arrest your eyes—not one that reflects in its forms and lines the admirable splendor of this beautiful sky and of this nature eternally young and fair. . . . Naples is not, like Venice, Florence, and Rome, one of the cities of the soul. You are too constantly deafened; reverie and contemplation are perpetually interrupted; you must get out on the bay or shut yourself up with the silent company of the statues; you cannot live in the past; you are too much jostled; you are overcome by the continual fever, the sterile activity, the indefatigable and idle curiosity which stir so many thousand beings."

Of Venice, too, of which everything would seem to have been said, M. Laugel says excellent things, and at the close of his chapter some very pretty ones, for which we must refer the reader to his book. Of Rome his enjoyment is keen, and his notes have many happy descriptive touches. No reader who has stood in St. Peter's but will feel how exactly the author renders, in its finer points, the sensuous impression of the place:

"I came in with my mind full of distrust of Bernini, on the defensive; I felt myself disarmed by so much spaciousness, by this unheard of luxury, which yet looks natural and does not weary you. Brutal size here acts as an æsthetic element; the immensity envelops details, melts them, drowns them; the light plays on the fine gilded cornices, on the multicolored marbles; it comes down through the azure, as it were, of the high dome, where the saints and angels are sitting in their motionless rings; it sparkles on the gold embroideries which twine about the bronze columns of the great altar; it flashes back from the immense glory which shines like a sun in the depth of the choir. The marble pavement, without a bench or chair to disturb its perspective, stretches away like a great lake. You take pleasure, without knowing why, in this vastness, in this order so obvious, in spite of the profusion of ornaments. Immensity produces here not the impression of terror, but a sort of contentment which makes you indulgent for all the pretentious tombs, the gigantic smirking attitudinizing saints of either sex, the white marble draperies twisted and blown by the impertinent wind that comes from nowhere, for the angels thrust into every corner—cupids of Christianity! The luxury is all so ample, so grandiose, so joyous! The sun comes in by the broad openings, and its rays, glancing back in every direction from polished angles, glittering mouldings, precious stones, and the gold of the mosaics, forms a sort of aureole which seems to lift and sustain the immense pillars and the colossal vaults. This formidable luxury, which exceeds all private or princely fortunes, has nothing which shocks or astonishes; you feel here none of the terrors and the sublime anxieties of Gothic art; you are far, too, from the robust and sombre simplicity of the basilicas; you assist at the definitive triumph of Catholicism—at its apotheosis."

The longest section is devoted to Sicily, where we are unable to compare impressions with the author. But this picture of the beauty and the misery of this once imperial island, its shrines and temples, its mountains and sea, its almost cruelly smiling nature, and its helpless and hopeless humanity, is forcible enough to beguile us into a half-sense of knowledge. His whole account of the ruined temples is admirable; it is that at once of an artist and a scholar. The author's errand in Bohemia was to visit the battle-fields of the Seven Weeks' War—in distinguished company; that of the Orleans princes. We have sometimes fancied our intellect impenetrable to all allusions to military movements; but we have almost understood M. Laugel's. The tone of the whole book is grave, we might almost say melancholy. The reader may judge by the closing paragraph, suggested by a glance at some of the great Frederic's scenes of victory:

"And yet for what strange heroes history works! Providence, the unknown God, has taken for his representative the old King of Prussia, and given a revolutionary task to a born enemy of the Revolution! What a jest is history, if you look only at the outside—at the stage-setting! But there is a secret, terrible force which sets in motion all the gods and demi-gods of the earth; an unconscious force tending as a still more unconscious force drives it; history is an ordered succession of chances; it moves always towards something necessary; it uses everything, tribunes and kings, monarchies and republics, barbarism and civilization. Whither is it leading us? Whither is aged, worn-out Europe going? Whither our Latin races? Whither France, so vile and so charming, so cunning and so easy to cheat, so full of hatred and of sweetness, so brave and timid, so unjust to those who have loved her, so generous to those who have injured; insane nation, loved and hated, sole of her kind, who may be vanquished but not equalled, mastered but not subdued, who bids defiance to all measurement by the suppleness of her elusive and ungoverned genius? She is not only inconstant; she is tormented with a sort of perverse logic, which demonstrates to her the falsity of all things. Between all things and herself she places her mocking doubt and her incurable irony."

* 'Italie, Sicile, Bohême: Notes de Voyage. Par Auguste Laugel.' Paris: Henri Plon; New York: F. W. Christern.

GROTE'S ARISTOTLE.*

IT has long been a dictum among scholars and metaphysicians that every man is either a Platonist or an Aristotelian. This is about equivalent to saying, after a rough popular way, that in every man of thought either the imaginative or the reasoning faculties predominate. Not, of course, to the point of reciprocal exclusion; for Plato had no small reasoning power, and Aristotle composed what may be called works of imagination, namely,

* 'Aristotle. By George Grote. Edited by Alexander Bain and G. Croom Robertson.' London: John Murray. 1872.

his Dialogues, which had much reputation in their day; unfortunately, none of them have come down to us. Mr. Grote himself, though obviously an Aristotelian, had taken great interest in Plato, and written very well about him. Hence, as the historian's mind was evidently of the Aristotelian cast, greater expectations were formed of his promised work on the Stagirite, and great was the disappointment when his death left the work unfinished—unfinished, too, in those very parts where, as the editors say, "the field was specially his own": the ethics and politics. As the rhetoric was also not reached, what we have is chiefly psychological. The portions which relate to the logical and dialectic works are chiefly analyses, sometimes indeed what may almost be called a meagre synopsis. The chapter "De Animâ," etc. (originally published as a separate contribution to psychology in the third edition of Bain's 'Senses and Intellect'), is probably the most valuable, as it certainly is the most interesting. It will perhaps be news to some of our readers that Aristotle, unlike Plato, did not believe in the immortality of the human soul.

The regular course of the work is broken off in the midst of the physics and metaphysics. Mr. Grote has therefore only completed his commentary on the six logical treatises known under the collective title of the Organon. Besides these and the chapter "De Animâ," we have a long appendix, composed, to use the editors' own words, "of materials somewhat heterogeneous," namely, an "Essay on the Ancient Theories of Universals and the Doctrine of Realism" (republished from *apud* Bain); a criticism on a criticism of Sir William Hamilton's (also a reprint); a long abstract of six of the fourteen books of Metaphysics, and two of the books "De Cælo"; a brief vindication of Epicurus; and a fragment on the Stoics. Altogether, the two volumes make up more than nine hundred pages, and will furnish a conscientious student with pretty stiff reading for some months, even supposing that he does not take the trouble of verifying the copious references to German and other authorities, or of consulting any more of the original text than he will find quoted in the foot-notes.

And now it may be asked, "Why all this labor of writer and reader? Why should we, at this day, concern ourselves about Aristotle, an old heathen who lived in the infancy of physical science? Suppose he did invent logic and metaphysics. Our positivists have exploded the latter, and a countless array of popular writers and speakers show how easy it is to get on without the former." The question is humiliating to answer, and yet we cannot close our eyes to the fact that similar charges of obsoleteness and uselessness are constantly brought against our author, often in so many words, more often indirectly and by implication or assumption. Let us say, then, briefly, that Aristotle is a great landmark in the history of human intelligence. Socrates was the first man who taught men to think seriously; Aristotle was the first who taught them to think systematically and methodically. He devised the syllogism; and all the attempts made to disparage the value of this intellectual implement have ended in establishing its merits on a firmer basis. Take the best-known objection, that the syllogism does not help us to the discovery of new truths; it is much like finding fault with a judge because he has not made a new constitution. The main office of the syllogism is to detect falsehood, and its services in that field are not easily overrated. Then, as regards ontology and psychology, and all that may be summed up under the general head of metaphysics, a historical knowledge at least of these sciences, in their various developments, is necessary to protect us from much false philosophy, false theology, and spiritual quackery of all sorts. Like statistics, they will have a great negative value, however we may differ or doubt as to their positive utility.

Now, when we come to those writings of Aristotle which Mr. Grote unfortunately did not live to reach, we see the everyday, practical work of the man. We see that, heathen and slaveholder as he was, he knew more about human nature and the principles of government than many a Christian legislator and authority of our own day. Indeed, there are many points on which all our political experience seems to have set us but a very little way in advance of him, supposing there has been any advance at all. If this assertion appears strange to many, it is because few have much direct acquaintance with the author, and Aristotle is eminently one of those authors who might adopt the answer of the mariner in the Spanish ballad:

"Yo no digo esta cancion
Sino a quien conmigo va."

The Medical Jurisprudence of Insanity. By J. H. Balfour Brown, Esq., of the Middle Temple, Barrister at Law. (London: J. & A. Churchill.)—Upon a superficial reading, we were at first tempted to speak with some severity of certain deficiencies and faults in this book. Faults it certainly has—of baldness, obscurity, and involved style; of carelessness of grammar and spelling; of a somewhat imperfect acquaintance with modern German researches in insanity. But these may well be forgiven, in consideration of the clear and sturdy common sense of the author. In the present position of the legal and the medical professions, each has often to ask help of the other; the medical man desires authority to employ restraint as a means of cure, while the prosecutor requests sanction for the infliction of pain as a means of protection to society. There is something unsatisfactory in the present position of both parties, as is very fairly acknowledged by our author. Physicians, from the nature of their calling, are perhaps apt to overestimate the amount of disease present in a community, and to underrate the mass of healthy, vigorous, self-recuperative life. And, accustomed as they are to regard insanity in the light of a disease, with which their first business is to get the patient under their control, they can scarcely be blamed for yielding to the insinuating temptation presented when an actual patient asks to be protected from the legal consequences of some burst of passion or some theft or fraud. But it is fully time for a change; and public sentiment, it is to be hoped, appreciates the danger of allowing the physician to take sides with the prosecution or the defence. The position of advocacy palpably unfits him for coolness of judgment; his gifts of forcible statement, of unflinching and unblushing adherence to truth (as he chooses to consider it), of popularizing medical "science" for the benefit of a popular audience—these gifts, impressive as they may be, ought never to be the openly acknowledged property of one side. We have the sympathy of a large body of the medical profession in making these statements. They feel the shame which attaches to them all, when one or another noted member of their order is accused of selling his testimony to the higher bidder. And it is time that the public were willing to add to the list of desired reforms another by which physicians should, as far as possible, be enabled in court to speak *ex cathedra scientiæ;* that they may be spared the double mortification of a conflict of opinions in the presence of ignorant umpires, and of occasional imputations of venality.

The position of lawyers and judges is accompanied with difficulties of another character, arising from the absurdities and incongruities of the principles which are supposed to govern them, but from which, with a commendable common sense, they are accustomed to depart in furtherance of the interests of justice. The author's views regarding the functions of the court are broad enough. On the one hand, he acknowledges "that, looked at in the light of modern science, the definition of what shall be regarded as insanity in criminal cases is eminently unsatisfactory" (p. 18). He states what to the lay mind appears a truism, but which, nevertheless, is not yet a part of the law—that legal responsibility implies not simply the knowledge of good and evil, but, combined with this knowledge, "the power to appreciate and be moved by the ordinary motives which influence the actions of mankind" (p. 21). His arguments are apparently based upon the assumption that every case must be judged upon its own merits; a most important doctrine, and one which goes some way to excuse the chaotic state of the law. But he states with startling clearness "that mental unsoundness is not incompatible with crime," and that "humane and well-devised punishment must follow all the misdemeanors of the morally insane"! Here are some refreshing words:

"We cannot get ordinary common-sense people to believe that every man steals just because he cannot help it, and that virtue is just as much a necessity of some organisms as the expiration of hydrogen is of others. No! Common-sense people are pig-headed, and think that if an ordinary man kicks you, and you thrash him in consequence, and give him to understand that the next time he raises his foot with a similar intent you will repeat the chastisement—these pig-headed common-sense folk have an idea that, in most cases, the individual's organism will *not* force him to raise his foot again."

In discussing Partial Moral Mania, a similar protest is made against the indiscriminate exemption from punishment in cases where an "irresistible impulse" is pleaded.

We are not disposed to find fault with the author's views; but it is proper to say that they suffer much from ill arrangement, and, to a casual reader, may now and then convey the impression of self-contradiction. Though striking and picturesque, his chapters will not quite answer as authority upon the purely medical aspects of the questions treated; nor are they probably intended to be read in that light. We miss, for example, all mention of Melancholia; it does not occur, even by name, in the two systems of classification he gives. But to thinking men, of all pursuits, this may be recommended as a fresh, independent and stimulating book.

Art Recreations. By Mme. L. B. Urbino, Prof. Henry Day, and others. (Boston: Shepard & Gill. 1873.)—George Eliot, describing showy humbug, compares it to old stucco ornaments that had gone out of style, and whose original material never was worth anything. The last charitable reflection

caused by this neat handbook, which has been substantially before the public since 1859, is, what an amount of painted dirt it must have accumulated in acres of peaceful houses. It has been the privy counsellor of that redoubtable being, the ingenious young person. We should not dare to undervalue this popular character, who presents her friends with glossy landscapes framed by herself, who is and ought to be the pride of the village, who leads its best intellects and supports its fancy fairs, whose hands are honorably stained with photography or pounce powder, and whose side of inconvenience is hardly known but to her own brothers. Our authors, who at once strongly kindle and assuage the creative thirst of such a nature, provide a manual excellent in its way, furnished with what we should think the best communicable rules for the mixture of colors; learned in wax, leather, and tin-foil, and stripping all its reserves from the specious mystery of varnish. They lift the pretty centre-table arts almost to the dignity of a science, while for all their elegant wares they have a severe and exact nomenclature. Thus we find that ornamenting your windows in imitation of stained glass is "Diaphanie"; tracing the outlines of ferns on paper with splashes of ink is "Linnæography"; the decoration of potsherds, perhaps from an imperfect view of the affliction of Job, is stigmatized as mania—"Décalcomanie" for crockery, "Potichomanie" for glass; stencilling flowers and butterflies with horn-paper patterns is "Theorem painting"; transferring the inky impression of an engraving to varnished glass is "Antique painting"; the brilliant signs executed in window-glass and pearl and gorgeousness, and often seen in barber shops, are specimens of "Oriental painting," and the patient recluses who make them must possess "ten thimbles, ten buttons, ten holes in a board, and a paint-stand"; laying on color at the back of a lacquered engraving is "Grecian painting." The author knows a connoisseur who thought he had a genuine Raphael, a Fornarina, judging of its correspondence with the touch of Raphael by the fact that "not a brush-mark was visible"; but the mischievous expert, who had done "Grecian painting" in England "when a boy," lifted up a corner and disclosed the engraving, with the effect of banishing Fornarina to the butler's room. This incident, we need not say, is but a testimony to the possible excellence of the Grecian mode of manipulating color. The writer is always an enthusiast, with the ability to infuse the wholesome ardor he feels into his descriptions. Some passages have the true Bernard Palissy ring: "Don't mind if the hot wax makes your fingers tingle; you want a beautiful bunch of grapes; pay for a thing and have it; we have dipped two hundred without stopping." Whether attaining grapes or other lofty aims, the moral force of that passage will serve as an inspiration.

The instruction in nearly all the crafts touched upon is plain and full; some are, however, more patiently described than others, and we think the girl who should have the daring thought to decorate a "cuspadore" for her lover in Permanent Painting, which is disposed of in a page and a half, might have some righteous cause of jealousy of the girl who succeeded in ornamenting for hers a slipper-case in Linnæography, by a sincere study of the two and a half pages here given to the art, and by the touching sacrifice of her tooth-brush and fine-tooth comb. There are unaccountable omissions, certainly, on the part of our usually assiduous guide. For instance, we do not observe any instruction in the pretty, malodorous industry dear to all lady-botanists, of divesting the pulp from natural leaves, and causing them to sit, like the famous sybarite of Sidney Smith, in their skeletons; nor do we find allusion to the neat trick of etching with fluoric acid on glassware, which is capable of so broad and artistic an application; nor to any of the easy modern ways of picture-manufacture by scratching on opaque varnishes and subsequent photography; nor, generally, we may say, to modes of decoration which do not call for the kind of stores kept for sale by the publishers. The work they give us has, however, the merits of a very good receipt-book, with directions written in a clear and orderly style. Its influence on the conduct of the ingenious person will be in the main beneficent, for it will keep her in the most harmless condition she is capable of, with her mind fixed on tried and attainable ends, instead of going out after devices of its own which will spoil good material and damp her hopefulness. The reissue is well thought of, and there are sixty pages of new and useful formulas.

Wanderings in Spain. By Augustus J. C. Hare. With seventeen illustrations. (New York: Dodd & Mead. 1873.)—In this volume Mr. Hare has not followed the plan that he adopted in his 'Walks in Rome,' which, the reader will remember, was a carefully selected compilation from the various writings of his predecessors, forming a volume of great value for any who thought of a journey to Rome either in the future or as a thing already done. One reason of his change of treatment may be that Spain is a country about which less has been written, so that there is still a chance to write an interesting book of travels which shall not go over too familiar ground, although thereby he makes a much less valuable book. It is a pity that Spain should be still so little visited by most travelling Americans. The most common objections alleged are the frequent revolutions, and the expensiveness and discomfort of the trip; but any political observer can choose a peaceful time for his journey, and even if civil war should break out, the only way in which it would trouble him would be by disturbing the regularity of the trains. The expense is not excessive, and every one will feel himself amply repaid for the uncleanliness of the hotels and the poorness of the food by what the country has to show him. Mr. Hare by no means conceals the discomforts for which every traveller in Spain must prepare himself, but he gives them no undue prominence. At the very beginning of his book we find the following account of what is by no means a rare occurrence in Spanish travel:

"The train crawls along in the most provoking way, stopping at all the small stations for two, ten, twenty minutes, and giving you ample time to survey the scenery. You feel impatient, but your Spanish companions are perfectly satisfied—'It is so much safer, so satisfactory never to have any accidents.' Time is of no importance to them whatever. 'One can smoke one's *cigarritos* as well in one place as another.' This *insouciance* was fully displayed when we reached the station of Alsasua, where we were to change for Pamplona, and found our train had just been taken off by the Company, without any previous notice having been given to that effect. It was pitch dark, and from the pouring rain which had continued for several days, the wild country round was little better than a swamp, so the prospect of a whole day's detention was scarcely exhilarating; but finding our Spanish friends received the announcement with no greater expression of displeasure than a shrug of the shoulders, we thought it better to take it in the same way, and, as they said, to 'avoid the fatigue of discomposing ourselves.'"

Fortunately memory soon wipes out all that is disagreeable in such incidents, and how much there is left to compensate may be seen by any one who will read Mr. Hare's book. His journey was a completer one than is generally made by tourists, but even one who contents himself with less will find a great deal to delight him. Mr. Hare describes admirably the wonders of Granada, the interest of Seville and Cordova; but perhaps we might feel inclined to cavil at his silence about the grim mountain scenery around the way between Madrid and Andalusia, which is nearly the most striking in Europe. Hardly more than a page is devoted to the gallery at Madrid, one of the most interesting in the world, though it may be said that any guide-book will be of more service than the necessarily brief jottings of a traveller who merely tells the general impression made upon him, without any pretence to exhaustive mention. Hence, while Mr. Hare's book will be found interesting, it is far from being the last book that can be written about Spain. The illustrations are not praiseworthy additions to the book; especially is this true of the view of Cordova, and that of Gibraltar from Algeçiras, both which are very unsatisfactory, while none deserves high praise.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*
Bradbury (W. F.), Elementary Geometry and Trigonometry.	(Thompson, Bigelow & Brown)
Buckle (H. T.), Miscellaneous and Posthumous Works, 3 vols.	(Scribner, Armstrong & Co.) $22 50

38 Bleecker Street, New York.

BOOKS BY MAIL.

The Publisher of the *Nation* will hereafter forward by mail any book for which an order may be sent him, on the following conditions, which must be strictly observed:

1. That the money be forwarded in advance whenever the price is known.

2. That enquiries as to price or other particulars be accompanied by a stamped and addressed envelope for the reply.

3. That both money and books shall pass through the mails at the risk of the purchaser.

THE NATION,

5 Beekman Street,

P. O. Box 6732. New York City.

HARPER'S CATALOGUE. The attention of those designing to form Libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

NEW EDUCATIONAL WORKS.

UNDERWOOD'S

HANDBOOKS OF ENGLISH LITERATURE.

I.

(BRITISH AUTHORS.)

HANDBOOK OF ENGLISH LITERATURE. Intended for the Use of High Schools as well as a Companion and Guide for Private Students and for General Readers. (British Authors.) By Francis H. Underwood, A.M. Crown 8vo. Price, cloth, $2 50; half morocco, $4 50; half calf, $4 50.

II.

(AMERICAN AUTHORS.)

HANDBOOK OF ENGLISH LITERATURE. Intended for the Use of High Schools, as well as a Companion and Guide for Private Students and for General Readers. (American Authors.) By Francis H. Underwood, A.M. Crown 8vo. Price, cloth, $2 50; half morocco, $4 50; half calf, $4 50.

LATIN SCHOOL SERIES OF TEXT-BOOKS.

596 Broadway, New York.

CHEMICAL PHENOMENA OF

IRON SMELTING.

An experimental and practical examination of the circumstances which determine the capacity of the Blast Furnace, the Temperature of the Air, and the proper condition of the materials to be operated upon.

BY J. LOWTHIAN BELL.

1 vol. 8vo cloth, $6.

D. VAN NOSTRAND, Publisher & Importer.

No. 23 Murray Street and 27 Warren Street.

*** Copies sent free by mail on receipt of price.

ESTABLISHED 1835.

BOERICKE & TAFEL,

HOMŒOPATHIC PHARMACEUTISTS AND MEDICAL PUBLISHING HOUSE,

145 Grand Street, New York.

We send Laurie & McClatchey's work on "Domestic Medicine," together with a complete set of Remedies, in a solid Mahogany Case, securely packed, to any address, on receipt of $17, *i.e.*, $5 for the Book, and $12 for the Medicine Case. Address as above.

NOW READY.

HARVARD UNIVERSITY CATALOGUE, containing the Official Information in regard to all the Departments of the University, the Lists of the Officers and Students, and the Examination Papers of 1871–72. 318 pp.

The University no longer prints a Catalogue for gratuitous distribution.

For sale by all Booksellers, and sent by mail, on receipt of price (50 cents in paper, 75 cents in cloth), by the Publisher,

CHAS. W. SEVER, Cambridge, Mass.

THE WEEK IN TRADE AND FINANCE.

FEBRUARY 24.

THE money market has continued very active with rates on call loans ranging between 7 per cent. and a commission of ⅛ per cent. per diem in addition. The average rate for the week was $\frac{1}{16}$ and interest. Towards the close of banking hours on Friday there was a pressure to loan, and money was offered down to 2 per cent. per annum. The occurrence of a holiday on Saturday made it desirable for holders of balances to loan them out from Friday until Monday for the purpose of securing three days' interest. Foreign bankers are inclined to make time loans on stock collaterals, and considerable amounts of sterling have been put out in this way for sixty days. Various estimates have been made of the amounts so placed in this market, which it is impossible to state with exactitude, but they will probably reach nearly twenty millions of dollars.

Last week the Bank of England gained £273,000 in bullion. The Bank rate remains at 3½ per cent. Money in the open market is quoted at 2½ to 3 per cent.

The weekly bank statement is again unfavorable; the total reserve has fallen off $2,731,200, and the total liabilities $3,681,400. The banks hold in specie and legal tenders $1,859,850 less than the 25 per cent. required by law against $1,299,000 last week—a falling off of $560,850.

The following is a comparison of the averages for the two weeks ending February 15 and February 21, the statement having been made up on Friday instead of on Saturday.

	Feb. 15.	Feb. 21.	Differences.
Loans	$291,520,700	$286,870,100	Dec. $4,650,600
Specie	16,461,000	15,046,900	Dec. 1,414,100
Circulation	27,539,800	27,573,100	Inc. 33,300
Deposits	214,613,400	205,898,700	Dec. 8,714,700
Legal tenders	42,778,300	41 461,200	Dec. 1,317,100

The following shows the relation between the total reserve and the total liabilities:

	Feb. 15.	Feb. 21.	Differences.
Specie	$16,461,000	$15,046,900	Dec. $1.414 100
Legal tenders	42,778,300	41,461,200	Dec. 1,317,100
Total reserve	$59,239.300	$56,508,100	Dec. $2,731,200
Circulation	27,539 800	27,573,100	Inc. 33,300
Deposits	214,613,400	205,898,700	Dec. 8,714,700
Total liabilities	$242,153,200	$233,471,800	Dec. $8,681,400
25 per cent. reserve	60,538,300	58,367,950	
Deficiency in legal reserve	$1,299,000	$1,859,850	Inc. 560,850

There is nothing of importance to report in regard to the stock market beyond a sudden recovery of 1½ per cent., on Thursday, in the price of New York Central, and 4½ per cent. in Western Union on Wednesday and Thursday. Union Pacific was strong at the end of the week (Friday), and the price advanced to 35⅛ from 33, the lowest point of the week.

We have news from Washington that the lobbying affairs of the Pacific Mail Steamship Company are to be overhauled. The object of this is to ascertain if there has been any money influence used in Congress towards obtaining the Government subsidy for the China line; and the proposal of it has caused a decline in the price of the stock to 70½.

It is said that the recovery in the price of Union Pacific was caused by the buying in of stock to cover short sales which were made last week for account of Washington parties. On Friday the stock was in good borrowing demand on account of the closing of the transfer books for election of officers. The "point" that a considerable advance is to take place in Central and Hudson has again been revived, and those who are reputed to be on intimate terms with the Commodore are the ones who speak most confidently of a rise in the stock.

The situation in Western Union Telegraph bids fair to bring about a lively fight between the opposite parties. There have been rumors of a "corner" in the stock, but, from our experience of "corners," we have always found that the successful ones come "like a thief in the night" without warning.

The Chicago, Burlington, and Quincy Railroad Company has declared its regular 5 per cent. semi-annual dividend, payable either in the stock of the Company or in cash, as holders may elect. At market price, the stock they receive will be equal to a 5½ per cent. dividend, it is probable, therefore, that but little cash will be called for. The Company does not really make new stock, since it already holds in its treasury 12,300 shares of the Burlington and Missouri River R.R., which it has recently leased. This stock will now be cancelled, and in its place new stock of the Chicago, Burlington & Quincy Road issued as a dividend. The company has ample opportunities for expending its ready cash upon road improvements, in the way of double tracks, steel rails, and rolling stock.

It would seem that some of the stockholders of the Erie Railroad Company do not approve of the payment of the recent dividend, judging from the fact that "a series of resolutions instructing the Attorney-General to commence a suit to restrain the payment of the Erie dividend, on the ground that it is unreal and fraudulent, has been introduced at Albany." There is a rumor that Jay Gould may be the next President of the Erie.

The following report of earnings, for the year ending October 31, 1872, has been made by the New York Central and Hudson River Railroad Company to the State Engineer and Surveyor:

	1871.	1872.	Inc.
Passengers	$6,224,839	$6,662 006	$437,167
Freights	14,647.581	16,259 676	1,612,066
Miscellaneous	1,099,785	2,659,023	1,559,237
Total	$21.972,205	$25,580,675	$3,608,470
Operating expenses	13,991,110	16,446,436	—
Net earnings	$7,981,095	$9,134,239	$1,153,144

The payments on account of dividends were $7,224,831, and for rentals of leased lines $146,799.

The following table shows the highest and lowest sales of the leading stocks at the Stock Exchange, for the week ending February 21:

	Monday.		Tuesday.		Wedn'day.		Thursday.		Friday.		Saturday.
N. Y. C. & H. R.	103¼	103¼	103	103¾	103⅜	103⅞	103½	104	103⅜	103⅞	Holiday.
Lake Shore	96¼	97	96	96⅞	95½	96	95⅜	96¼	94⅜	96⅛	
Erie	63¼	65⅜	64¼	66	63⅜	64½	64⅜	64⅜	64⅜	65¼	
Union Pacific	33	33⅝	33¾	34½	33⅜	34¼	33⅝	34⅜	33⅜	35⅛	
Rock Island	112⅛	112⅜	112¾	112⅞	112½	112⅞	112⅜	112⅞	112¾	113⅝	
Mil. & St. Paul	51¾	52	52	52⅛	51⅞	52¼	52	52⅛	No sales		
Wabash	72	72¾	72⅜	73	72¾	73⅛	72¼	73½	73	74⅜

West. Union Tel.	87¼	88¾	88⅛	89⅞	88¼	89⅞	89½	91⅜	90⅜	91¼	
Pacific Mail	72	73	72½	73	72⅛	73	71	72⅝	79½	71½	

The Government bond market has been strong, with a constant demand from foreign bankers for bonds for shipment. The Treasury purchase on Wednesday drew seventeen offers of 5.20's, amounting to $5,128,150, at 113.65 to 114.49. The price of gold at the time the offers were made being 114⅝, it will be seen that Mr. Boutwell had an excellent opportunity to purchase an amount sufficient to make up the deficiency in the purchases of last month, but, for some good and wise reason, he decided not to do so, and took $1,000,000 at 113.65 to 113.85. There is nothing new to report in Syndicate operations in the new 5 per cents.

The State of Virginia is endeavoring to induce holders of bonds of the State to compromise in settlement of the interest due this year, and the following proposition is reported to have been accepted by a conference which sat in Richmond on Saturday, the 15th inst.: Four per cent. interest for 1873 to be paid on consols, four per cent. on two-thirds of the unfunded debt, and a like amount on the sterling debt; holders of coupons are to receive, when the same are presented at the Treasury, a non-interest bearing certificate in lieu of the unpaid interest. It is proposed to leave the settlement of past due coupons to the action of the Legislature.

It is reported that the coupons of the St. Joseph and Denver City Railroad Company are in default, due February 15.

The gold market has been strong, with the price fluctuating between 114⅜ and 114⅞. At the Treasury sale on Thursday bids for $8,125,000 were made at 114 to 114.63½. The $1,500,000 was awarded at 114.51½ to 114.63½.

BANKING OFFICE OF FISK & HATCH,
No. 5 Nassau Street, New York, Feb. 25, 1873.

☞ The CHESAPEAKE AND OHIO, the CENTRAL PACIFIC, AND WESTERN PACIFIC BONDS, all of which have been negotiated by us, we believe to be among the best and most desirable investment securities in the market, which in time must become very scarce; especially as the Government will probably during the year pay off, in gold, $300,000,000 more FIVE-TWENTIES, and a large amount of money thus released from investment must find its way into this class of securities.

THE CHESAPEAKE AND OHIO SIX PER CENT. GOLD BONDS, the total amount of which is only $15,000,000, are secured upon a property worth $35,000,000 to $40,000,000, and are fully equal in intrinsic value to the CENTRAL PACIFIC BONDS. They are issued in denominations of $100, $500, and $1,000, coupon or registered, and at their present market price, 87⅞ and accrued interest, are very desirable.

THE CENTRAL PACIFIC SIX PER CENT. GOLD BONDS are too well known to require description or commendation. Their total amount is $25,885,000; they have for a long time ranged in market price near or above par. Their price to-day is 104 to 104¼.

The WESTERN PACIFIC SIX PER CENT. GOLD BONDS amount to $2,735,000. This road is now consolidated with the CENTRAL PACIFIC, and the payment of its bonds, principal and interest, is assumed by the latter. Coupon Bonds, $1,000 each. Their market price to-day is 94¾ to 95. As they have recently been introduced on the Stock Exchange, we expect to see them rapidly rise to the price of CENTRAL PACIFICS, being substantially the same in character and value.

We buy and sell, as usual, Government Bonds, receive deposits, on which we allow interest, make collections, and conduct a general banking business in all its branches.

FISK & HATCH.

The Nation.

NEW YORK, THURSDAY, MARCH 6, 1873.

The Week.

THE Forty-second Congress closed its session on Tuesday without making any sensible mark on public affairs, and without having earned much of the respect of the public. But it has, nevertheless, two or three claims of some moment to distinction. There can be little doubt, for one, that it is the last "War Congress"—that is, the last Congress powerfully influenced by the passions and reminiscences of the war—which we shall see. It also closed what may be called the legislation arising out of the war by passing the bill providing for the execution of the fishery clauses of the Treaty of Washington, and, though last not least, it has lanced—though very unwillingly, and with a trembling hand and considerable faintness, it is true—the huge tumor of corruption, bred by twelve years' lavish expenditure, paper money, and protection to native industry, and subsidies, and land-grants. We may not have complete purity hereafter, but we shall have considerably less corruption. It has carefully, or almost carefully, avoided dealing with all the more serious questions of the day—the currency, the civil service, and so on—which is perhaps well, as we doubt whether any Congress can deal with them which is not elected for that purpose, as this Congress was not. It was elected to keep the Democratic party from getting back into power or "imperilling the results of the war," and this with the help of the Democrats themselves it has done very effectively.

One thing, however, was done at the last moment which will probably hurt the reputation of Congressmen more than fifty things far more nefarious. This was the addition of $2,500 a year to the salary of each senator and representative, a thing in itself objectionable for several reasons, and done in a very discreditable way, to say nothing of the scandal of making the bill retroactive. The same bill raises the President's salary to fifty thousand dollars a year, that of the Chief-Justice to ten thousand five hundred, and that of the Speaker and the Justices to ten thousand. The disproportion between the pay allotted to the Justices and that allotted to the ordinary members of Congress is not one of the least of the objections to the passage of this bill. If Judge Nelson's services were worth no more than ten thousand dollars a year to the country, Mr. Oakes Ames's have not been worth $15,000 during the past two years, notwithstanding the fact that Barnes's 'History of the Fortieth Congress' remarks of the latter gentleman, that though not in the habit of making speeches "he exerted much influence in legislation," as the newspapers are now pointing out. Mr. Blaine, to whom the bill proposed to give the retroactive salary as Congressman, called attention to the fact that the Speaker properly and customarily was in the position of the President, Vice-President, Judges, and so forth when the question of salaries came up, and very neatly and adroitly took himself "out of that crowd." We do not suppose it will hurt his chances for the Presidency. Of the outgoing members about one-half had the grace and honesty to oppose the increase and voted nay. Mr. Blaine gets praise from the correspondents for his dignity and his efforts to preserve order. In the Senate there was great "rushing through" of bills, but more decorum than in the House. Of the final action of senators on the unfortunates who have been candidates for expulsion, we suppose no one wishes to hear anything more said.

The Louisiana muddle still continues to be a muddle. The Senate Committee, composed of Messrs. Carpenter, Anthony, Alcorn, Logan, Trumbull, Morton, and Hill, made a very able report on it, confirming substantially the view we have all along taken of it in these columns. The Warmoth Board of Canvassers had possession of the returns, and were the champions of McEnery, who *probably* had the votes of all the white inhabitants of the State, while Kellogg was the Custom-house candidate, had the black vote, and a canvassing board of his own. Before either board, however, had made any returns, the Custom-house men filed a bill in chancery, before Judge Durell, of the United States District Court, who thereupon issued a batch of orders and injunctions, sending the United States Marshal, with the Federal troops at his back, to instal as the State Legislature such men as he thought proper. Of these orders the Committee say—and we commend the report to the attentive perusal of *Harper's Weekly* and the New York *Times*, as well as of the Custom-house publicists of this city:

> "Viewed in any light in which your Committee can consider them, the orders and injunction made and granted by Judge Durell in this case are most reprehensible, erroneous in point of law, and are wholly void for want of jurisdiction, and your Committee must express their sorrow and humiliation that a judge of the United States should have proceeded in such flagrant disregard of his duty, and have so far overstepped the limits of the Federal jurisdiction."

The majority of the Committee deduce from the facts the conclusion that no returns were legally canvassed at the late election, and that there is therefore no legal State government in Louisiana; five members find that if there be a Legislature it is that known as the McEnery Legislature; while one, Mr. Trumbull, finds positively that the McEnery Legislature is a lawful body and ought to be recognized. The majority hold that the decisions of the State Court on the matter, on which a friend of Mr. Kellogg's who wrote to us on his behalf from New Orleans relied, were as void as those of Judge Durell, inasmuch as the Court was created by an illegal acting Governor, who was appointed by a pretended Legislature, which was organized by illegal orders granted by Judge Durell. The majority of the Committee also decide finally that there is no legal State government in Louisiana, but differ as to what should be done under the circumstances. In the meantime, the President having already recognized the Kellogg government, and having received no instructions from Congress, in spite of his urgent application for them, will continue his present course. But surely Judge Durell ought to be impeached.

The first all-night debate that the Senate has held for a long time was held from Thursday to Friday last, the final vote being taken at seven in the morning. The question was the extremely knotty question of the passage of Mr. Carpenter's bill ordering a new election in Louisiana, and an amendment declaring that pending this election the so-called Kellogg government should be the government of the State. The amendment appears to have killed the bill, for the amendment having, after much voting, been tacked on, the bill then failed. All the voting was extremely close. The course adopted looks at first a little like a shirking of senatorial duty and the imposition of an undue burden upon the President, to whom now the question is turned over. It is a burden of which he tried to free himself, too, for although in the beginning he recognized the Kellogg faction, his late message showed a desire to make Congress take up its responsibility. But considering the very thorny character of this fruit of the war and of the system of reconstruction which we adopted, perhaps the solution reached—for we suppose a speedy compromise between the factions is now certain—is the best solution that could have been arrived at.

One of the noteworthy political events of the week is such because so little notice has been taken of it; yet Mr. Alexander Stephens, who has just been elected to Congress from a Georgia district, was

in 1865 the Vice-President of the Southern Confederacy. He was, however, beyond question the Confederate official least disliked at the North and probably the least regarded by the Confederate South, although much respected at the South for a kind of ability for which the South has always had at least sufficient respect. There never was a better specimen of a thoroughly lukewarm extremist, nor probably can history show a better example of a politician who has more thoroughly reaped the reward at once of his lukewarmness and of his extremism. He was made Vice-President of the Confederacy because he opposed secession, and neither the Southern Unionists nor the Northerners bore him malice, both being rather pleased that so moderate a man, and a Whig at that, was in the second place in the Confederate government. Now, his extremism in construing the Constitution as he was doing thirty years ago, sends him in his old age, unopposed in his Congressional district, to the scene of his old labors and triumphs. His moderation of temper—perhaps even his lack of physical robustness—has stood him in good stead. That he will be unopposed when he seeks admission at Washington is more than can be said. And indeed, that he ought to be unopposed is a question as to which opinions will differ. When one thinks of Mr. Sypher of Louisiana, not the worst specimen of the present kind of Southern representatives, one is inclined to think that rebels even of Mr. Stephens's grade would be an acquisition to the House. Of Mr. Sypher, Mr. C. K. Garrison, of the Pacific Mail Steamship Company, testified the other day, that he never paid Mr. Sypher any money, but that on one occasion Mr. Sypher came to him in the lobby, and said that he never took any money for his vote, but that there were twenty gentlemen in Congress from Southern States who usually acted with him and who did take money.

The *Evening Post* the other day called attention to one of the most curious incidents in the history of the pending attempt to provide the city with a new charter—the prominence assumed in it by a young man named Davenport, whom few people had ever heard of until last fall, when he suddenly made his appearance as a United States Commissioner. His career, indeed, is almost as extraordinary and in some of its features as alarming as that of many of the Southern carpet-baggers. It appears that he has never followed any calling more regular than that of somewhat desultory reporting for the newspapers, and it was while engaged in this during the war that he won the favor of Mr. B. F. Butler, and was by that soldier put on his staff, and modelled himself on his master, as Warmoth is said to have done on Banks, acquiring, among other things, that mixture of impudence with smartness which makes Butler so formidable to the timid, and covers up so many defects of mind and morals. But he remained entirely unknown to fame till he managed to make himself useful in some capacity to the members of the Republican Ring, who had him made U. S. Commissioner, and used him last year to "verify the registry," that is, find out whether the persons whose names were on it lived where they said they did—a simple police duty, which he performed insolently and turbulently, but efficiently.

His patrons then appear to have promised him the Superintendentship of Police under the new Charter, and put a section into it conferring on him—a youthful and unknown adventurer—powers such as were never thought of for the elderly, experienced, and distinguished men who fill that place in London, and such as no prefect of police in Paris or Vienna ever thought of claiming, except during a "state of siege." But this is not all. During the debates on the Charter in the Legislature of this great State, in which Marcy or Seward "fixed things" within even fifteen years, Mr. Davenport occupied a seat beside the Clerk in the Assembly, and sent his messages to the members by the pages, being apparently charged by the Ring with the conduct of the bill and with the duty of letting the majority know how to vote. Moreover, in the hearing before the Committee of the Senate, it is Mr. Davenport who appears in company with Mr. George Bliss, Jr., to defend the Charter against such men as Professor Dwight, Mr. Dorman B. Eaton, Mr. Schultz, and Mr. Howard Potter. It must be remembered, too, that he is a United States Commissioner, and is absent from his post while figuring as a "manager" at Albany. The times are certainly strange, whether they are "out of joint" or not. If the President would forbid United States officers acting as "workers" in State politics, he would confer an enormous benefit on the community.

We regret to say the week has again been marked by considerable disturbance in "journalism." The *Post*, in reply to that chaste and gentlemanly advice to its editor about his clothes from the *Times*, which we reproduced, observed that the editor of the *Times* was "an illustrious Briton," "who had learned his vocabulary in Billingsgate," and had "left his country for his country's good," and asserted, with justifiable confidence, that the plan of having appointments made by executive nomination and legislative confirmation was devised by the founders of the American Government, and not, as the *Times* alleged, by its own editor. Whereupon the *Times* insinuated vaguely that some of its enemies had been "indicted," and the *Tribune* then intervened by requesting the *World* not to call the editor of the *Times* "Jennings," as this was an opprobrious epithet which it should avoid out of respect for the memory of Henry J. Raymond. Here the editor of the *Times* appeared on the scene again, with flaming eyes, and observed that the *World* had been "twice sold," once for a house and once for "a sum of money," and that the editors of the *Tribune* had no "reputation from which they would not willingly part." He then indulged in a monologue on the cause of the detestation generally felt for him by the members of his own profession ("the vindictive hatred of most of our city contemporaries"), and came to the conclusion that it was due to his publication of the Ring accounts.

The account given by Butler in his report of the difference between the actual loss sustained by the United States and the amount of damages awarded by the Geneva Tribunal appears to have produced in England and on the Continent, as might have been expected, and as he probably desired, the impression that this Government had succeeded in perpetrating something in the nature of a fraud, and has led to an attack on the English Ministry, as the victims of it, in the House of Commons; but Mr. Gladstone got out of the difficulty by showing that the Board only awarded about half what the United States claimed. The feeling that there has been sharp practice in the matter on our side has, however, not been dispelled, and it has found expression in a motion by Lord Campbell, in the House of Lords, for an address to the Crown, praying that all treaties be submitted to Parliament six weeks before ratification, which was, however, negatived, after opposition by the Ministry, including the Lord Chancellor, on grounds of inconvenience and impracticability. In the meantime, the Senate and House at Washington, having failed to agree on any principle of distribution, the money will probably lie in the Treasury till next year. We doubt, too, whether any agreement between them about "equity" will ever be reached, and it is still worthy of consideration whether the law of the land and the notions of honor common among honest men would not furnish as good a rule as any that will ever be extracted from Congressional ethics.

The week, and indeed the last fortnight, in France has been given up to the debates of the Assembly on the report of the Committee of Thirty, of which we have already made a summary. The report makes no provision for settling the form of the government,

beyond claiming full constituent powers for the present legislature. In fact, it makes no provision at all for the future, beyond conceding "the principle" of a Second Chamber, and is mainly occupied with the definition of M. Thiers's relations to the Assembly. The vice of this definition is, like the vice of the Ring Charter for the city, that it seeks to base a permanent arrangement on an exceptional state of things, and creates restrictions for the President of the Republic which would not be thought necessary for any president but M. Thiers. During the pending debates, the Royalists have shown greater boldness than for some time past, even the Duc de Broglie, who is the most prudent as well as most respected of them, openly avowing his opinion that the only salvation of France lies in a monarchy, to which she must ultimately get back, though perhaps not yet—which is the old story over again, without emendation. The salvation of France lies in the possession of the government by somebody who can keep it and make it respected, while leaving discussion free; and the particular name given to this person or body of persons is of precious little consequence. The present Government, for instance, which is a nondescript, and has just as many characteristics of a monarchy as of a republic, is as good a one, to all outward appearance, as she has ever had. Giving it a name would not improve it. The debate will probably last some days longer, and has been enlivened by fresh rumors of a "fusion" between the Count de Chambord and the Count de Paris, which, however, outside Legitimist circles, seem to excite little interest, the fact being that such "fusion," even if it took place, would in no degree simplify the problem—the Count de Chambord's "claims" being to most Frenchmen questions of "lunar politics."

In the meantime, the events in Spain are likely to increase M. Thiers's difficulties as the advocate of the republican form. The spectacle of an orderly and successful republic in Spain would undoubtedly help him, but this, if it comes at all, is not likely to come soon enough for his purpose. On the contrary, whatever the final result of the Spanish experiment, the immediate future promises plenty of disorders, of which the French monarchists will make abundant use to frighten the small French property-holders, though for these disorders no form of government is really responsible, or offers any radical cure. The same things which caused Amadeus to run away will cause Castelar and his coadjutors many a sleepless night. On the other hand, the Spanish revolution is likely to help France by acting as what doctors call a "derivative," and drawing off from Paris some of the most troublesome elements of French society. There are plenty of signs that the Spanish Republic, if it attempts to be anything more than the rule of the army, which it was under Prim, will have to swallow a strong dose of socialism, as your Spanish "Red" is not a man to stand any nonsense, or be put off with orations and poems. When he calls for a republic, he means business—none of your pious respectable concerns, in which men have to put up with "the rewards of industry," but a radical removal of anxiety from every citizen's mind. Accordingly, the latest accounts say that there is a brisk migration from France, as well as other countries, of socialists and uprooters of various schools, who packed their carpet-bags, got their hats ironed, and started for Madrid on hearing the joyful news from that quarter, and are now rallying round the unhappy Castelar, who may thank his stars if he does not prove the Lamartine of the crisis.

As regards the condition and prospects of the Spanish Republic, they are neither worse nor better than might have been expected. Switzerland is thus far the only foreign power which has recognized the new Government; Austria and Germany and Russia await events, and England and France probably hardly know what to say. Its fate clearly depends on the army, and of the disposition of the army little is as yet known, although Serrano and other military chiefs have promised their support. The Carlists are clearly making headway, but only in the northern provinces, their principal operations being apparently thus far confined to Catalonia. The worst feature in the crisis is the apparently spreading insubordination of the troops, which are represented to be unsteady in various directions, the officers being largely monarchical. The Cortes has indicated its sense of the gravity of the situation by voting 45,000 men and 10,000,000 pesetas for the suppression of the insurrection. The men can doubtless be had, but where the money is to come from does not appear clear. The advantage of the Carlists will lie mainly now in the disorganization of the army and the dissensions of the Republicans, whose principal force is in the great towns, where, however, socialism is also most rampant, and in which a "conservative republic" will be hardly more attractive than a monarchy.

It appears that the chief offender in the alleged official corruption in Prussia is Wagener, a member of the Upper Privy Council, who has risen rapidly in his official career, according to the average scale of promotion in Prussia, and has enjoyed the honor of being summoned by the King as a trusted adviser. Wagener and two others formed a stock company for a railway in Pomerania, and (like Fisk, Gould & Co.) voted themselves permanent directors until the expiration of two years after the completion of the road, and enacted a statutory provision by which they, as founders of the company, should receive from the first meeting of the stockholders yet to be a pecuniary consideration for their services. Wagener used his official position to procure a "concession" or authorization for the company by an adroit evasion of the law. The capital was announced at seven million thalers, but the real capital never exceeded 420,000 thalers, and not more than half of this sum was in substantial values. The company being duly manipulated by the founders, and, in fact, representing them under another form, voted an honorarium of 40,000 thalers to compensate their services. But the three rogues fell out by the way, and quarrelled over the division of the spoils, Wagener demanding the half for his indispensable work. This brought the affair into court, and so it began to attract the notice of the public. Lasker broached it in Parliament during a general debate upon railway grants, and finally, on the 7th of February, in a speech of more than two hours' duration, he arraigned Wagener with so many circumstantial details that the House, without distinction of party, insisted that the Government should appoint a commission to investigate the affair, and that the investigation should be open.

Lasker had also alleged, in a general way, that Prince Biron, the King's chief cup-bearer, had accepted a consideration for a concession to another company. This high staff-officer, in a published letter, indignantly denied that he had received any money for the grant. In his speech of February 7, Lasker gave him the benefit of this denial, but went on to produce evidence that the Prince had been assured of 100,000 thalers in stock of the company as a recompense for his favor, but that the managers evaded payment upon the pretext that they had only meant to concede to him the privilege of purchasing that amount of stock. In point of fact Biron came off with neither money nor stock, but only a damaged reputation. Lasker knows too well his responsibility as a leader of the National Liberals to speak without book; and the press is well-nigh unanimous in insisting upon a thorough investigation, for the honor of the Prussian service, which has hitherto been deemed impeccable. The discipline of the father of Frederic the Great and of the great Frederic himself had brought the civil service under a military rigor of responsibility. When Rath Schulbut of Königsberg had been found guilty of peculation, and condemned to restitution and imprisonment, the father of Frederic, in one of his huge fits of royal passion, drove off to Königsberg in person, looked into the case over night, and had Schulbut hung the next morning. But times are changed. Prussia feels the spirit of speculation, and money is there becoming the talisman.

THE REPUBLICAN PARTY AND THE CRÉDIT MOBILIER SCANDAL.

THE House of Representatives has dealt with the Crédit Mobilier affair very much as might have been expected. As we ventured to predict some weeks ago, it has refused to expel anybody; but it has censured Messrs. Brooks and Ames, which we did not think it would do—not because we did not believe those gentlemen deserved censure, but because we thought censure simply too ridiculous a penalty even for the House to inflict. Why the penalty is ridiculous of course hardly needs explanation. If Oakes Ames, in his dealings with the members in Crédit Mobilier stock, did not mean to exert a corrupt influence on them, his transactions are no more matter for comment by Congress than his dealings with his customers at Easton. If he did mean to exert a corrupt or corrupting influence on them, of course he has been guilty of the gravest offence which a member of Congress, *quâ* member, could commit. Censuring him, therefore, is very like finding a man guilty of wilful murder, and then reminding him, by way of punishment, that his conduct has been culpable, and that he must be more careful in future. The same thing may be said, with still greater force, of Mr. Brooks's case.

There were scenes and incidents in the debate, too, which illustrated most powerfully the depth of the prevailing demoralization, and which explained pretty clearly how it is that the investigation has ended in nothing. Every step in the proceedings revealed clearly that widespread reluctance to punish anybody, or to apply to the vices of anybody in particular the disapprobation which we, in our books and sermons, inflict on vice in the abstract, of which we spoke a few weeks ago in commenting on the failure of the Bar Association in its pursuit of the Erie counsel. There was a world of meaning in the spectacle presented by Oakes Ames sitting bathed in tears, with a big bouquet of flowers in front of him, in the character of a national hero persecuted by an ungrateful country, like the well-known Christopher Columbus, while Mr. Benjamin F. Butler, who is rather proud of being a rascal, and boasts of his freedom from such encumbrances as conscience or honor, stood manfully forward, not in defence only, but in glorification of him—Butler himself being clearly the leading man in the assemblage, defiant, courageous, imperious the cynosure of all eyes, fresh from having instructed the House in its duty, as guardian of the national honor, in the distribution of the *Alabama* fund. The attitude of the rest of the body was not less instructive. There were no signs whatever of shame, or indignation, or of any other emotion with a noble side to it. The whole debate reminded one of the efforts of a herd of sheep to find an opening in a fence through which they might escape a barking dog—the same scurrying to and fro, and the same frantic eagerness in front of all attractive-looking holes. One little motion, amendment, and point of order followed the other, the sharp, ingenious fellows carrying off the honors of the day, until the desired aperture was discovered, after which they seem to have wiped their brows and breathed freely. The House, in short, showed the very prevalent dread of persons who have committed crimes and offences. Moral courage seems to be rapidly becoming the peculiar possession of people who have no morality. Honest men hang their heads in the presence of a rascal. They try him with great reluctance, pass sentence on him with sobs and groans, and then beg of him for God's sake to run away and leave them to their business; and when he refuses to run, and proceeds to slap their faces, they are profoundly impressed by his pluck—think he must have good in him after all, and, remembering his mother and sisters, and his early attendance on the Sunday-school, weep on his breast and subscribe to set him up in business. The result is that criminals begin to have a hearty contempt for us, and, far from repenting them of their crimes, are daily cursing their moderation in not stripping us more thoroughly. Their view of society begins to resemble that of the pickpockets who took a gentleman's watch and purse in broad daylight, two or three years ago, on the platform of a Fourth Avenue car, and, when he remonstrated, kicked him off and laughed at him as he ran after them penniless on foot.

What effect will all this have on the Republican party? This is the question which everybody is naturally asking, because, whatever Congress may say or do, everybody who does not despair of the country believes that out of doors the sentiment about the Crédit Mobilier affair is very different from that which seems to prevail in the House, and that this sentiment will sooner or later find expression at the polls. But there is and will continue to be more or less difference of opinion as to its nature and objects. *Harper's Weekly*, for instance, which found no difficulty in making the Democratic party responsible for the doings of the New York Ring, thinks that the Republican party cannot properly be held responsible for the corruption or wrongdoing of its principal men, but that whatever is reprehensible in the Crédit Mobilier affair should be laid at the doors of the individuals implicated solely, while the party should be allowed to retain its power and find other and honester agents to do its work. This is a legitimate deduction from a theory which the *Weekly* has long held, and which Mr. Henry Wilson defended in the *Independent* last summer against the attacks of the *Nation*—viz., that the Republican party is an organization analogous to the Christian church, having good in general for its object, and not the embodiment in legislation of a particular set of opinions; that, therefore, its failure to carry out any particular line of policy, or to enact any particular laws, or the corruption or ignorance of its leaders, are no more destructive of its claims to respect and confidence than the failure of the Christian church thus far to convert the world, or the bad behavior of its clergy, is destructive of its claims to divine origin. This theory has, of course, a basis in fact—and that is, that the party does really contain a very large proportion of the virtue and intelligence of the country, and does really exhibit in its legislation a higher ideal of national polity than the party it supplanted. To make the theory complete, however, and make it answer the purpose for which it is apparently intended, of establishing the right of the Republican party to retain perpetual control of the Government, and to make unimpeachable the analogy with the Christian church, an additional proposition is necessary—that the Republican party is not only the best party now in existence, but the best possible party, and the only possible party. It is not enough to say that it is better than the Democratic party was; it has to be said that it is better than any party ever will be. We shall only remark of this doctrine, that it is absolutely novel; that nothing like it has ever before been heard of in politics; and that if it were sound, discussion and many other processes of constitutional government would hereafter be useless in the United States, and we should speedily be delivered up to a body of political priests, bound by their ordination vows to take charge of our affairs.

We, on the other hand, maintain, and with increased confidence, that the shameful corruption in the Government which is showing itself side by side with overwhelming Republican majorities all over the country, is a fresh proof that the Republican party is a common human organization, for the ordinary political purposes—namely, the embodiment in legislation of a small cluster of ideas; that that purpose was carried out at the close of the rebellion; that the party is now *functus officio*, and has for several years been kept in office by the popular dread of "reaction" and the force of the great patronage and enormous handling of money resulting from the war; and that in the absence of any great controlling ideas, of real work, and of a powerful and respectable opposition, its leading men, who, for all practical purposes, are the party and represent it, have grown careless, and insolent, and indifferent to public opinion, and finally corrupt. There is nothing ecclesiastical about them or it. It has no divine mission, and they have no personal consecration. *It* is simply the consensus of a large body of the American people on a few points of home policy, and *they* are a number of not very remarkable gentlemen, whom the American people has put in charge of its affairs.

The remedy is to be found in the formation of another organization for other purposes. What these purposes are we have frequently intimated. We may venture to repeat them—the reform of the civil service; the restoration of the judiciary to its old position of independence and respectability; the simplification of political machinery, so that honest and industrious citizens can attend to their political affairs without the help of professional tricksters; the release of the States from the constant interference and supervision of the central authority; the purification of Congress by the reform of the tariff, and the prohibition of grants, subsidies, bounties, "protective" duties, and the total exclusion of Congressmen from a share in the appointing power. These objects can only be obtained by a party formed for that purpose, and for nothing else. Whether we are near the formation of any such party we do not know. We acknowledge with sorrow and disappointment that the events of last year undoubtedly postponed it, but we would fain believe that those who last year honestly strove to bring about a better state of things, have not abated one jot of heart or hope. We are sure that they must find in what is now passing both abundant justification for their course and abundant reason for trying again, whenever the opportunity offers. It is needless to say, of course, that any such organization would contain, if successful, whatever good elements the Republican party now contains, and many good elements which that party does not contain, and nothing short of this combination of the good of all parties will save us. The good Republicans are not likely to be removed in chariots of fire when the party organization disappears.

ANOTHER STUDY IN MUNICIPAL POLITICS.

WE can again cordially recommend the history of the second attempt to provide New York with a charter, in lieu of that enacted by the Tweed Ring, as an excellent study in morbid politics. The public, and especially the younger portion of it, can hardly examine it too closely. As is well known, the problem of governing this city is made peculiar and intricate by two things—one is the very heterogeneous character of the population, and the other the fact that the large majority of this population belongs to the Democratic party, while the majority of the people of the State, who provide the city with its form of government, belongs to the Republican party. The first result of this is, that the experiment of "trusting the people," as it is called, or, in other words, of leaving the city voters to draw up their own charter and administer their affairs in their own way, which many intelligent observers advocate—though we ourselves have little faith in it—cannot be tried. The majority in the State have never been able to make up their minds to relinquish all hold on the city offices, and thus deprive themselves of all means of keeping down the city majority, which threatens every year more and more to overwhelm the country majority at State and Federal elections; and all preaching by the press of the plan of "taking city affairs out of politics" has thus far, for the same reason, proved idle. This standing conflict between the city and State would be by itself sufficiently unfortunate and sufficiently discouraging, but it has been complicated ever since 1860 by the appearance in the field of the United States, represented by the "Custom-house," as an ally of the State. During the excitement of the war, the Republican party in the city held together pretty well; but the war over, they began to quarrel over the "spoils," and the managers broke into two sets or "gangs," as they were called, one of them led by the Custom-house and standing by the Administration, and the other forming a kind of "Fronde," led by Mr. Greeley, and finally developing into the "Liberal Republicans" in 1872; the first owning allegiance to Senator Conkling and having the *Times* for trumpeter, and the second to Senator Fenton, and having the *Tribune* for trumpeter.

The contest raged with varied fortune, the State politicians looking on doubtfully, and professing to feel scandalized by these "dissensions," until 1870, when there appeared a decided breach in the ranks of the city Democrats by the secession from Tammany of Mr. Jimmy O'Brien and his followers, under the style and title of the "Young Democracy," also owing to a quarrel over the "spoils," O'Brien not having got what he considered his due. It was not very long before the effect of this on the Republican schism became very manifest. The Custom-house faction, led by Tom Murphy, began to show a decided leaning for Tammany and Tweed, while the Fentonites, by way of preserving the balance of power, entered into secret relations with the "Young Democracy," and the public was shocked by stories of interviews between Mr. Greeley and Messrs. O'Brien and John Morrissey. Tweed took advantage of this state of things, and of a Democratic majority in the Legislature for the first time in twenty-four years, to introduce the famous "Ring Charter." The Fentonites, headed by Greeley, and in alliance with the "Young Democracy," fought it bitterly, as did the *Tribune* and the rest of the city press, but the Custom-house men and the country Republicans supported it stoutly—the Republican assemblymen even and senators receiving, as was and is believed, large bribes from Tweed. The *Times*, too, the Custom-house organ, hailed its enactment with joy. It declared its passage to be "most important and salutary"; said that Tweed "was in a fair way to distinguish himself as a great reformer," and claimed the credit of the great victory "for the Republicans and the Legislature." "The credit," it said, "is as much theirs as it is of the Tweed Democracy," and it warmly eulogized Peter B. Sweeny, and expressed its "thankfulness" for the appointments made by the Ring in the various departments.

The Ring had the city now completely in their hands, and proceeded to plunder it at their leisure, and the Custom-house Republicans reigned supreme, under the leadership of Mr. Tom Murphy, whom the Fentonites assailed by "investigation," but only forced into a nominal retirement. When the Ring operations excited the suspicions of the *Times*, and finally led to the publication by that paper of the secret accounts furnished by their untiring and implacable foe Jimmy O'Brien, there descended a great cloud on the Custom-house faction. They fell into a secondary position, and indeed all divisions were effaced by the reform movement; and the result was that when it was over, Murphy & Co. remained modestly in the background and allowed the Committee of Seventy—a body representing all shades of municipal opinion—to come forward with a charter which the Legislature, great rascals as the majority of it were, were afraid to refuse, but which Governor Hoffman unfortunately vetoed.

The probabilities are that but for the Greeley movement this happy state of things would have lasted until now; that is, the trading politicians would have been kept in the background sufficiently long for the honest sentiment of the city to have secured recognition at Albany in some permanent plan of city government. If the Cincinnati Convention had nominated Mr. Adams, or anybody who would have been recognized as a real representative of reform, there is little doubt that even if Grant had been re-elected, the corrupt hosts who fought under the banner of the Administration would have received a sufficiently rude handling to have inspired them with modesty and caution during the remainder of his term of office. But the nomination and overwhelming defeat of Mr. Greeley—himself the head and front of one of the New York factions, and by no means believed to be superior to their arts, of course served the Custom-house men as a complete rehabilitation, and the triumph was easily made to wear the appearance of being the work of their hands. They had during and before the election been modest almost to bashfulness. They thankfully endorsed the nomination for the mayoralty of Mr. Havemeyer, an old Democrat, and thankfully accepted General Dix, another old Democrat, for the Governorship. Mr. Tom Murphy, as their chairman, wrote an abject letter to Mr. Havemeyer, assuring him that he need not be afraid that they would claim him as a Republican candidate; and their organ the *Times* resounded with praises of him. The election over, the change in their attitude was complete and almost instantaneous, and they began a series of operations which furnish a striking and instructive

illustration of the way in which Federal patronage and interference have been made during the last ten years instrumental in handing over some of the greatest, richest, and most flourishing communities in America to small bands of paltry adventurers.

One of their first acts when the election was over was to make arrangements to divide the offices. They first and foremost cleared the ground by arrangement with Mayor Hall, by which some of his men resigned just before the close of his term, and he appointed Custom-house nominees in their places. This enabled them to provide for some of their own number without inconvenience. They next appointed a little committee to take charge of the work of providing this great city with a charter, and accordingly drafted one and took it up to Albany, and began to force it through the Legislature—a task which is rendered all the easier by the fact that there is hardly any country member of the Legislature on the Republican side who takes any real interest in municipal reform, or knows anything about municipal affairs, and the Federal officials in the city are consequently accepted as final authorities as to what the course of "the party" should be on all municipal questions. The charter thus prepared has many points of superiority over Tweed's, which is not saying much for it, but it was curiously adapted to Custom-house purposes in one particular. It took away from the Mayor, Mr. Havemeyer, whom after election the managers began to abuse and "distrust," all real control of the appointments, while it kept the Departments of Finance and Public Works, in which the patronage and expenditure of money are very great—and in which, therefore, on the principle they apply to the mayoralty, a division of power and responsibility among several men is most called for—in charge of a single head, and it gave the Superintendent of Police unprecedented powers. The object of all this was of course obvious, and when we say that desperate efforts have been made to pass it, under the party whip, plied vigorously by the Federal District Attorney and Commissioner, in spite of the opposition of the best class of New York citizens, and that the promoters insisted on having the elections held along with the State and Federal elections in the fall, and not, as the reformers wished, separately in the spring, we say enough to complete the story.

THE ABDICATION OF AMADEUS.

PARIS, Feb. 14, 1873.

THE new revolution in Spain has at least one merit—it has been quite bloodless. The King has abdicated, for the simple reason that his monarchy—his dynasty—died, as it were, of inanition on a foreign soil. It was a bold experiment to graft a branch of the House of Savoy on Spain; the Savoyard dynasty is perhaps the most original of Europe, the least adapted to any other country than Italy. Even in Rome and in Naples, Victor Emanuel finds himself almost a stranger. He represents essentially the hardier populations of Northern Italy. His young son, the Duke of Aosta, was educated in a court which has perhaps the strictest etiquette of all the European courts. He was of course a soldier, as every Prince of Savoy has always been. He is tall, very thin, with an angry look in his eye; he has a sternness quite extraordinary for his age; he resembles very much his father, with a touch of still greater severity in his face; he moves and walks like a drill-sergeant. He has always lived among his aides-de-camp and officers of the army, and cares for little except military matters. Under his brusque and haughty manner he conceals the hereditary *finesse* and shrewdness of the House of Savoy; its ambition also, as was well proved when he exchanged his name for that of King of Spain. There is something in him which reminds me of the portraits of Philip II.—the thick Austrian lip, the long form; only the eye of Philip seems almost vacant and dead, while the eyes of Amadeus are restless and brilliant. Philip was a grand-inquisitor on the throne, and Amadeus was obliged to make war upon the church in Spain, as his father had done in Italy. Philip enjoyed as absolute a power as an Asiatic sovereign, and Amadeus, in his short career of a constitutional monarch, was constantly threatened by factions, and betrayed by the very men who had offered him the crown.

It is said that as the ambition and imagination of Princess Charlotte of Belgium had much to do with the conduct of the Archduke Maximilian when he accepted the dangerous crown of Mexico, the Duke of Aosta was much influenced by his wife, who belongs to the old family of the Mérodes. I remember seeing the young Duchess a few years ago. Without being regularly handsome, she has what the French call *grand air*; having entered by marriage a royal family, she perhaps assumed too royal manners. One of her ladies of honor, the Marchioness A——, was once by her as she was sitting for her portrait. She had already given a few sittings to the painter, and had never spoken to him. The Marchioness A—— politely approached the painter and encouraged him. The Duchess recalled her abruptly, and, showing her a chair, said to her, "Here is your place." "No, madam; my place is at home"; and she went out and never approached the Duchess again. Once Queen of Spain, she made great efforts to attract the best Spanish society to her Court; but all her attempts were vain. The grandees of Spain and their wives belong, without exception, to the parties of Christina, of Isabella, of the young Prince of the Asturias, or of the Duc de Montpensier. At the Court balls it was next to impossible to form a quadrille for the Queen, as there were hardly any other ladies but those of the diplomatic body. Marshal Serrano, who with Prim had for so many months the fate of Spain in his hands, and who, as well as the once Montpensierist Topete, had finally accepted the rule of Amadeus, became estranged from the King after a short time. The unfortunate young sovereign had lost the support of the members of the Liberal Union and of the Progressists; latterly he had actually no supporters except a small band of politicians led by M. Zorilla. He knew better than anybody the value of the men who formed his Cabinet and the majority of the present Cortes; he felt himself in a sort of political vacuum. His intentions were good and honest, but he had only corrupt instruments at his disposition. In his journey through the provinces he found that everywhere the most important citizens fled, as it were, before him. He was alone in a country of whose language he was ignorant, surrounded by valets and vulgar intriguers.

There can be no doubt that he was glad to find an opportunity for resigning. His partisans in Italy and in Spain had often said that he would never leave the Peninsula but in a coffin; and he is said to have himself declared that the fate of Maximilian did not frighten him. But he has given so many proofs of personal courage that he can hardly be blamed for not having carried his bold experiment to a tragical end. He almost courted assassination; he went day after day alone in the streets of Madrid, in plain clothes or in uniform. His life was attempted not long ago on his way to the theatre. The people of Madrid admired him for his coolness; they liked him as a man, but not as a king. A chivalrous people could not help feeling some sympathy for a young prince who seemed so careless of danger. The army naturally had the same feeling; but the very sympathy which had sprung up between the King and the army has been the cause of the abdication. There is a part of the Spanish people which has always preserved a very high tone and *esprit de corps*, which is very proud of its achievements in the war of independence, and which never took any part in the numerous *pronunciamientos* which have so often been the signal of revolutions. The cadets of Segovia who enter the artillery do not expect to be promoted except by seniority. In a country where political fidelity and honesty are so low, this *esprit de corps* of the artillery is one of the traditions which have survived so many civil convulsions. The last Ministers of Amadeus had promoted to the rank of general a colonel called Hidalgo, who is an officer of artillery, and who had made himself very unpopular in his own corps. He was accused by his comrades of having taken part in the bloody insurrection of 1866, when the soldiers of a regiment killed several of their officers. Hidalgo, it is said, had seen two of his friends killed under his eyes, and had not tried to save them; when his promotion became known, 700 officers of artillery sent in their resignation on the same day. The Ministers accepted it, and issued a decree by which they at once promoted 700 sergeants to the rank of officer. The King was strongly opposed to this revolutionary measure; his sympathies were entirely on the side of the army; but he could not dismiss his Ministers, as he could form no other Ministry; they were the last *residuum*, on which he must stand or fall. Unwilling to disorganize the army, and unable to carry on a constitutional government, since a possible change of the Cabinet is one of the conditions of such a government, he decided to resign, and it soon became evident that the question of General Hidalgo was only for him a desired opportunity. This resolution, which has taken Europe by surprise, will not astonish those who are familiar with Spanish politics. A few months after Amadeus had set foot in Spain it could be safely prophesied that he would never be acceptable to the mass of the people. He was essentially the creature of a party, and not of the strongest party; his dynasty was not organic, as it were, it was the artificial work of diplomacy and of intrigue. The only way for the King to make his Government firm would have been to violate the very constitution which had placed him on the throne, to clear the Augean stable of a despised congress, and to be the man of the people. But he could not speak Spanish, he knew as little about

Spain as he would have known about Greece or Denmark. He had not the genius of a reformer.

The revolution in Spain will have very remote consequences. M. Thiers, when he heard that the Republic had been proclaimed in Madrid, said: "I have not milk enough for two nurselings." Monarchical Europe may not be much alarmed by the proclamation of a Republic, which is only the equivalent of proclaiming a chaos; but still Germany, Russia, and Italy will not see with much satisfaction how difficult it has become to maintain a monarchy in the most monarchical part of Europe. Spain is a dangerous spot, a kind of a sore; and the sore is opening again. The House of Savoy, which has been so lucky and triumphant for the last fifteen years, will lose something of its prestige, and feel weakened in its struggle against the Catholic Church. But nobody seems so afraid of the proclamation of the new Republic of Spain as the French Republicans. They are naturally afraid that the anarchy, the struggles, the probable armed conflicts which threaten Spain will not turn to the credit of their ideas. There is no man in Spain likely to play the part of M. Thiers with as much success, to reconcile many old monarchists to a conservative republic, to keep a sort of miraculous balance of all the political forces. There is not a man left in the Spanish Cortes with the smallest amount of prestige; the generals and the marshals will probably have more to say in the final settlement than the eloquent Castelar or the cunning Rivero. On the other hand, if the Republic comes to an inglorious end, comes the dangerous question of the successor of Amadeus. No foreign prince will probably be found mad enough to try an experiment which is almost sure to fail. And what is the condition of the old dynasty? Though the Carlists keep up a desultory warfare in the mountains of the North, Don Carlos has no hope of success. He is not considered as the legitimate ruler by the immense majority of the Spaniards, who have never accepted the French idea of a Salic law. Isabella is the legitimate sovereign; but she cannot return to Spain as a queen; her heir, the Prince of the Asturias, is only fifteen years old. A regency will therefore be necessary. Who will be the regent? Here the struggle will begin between the ambitious marshals, who have already tasted absolute power and wish to do so again, and the Duc de Montpensier. The Duke is now so much identified with Spanish affairs that the Spaniards will be wise if they forgive him his French origin, and give him the preference. Nobody knows better the statesmen, the politicians, the officers of the army; and his birth places him in a position where he can show himself superior to the small *cliques* (I can hardly call them parties), which would be sure to conspire and to fight perpetually under a marshal. But it may be that the Duc de Montpensier is tired of meddling with politics in Spain; he has so far gained nothing, and he has lost much by his long efforts under Queen Isabella and since the revolution. He is enlightened, able, hard-working, active; his domestic life is pure; he has many daughters, one of whom might one day marry Prince Alphonso. Everything seems to favor this solution; but it is never safe to prophesy on the "*Cosas de España.*"

A EUROPEAN SUMMER.

VII.—FROM VENICE TO STRASSBURG.

THERE could be much to say about that golden chain of historic cities which stretches from Milan to Venice, in which the very names—Brescia, Verona, Mantua, Padua—are an ornament to one's phrase; but I should have to draw upon recollections now three years old, and to make my short story a long one. Of Verona and Venice only have I recent impressions, and even to these I must do hasty justice. I came into Venice, just as I had done before, toward the end of a summer's day, when the shadows begin to lengthen, and the light to glow, and found that the attendant sensations bore repetition remarkably well. There was the same last intolerable delay at Mestre, just before your first glimpse of the lagoon confirms the already distinct sea-smell which has added speed to the precursive flight of your imagination; then the liquid level, edged far off by its band of undiscriminated domes and spires, soon distinguished and proclaimed, however, as excited and contentious heads multiply at the windows of the train; then your long rumble on the immense white railway bridge, which, in spite of the invidious contrast drawn (very properly) by Mr. Ruskin, between the old and the new approach to Venice, does truly, in a manner, shine across the green lap of the lagoon like a mighty causeway of marble; then the plunge into the station, which would be exactly similar to every other plunge, save for one little fact—that the key-note of the great medley of voices borne back from the exit is not "Cab, sir!" but "Barca, signore!" I don't mean, however, to follow the traveller through every phase of his initiation, at the risk of stamping poor Venice beyond repair as the supreme bugbear of literature; though, for my own part, I hold that, to a fine, healthy appetite for the picturesque, the subject cannot be too diffusely treated. Meeting on the Piazza, on the evening of my arrival, a young American painter, who told me that he had been spending the summer at Venice, I could have assaulted him, for very envy. He was painting, forsooth, the interior of Saint Mark's. To be a young American painter, unperplexed by the mocking, elusive soul of things, and satisfied with their wholesome, light-bathed surface and shape; keen of eye; fond of color, of sea and sky, and anything that may chance between them; of old lace, and old brocade, and old furniture (even when made to order); of time-mellowed harmonies on nameless canvases, and happy contours in cheap old engravings; to spend one's mornings in still, productive analysis of the clustered shadows of the Basilica, one's afternoons anywhere, in church or camp, on canal or lagoon, and one's evenings in starlight gossip at Florian's, feeling the sea-breeze throb languidly between the two great pillars of the Piazzetta and over the low, black domes of the church—this, I consider, is to be as happy as one may safely be.

The mere use of one's eyes, in Venice, is happiness enough, and generous observers find it hard to keep an account of their profits in this line. Everything the eye rests on is effective, pictorial, harmonious—thanks to some inscrutable flattery of the atmosphere. Your brown-skinned, white-shirted gondolier, twisting himself in the light, seems to you, as you lie staring beneath your awning, a perpetual symbol of Venetian "effect." The light here is, in fact, a mighty magician, and, with all respect to Titian, Veronese, and Tintoret, the greatest artist of them all. You should see, in places, the material on which it works—slimy brick, marble battered and befouled, rags, dirt, decay. Sea and sky seem to meet halfway, to blend their tones into a kind of soft iridescence, a lustrous compound of wave and cloud, and a hundred nameless local reflections, and then to fling the clear tissue against every object of vision. You may see these elements at work everywhere, but to see them in their intensity you should choose the finest day of the month, and have yourself rowed far away across the lagoon to Torcello. Without making this excursion, you can hardly pretend to know Venice, or to sympathize with that longing for pure radiance which animated her great colorists. It is a perfect bath of light, and I could not get rid of a fancy that we were cleaving the upper atmosphere on some hurrying cloud-skiff. At Torcello there is nothing but the light to see—nothing, at least, but a sort of blooming sand-bar, intersected by a single narrow creek which does duty as a canal, and occupied by a meagre cluster of huts, the dwellings, apparently, of market-gardeners and fishermen, and by a ruinous church of the eleventh century. It is impossible to imagine a more poignant embodiment of unheeded decline. Torcello was the mother-city of Venice, and it lies there now, a mere mouldering vestige, like a group of weather-bleached parental bones left impiously unburied. I stopped my gondola at the mouth of the shallow inlet, and walked along the grass beside a hedge to the low-browed, crumbling Cathedral. The charm of certain vacant grassy spaces, in Italy, overfrowned by masses of brickwork, honeycombed by the suns of centuries, is something that I hereby renounce, once for all, the attempt to express; but you may be sure, whenever I mention such a spot, that it is something delicious. A delicious stillness covered the little campo at Torcello; I remember none so *audible* save that of the Roman Campagna. There was no life there but the visible tremor of the brilliant air and the cries of half-a-dozen young children, who dogged our steps and clamored for coppers. These children, by the way, were the handsomest little brats in the world, and each was furnished with a pair of eyes which seemed a sort of protest of nature against the stinginess of fortune. They were very nearly as naked as savages, and their little bellies protruded like those of infant Abyssinians in the illustrations of books of travel; but as they scampered and sprawled in the soft, thick grass, grinning like suddenly translated cherubs, and showing their hungry little teeth, they suggested forcibly that the best assurance of happiness in this world is to be found in the maximum of innocence and the minimum of wealth. One small urchin—named, if ever a child was, to be the joy of an aristocratic mamma—was the most expressively beautiful little mortal I ever looked upon. He had a smile to make Correggio sigh in his grave; and yet here he was, running wild among these sea-stunted bushes, on the lonely margin of a decaying world, in prelude to how blank, or to how dark, a destiny? Verily, nature is still at odds with fortune; though, indeed, if they ever really pull together, I'm afraid nature will lose her picturesqueness. An infant citizen of our own republic, straight-haired, pale-eyed, and freckled, duly darned and catechised, marching into a New England school-house, is an object often seen and soon forgotten; but I think I shall always remember, with infinite tender conjecture, as the years roll by, this little unlettered Eros of the Adriatic strand. Yet all youthful things at Torcello were not cheerful, for the poor lad who brought us the key of the Cathedral was shaking with an ague, and his melancholy presence seemed to point the moral of forsaken nave and choir. The church is admirably primitive and curious, and reminded me of

the two or three oldest churches of Rome—St. Clement and St. Agnes. The interior is rich in grimly mystical mosaics of the twelfth century, and the patchwork of precious fragments in the pavement is not inferior to that of St. Mark's. But the terribly distinct apostles are ranged against their dead gold backgrounds as stiffly as grenadiers presenting arms—intensely personal sentinels of a personal Deity. Their stony stare seems to wait for ever vainly for some visible revival of primitive orthodoxy, and one may well wonder whether it finds much beguilement in idly-gazing troops of Western heretics—passionless, even in their heresy.

I had been curious to see whether, in the galleries and churches of Venice, I should be disposed to transpose my old estimates—to burn what I had adored, and to adore what I had burned. It is a sad truth, that one can stand in the Ducal Palace for the first time but once, with the deliciously ponderous sense of that particular half-hour being an era in one's mental history; but I had the satisfaction of finding at least a great comfort in a short stay—that none of my early memories were likely to change places, and that I could take up my admirations where I had left them. I still found Carpaccio delightful, Veronese magnificent, Titian supremely beautiful, and Tintoret altogether unqualifiable. I repaired immediately to the little church of San Cassano, which contains the smaller of Tintoret's two great Crucifixions, and when I had looked at it awhile, I drew a long breath, and felt that I could contemplate any other picture in Venice with proper self-possession. It seemed to me that I had advanced to the uttermost limit of painting; that beyond that another art—inspired poetry—begins, and that Bellini, Veronese, Giorgione, and Titian, all joining hands and straining every muscle of their genius, reach forward not so far but that they leave a visible space, in which Tintoret alone is master. I well remember the excitement into which he plunged me, when I first learned to know him; but the glow of that comparatively youthful amazement is dead, and with it, I fear, that confident vivacity of phrase of which, in trying to utter my impressions, I felt less the magniloquence than the impotence. In his power there are many weak spots, mysterious lapses, and fitful intermissions; but, when the list of his faults is complete, he still seems to me to remain the most *interesting* of painters. His reputation rests chiefly on a more superficial sort of merit—his energy, his unsurpassed productivity, his being, as Théophile Gautier says, *le roi des fougueux*. These qualities are immense, but the great source of his impressiveness is that his indefatigable hand never drew a line that was not, as one may say, a moral line. No painter ever had such breadth and such depth; and even Titian, beside him, has often seemed to me but a great decorative artist. Mr. Ruskin, whose eloquence, in dealing with the great Venetians, sometimes outruns his discretion, is fond of speaking even of Veronese as a painter of deep spiritual intentions. This, it seems to me, is pushing matters too far, and the author of the "Rape of Europa" is, pictorially speaking, no greater casuist than any other genius of supreme good taste. Titian was, assuredly, a mighty poet, but Tintoret—Tintoret was almost a prophet. Before his greatest works you are conscious of a sudden evaporation of old doubts and dilemmas, and the eternal problem of the conflict between idealism and realism dies the most natural of deaths. In Tintoret, the problem is practically solved, and the alternatives so harmoniously interfused that I defy the keenest critic to say where one begins and the other ends. The homeliest prose melts into the most ethereal poetry, and the literal and imaginative fairly confound their identity. This, however, is vague praise. Tintoret's great merit, to my mind, was his unequalled distinctness of vision. When once he had conceived the germ of a scene, it defined itself to his imagination with an intensity, an amplitude, an individuality of expression, which make one's observation of his pictures seem less an operation of the mind than a kind of supplementary experience of life. Veronese and Titian are content with a much looser specification, as their treatment of any subject which Tintoret has also treated abundantly proves. There are few more suggestive contrasts than that between the absence of a *total* character at all commensurate with its scattered variety and brilliancy, in Veronese's 'Marriage of Cana,' in the Louvre, and the poignant, almost startling, completeness of Tintoret's illustration of the theme, at the Salute Church. To compare his "Presentation of the Virgin," at the Madonna dell' Orto, with Titian's, at the Academy, or his "Annunciation" with Titian's, close at hand, is to measure the essential difference between observation and imagination. One has certainly not said all that there is to say for Titian when one has called him an observer. *Il y mettait du sien*, as the French say, and I use the term to designate roughly the artist whose apprehensions, infinitely deep and strong when applied to the single figure or to easily-balanced groups, spends itself vainly on great dramatic combinations—or, rather, leaves them ungauged. It was the whole scene that Tintoret seemed to have beheld, in a flash of inspiration intense enough to stamp it ineffaceably on his perceptions; and it was the whole scene, complete, peculiar, individual, unprecedented, which he committed to canvas with all the vehemence of his talent. Compare his 'Last Supper,' at San Giorgio—its long, diagonally-placed table, its dusky spaciousness, its scattered lamp-light and halo-light, its startled, gesticulating figures, its richly realistic foreground—with the usual formal, almost mathematical, rendering of the subject, in which impressiveness seems to have been sought in elimination rather than comprehension. You get from Tintoret's work the impression that he *felt*, pictorially, the great, beautiful, terrible spectacle of human life very much as Shakespeare felt it poetically—with a heart that never ceased to beat a passionate accompaniment to every stroke of his brush. Thanks to this fact, his works are signally grave, and their almost universal and rapidly increasing decay does not relieve their gloom. Nothing, indeed, can well be sadder than the great collection of Tintorets at San Rocco. Incurable blackness is settling fast upon all of them, and they frown at you across the sombre splendor of their great chambers like gaunt, twilight phantoms of pictures. To our children's children, Tintoret, as things are going, can be hardly more than a name; and such of them as shall miss the tragic beauty, already so dimmed and stained, of the great 'Bearing of the Cross,' at San Rocco, will live and die without knowing the largest eloquence of art. If you wish to add the last touch of solemnity to the place, recall, as vividly as possible, while you linger at San Rocco, the painter's singularly interesting portrait of himself, at the Louvre. The old man looks out of the canvas from beneath a brow as sad as a sunless twilight, with just such a stoical hopelessness as you might fancy him to wear, if he stood at your side, gazing at his rotting canvases. It is not whimsical to fancy it the face of a man who felt that he had given the world more than the world was likely to repay, Indeed, before every picture of Tintoret, you may remember this tremendous portrait with profit. On one side, the power, the passion, the illusion of his art; on the other, the mortal fatigue of his spirit. The world's knowledge of Tintoret is so small that the portrait throws a doubly precious light on his personality; and when we wonder vainly what manner of man he was, and what were his purpose, his faith, and his method, we may find forcible assurance there that they were, at any rate, his life—and a very intense one.

Verona, which was my last Italian stopping-place, is under any circumstances a delightfully interesting city; but the kindness of my own memory of it is deepened by a subsequent ten days' experience of Germany. I rose one morning at Verona, and went to bed at night at Botzen! The statement needs no comment, and the two places, though but fifty miles apart, are as painfully dissimilar as their names. I had prepared myself for your delectation with a copious tirade on German manners, German scenery, German art, and the German stage—on the lights and shadows of Innsbrück, Munich, Nuremberg, and Heidelberg; but just as I was about to put pen to paper, I glanced into a little volume on these very topics, lately published by that famous novelist and moralist, M. Ernest Feydeau, the fruit of a summer's observation at Hamburg. This work produced a reaction, and if I chose to follow M. Feydeau's own example when he wishes to qualify his approbation, I might call his treatise by any vile name known to the speech of man, but I content myself with pronouncing it—superficial. I then reflect that my own opportunities for seeing and judging were extremely limited, and I suppress my tirade, lest some more enlightened critic should come and pronounce *me* superficial. Its sum and substance was to have been that—superficially—Germany is ugly; that Munich is a nightmare, Heidelberg a disappointment (in spite of its charming Castle), and even Nuremberg not a joy for ever. But comparisons are odious; and if Munich is ugly, Verona is beautiful enough. You may laugh at my logic, but you will probably assent to my meaning. I carried away from Verona a certain mental picture upon which I cast an introspective glance whenever between Botzen and Strassburg the oppression of external circumstance became painful. It was a lovely August afternoon in the Roman Arena—a ruin in which repair and restoration have been so gradually and discreetly practised that it seems all of one harmonious antiquity. The vast stony oval rose high against the sky in a single, clear, continuous line, broken here and there only by strolling and reclining loungers. The massive tiers inclined in solid monotony to the central circle, in which a small open-air theatre was in active operation. A small section of the great slope of masonry facing the stage was roped off into an auditorium, in which the narrow level space between the footlights and the lowest step figured as the pit. Footlights are a figure of speech, for the performance was going on in the broad glow of the afternoon, with a delightful, and apparently by no means misplaced, confidence in the good-will of the spectators. What the piece was that was deemed so superbly able to shift for itself I know not—very possibly the same drama that I remember seeing advertised during my former visit to Verona—nothing less than *La Tremenda Giustizia di Dio*. If titles are worth anything this product of the melodramatist's art might surely stand upon its own legs. Along the tiers above the little group of regular specta-

tors was gathered a sort of free-list of unauthorized observers, who although beyond ear-shot must have been enabled by the generous breadth of Italian gesture to follow the tangled thread of the piece. It was all deliciously Italian—the mixture of old life and new, the mountebank's booth (it was hardly more) grafted upon the antique circus, the dominant presence of a mighty architecture, the loungers and idlers beneath the kindly sky, upon the sun-warmed stones. I never felt more keenly the difference between the background to life in the Old World and the New. There are other things in Verona to make it a liberal education to be born there—though that it is one for the contemporary Veronese, I don't pretend to say. The Tombs of the Scaligers, with their soaring pinnacles, their high-poised canopies, their exquisite refinement and concentration of the Gothic idea, I cannot profess, even after much worshipful gazing, to have fully comprehended and enjoyed. They seemed to me full of deep architectural meanings, such as must drop gently into the mind, one by one, after infinite tranquil contemplation. But even to the hurried and preoccupied traveller the solemn little chapel-yard in the city's heart, in which they stand girdled by their great swaying curtain of linked and twisted iron, is one of the most impressive spots in Italy. Nowhere else is such a wealth of artistic achievement crowded into so narrow a space; nowhere else are the daily comings and goings of men blessed by the presence of *manlier* art. Verona is rich, furthermore, in beautiful churches—several with beautiful names: San Fermo, Santa Anastasia, San Zenone. This last is a structure of high antiquity, and of the most impressive loveliness. The nave terminates in a double choir—that is, a sub-choir or crypt, into which you descend, and wander among primitive columns whose variously grotesque capitals rise hardly higher than your head, and an upper choral level into which you mount by broad stairways of the most picturesque effect. I shall never forget the impression of majestic chastity that I received from the great nave of the building on my former visit. I decided to my satisfaction then that every church is from the devotional point of view a solecism that has not something of a similar absolute felicity of proportion; for strictly formal beauty seems best to express our conception of spiritual beauty. The nobly serious effect of San Zenone is deepened by its single picture—a masterpiece of the most serious of painters, the severe and exquisite Mantegna.

Correspondence.

MR. RICHARD GRANT WHITE'S 'WORDS AND THEIR USES.'

To the Editor of the Nation:

Sir: In the *Nation* of the 20th inst., the following paragraph has a conspicuous place:

"We have received what purports to be on its title-page a 'new edition revised and corrected' of Mr. Richard Grant White's 'Words and their Uses' (New York: Sheldon & Co. 1872). In a circular which accompanies it the publishers also speak of it as a 'new and improved edition' and 'carefully revised and enlarged.' This appears, however, to have been true in 1870, when the present plates were made, rather than now, as we are unable to detect any alterations or additions. Time has certainly not brought wisdom to Mr. White on the subject of his eleventh chapter, 'is being done,' and thirty of the weakest pages in the book are retained in spite of the frequent exposures of his fallacy concerning 'exists existing.' He has, by the way, as we expected he would in due time, fallen foul of the perfectly well-established phrase 'had rather,' which he tears to pieces in the January *Galaxy*. A writer in the *American Educational Monthly* for February has had no difficulty in confuting him on this topic also."

The purpose of this paragraph is plain. Its assertions are made with particularity, and profess to be made with knowledge. The writer compares the edition before him with the previous edition, and remarks the retention without change of the eleventh chapter; he has looked into the circular which accompanied the volume, and tells the readers of the *Nation* that the edition of 1872 is announced therein as "new and improved" and "carefully revised and enlarged"; and yet he speaks of it as a book "which *purports* to be on its title-page a new edition revised and corrected," but one in which he is "unable to detect any alterations or additions"; and therefore he declares that the assertions of the circular and of the title-page appear "to have been true in 1870 when the present plates were made."

This is a direct imputation upon the commercial honesty of the publishers, and not only so, but upon the good faith of the author himself, who in the new preface (which of course no critic allowed to write for the *Nation* could pass over without notice) says, on the very first page, "in many passages of the book slight changes have been made; upon matters of fact and opinion a few important modifications will be found; one new chapter has been added."

Such being the case, you cannot expect your imputations to pass unnoticed. If true, they would be scandalous; if untrue, they are grossly libellous. Either the author and the publishers of 'Words and their Uses' on the one hand, or the conductors of the *Nation* on the other, have been led into that peculiar error which consists in making assertions directly at variance with the truth. Under these circumstances I beg leave to ask your attention and that of your readers to the following statement of facts:

As to enlargement and addition, a comparison of the two editions shows that that of 1870 consists of 437 pages, that of 1872 of 469 pages. Alterations by way of correction, suppression, or addition have been made upon one hundred and thirty-one pages. Many of these are trifling in extent, involving changes of a few words, or of but one; their importance being sometimes not greater than that of striking out "not" from the commandment, "Thou shalt not bear false witness against thy neighbor." But upon twenty-six pages the changes are such as must have attracted the attention of the most superficial observer.

For example: on p. 63, a new paragraph of one-quarter of a page; on p. 90, a change of like extent; on p. 119, two paragraphs rewritten; pp. 121, 122, and 123 almost entirely rewritten; pp. 124 and 125, the article on *grow* rewritten; part of p. 131 and all of pp. 132 and 133 rewritten; p. 160, a paragraph nearly filling the page rewritten; p. 174, a like change; p. 175, a foot-note cancelled, and one upon *widow-woman* in the Bible substituted; p. 182, formerly half blank, now filled with a foot-note of half a page; p. 198, nearly all blank in the previous edition, now filled with a new article upon the British use of *nasty;* p. 230, a new illustration added; p. 244, the first paragraph of more than one-quarter of the page rewritten; p. 245, a like change; p. 246, nearly the whole page cancelled and rewritten for an important change as to the pronoun *hers;* p. 249, a like though less extensive change; p. 258, one-quarter rewritten and a new illustration added; p. 285, one-quarter rewritten; p. 322, a sentence rewritten. Passing by other corrections and emendations, I direct your attention to the fact that from p. 392 to p. 416 in the revised edition of 1872 (in which the *Nation* declares it can find "no additions") is entirely new matter, forming the "new chapter" of twenty-five pages mentioned in the preface to the new edition.

These are some of the "alterations and additions" which are manifest to any person who will examine the book. In addition, I shall only mention that Messrs. Sheldon & Company have paid the stereotypers for sixty pages of "composition" upon the revised edition, which, as the new chapter occupies but twenty-five pages, leaves thirty-five pages for alterations and minor additions.

Among the passages in which no change has been made is one (on p. 218 of both editions) which mentions "the *Nation*, a paper which is doing much, I hope, at once to sober and to elevate the tone both of our journalism and our politics." I did revise that passage, but I have not yet corrected it.

Your obedient servant, Richard Grant White.

New York, February 26, 1873.

[We have done Mr. White and his publishers an injustice which we sincerely regret. What we set out to do was not to impugn their good faith, but Mr. White's thoroughness in revising and correcting his work, as may be inferred from the context ("Time has certainly not brought wisdom, etc."), though our language was much too sweeping; and we should have been glad if we had discovered for ourselves the proofs of Mr. White's efforts at improvement. That we did not was due to a confused impression that there had been more than two distinct editions of 'Words and their Uses,' and that the (undated) 'Forewords and Afterthoughts to the Present Edition' had done duty before. This was confirmed by the retention of the appendix, which Mr. White should have been glad of an opportunity to revise away; by the undisturbed aspect of the exploded eleventh chapter, on which we commented; and by the general appearance of the plates from which the book was printed. Perhaps these circumstances may palliate our too hasty induction. We of course feel indebted to Mr. White for the commendatory allusion to the *Nation* on the page to which he refers, but the minatory tone of his last sentence induces us to express the hope that before "correcting" the passage in question, he will give us due notice, and allow us to be heard by counsel.—Ed. Nation]

Notes.

Roberts Bros. have in press 'Work: a Story of Experience,' by Louisa M. Alcott; 'The Rising Faith,' by Rev. C. A. Bartol; 'Ups and Downs,' by Rev. Edward E. Hale; 'Songs from the Southern Seas,' by John Boyle O'Reilly; and 'Emeralds and Cameos,' by Théophile Gautier.——A 'Year-Book of Nature and Science,' covering 1872, by Dr. J. C. Draper, will be

published by Scribner, Armstrong & Co.——A. D. F. Randolph & Co. announce 'Corn and Beans,' by Anna Warner.——Macmillan & Co.'s list of forthcoming publications includes: 'Memoirs of a Brother,' by Thomas Hughes; a second series of Edward A. Freeman's 'Historical Essays'; 'The Childhood of the World: a Simple Account of Man in Early Times,' by Edward Clodd; and 'The Romance of Astronomy,' by R. K. Miller.——Since we recommended the other day the French periodical *Romania*, we ought to mention the starting of a similar one in Italy, *Rivista di filologia romanza*, a quarterly journal published in Imola, and conducted by L. Manzoni, E. Monaci, and E. Stengel. It is the first of its kind that has appeared in the Peninsula. The last-named editor contributes a document in the Sardinian dialect of the year 1173, never before printed, and of very high value for the light it sheds on the ancient *volgari* of Italy.

—A South Carolinian writing to the Boston *Advertiser* expresses his pain at seeing in many Northern papers the statement that Mr. Henry Timrod, the poet, died in extreme poverty and all but starved to death, and, coupled with this erroneous statement, "some ungenerous taunts thrown upon the stricken land where Henry Timrod lived, wrote, and died, and the crushed State he loved so well"—as if South Carolina had ungratefully allowed him to suffer for bread. The correspondent, apologizing for speaking about a matter which should not have been made so public, goes on to say that in November, 1865, when the famine was bitterest in the land, his father, a Columbia clergyman, received a call from General Wade Hampton, who remarked that he had just heard that among the most necessitous cases in the community was Timrod's, he being sick and unable to move, and the only man in a houseful of dependent women. The General had, therefore, brought a sum of money which he wished the clergyman to induce Timrod to accept. The interview between the two latter, and the conquering of Timrod's natural scruples, did not indeed come too soon, for the distress was great everywhere, and the poet in particular had been thoroughly ruined; but that he did not again suffer want is, says the correspondent, beyond doubt. We suspect that careful examination would show that haste in writing notices of Mr. Timrod's life and haste in reading them may alike have something to do with the pain felt by the correspondent; we have seen no notice that appeared to be meant unkindly, and certainly shall not look to see any now that this Columbia protest is filed. Meanwhile, to make purchase of the last edition of Mr. Timrod's poems is an act which is for all reasons worth doing.

—In an old number of the *North American Review* (No. LVIII. for January, 1828) there is to be seen a curious prediction of the moral and social future of the city of New York. It originally appeared in an article in the *Talisman* for the current year—the *Talisman* being a publication of the *Forget-me-not, Memorial, Souvenir, Amulet,* or *Token* species, then so much in vogue. This *Talisman* for the year 1828 the caustic critic of the *North American* was then reviewing, and in it he found a *jeu d'esprit* entitled the "Legend of the Devil's Pulpit," the scene of which is laid in 1760. Without going into the details of the plot, we may say that Tevas Oakes, metamorphosed from a vagabond into an exquisite of the period, and suspected by one Wince, a tailor, of having acquired his wealth by nefarious, or at any rate doubtful, means, is tracked to Weehawk—a name which we suppose must be the equivalent of Weehawken. Wince returns in a panic, with the story that "the Devil preached over at Weehawk, and that he talked handsomer than the rector or the recorder." The story collects a crowd, which is addressed by Dr. McGraw, "a most original personage," the *North American* says, "whose characteristic trait is an abhorrence of quackery, and who, as we are credibly informed, is an actual historical personage, yet remembered by the older inhabitants of New York." The Doctor, having collected a sufficient force, runs the Devil to earth, and the mystery is then found to be the contrivance of a band of smugglers with which the wicked Tevas is connected, the Devil's sermon having been composed and preached by Tevas himself, for the purpose of imposing on the ears of the then simple and credulous inhabitants of New York, and diverting their attention from his real occupation. The Doctor seizes the pretended Devil, exorcises him, and then, seating himself in the pulpit, utters a soliloquy, which, even in 1828, the *North American* thought had come to pass. We have not space for an entire quotation, but among other things the Doctor prophesies that "these poor people half a century hence will be as wicked as the Londoners." With the same vices, he thinks, they will have more wit. "They will have their South-Sea Bubbles, their land bubbles, their bank bubbles, and all manner of bubbles." They will have their stock-market, and in the market will be bulls and bears, and "every second man in a good coat will be a broker, or a lawyer, or an insolvent." There will be no more cash payments; but the women will wear cashmeres, and the men will drink champagne. The girls, instead of learning to work and mend clothes, will chatter bad French; and there will be no more comfortable tea-drinking and innocent dances; and people will dine by candlelight of week-days, and nobody will go to church on afternoons on Sundays! "Folks will be knowing in wines, and cookery, and players, and painting, and music, and know nothing of their own affairs." "The boys will all be old men, and the old men will try to be boys." "Then they will have all manner of quackery, from a patent pair of loops to hold up their breeches, to a patent way of paying off the National Debt."

—Some errors into which we fell, the other day, when speaking of Bettine von Arnim's letters to Goethe, have recently been exposed, we regret to say; and exposed in the *Woman's Journal* at that. We have the consolation, however, that it was by no woman that we were triced up, the lash having been laid on by a manly hand—that of "T. W. H." In writing about the *Atlantic Monthly's* "Curiosity of Literature" (February, 1873), we spoke, as if it really existed, of a Boston edition of Bettine von Arnim's 'Correspondence'; but "T. W. H." shows us that the city of Lowell was the place at which our "Boston edition" appeared. On the same occasion, we spoke of the translation of our imaginary edition as having been done by some American; as a matter of fact, it was not made by any American; it was the translation made by Bettine herself. We spoke of the book as having been for some time out of print in this country; yet we have now before us a copy of an edition published by Messrs. Ticknor & Fields, of Boston, and bearing the date of 1861. We said that the translation "has the name of being excellent"; and so we were told by our informant; but, in fact, it is the translation in Bettine's own queer English. As Bettine herself once remarked, on an occasion when she had made a blunder, "How this makes blush me!" and "how makes blush us" this array of our ignorance and misinformation. The truth appears to be that, nearly a generation or so ago, Bettine's translation was republished in this country, and even was "mentioned in the *Dial*"—an honor which we have known to be defined as being "breveted to obscurity," and which, at all events, certainly did nothing to lighten our own darkness as to the matter in hand. Afterwards, Messrs. Ticknor & Fields published an edition in one volume, the text of which, so far as we have compared it with a copy of Bettine's own three volumes, Berlin edition, now before us, we find to be the same thing with that work. So much by way of confessing error, and expressing regret for having trusted to the recollection of others and not to our own knowledge. Seldom do we defer to another and distrust our own judgment and information; and seldom indeed, when incautiously we have made such concession, do we fail to find reason to deplore it. As for the *Atlantic's* "literary curiosity," we are informed that the article describing it has caused the writer to receive a quantity of correspondence which would seem to show widespread want of knowledge about Bettine's translation in any and all its editions—Berlin, Lowell, or Boston. Two gentlemen write that they will not believe, till they see it, that Bettine ever made a translation; others, that they have never heard of it; others, that the whole story of it is a "moon hoax"; others, that they have seen or heard of other copies in this country besides that which the *Atlantic* describes. As to this last point, the *Atlantic* writer did not say that there were no other copies than the one upon which the magazine article was based. What was said was that "perhaps" that copy was the only one that had been brought into this country. There was no assertion that it was; and there was nothing that should have called out any inuendo that the article was other than it pretended to be—a description, written in perfectly good faith, of an extremely rare book, of which the writer had not before heard, and supposed to be known to almost nobody. This copy is not unique, however, on this side of the water. We ourselves, since we read the *Atlantic's* article, have heard of two copies and seen one. Of these, one is at Cambridge, in a private library, and one in Brooklyn, in a public library. Of Messrs. Ticknor & Fields's edition, we dare say, whosoever will may purchase copies at Messrs. J. R. Osgood & Company's. "T. W. H." implies as much in his communication to the *Woman's Journal*.

—General Thomas Van Buren, who has had charge of the transmission to Vienna of such pictures, sculptures, etc., as should fairly represent American art, recently requested the authorities of the National Academy of Design to make the selection. These gentlemen have reported that it will be better to make no attempt to represent American art: the time allowed exhibitors is too brief to permit of the production of new works; most of the works already in existence are in the possession of private owners who wish neither to let their property go out of their hands for a year, nor to expose it to the risk of injury with no chance of reimbursement, except so far as the recovery of the amount of marine-insurance policies might be reimbursement. There appears to have been nothing to do but to make this report, and it is to be hoped it may be accepted as final by the commissioner. What is remarkable about the matter is that, of American officials,

Congressmen, and others, he is one of the very few indeed, out of a large number, who have shown anything whatever of deference for the opinions of men personally skilled in art. It is, for example, only a few weeks since a House Committee, who were to pronounce on the merits of some designs for the Farragut monument, voted with entire coolness that the work should be entrusted to Miss Vinnie Ream, a decision from which the Senate Committee fortunately dissented, but as to which there is no evidence that competent counsel was sought from experts by either the Senate Committee or that of the House. Congressmen who would admit themselves ignorant of the art of navigation, or of surveying, or of most other arts which men study for years, entertain as little doubt of their ability to decide one of the most difficult of all kinds of questions as they entertain of their ability to walk; and already they have made the array of pictures at Washington one of the wonders of the world for bad taste and ignorance. And the worst is that they are at it daily, and that daily protests will be necessary for, we fear, a long time to come. Take the case of the last picture purchased by Congress—Mr. Powell's "Victory of Lake Erie." The Washington *Capital* gives this account of its purchase, and we dare say it is an account entirely true in spirit: Some years since Mr. Powell, something of a protégé of General Robert C. Schenck, appeared at Washington as a candidate for an order for a painting which should have for its subject some naval action. General Schenck was interested and influential, and Mr. Powell by-and-by got an order for a twenty-five-thousand-dollar picture, and this in spite of the fact that his "De Soto" already stretched its length and breadth in the Rotunda. The twenty-five thousand dollars was to be paid in instalments as the work went on, and our account says that when $18,000 of it had been paid the picture was finally accepted, although, if the *Capital* is not misinformed, the "original picture" at Washington bears a close resemblance to "Perry's Victory," previously sold to the State of Ohio by the same painter. However that may be, good opinions will not differ as to whether we have paid out $25,000 for a picture worth having, at that price or any price.

—We did not discuss the litigation over Mr. Greeley's will because we thought the matter had little or no interest for the public, and that the heat with which public opinion was appealed to was, *pendente lite*, very unnecessary and ill-judged. All parties are, we believe, now pretty well satisfied with the result. The will of 1871 has been admitted to probate, but the Misses Greeley are, even under it, well provided for. We are, however, very sorry to hear that the simple fact that the Children's Aid Society was, greatly to Mr. Greeley's honor, legatee under this will, has created a prejudice against the society in some minds owing to the belief that it was in some way concerned in the proceedings before the Surrogate. During the litigation denunciations of it appeared in various quarters for "seeking to take the bread away" from Mr. Greeley's orphans, and several gentlemen who, we firmly believe, never gave a cent to its funds, announced in print their intention of withdrawing all support from it. Let us now say of our personal knowledge, that the clamor against it was, from first to last, ridiculous, and that the trustees acted throughout with the utmost propriety. They took no part in the litigation whatever. They left Mr. Greeley's executors and family to test the validity of his wills, which was what delicacy prescribed; and when the will which left the Society a legacy was admitted to probate, they went to the utmost limits of magnanimity permissible to Trustees by passing a resolution declining the bequest in case the estate had been materially diminished since the date of the will. There is no question of Mr. Greeley's sanity at that date, and if he then thought his fortune was sufficiently large, and the provision he made for his daughters, to whom he was tenderly attached, sufficiently good to permit of his making a bequest to a charity in which he was greatly interested, we should like to hear what rule of law and morals it is which requires the Society to question his judgment and decline his money; nay, we should like to hear what rule of morals would permit the trustees to decline it, if, as is not denied, the state of Mr. Greeley's fortune, when he made his will, assured his daughters a more than comfortable maintenance. The men who compose the Board of Trustees stand in the very highest rank, not simply as business men but as gentlemen, and indeed there is not one of them whom we should not be glad to consult on any question raised by the conflicting claims of interest and honor; and we advise all charitable persons to rest assured that what they have done about the Greeley will was the fittest and fairest thing that could be done.

—Since the death of Lord Lytton it has been made known that in his late years he was the author of two anonymous books. Of these, one—'The Coming Race'—was attributed to various persons, and among others to Mr. Laurence Oliphant, a gentleman who, by a residence in this country while engaged in some little-known socialist experiments, had presumbly become acquainted with our politics and polity, which 'The Coming Race' rather contemptuously satirizes. It appears, however, that Lord Lytton was the author, for so his publishers now state; and, in the veteran contributor to *Blackwood*, the satire is easy to account for—easier than if the author had been a socialist, for its contempt of Republicanism is bred of its belief in Conservatism. We have not seen it mentioned that Lord Lytton's machinery in the opening of this book—the deep mine, the young mining-engineer who, by an accident, penetrates into the country of the coming man and woman in the interior recesses of the earth—was apparently taken from Mr. Robert Landor's 'Fountain of Arethusa.' The other anonymous work by which Lord Lytton somewhat curiously chose to test his real favor with the public was a story now in course of publication in *Blackwood*, and entitled "The Parisians." The reader, ignorant of its authorship, may well have imagined it the production of some cultivated person, man or woman, in a state of refined but serious revolt against the rawness and realism of current thought and fiction, who had reverted for inspiration to the ancient old-time literary novel and volume of letters. An American family figures in it; so do a number of French people, literary people, and others; an English hero, "who rides, draws the bow, and speaks the truth," like any young model of English aristocracy in a well-toned conservative novel, and who also has that mastery of blue-books, that knowledge of the House of Commons, of colonial politics, of diplomacy, etc., which are attributes of so many of Lord Lytton's serious young heroes. A reading of a few chapters some time since made us think this a story which many of our readers would greatly enjoy. We believe it is finished in manuscript, as also is another novel yet to appear.

—Physicians whose lot it is to attend great personages in their last hours are liable to be accused by the public, and even by their own colleagues, of having caused the death of their patients. This has been noticeably the case with the medical advisers of and operators upon the late Emperor Napoleon; and so cautious and fair-minded a journal as the London *Practitioner* feels constrained to join in the general condemnation of the course pursued and the reasons assigned for it. While this dispute is going on, the ex-Emperor's brain is examined in the interest of science, and is found to weigh 1,500 grammes, and to rank among the "very large," though inferior to several well-known examples of extraordinary weight and size. On the other hand, as it surpasses in weight the brains of confessedly superior men, it gives no help in solving the problem of the relation between brain-weight and size on the one hand, and intellect on the other, except to make it more than ever certain that the former are not an absolute measure of the latter.

LIFE OF BISHOP HOPKINS.*

THE life of Bishop Hopkins has interest primarily for those who were his personal friends, and for those who are engaged in party warfare inside the Episcopal Church. The latter will find here information with regard to many of the incidents in the great battle of High and Low, Broad and Narrow, which has been going on in that communion from the beginning. The Bishop's life was a life of controversy. He was robust and energetic in mind—far beyond the men with whom he was called upon to associate. He found himself always amongst inferiors, and the position of leader was forced upon him from the first diocesan convention which he attended. It may well be true that his popular reputation was unjust, and that he was rather, as his biographer represents it, in a continual attitude of deprecation with regard to the position thrust upon him, first by one party, and then by the other. It is certain, however, that he had that disposition which sniffs the battle of controversy from afar, and that, either from habit or nature (we should say the latter), he felt called upon to do execution upon all evil-doers or wrong-thinkers.

His biographer follows him not only with the affection of a son, but also with the sympathy of a like disposition. Low Church means for him all that is plebeian and vulgar. In stray epithets, in sharp foot-notes, in contemptuous references, this animus is apparent. The Low-Church party appears here as truculent in prosperity and intriguing in adversity, and as the originators of tricks and schemes in church politics, though their adversaries, on the same showing, seem to have quickly learned the lesson and "bettered their instruction." On the other hand, to be "catholic-minded" is to be elegant, cultivated; in short, patrician. In the bishop, this opinion was tempered in practice by a really mild disposition and solidity of mind; in his biographer, it becomes fretful and arrogant. The sympathy between the author and his subject is so complete that we cannot expect, and do not find, any critical delineation of the mental development by which the frontier

* 'The Life of the late Rt. Rev. John Henry Hopkins, First Bishop of Vermont, and Seventh Presiding Bishop. By One of his Sons.' New York: F. J. Huntington & Co. 1873.

iron-master and lawyer became a High-Church bishop. To us, that would have been the most interesting aspect of the Bishop's life. The Episcopal Church presents some remarkable phenomena in our American society, not the least of which is the process by which it segregates from this crude and active community of ours certain types of men, and subjects them to a process from which they issue anything but what might have been expected. We have little information here with regard to the peculiar character by which Bishop Hopkins was marked in his early years. We hear of him as trying various occupations with a facility of change which was more practicable fifty years ago than now, and showing a certain versatility in all. He is engaged in manufacturing and law in a frontier town, and the only idea we can form of him is conformable to his occupations and surroundings. This man, drawn into the Episcopal Church by one accident and into its ministry by another, takes to the study of patristic theology, forms his dogmatic opinions upon the authority of the Fathers, and spends his life in the see-saw of party strife, in the discussions of theological traditions, in making war upon heretics, in denouncing schismatics, in sharpening the sectarian lines about his own Zion, in propagating a set of notions which he and others had built up and dubbed "catholic," and in chasing the chimera of "primitiveness" through the changing forms of ecclesiastical usage.

No misgiving that after all he was working very hard at a very small matter, or that spiritual culture has a deeper root than ecclesiastical tradition, or that unity and learning amongst those who seek the spiritual welfare of mankind must be sought on some broader basis than the fiction of a "Primitive Catholicity," seems ever to have dimmed his zeal. He was a Tractarian before the Tractarians. He found in the Fathers indications that certain usages had once existed, and that was for him conclusive that they ought to exist now. Considerations of changed place and circumstance were impertinent. He followed the Oxford men, or accompanied them, up to Tract 90, when he drew back; but in his last years he once more joined the march. So likewise, when the Fathers and Councils permitted slavery, and interpreted Scripture as allowing it, it seemed to him that that interpretation was guaranteed beyond question, and that it made slavery for ever "lawful." In this circuit his mind worked his whole life long. By it he ruled his parish and his diocese; by it he elaborated what he called "church principles"; and by these he measured and judged all movements and institutions, and guided his action in his numerous controversies. The picture given us (p. 274) of his scheme for a commentary on the Bible, to be made with D'Oyly and Mant on one side, and the Fathers on the other, is significant of his estimate of the things worth doing in this life, and of the means by which they are to be accomplished. He was energetic, sincere, and faithful to what he considered duty, and his life was a happy one, because it was free from any misgiving as to the importance of his work or the correctness of his means; but whether it was a useful life or not must be decided by the question whether men who want to be useful in life ought to devote their energies to the elaboration of institutions, trusting that these, if perfected, will regenerate mankind. To us it seems that the church of which Bishop Hopkins dreamed would, if realized, be like an exquisite but over-elaborate machine, in which the friction is so great that all the force it can bear only sufficies to move it, leaving no power to be spent on the material to be wrought.

CHAPMAN'S EVOLUTION OF LIFE.*

THE contents of this interesting volume are so largely taken from Professor Häckel's 'Schöpfungsgeschichte' that a recognition of the fact upon the title-page would have been quite appropriate. As it is, the author would appear to have been not sufficiently careful in stating the amount and character of his obligations to the German work. There is not, indeed, any attempt in the body of the book to cover up the source from which its facts and conclusions are obtained; but in the preface, at least, Prof. Häckel should have been prominently mentioned, and not merely alluded to in an incidental way, along with twenty-two other writers on the development theory. The oversight is doubtless unintentional, but it has an unpleasant look, and would be well worth correcting if Dr. Chapman's work should pass to a second edition; for in no way does this work present the results of original investigation or of original thinking. The facts and the speculations are like those of Häckel, and they are given, without further elaboration, very much as they stand in the German work. It is not, therefore, as an original treatise that Dr. Chapman's book is to be criticised. Its faults and excellences are not its own, though we may freely accredit it with the general merit of making the views of Prof. Häckel accessible to readers in this country.

Students of natural history have for some time known Prof. Häckel as one of the foremost comparative anatomists of Germany and as a staunch advocate of the Darwinian theory. His great work is the 'Generelle Morphologie der Organismen,' in which the general principles of animal structure are elaborately discussed. But as this book is too technical and cumbrous for any save professed students of science, the author has taken the trouble to present his views in a more intelligible form in his 'Schöpfungsgeschichte,' or 'History of Creation,' which is probably the most complete, accurate, and interesting exposition of the Darwinian theory that has ever been made. It is, however, more than a simple exposition; for with regard to the classification and genetic relationships of animals, Prof. Häckel has contributed a vast number of suggestions of his own which are of the highest interest, and which are ably and succinctly summed up in Dr. Chapman's book. One or two of these suggestions we may briefly mention, as indicating the kind of assistance which the students of the development theory or of the classification of animals may expect to get from Dr. Chapman.

Prof. Häckel's original and elaborate researches into the simplest forms of organized matter have resulted in the conviction that those organisms which possess no distinctively animal or vegetal characteristics should be grouped together as constituting a third kingdom. Instead of "protozoa" and "protophyta," Prof. Häckel recognizes only "protists," in which we may see the types of the forerunners of both the animal and the vegetable kingdoms. They represent the primitive less-specialized forms whose descendants have become variously specialized, first as animal or vegetal, then as cœlenterate or mollusk, cryptogam or phænogam, and so on. Starting from the *Amœba* and its kindred, which are neither animal nor vegetable in character, we encounter two diverging lines of development, represented respectively, according to Häckel's surmise, by the protists with harder envelopes, which are the predecessors of the vegetable kingdom, and the protists with softer envelopes, which are the forerunners of the more mobile animal organization. Confining our attention to animals, we have first the *Cœlenterata*, including sponges, corals, and jelly-fish, characterized by the union of masses of amœba-like units, with but little specialization of structure or of function. Besides these lowly forms, but not immediately above any one of them, we find echinoderms starting off in one direction, worms or annuloida in a second, and molluscoida in a third. Following the first road, we stop short with echinoderms. But on the second we find annuloid worms, succeeded by true annulosa or articulata, reaching the greatest divergence from the primitive forms in the crabs, spiders, and ants. On the third road we find the molluscoid worms diverging into mollusks and vertebrates. Through the *Bryozoa* we are gradually led to the mollusks, while the *Tunicata*, of which the ascidian or "pitcher" (the primitive "tadpole" of unscientific ridiculers of Darwinism) is the most familiar form, lead us directly to the vertebrates. Kovalevsky has discovered some wonderful likenesses between the embryonic development of the ascidian and that of the amphioxus or lowest known vertebrate. Of all the "missing links" the assumed absence of which is so triumphantly cited by the adherents of the dogma of fixity of species, the most important one would appear to have been found; for it is a link which connects the complex and highly developed vertebrate with a very lowly form which passes its natural existence rooted plant-like to the soil or rather to the sea-bottom. The ascidian cannot, indeed, be regarded as typifying the direct ancestors of the vertebrate. It is a curiously aberrant and degraded form, and its own progenitors had doubtless once "seen better days." In its embryonic state it possesses a well-marked vertebral column, and it behaves in general very much as if it were going to grow to something like the amphioxus. But it afterwards falls considerably short of this mark. Already in early life its vertebræ begin to become "rudimentary" or evanescent; and when fully matured, it stops swimming about after its prey, and, striking root in the sub-marine soil, remains thereafter standing, with its broad pitcher-like mouth ever in readiness to suck down such organisms floating by as may serve for its nutriment. That vertebræ should be found in the embryo of such an animal is a fact of striking interest. It would seem to mark the ascidian as a retrogaded offshoot of those primitive forms on the way toward assuming the vertebrate structure, of which the more fortunate ones succeeded in leaving as their representatives the amphioxus and the progenitors of the lampreys.

In treating of the classification of mammals, Dr. Chapman differs from Häckel in one important point. The old Cuvierian classification of marsupials as an order side by side with carnivora, rodentia, etc., is now generally abandoned; the absence of a placenta and possession of a pouch for the developing young is justly regarded as a deeper point of difference than any of those which demarcate from each other the various orders of placental mammals. Both Häckel and Huxley divide the class mammals into three great sub-classes—ornithodelphia, didelphia, and monodelphia. The first includes

* 'Evolution of Life. By Henry C. Chapman, M.D.' Philadelphia: J. B. Lippincott & Co. 1873.

the ornithorhynchus and echidna, the second the marsupials, and the third all placental mammals. But the didelphians subdivide into orders or pseud-orders which curiously simulate several of the orders of monodelphians. On the development theory, this fact admits of two possible solutions, of which Dr. Chapman has, as it seems to us, chosen the less probable one. He holds that each monodelphian form is descended from the marsupial form which simulates it, the monkeys from some ancestral form akin to the opossums, the monodelphian rodents from a didelphian rodent, the ungulates from some congener of the kangaroo, and so on. If this be the case, we must suppose that a host of marsupial forms, scattered far and wide over the face of the earth, and subjected to every imaginable variety of physical condition, all somehow contrived to achieve the very same step in development—the step which consisted in the acquirement of a placenta and the loss of a pouch. Häckel, on the other hand, would derive all existing monodelphians from one marsupial, probably not far removed from the opossum, and would say that, because the most fundamental conditions of life are much the same at one epoch as at another, the monodelphians naturally diverged, as their predecessors had done, into flesh-eaters, fruit-eaters, gnawers, etc. This would seem to be by far the sounder view, especially as the resemblances between the various monodelphians and marsupials can in general be interpreted as "adaptive" resemblances.

THE MAGAZINES FOR MARCH.

MR. THURLOW WEED'S personal recollections of the late Horace Greeley, interspersed with letters from him, are published in the March *Galaxy*, and will have interest for many readers besides having promise of interest for a great many more; but they are set down *currente calamo*, and are not really of much importance. It is curious to see how Mr. Greeley's political enthusiasm and desire to win given political campaigns were associated with those enthusiasms and "isms" which are not usually supposed to have been much connected with his practical political action. But practical politics were probably sure sooner or later to color all his views, however abstract. Take, for instance, this passage from a letter which was written to Mr. Weed in 1841, when Mr. Greeley was deep in Fourierism and Brisbanism. Mr. Weed, alarmed at the *Tribune's* socialistic course, had published an article in his Albany paper in which Fourierism was handled without gloves. Mr. Greeley replies and endeavors to show that the Whigs would do well to secure a Fourierite following, because, the Democratic party being the poor man's party, the Whigs must somehow throw off the stigma of being aristocratic:

"I assure you that the doctrines of Fourier—I mean his fundamental position with regard to the economies of association—have received the assent of some of the strongest and most *practical* minds of this city and elsewhere. Clerk Garland of the U. S. House, General Keim, M. C. from Berks, G. A. Worth, cashier of City Bank, Alderman Phœnix, and many other sound men, are favorably impressed with it.

"I think you take the wrong view of the *political* bearing of this matter, though *I* act without reference to *that*. Hitherto all the devotees of social reform of any kind—all the advocates of a higher destiny for labor—all the combatants against unjust and false social principles—in short, all the social discontent of the country has been regularly repelled from the Whig party and attracted to its opposite. This forms a heavy deadweight against us. It strikes me that it is unwise to persist in this course, unless we are ambitious to be considered the enemies of improvement and the bulwarks of an outgrown aristocracy in the country. But I will not ask you to think as I do. I only want a chance to think for myself."

Mr. Weed, however, was not convinced.

Another characteristic instance of attention to the immediately practical in politics is exhibited in a letter of Mr. Greeley's written in 1852, in the early part of the year, when State issues were to be made up with reference to the presidential struggle in the autumn:

"I don't see how they [the Democrats] could live but for our troubles. Chief among these is the Maine law. That need not have been a trouble. If some sort of an act had been passed and sent to the people, all would have been easy. If there is any fear of its immediate operation, it might have been made to take effect far ahead—say the 1st of May, 1853—and meantime submitted to the people at the fall of a special election. Now it goes square into the fall contest and ruins our chance for the Legislature.

"It seems to me that we must run Patterson for Governor. He is an old temperance man, but not known to be anywhere on the Maine law. We can get through with him if anybody."

Other articles in the March *Galaxy* are "Casual Cogitations" by Carl Benson, who discourses upon the mercantile spirit of our society and the labor question; four chapters of Mr. De Forest's "Wetherel Affair"; General Custer's, who gives us a glimpse at the rascalities of the Indian agents, and fortifies his position by official letters which are all worth reading and saving; and there is in the *Nebulæ* a discussion of the question, What constitutes American Society? The essayist's conclusion is that we can hardly be said to have "society" at all, in the sense in which that word is used by the foreigners who come here seeking society. The tourist, he remarks, usually lands on these shores with a notion that here as in France, in England, in Italy, he is to find some body of men and women clothed with authority to legislate on social subjects, "who have the key to the sacred mystery of *savoir faire*, who may make rules, affix to them penalties and awards, admit new members," etc. But we have no such well-defined body possessed of plenary legislative and executive powers. The second mistake of the foreigner sojourning amidst us is the mistake of supposing that there is in this country any "fixity of national characteristics"—that because an Englishman will, under certain circumstances, always do certain things, and a Frenchman will always do certain things, therefore an American also has this fixity. From our want of a fixed "society," then, and of a fixed national type, it follows that whoso seeks among us fixed society usages will always be liable to mistakes. The subject is a deep and a high one; but tourists who intend paying us a visit might be referred to an article which appears in *Lippincott's* for March, entitled "Unsettled Points of Etiquette." Both for the points which it finds still mooted in Philadelphian circles, and for its way of settling them, it will serve to open a good many eyes.

In the *Atlantic*, "Life Under Glass" argues in favor of the erection of immense glass houses like the Crystal Palace, in which a winter residence may be sought by all such people as wish to escape from "the hard gray weather" of Mr. Charles Kingsley's favorite skies, of which we have just been having so inexcusable a three months. Weary humanity deserves an equable climate, says the sanguine Mr. Shove, as much as exotic plants which now flourish in every conservatory, and can as easily have it. Every State should contain one or more winter gardens roofed with glass, each about as large as Boston Common, which contains some forty-five acres. Such a garden would be rather more than twice as large as the Crystal Palace of 1851, and not twice as large as that of 1862, with its "annexes" and picture galleries. Thorough ventilation could be secured, a uniform temperature could be maintained, and ten thousand patients could live for the winter months in a paradise of vegetable and other beauty, pure air, healthful temperature, orchestral music, and all delights. Running around this earthly paradise, of fifteen hundred feet in diameter, should be a broad arcade warmed, lighted, and ventilated like the garden, paved with wood or asphalt, and provided with driveways and sidewalks. Skirting the outside circumference of this boulevard should be the hotels and boarding-houses in which the inhabitants of the garden would dwell, and the shops to which they would go shopping. For the purchase and grading of a site for such a garden with its hotels and other appliances, about $12,000,000 would be required, the interest of which at 8 per cent. would amount to $960,000. To this sum must be added the cost of boarding ten thousand boarders from the first day of November to the first of June, which would be about $2,500,000, making the total amount of outgoes of each year $3,460,000. But at two dollars a day for the board of ten thousand persons for thirty weeks, the income of the establishment would be no less a sum than $4,200,000, "which would certainly provide a reserve fund large enough to meet any unforeseen or extraordinary outlay." Probably. One can only hope the same company will remember what is in store for us in July and August next, and be ready with its *frigidarium* also, which no doubt can be made nearly as profitable as the other.

"Robert Owen at New Lanark"; "The Abbé Galiani"; "A Good Word for Quacks"; "The Quarrel of Jefferson and Hamilton," by Mr. Parton; Mr. Howells's "Chance Acquaintance"; "The Madonna of the Future," by Henry James, Jr., are other contributions in the new *Atlantic*. The critical departments are especially interesting; they treat of numerous books, domestic and foreign; of Mlle. Lucca and Miss Nillson; of some water-colors by Mrs. W. J. Stillman, and of some other pictures exhibited by the Boston Art Club, of Mr. Sidney Colvin's recent book on "Children in Italian and English Art," and of two or three recent scientific works. "Our Railroad Monopoly," under the head of politics, recites fresh instances of the arrogance of our railroad corporations, and a promise is made that there shall be a return to the subject. It appears that Mr. Coleman, the gentleman who had "A Fight with a Railroad," has, ever since he published his article in the *Atlantic* two or three months ago, been in receipt of numerous letters, many of them very full of feeling, and that he meditates employing them in another magazine article.

The writer in *Lippincott's*, who begins a series of illustrated articles on "The Roumi in Kabylia"—the Franks in Algiers—has a good subject, which so far he handles pleasantly, and for this and for two or three other of its papers *Lippincott's* for March is worth having. One of these is a good long instalment of Mr. Black's "Princess of Thule," in which he appears to be as strong as ever in his landscape painting, and to have luckily

opened a new field in his far-off highland isle of Borva. Another agreeable sketch is the semi-humorous one by Mr. Charles Warren Stoddard, which describes how the rather frightened crew of the *Petrel*, instead of encouraging each other while that vessel rolled heavily in the tempest, sat about telling each other the most dismal tales of marine disaster and horror, including cannibalism, and how, finally, they were saved. It is a subject for Mark Twain. Mr. Chauncey Hickox speaks hopefully of the municipal eprospets of the city of Washington, and Professor T. B. Maury is strong for the trans-Allegheny canal systems favored by the last Presidential message.

We bespeak a perusal also for the article on "Etiquette," to which we have already referred, and to "Her Chance," a novelette by Mr. S. W. Kellogg. The "Chance" spoken of is Miss Mary Grilligus's chance to make a fortune, which she very much wants to make. The story of her endeavors in this direction is a singular one. The author is very ill-advised if he means pathos, and not much less so if he means fun. A fitter foil for the unexpected jocoseness of the conclusion should be found, the natural and well-described fears and troubles of the heroine at the beginning of the story deserving a better or less coarsely farcical conclusion than the absurd one reached.

The *Catholic World* closes its eighth year with an address to its readers and contributors, in which, thanking the latter, it promises the former to continue waging war, in its degree, "against the impious, anti-Christian, and immoral press." Specifically it promises to try to give a greater number than it has hitherto given of articles pertaining to the special rights and duties of the Catholic Church in this country. With one such the March number opens. It is a discussion of "The Relations of the Right of Conscience to the Authority of the State under the Laws of our Republic," and is in the form of an address to a Catholic society of New Haven. Somewhat similar in point of topic is a sharp attack on the New York *Times* and *Harper's Weekly* for the alleged bigotry and injustice with which those journals recently handled such matters as the religious creed of Mr. Kernan, and the relations of the Society of Jesus with the Ku-klux Klan. Other articles of various degrees of readability are more of "Fleurange"; a "Sketch of Brussels"; "Recollections of Père Hermann"; a "Daughter of Saint Dominic"; and an article called "Marriage in the Nineteenth Century," which is as civil to Protestants as if there were no impurity of wedded life in Catholic lands, but which is justly uncivil to them in many ways. A warm article on "Italian Unity" is copied from a foreign source, and is severe enough on the "Sub-Alpine" Government and Count Cavour, the conspirator.

Scribner's contains a kind biographical notice of the late Mr. Putnam, the publisher; and it appears to be not more kind than just. "The New Diamond Diggings" continues to be readable and in its way instructive. A long and elaborate discussion by Augustus Blauvelt, entitled "Christ's Miracles Scientifically Considered," and designed to show that both Strauss and Renan have missed the real nodus of the question before them, is the most formidable contribution. "Professor Morse and the Telegraph" is a well-illustrated paper, with the familiar story well enough told; and quite as good in letterpress and picture is the description of Hessian and Swabian peasantry, with its excellent engravings. "The Woman who Saved Me" is pabulum of an odd sort to set before the young people of *Scribner's*; or of any other magazine, for the matter of that. But nearly all of them do the same thing: A woman droops and pines, for she has found out that she does not love her husband and never did; the husband glooms and glowers; he evidently does not love his wife and never did; certainly he is extremely sulky about it; the life goes out of the wife's life, and she fades slowly but uncomplainingly and surely away; the doctor makes her visit her friend in Bamborough, and there she finds Ralph Gwynne, the man whom once she loved, whom now she sees she should have wedded; she droops yet more; the husband does not write, nor will she; an elopement is planned. But the woman who saves Gervase has known all along that the husband was in fact devoured with love for his wife, and ever had loved her; that he had loved her, but that his unfortunate manner of behaving like a bear with a sore head when he was in apprehension about his wife's health and saw her suffering, had concealed his affection; the illegitimate child was one that he had rescued from the street, not his own; Ralph Gwynne's heart is shallow in comparison, and all is accommodated at last, after the reader has pored over a fine lesson in sickly sentiment, unreality, stupidity, and falsity.

"Life on Board a Man-of-War" (illustrated); "Along the Elbe" (illustrated); "Aunt Eve Interviewed" (illustrated), being the garrulous reminiscences of an old negro woman; "Magdalen," by Mr. Wilkie Collins; "A Simpleton," by Mr. Charles Reade; Miss Thackeray's "Old Kensington," and a dozen more articles fill up *Harper's* table of contents. Mr. Curtis talks of the American prison system, of the late Mr. Kensett the artist, and of old artist days in Rome, and also of Mr. Froude and his mission to this country. Mr. Curtis makes the point that some of us are too ready to dislike Englishmen because we remember George the Third and Dr. Johnson; that many of us are too ready to put on "the green" to please our Irish-born population; that Mr. Froude and Father Burke and Mr. Meline, in talking about the historic questions which by and-by they had to talk about, were talking of questions which always arouse fierce heats of religious and political partisanship. Apparently these propositions imply that it was bad rather than good policy for Mr. Froude to come over among such people to discuss such questions. But whatever we think of Mr. Froude's wisdom, one point of Mr. Curtis's appears to be well taken—namely, that when once the attempt was made to close Mr. Froude's mouth by refusing him food, as was practically done by his Boston host, or by refusing him a place in which to speak, which was nowhere done that we know, it became our duty to insist on his speaking while there was any menace against him.

Ueber den Begriff der Liebe in einigen alten und neuen Sprachen. Von Dr. Carl Abel. (Berlin: C. Habel. New York: L. W. Schmidt.)—This little volume is, in its unpretending way, an entertaining contribution to the study of philology. The author, who has acquired some distinction in Europe for his practical knowledge of numerous ancient and modern languages, aims in the present publication to define some of the words which, in different ways, convey the idea of love. He assumes that the words of a language express the thoughts which are most usual and most strongly felt; that a people which employs many words to express a sentiment or a moral must have enlarged and qualified it on many sides; that a contrary conclusion may be drawn in the case of a people with which the contrary is the case. He chose love because so strong and yet so tender a sentiment permits of a deep insight into the hearts of those by whom the words expressing this feeling are formed and employed. Where the feeling is greatest the distinctions in the words are the most delicate. In order to exhibit the diversity of character among different peoples by reason of the different modes in which they express their love in words, Dr. Abel selects four languages: Hebrew, for the primitive Semitic period; Latin, as a type of classical antiquity; English, as representing the new Germanic world; and Russian, as representing the aspiring Slavic race. He adduces several words in each of these languages, and describes the shades of difference in the ideas which they convey. On reviewing his labor, he concludes that the most prominent features of the Hebrew tongue are: The love of God for man; the love of man for God; and the universal love among men. This last idea is most significant of an active, helping love, and its manifold expression requires three words: *'hesed*, the gracious benevolence of a superior in rank; *'hen*, the favor which springs from affection; and *Ra'ham*, the mercy which draws the soft and willing heart toward the sufferer. The Latin language gives prominence to the feeling of duty which is implied in love. That which arises from family ties is distinguished by *caritas;* the more spiritual extended to the gods and to the country is expressed by *pietas;* and the zealous attachment which endeavors to serve a friend is shown by *studium*. There are four principal ideas in English to distinguish a gradation, expressed in the words *liking, attachment, love,* and *affection*. The Russian language, besides having words to express different grades of love, has a peculiar word, *milost,* which not only signifies neighborly love, but also politeness and high, condescending grace inherent in the individual, regardless of divine command. The origin of the word is accounted for by the political and social relations which Russia is now endeavoring to rectify. It will soon be a relic of the past, when the progress of the country has made it appear improper to beg for grace out of pure politeness. But what distinguishes the Russian from the rest is the word *blagost,* showing the decided prominence given to the love of God for humanity.

BOOKS OF THE WEEK.

Authors.—Titles.	*Publishers.—Prices.*	
Blinckle (J. G.), The Electra of Sophocles	(J. Campbell & Son)	
Cook (Rev. F. C.), Bible Commentary, Vol. II.: Joshua.—Kings	(Scribner, Armstrong & Co.)	
Crabb (W. D.), Poems of the Plains	(Hurd & Houghton)	
Emery (E. B.), Queens	(Estes & Lauriat)	$1 50

GERMAN AND FRENCH.

HOLT & WILLIAMS,

25 BOND STREET, NEW YORK,

Publish most of the

TEXT-BOOKS

used at YALE, HARVARD, and many other prominent American Institutions. Correspondence is invited from educators and students.

"The *Penn Monthly* has won for itself a place in the field of literature where certain and solid standing is hard to find, and where only the deserving can healthfully maintain themselves, even when found."—*Pittsburgh Evening Leader.*

"It aims to give 'meat to strong men' rather than to dispense 'milk for babes.'"—*Christian Intelligencer.*

THE PENN MONTHLY is published regularly every month in Philadelphia. It aims to be an exponent and defender of sound views respecting politics, public affairs, education, and social improvement. It also aims to be a magazine for all times, discussing questions of public interest in literature, science, art, and philosophy in a thoughtful way. The contributors have been men distinguished as thinkers and students both in Philadelphia and in other cities of the country. The *Penn Monthly* now enters upon its *fourth year*, having become fully established and its permanent success beyond a question secured. It will continue to discuss the various questions of the day as they arise, especially the national finances, the true theory of political rights, the duties of the state, and its relation to education and to the development of home industries. Papers upon art-subjects and the application of the arts to industries will appear from time to time. New books, both American and foreign, will be examined in the spirit of impartial criticism, and particular efforts will be made to render critical notices valuable for their fulness and thoroughness.

CONTENTS OF MARCH NUMBER.

The Conquest of Spain by the Arab-Moors. First Paper. By Prof. Henry Coppée, LL.D., President of Lehigh University.
The Childhood and Youth of Luther. By Robert E. Thompson.
Public-School Education in France. By Joseph G. Rosengarten.
To Herbert Spencer.
The Cosmical Effects of Adam's Fall. By the Rev. Daniel R. Goodwin, D.D., late Provost of the University of Pennsylvania.
THE MONTH.—The Spanish Republic.
Pennsylvania Constitutional Convention.
Crédit Mobilier.
The Electoral College.
The Reading Railroad as a Mining Corporation.
BOOKS REVIEWED.

TERMS: $2 50 per annum, in advance. Single copies, 25 cts.

HARVARD UNIVERSITY CATALOGUE, containing the Official Information in regard to all the Departments of the University, the Lists of the Officers and Students, and the Examination Papers of 1871-72. 318 pp.

The University no longer prints a Catalogue for gratuitous distribution.

For sale by all Booksellers, and sent by mail, on receipt of price (50 cents in paper, 75 cents in cloth), by the Publisher,

CHAS. W. SEVER, Cambridge, Mass.

HARPER'S CATALOGUE. The attention of those designing to form Libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

DODD & MEAD *publish this day, by the Author of 'Walks in Rome,'*

WANDERINGS IN SPAIN,

By Augustus J. C. Hare, Author of 'Walks in Rome,' etc., etc.

One handsome vol. crown 8vo, with 17 full-page illustrations, price $3.

DODD & MEAD, Publishers,
762 Broadway, New York.

MACMILLAN & CO.'S NEW BOOKS.

The Ocean Survey Expedition.

THE DEPTHS OF THE SEA: An Account of the General Results of the Dredging Cruises of H. M. S. *Porcupine* and *Lightning*, during the Summers of 1868-69-70, under the scientific direction of Dr. Carpenter, F.R.S., J. Gwyn Jeffries, F.R.S., and Dr. Wyville Thomson. By Prof. Wyville Thomson, Director of the Scientific Staff of the *Challenger* Expedition. In 8vo, cloth, extra gilt, with nearly 100 Illustrations and 8 colored Maps and Plans. Price $9. [On Saturday.

It was the important and interesting results recorded in this volume that induced the British Government to send out the great Expedition now launched under the scientific guidance of Dr. Wyville Thomson, and which is spoken of as "the most important surveying expedition which has ever sailed from any country."

NEW VOLUME OF ART CRITICISM.

STUDIES IN THE HISTORY OF THE RENAISSANCE. By Walter H. Pater, M.A., Fellow of Brasenose College, Oxford. Crown 8vo, cloth, $2 50. [This day.

THE HISTORY OF TACITUS. Translated into English by A. J. Church, M.A., and W. J. Brodribb, M.A. With Notes and a Map. New and cheaper edition. Crown 8vo, cloth, $2 50.

NEW EDITION WITH PORTRAIT.

MICHAEL FARADAY. By J. H. Gladstone, F.R.S. Second Edition, revised and enlarged, with a Steel Portrait. Engraved by Jeens. Crown 8vo, cloth, $1 50.

SECOND EDITION. THIS DAY.

THE GROWTH OF THE ENGLISH Constitution from the Earliest Times. By Edward A. Freeman, M.A., D.C.L., Oxon, author of 'The History of the Norman Conquest.' Second edition, revised, crown 8vo, cloth, $2.

THE STATESMAN'S YEAR BOOK for 1873: A Statistical and Historical Annual of the States of the Civilized World. By Frederick Martin. Crown 8vo, cloth, $3 50.

MACMILLAN & CO.,
38 Bleecker Street, New York.

NEW BOOKS.

THE MAGIC OF SCIENCE: A Manual of Amusing and Instructive Scientific Experiments. By James Wylde. With numerous illustrations. Second edition. 12mo, cloth, $2 50.

NATURAL HISTORY OF THE RAW Materials of Commerce. With a copious list of Commercial Terms in several languages. By John Yeats, LL.D. Second and revised edition, with Geography. 12mo, cloth, $2 50.

THE CAUSE, DATE, AND DURATION of the last Glacial Epoch of Geology, and the probable antiquity of man. With an investigation and description of a new movement of the earth. By Lieut.-Col. Drayson. 1 vol. 8vo, cloth, $5.

COURS DE PHYSIQUE. Par Brisse and André. Illustrated by 470 woodcuts. 8vo, paper, $5 20.

D. VAN NOSTRAND, Publisher and Importer,
23 Murray Street, and 27 Warren Street.
*** Copies sent free by mail on receipt of price.

ANNOUNCEMENT.

The periodical and newspaper literature, both of this country and of England (to say nothing of books), is already so large, and is so constantly increasing in size, that, to most readers, its tone and general tendency are little known. Yet it is this literature which at present furnishes at once the means of forming and the medium of expressing public opinion. It is believed that a paper which shall enable a reader to inform himself with ease and rapidity of the proceedings and productions of that vast machine which we call in the aggregate the Press, will be at once valuable and interesting.

With this view, and in the hope that the need of such a paper is already felt by the public, the proprietors of the *Nation* have assumed the publication of the *Week*, an eclectic journal of current opinion and events, now in its fourth volume. The *Week* will be published on Saturdays.

The following is the table of contents of last Saturday's issue:

TOPICS OF THE DAY:
Crédit Mobilier ... 3
The New York Charter ... 4
Religion in the Colleges ... 4
Accidents ... 5
Bribery and Corruption ... 5
Disappearance of the Ku-klux ... 5
The Russian Advance ... 5

COMMENTS:
An Intelligible Account of the Louisiana Case ... 6
Increase of Legislative Business ... 6
The General Railroad Law of Massachusetts ... 7
Public Opinion in Spain ... 7
A Political Superstition ... 8

MISCELLANEOUS:
The Conversion of Dumas *fils* ... 9
American "Society" ... 9

ADVANCE SHEETS AND NEW BOOKS:
Der Alte und der Neue Glaube ... 10
Æsthetic Criticism ... 10
The Foreigner in Far Cathay ... 11
The Three Lovers ... 11

NOTES:
Science ... 12
Literature ... 13
Music ... 13
The Drama ... 14
NOTES AND QUERIES ... 14

Terms—Four Dollars per annum, in advance; Clergymen and Teachers, Three Dollars. Ten Cents per copy.

Address the WEEK, Box 6,732, New York.

Office of the *Nation*, March 6, 1873.

THE LAND OF ISRAEL. A Journal of Travels in Palestine, undertaken with special reference to its Physical Character. By H. B. Tristram, M.A., F.L.S. 8vo, cloth. With a number of full-page Illustrations, Woodcuts, and Maps. Price $8.

THE NATURAL HISTORY OF the Bible. A Description of every Animal and Plant mentioned in Holy Scripture. By H. B. Tristram. Illustrated. 12mo, cloth, $3.

SCRIPTURE MANNERS AND Customs. Being an Account of the Domestic Habits, Arts, etc., of Eastern Nations mentioned in Holy Scripture. Illustrated. 12mo, cloth, $2 25.

THE BIBLE ATLAS OF MAPS and Plans to illustrate the Geography and Topography of the Old and New Testaments and the Apocrypha, with Explanatory Notes. By Samuel Clark. Also, A Complete Index of the Geographical Names in the English Bible. By George Grove, M.A. Large 4to, cloth, gilt edges.

POTT, YOUNG & CO.,
Cooper Union, New York.

THE WEEK IN TRADE AND FINANCE.

MARCH 3, 1873.

THE week in Wall Street has been one of interest, and has witnessed the evaporation of at least a great part of one rapidly accumulated fortune. The activity of the stock and money markets has given people plenty to do, and this, with the care and anxiety experienced by the majority of brokers, made the arrival of Saturday night most welcome, and Sunday a day of rest indeed.

The Treasury statement for February shows a reduction for the month of $5,277,880 in the public debt. The legal tender notes have been reduced to the original limit, $356,000,000, which furnishes some explanation for the loss of legal tender notes by the banks during the last four weeks, as $2,000,000 have been taken in and cancelled since the last debt statement was issued. The public, who are naturally interested in any contraction of the currency, were kept in ignorance by Mr. Boutwell of what was going on, which again gives rise to the query whether parties outside of the Treasury had knowledge of the fact. Mr. Boutwell has ascertained the amount of 5-20's he can pay off against the cash subscriptions to new 5 per cents, and the "amended call" is for $50,000,000, to be redeemed June 1.

The money market has remained very stringent, the rate for money on call at one time reaching ¼ per cent. per diem, in addition to the legal rate, which is equal to 98 per cent. per annum; the average rate of the week was fully $\frac{1}{16}$ and interest. The National Banks, anticipating a call from the Comptroller of the Currency for a report showing their condition, have been placing themselves in a stronger position, and the weekly statement shows a considerable contraction of loans as well as of deposits, as will be seen by the statement we publish below.

Commercial paper has been dull of sale, although rates have changed but little since our last report, and we quote them 8 to 12 per cent. The stringency in the money market has naturally interfered with business in paper, and will continue to do so until the prospect for easy money is brighter than at present.

The foreign money markets remain easy throughout Europe. The Bank of England rate of discount remains at 3½ per cent. The Bank of France reports a gain of 2,250,000 francs.

The weekly statement of the city banks is favorable; the total liabilities have decreased $3,804,400, and the total reserve increased $586,400. The gain in the reserve is in specie, which more than offsets a loss in legal tenders.

The following are the statements for the two weeks ending February 21 and March 1.

	Feb. 21.	March 1.	Differences.
Loans	$286,870,100	$281,344,900	Dec. $5,525,200
Specie	15,046,900	16,370,500	Inc. 1,323,600
Circulation	27,573,100	27,601,300	Inc. 28,200
Deposits	205,898,700	202,066,100	Dec. 3,832,600
Legal tenders	41,461,200	40,724,000	Dec. 737,200

The following analysis of the above shows the relation between the total reserve and the total liabilities:

	Feb. 21.	March 1.	Differences.
Specie	$15,046,900	$16,370,500	Inc. $1,323,600
Legal tenders	41,461,200	40,724,000	Dec. 737,200
Total reserve	$56,508,100	$57,094,500	Inc. $586,400
Circulation	27,573,100	27,601,300	Inc. 28,200
Deposits	205,898,700	202,066,100	Dec. 3,832,600
Total liabilities	$233,471,800	$229,667,400	Dec. $3,804,400
25 per cent. reserve	58,367,950	57,416,850	
Deficiency in legal reserve	$1,859,850	322,350	Dec. 1,537,500

In the early part of the week the stock market was dull and free from any interesting features; prices were kept up by the cliques in the different stocks, and holders were patiently waiting for "something to turn up," whereby they could rid themselves of their loads. Late in the day, on Wednesday, a movement, known in the street as a "raid," was made upon the market, directed chiefly towards Mr. Stockwell's specialties, Pacific Mail and Panama, although Western Union, Lake Shore, and Central and Hudson came in for their share of the hammering. For a few moments, Pacific Mail sold down 11 per cent. and Panama 25 per cent., the latter upon very few sales. The parties making the "raid" gave the attacked scarcely an opportunity to defend themselves, and offered stocks down 1 per cent. at a time. When the movement commenced the market was dull, many dealers and operators being absent from the street at that hour (3.30 P.M.), and, of course, for a time, the bears had their own way in the general market, until orders could be sent into the Exchange to support prices. Mr. Stockwell fared badly enough with his fancies, Pacific Mail, Panama, and Atlantic & Pacific preferred, and although they recovered somewhat from the extreme depression, the close of the week found Pacific Mail at 57¼ against 70½, the price on Monday; Panama 109 against 125 on Monday; and Atlantic & Pacific Preferred 23½ against 31 on Monday. The great trouble against which Mr. Stockwell had to contend was the unavailability of his stocks as collateral. Some time since, when operating for a decline in Pacific Mail, he directed his brokers not to advance money on the stock, and they accordingly threw it out of loans when offered to them as security. "The chickens came home to roost" this week. With some assistance from other operators, however, Mr. Stockwell met all his contracts, and, in spite of his losses, which are immense, he will undoubtedly soon be in a position to take better care of himself than he was last week, as his resources outside of Wall street are said to be great.

The annexed table of prices of the active stocks shows the course of the market very clearly for the week ending March 1:

	Monday.		Tuesday.		Wed'day.		Thursday		Friday.		Saturday.		Sales Sh's
N. Y. C. & H. R.	103⅝	104⅛	103¼	104⅛	101¼	103¼	101¼	103	102½	103½	103	103½	107,500

The Delaware & Hudson Canal Company is about to increase its share capital $5,000,000 by the distribution among stockholders of 50,000 shares upon the payment of par, one share being given for every three shares owned by stockholders of record April 1. This increase of stock is: "To provide means for the completion of the line of railroad now under construction on the west shore of Lake Champlain, and for other purposes connected with the extension of the business of the company."

The Erie disclosures made by F. A. Lane in his recent circular have been the topic of considerable comment in the street. The *Times* of Saturday, in speaking of the distribution of the money paid by English stockholders to aid in the overthrow of Gould as President of the Erie Railway Company, says:

"It is alleged by those who claim to know all the facts that Bischoffsheim and Goldschmidt actually paid out the sum of $750,000 in two payments, one for $300,000 and another for $450,000. The first amount was divided as follows:

F. A. Lane	$75,000
Henry Thompson	75,000
M. R. Simonds	50,000
I. D. White	25,000
H. N. Otis	25,000
John Hilton	25,000
Homer Ramsdell	25,000
Total	$300,000

"These payments secured the resignations of the necessary number of old directors, and resulted in Jay Gould being turned out of the presidency. But there were other claimants for services alleged to have been performed, so it was necessary to call for more money. The second payment of $450,000 was made after the *coup d'état*, and divided as follows:

Daniel Sickles	$125,000
George Crouch	50,000
James J. Gardiner	25,000
Wm. A. O'Doherty	25,000
F. A. Lane	25,000
Charles Day	25,000
S. L. M. Barlow	87,500
James McHenry	87,500
Total	$450,000

The offers of 5.20's to the Treasury on Wednesday amounted to $2,482,250, at 113.51 to 114.49. The price of gold at noon being 115, all the offers of bonds were under par in gold. Mr. Boutwell accepted only $1,000,000, paying for them in legal tenders, which was an improvement upon his course of the previous week, when payment was made one-third in legal tenders and two-thirds in National Bank notes. A larger offering of bonds might reasonably have been expected, considering the stringency of the money market, but this was doubtless prevented by the apprehension that sellers would have to take payment principally in National Bank notes.

In the market for Government bonds, although not very active, prices have been firm, and towards the close of the week improved in sympathy with the firmness of the gold premium and the higher cable quotations for 5.20's in London.

Southern State bonds have been dull, and the dealings chiefly confined to Tennessees, which were selling freely at the close of the week at 81. A better feeling exists in their regard by reason of a funding bill which is now before the Legislature, and will probably be passed this session. The Alabama Legislature has authorized the issue of $15,000,000 new bonds.

The gold market has remained strong all the week, the price fluctuating between 114¼ and 115⅛, finally closing on Saturday at 115.

The Nation.

NEW YORK, THURSDAY, MARCH 13, 1873.

The Week.

THE President in his second inaugural says that "the past four years, so far as I could control events, have been consumed in the effort to restore harmony, public credit, commerce, and all the arts of peace and progress"; expresses it as his firm conviction "that the civilized world is tending towards republicanism, or representative government," and that our own great "republic is destined to be the guiding star of all others"; that the negro ought to have "access to schools," and ought to be made to feel assured, "when he travels," "that his conduct will regulate the treatment and the fare he will receive"; that to the grant of these civil rights he himself "stands committed, so far as executive influence can avail." As to the Southern States, he declares them "rehabilitated," and says that no executive control is exercised in them that would not be exercised anywhere; so Chicago and Boston may contemplate New Orleans with new interest. With reference to the acquisition of foreign territory, the President believes in it, but will not recommend any more schemes looking that way, unless the people have first given them their support, because he believes that "our great Maker is preparing the world in his own good time to become one nation," with one common language, and with no armies or navies. The President promises to direct his efforts for the future to the restoration of good feeling, the return to specie payments, or, at least, the establishment of a fixed relation between gold and paper, the construction of "cheap routes of transit," the maintenance of friendly relations abroad, the re-establishment of our commerce and carrying trade, protection of such manufactures as can be "economically" produced here for the sake of a return to specie payments through a good condition of the balance of trade, the "elevation of labor," and humane attempts to civilize the Indians. He promises to reform the civil service, and, in conclusion, thanks the American people for vindicating him by a re-election against the abuse and slander he has suffered in their service. The most noticeable part of the address was perhaps that part in which the President speaks of the fact that ever since 1861 he has had laid upon him a great burden of responsibility, from which he shall be glad to escape. Or, rather, this is the passage at once most noticeable and most to be commended. Other parts of it are noticeable enough, and have called out much rather wondering comment.

The most significant feature of the inauguration festivities was the grand ball, attended by the President, his Cabinet, and the foreign ministers, and by citizens "without distinction of race, color, or previous condition." "Social equality," the President had just said publicly from the Capitol, "is not a subject to be legislated upon, nor shall I ask that anything be done to advance the social status of the colored man except to give him a fair chance to develop what there is good in him"; and these words, interpreted by his action in the evening of the same day, mark an epoch in the national feeling towards the colored race. They confirm the opinion which we expressed last week, that with the Forty-second Congress the war period ended for whites and blacks alike. It has taken eighty-four years to place the head of the Republic on a social equality with the servile population of 1789; but that being effected, to the lasting credit of the American people, there remains no excuse for the old party divisions, and little reason for supposing that on general questions of public policy there will be any greater unanimity among the blacks than among the whites. West Point cadets dancing in the same set with the wives of colored Congressmen; James Brooks renouncing his opposition to the colored race in return for the exculpatory vote of his colored colleagues; Cuban annexation urged not by white Democratic filibusters, but by colored Republicans in convention; colored Bostonians petitioning the Massachusetts Legislature to expunge its censure of Mr. Sumner for his battle-flag resolutions—such are some of the signs of the times to which this Congress of the transition has delivered us, giving us for a cue not the suppression of the Ku-klux, but the abolition of the franking privilege, the civil-service regulations, and the Crédit Mobilier investigation.

Nothing, we think, which any Congress has done for many years has excited as much public indignation as the vote of the "back pay" to themselves by the gentlemen of the Forty-second, who have just gone home. The obscurity of most of them will of course be a sufficient shield hereafter, and will enable them to enjoy the money in peace. But the offence differs little, if at all, from that of a president of a bank who should raise his own salary in the middle of his year, pay himself out of the till, and then resign, and set the directors at defiance. In fact, it is worse; because a bank president would know that he might be reached by the law, while Congressmen know they are safe against the only pursuit which for many of them has any terrors—that of criminal justice. One of the most striking results of the caucus system is that it has given us a class of "statesmen" on whom the opinion of the decent and moral elements of American society has absolutely no influence, and who revel in an unprecedented callousness. It is just possible, however, that a good many, if not all, of the minority who voted against the bill consider that they have thus discharged their obligations to virtue, and that they may now pocket the money along with the Butlerites. We trust constituencies will do all in their power to dissipate this delusion, and that the neighbors of returned legislators will make them understand that it is as disgraceful to take the money as to vote for it. Congress is not without historical precedent for its performance, to be sure; but, on the other hand, neither are the people without historical precedent for their disgust and their clamor, and their punishment of this kind of legislation.

The New York *Times* has made an analysis of the final vote which has some very instructive features. The back pay was voted by 99 against 97. Of these ninety-nine forty-seven were furnished by the South, out of a total of fifty-nine votes possessed by that section in the House, or nearly 80 per cent. Only four came from New England, and, as might have been expected from the later political history of that State, Massachusetts furnished every one of the four—Messrs. Ben. Butler, Oakes Ames, Ginery Twichell, and N. P. Banks, while New York City only furnished one, and he was the renowned Fernando Wood. The Senate majority, which still remains behind in Washington to bear the pitiless pelting of the storm, defends itself on the ground that the "back pay" from which mileage has to be deducted, was intended simply to equalize the salaries received by the members during the last session, so that those who come from places near the capital might get as much as those from a distance. The answer to this is, that the country wants neither "equity" from Congress, nor any attempts of a superfine kind to remove the inequalities of this wicked and suffering world, especially in money matters; that the law of the land, and the rules of old-fashioned honesty common among "plain people," are all that we care to have either House take as its guide in legislation; and that for anything more delicate than these we prefer to apply to the Courts or the Church.

The result of the finding of the Senate Committee favoring the pretensions of the McEnery Legislature, and the failure of the Senate to pronounce positively in favor of either of the two so-called governments in Louisiana, was that the McEnery party most fool-

ishly and wickedly resorted to violence on Wednesday the 5th inst., by collecting an armed but unorganized body of men whom they called "militia," and with whom they made an attack on the metropolitan police in the service of the Kellogg party. They succeeded in capturing a station-house and having a little fight the next day, in which a few men were killed and wounded, but they were worsted and finally dispersed or made prisoners—the United States troops coming into the field against them at the last. The attempt was made the more foolish and criminal by the fact, which was perfectly well known, that the Federal Government would support the Kellogg party, which would of course have made the victories of the "militia" idle. What reason the Federal Government has for supporting Kellogg we do not know, except that he is the Custom-house candidate. That it should continue to support him after the strong expression of opinion by the Senate Committee is doubtless very unfortunate, but it was useless to expect anything else in view of Casey's case, and the responsibility of the affair must undoubtedly be laid at the door of the Senate, which might have settled the question but did not. It can still do so by indirectly admitting McMillan, the McEnery candidate, to his seat—a step which the President would doubtless treat as a sufficient indication of his duty in the matter. The McEnery Legislature has in the meantime been dispersed, but a committee of the body has published a clear, temperate, and very able address to the people of the United States and of the State, quoting the conclusions of the Senate Committee, explaining the situation in Louisiana, and protesting with great earnestness and dignity against the mode in which Federal interference has been exercised. Passive resistance to the Kellogg government by refusal to pay taxes, and all other peaceful means, has been determined on, and we think the malcontents will have the sympathy and good wishes of all those in all parts of the country who wish to see Custom-house and Carpet-bag rule, and their attendant disorders, quickly and for ever ended.

Mr. Caleb Cushing is reported to be the author of a plea in behalf of Senator Caldwell which appears to be finding some favor, and of which, should it be successful, the result would be in substance this: A Senator-elect presents his credentials, which are regular, is sworn in, and becomes a member of the Senate. The Senate by-and-by hears that the new Senator bought his way into his seat, and the new Senator requests a committee of investigation. The committee make a report which satisfies the Senate that the charge is sustained. But when all this is done, nothing is done, and the man is, in spite of it, a Senator. For the State Legislature cannot invalidate his credentials; it exhausts its power when its vote has made him a Senator; thenceforth the Senate has jurisdiction as against the State. Nor can the Senate touch him; for, no matter whether he has bribed State legislators or not, it was the State acting in its sovereign capacity that gave him his credentials, and the Senate must not go behind the State's action, ignorant though that may have been. "A careful canvass of the Senate makes it doubtful," we are told, "if the report of the committee will be sustained"; but how much of this dubiety is caused by Mr. Cushing's argumentation we are not informed. Messrs. Logan, Anthony, and Carpenter are said to be in doubt if the evidence is sufficient; some Democratic Senators are said to be in doubt about their legal right to pass Mr. Morton's resolution (declaring Mr. Caldwell "not duly and legally elected"); and some honorable gentlemen have their doubts if Mr. Caldwell, having been proved to have bought only two legislators, whereas he had a majority of twenty odd, is not "legally elected," and a nice enough man for Senator anyhow. As for the public opinion on this matter, there is no doubt anywhere of what that is—at least among a sufficiently large section of the public to make all this very dismal work for somebody before very long. The cases of Judge Durell and Judge Sherman also are, we trust, being borne in mind by a certain number of people.

Mr. Schuyler Colfax has had "an ovation" from his fellow-citizens at South Bend, who received him with great rejoicings; and, after hearing at a public meeting his account of his connection with the Crédit Mobilier affair, passed a resolution expressing "undiminished confidence in his honor and integrity both as a public man and as a private citizen," and styling him "a model statesman, temperate and faithful to principles." Mr. Colfax in his speech relied for his defence mainly on the evidence which Oakes Ames first gave, and on the "strong impression" of the cashier of the Sergeant-at-Arms that he paid the "S. C." check to Ames himself. Mr. Colfax gets out of the South Bend speech during the campaign by laying stress on the words "gave or offered to give," which, however, he did not emphasize in the speech, and which he used with such a context as to leave the impression on the public mind that he had never held Crédit Mobilier stock in any manner whatever. We wish, too, he had explained in some satisfactory manner the extraordinary evidence in which he described his own surprise and that of his family at receiving the $1,000 bill from Nesbitt, as a person who was "almost an entire stranger to him," when the facts were, as he afterwards confessed, that Nesbitt was anything but a stranger to him; that he had received money from him previously, and had relations with him which made the coming of the $1,000 bill a by no means startling occurrence. We should like very much to know what Mr. Colfax's notion of credibility is, but, having heard it, we should like to have him close his lips on the subject of Crédit Mobilier stock for ever. He has carried off from Washington a letter from the President, expressing the strongest confidence in his integrity, which would, as the *Tribune* points out, have been of some value if the President had not also written Mr. Tom Murphy a letter expressive of affectionate admiration.

Mr. Ames's friends are going, we believe, to give him a dinner and reception at Boston, and express, we suppose, undiminished confidence in his integrity, and hold him up as another "model statesman." As the people of Easton are just as upright, pious, and patriotic as the people of South Bend, and as, if Ames is a "model statesman," Colfax is a great rascal, and *vice versâ*, the rest of the community is plunged in perplexity by these testimonials, somewhat like that created by the practice of singing *Te Deums* over battles by hostile armies. The only way we know of avoiding this perplexity, in the present condition of public morals, is by hammering away at vice in the abstract, and avoiding all censure of vicious men. Vice has no friends, and everybody is therefore willing to attack it; but a vicious man is always surrounded by "friends" who would not "withdraw their confidence" from him if they saw him riding on a broomstick in the air in company with a black goat.

The society calling itself the National Association, which recently closed its annual convention in this city, has called forth more comment this year than ever before, but the approval that it secures appears to be in an inverse ratio to the attention it attracts. It has at its head a Justice of the Supreme Court, and numbers of other gentlemen of ability and repute; its motive is seen to be excellent, and its object on the face of it as good; but it meets with slight success. It proposes to secure, as a Sixteenth Amendment, we suppose, a change in the Constitution acknowledging that "Almighty God is the author of the nation's existence, and the ultimate source of its authority, that Jesus Christ is its ruler, and that the Bible is the fountain of its laws." This, it will be seen, would abrogate that part of the Sixth Article which, after providing that certain public servants shall make oath or affirmation to support the Constitution, provides that "no religious test shall ever be required as a qualification to any office or public trust under the United States." The reasons why the abrogation of this provision will in all probability never be made are many, but two which will be efficiently operative are these, one of them influential in the religious world (as distinguished from the secular) and the other operative in both: many

religious persons will object to basing the reverence for divine things upon the law of the land, or any appearance of calling force, upon which law rests, to the propagation of religion. Secondly, this proposed Sixteenth Amendment is generally felt to be the first Amendment which instead of extending and advancing the genius of our institutions goes against it, diminishing the rights of the individual and limiting a freedom which has not as yet been found harmful. The new amendment would disqualify for holding United States offices of whatsoever kind all Jews; a majority of Unitarians; all Roman Catholics who believe that the Bible without tradition and an apostolic church as its interpreters is a guide speaking in an unknown tongue; all deists and other unbelievers of various kinds; all future believers seeking religious certitude, but as yet without definite result, and very many other persons of tender consciences, who for one reason and another would hesitate at taking comprehensive oaths relating to so delicate and difficult a subject. The proportion of the population who would be thus disqualified is very large. Enough would be left to fill the offices, however. Mr. Harlan would take the oath, for instance; so would Mr. Jay Gould.

Mr. Gladstone has introduced a bill into the House of Commons for settling the much vexed question of Irish university education, and some of its provisions, in the nature of concessions to the Catholics, are perhaps among the most extraordinary attempts at religious equality ever ventured on. The university is not only forbidden to examine in theology, or to appoint any professor or teacher in theology, modern history, or moral or mental philosophy (all of which fields the Church reserves to herself), but "to attach any disqualification to any candidate in any examination, by reason of his adopting in modern history, moral or mental philosophy, *law*, *medicine*, or any other branch of learning, any particular theory in preference to any other theory." The *Pall Mall Gazette* points out that this is really requiring the examiner to confess that he knows no more about the subject on which he examines than the candidate, and suggests, in illustration of its absurdity, the possibility of a medical student's propounding the theory that the view of the condition of the blood held by the proprietor of Morrison's pills was the true one. It would be a convenience, however, in some way—as it would enable homœopathic and allopathic doctors to live in peace; but then it would offer a chance to quacks of all kinds to get themselves into good and regular standing, such as they have never had before in the history of learning. In this country a university thus organized would, for instance, be pretty sure to have to examine Mr. Stephen Pearl Andrews in "Pantarchy," a subject in which he would necessarily receive the highest marks, as the examiner could never follow him. The provision is worth notice as a sign of the working of the widespread tendency to acknowledge not only that one man is as good as another, but that one man knows as much as another, and that, therefore, all examination is an arrogant and offensive process, and unrepublican to boot, inasmuch as it may place a citizen under the painful and humiliating necessity of confessing his ignorance. The House of Commons has rejected the bill.

The reorganization of the courts in England proposed by the Lord Chancellor, to which our correspondent makes allusion, consists in converting the four courts, Queen's Bench, Common Pleas, Exchequer, and Chancery, into one "High Court," having four divisions, among which the judges will be divided, but the Lord Chief-Justice will be president of the whole. Over this there will be one Court of Appeal, composed of the Lord-Chancellor, the presidents of the four divisions of the High Court, together with the judicial members of the Privy Council, the Lords-Justices, and three other judges, and this will exercise the appellate jurisdiction now lodged in the House of Lords in all except ecclesiastical, Scotch, and Irish cases. The exclusion of these is due to the fear, as regards the first, of exciting tremendous opposition to the whole scheme among churchmen, and, as regards the other two, to the fact that to make the Scotch and Irish appeal to an English court in which they are not represented, instead of to a legislative body in which they are represented, would be treated as a violation of the compacts made at the time of the legislative union, and an outrage on whatever is left of their national feeling; but that the jurisdiction of the House of Lords will long survive, even as to their cases, it is difficult to believe. One argument used by Lord Selborne in the debate on the constitution of the Court of Appeal, is worth attention here as well as in England, viz.: That no matter how many appeals you allow, litigants will avail themselves of them all, and never be satisfied till they have reached the last resort. Therefore, when you have made your court below as good as you can, it is best to present the suitor with his last chance, the minute he comes out of it, but into this chance you ought to put all the learning and integrity you can command.

The "coal famine," however, is the problem which in England overshadows all others, and seems as far from solution as ever. Its main facts are that, according to the best estimates, the coal-fields of England will only supply 80,000 millions of tons more; that these are now being used up at the rate of 110,000,000 tons a year, and with such waste that it is estimated that the same amount of work might be done with 80,000,000 tons, while the annual increase in consumption has for a good while back been 3,000,000 tons; that at this rate of increase the industrial resources of England would be exhausted and the decline of the empire precipitated in 125 years from this time, inasmuch as it is not believed that more than 40,000 millions of tons is sufficiently accessible or of sufficiently good quality to maintain her present industrial efficiency; that in the meantime the price of coal has advanced during the past year $2 per ton, which is calculated as being the equivalent of an increase of taxation to the amount of $220,000,000 annually, and yet the diminution of production is only estimated at about five per cent. This diminution is partly due to diminished labor on the part of the men, short hours and increased pay having unhappily not resulted in all the good that was anticipated, though this cause will not account for the whole of the rise in price. *That* has been brought about in the main by panic, followed by combination among the dealers. In short, there are said now to be "coal rings" in the large cities, and it is feared that they will be found before long among the great coal-owners; there is already talk of Government seizure of the coal-fields as a supreme measure of public safety, and the old British grate is threatened with disappearance before the march of the dismal and repulsive but conquering stove. However, on motion of Mr. Mundella, a Committee has been appointed by the House of Commons to enquire into the whole matter.

The news from Spain is somewhat better. The reports of Carlist successes seem to have been exaggerated, and no serious opposition to the authority of the republic has yet been offered, though great disorganization plainly prevails all over the kingdom, and military officers are apparently occupied rather with keeping the army from going to pieces than with preparing it for the support of the new government. However, all delay unmarked by overwhelming disorder tells in favor of the new order of things. A bill was proposed by President Figueras last week, providing for the dissolution of the Cortes, and convoking a Constitutional Assembly, and, after reference to a committee, was favorably reported, and the Cortes agreed on Monday to take it into consideration, by a vote of 186 to 19. This is so far a triumph for the Ministry, but it has brought them face to face with the greatest difficulty of all, whether the new republic shall be federal or "one and indivisible," as the French say. The Moderates, headed by Castelar, are federalists, and with good reason, the old provincial organization of Spain being still strong and healthy. But then the fiercest republicans are Unitarians, and it is to be feared that there will be a good deal of trouble before the two parties come to terms, particularly as the Unitarians belong to a school of politicians who look on all compromise or postponement as base.

POLITICAL RESPONSIBILITY.

THE melancholy spectacle of a nation robbed by its own representatives, and for their own individual profit, without any pretext of reason or right, and while the press of the country of all political shades is with singular unanimity thundering against the act, must certainly awaken enquiry in every reflecting mind as to the power which is to be held responsible for the outrage.

A single act of misgovernment which takes from the Treasury in round numbers one million six hundred and fifty thousand dollars, without the smallest consideration having been received for it, is unquestionably something about which in ordinary times we might complain; but when this large amount is voted directly and openly into the pockets of the members of Congress, one cannot help asking, What is there to prevent it from being done again, and why cannot the amount be increased tenfold? If General Washington or General Jackson had been President on the 3d of March, 1873, all the world knows that the measure would have come back to Congress with a stern message of disapproval, and that coupling it with an increase of the Presidential salary would have only rendered more certain the Presidential veto. If General Grant had done so, it would have been worth to him more than $100,000—raising him in the opinion of his countrymen at a point where his character is supposed to lack elevation, and furnishing the sharp, incisive, surgical treatment that the nature of the case certainly required. One can easily conceive how jubilant the country would now be if these legislative Fisks and Goulds were coming home covered with the disgrace of the attempt and the ridicule of the defeat. If twenty Republicans, in either the Senate or the House, had resolutely and honestly said to the others, "This retroactive increase of your own salaries shall not pass, let the consequences to the Appropriation Bill be what they may," the measure would have been dropped. As it is, we have the practical result that a Republican House, Senate, and President have united against the unmistakable wishes of the entire country to give this iniquity the form and sanction of law.

But it is not only in the national legislature that we see the law-making power in the same manner acting as though it were utterly irresponsible to the body of society which has constituted it. The Legislatures of New York and New Jersey are now a sufficient illustration of the same thing. With the same impunity they seem able to do precisely what they should not, and to leave undone precisely that which they were elected to do. With such a state of things existing, can it be said we are governed by our own representatives; and while we allow this state of things to continue, can it be believed that we know where the proper responsibility begins or ends?

American society is now organized politically upon the principle that the majority governs. It gives the control to the majority almost absolutely, and with little regard to the representation of the minority. But, practically, society does not consist of a number of individuals going to the polls, each philosophically doing precisely what he thinks best for the welfare of the country, irrespective of all other men. On the contrary, it divides itself into two political parties—and a political party is not a mere assemblage of individuals, but a singular entity, having its history, traditions, instincts, and prejudices as well as principles and objects. Its members do not subscribe to any constitution or sign any roll, nor give any obligations or pledges, nor receive any pass-word, and yet with the larger part of them there is a sense of membership and obligation much stronger than exists in many formally constituted societies and clubs. In the earlier days of the country, political parties were held to strict accountability for the action of their agents, whether those agents were Congressmen or Presidents, legislators or governors, and this sense of accountability certainly pervaded the masses as well as the representatives. That a party could get rid of this accountability by passing resolutions, and could then re-elect the same men or others equally bad to office, would have been regarded as preposterously absurd. The standard of political morality was not always of the highest, but there was never the extraordinary falling away from the standard which we now see wherever we choose to look. Mr. Cragin said in the Senate that this gratuity voted by Congressmen to themselves would cost the Republican party the States of New Hampshire, Rhode Island, and Connecticut. If the statement were true, if the reprehensible conduct of the Republican party in Congress were to be followed by the immediate punishment of the loss of three Republican States, we all know that even the professional politician would find it necessary to have a conscience. The Republican Congress, in fact, proceeded to do as it chose because it felt pretty well assured that no immediate harm would befall the party. It is indeed almost ludicrous to see how solidly the representatives from those States, senators and representatives, Republicans and Democrats, went against the measure. Mr. Dawes also put himself upon record as against it, but we do not observe that he devoted to the subject any of his usual invectives against extravagance where the extravagance benefits other people than himself, or that he resorted to any of those "parliamentary tactics" which prolonged experience has placed at his command, and which have defeated a great many better measures, and might, with great certainty be it said, have defeated this one. Nevertheless, Mr. Dawes and all the other gentlemen appearing "right on the record" can go back with unblushing faces to the intelligent people of New England, and claim for themselves and their party continued confidence and support, and throw the blame on certain individuals who happened to be in Congress at the time.

The idea that we would impress upon the minds of all thoughtful and conscientious citizens is, that political power carries with it political responsibility, and that we should not grant the one without exacting the other. Thoughtful and conscientious men are, it is true, but a small part of the community, but nevertheless they hold, as between the two parties, the balance of power. There is no party yet in this country strong enough to succeed without them. During the past eight years this thinking element of the country has not been sleeping, but has been singularly held in abeyance. The great issues of the war have led thinking and conscientious men to regard Republican derelictions as of comparatively little consequence, and the extraordinary folly of the Democratic party has forced them to the conclusion again and again that it was not to be trusted. At all times the party in power has been understood to merit punishment, but at no time has it appeared as if punishment could be administered without too great a risk being run. It was impossible for such men in 1868 to allow a party to succeed which nominated General Blair immediately after and as a reward for his impudent and incendiary letter. It was also impossible for them during the last election to put any confidence in a party whose leaders could enter into such a compact as brought them to the support of Mr. Greeley. And the results of these two elections have apparently led the Republican politician to believe that he can now do anything without injuring his party, and that upon its continued flood-tides of success he will be pretty surely floated into place. With the departure of the issues of the war, and the increased audacity of the professional politician, and the frightful prevalence of public corruption, more now depends than ever before upon those who do not make politics a trade, and who can rise above prejudice or discipline to the just contemplation of the fact that a party is but the means, and the welfare of society the end, of political efforts.

GENERAL GRANT'S GOOD FORTUNE.

IN looking over the newspaper criticism which the beginning of General Grant's second term and his inaugural address have brought out, we have been more struck by its moderation of tone than by anything else. Any one who remembers the fury of last summer's campaign might be pardoned for expecting something in the way of editorial writing very different from the rather qualified expressions of approval from the Republican, and rather qualified

expressions of disapproval from the Liberal-Republican, Democratic, and Reform organs, which have appeared within the last ten days.

The picture drawn of General Grant last summer by his supporters in the press was that of the good citizen-soldier, the great-hearted patriot, the unselfish devotee of equal rights, purity, reform, and progress. He had overcome the greatest rebellion against the greatest government of the greatest country in the greatest age the world had ever seen. He had peacefully disbanded the greatest army of modern times, amid the acclamations of the most law-abiding people on the face of the earth, and had been called by an unprecedentedly unanimous shout to administer the affairs of this people for them. He had done it well. He had no policy opposed to the will of the people; he had reduced the national debt; he had lightened taxation; he had maintained order in the South. On the other hand, the portrait of him drawn by those journalists who supported the nominee of the Cincinnati Convention was something frightful. In their minds, Grant in the nineteenth century was the copy of Nero or Caligula in the days of imperial Rome—perhaps better still of Dionysius of Syracuse, with selected vices from the characters of such modern reprobates as Napoleon, Aaron Burr, Andrew Johnson, the members of the House of Stuart, and the New York Ring. Grant the centralizer was depicted as sitting, stupid with drink, in the White House at Washington, surrounded by his military staff, issuing orders enforced all over the country by the bayonets of a licentious soldiery. In each of the Southern States, and in some of the Northern, he had his satraps, who, under cover of preserving the country from domestic violence, were in reality overriding its laws, and subjugating its unhappy people. Congress, to be sure, still met, and State legislatures still enacted laws, but no law which came in conflict with his nefarious designs was any longer enforced. Not only had he an army of paid veteran soldiers at his back, but he had, by skilful manœuvres, gained over the vast body of the civil service, which was now officered and governed by his relatives and personal adherents, and which was dependent on his favor for its daily bread. In short, when the managers of the Philadelphia Convention unrolled their theatrical scene, displaying General Grant as the "man on horseback," not a Liberal-Republican journalist in the country but felt his temples throb with shame and rage, as he thought (and wrote) how, by corruption, nepotism, and lawless tyranny, this despot had made himself master of a once free country. To be sure, the picture was rendered a little hazy by the fact that these same editors described General Grant at the same time as an utter ignoramus, an account which seemed inconsistent with what they said of his success as a scheming villain, but then consistency last summer was looked on with some suspicion and distrust.

Six months have gone by, and the scene has wonderfully changed. The despot has completed his work and riveted our chains, and the Second Washington has again, by the unanimous voice of the people, been called upon to administer its affairs; but we hear very little now of Second Washingtons or of men on horseback. There is, so far as we can judge, a very general disposition throughout the country, on the part of those who supported the Cincinnati candidate in the late campaign, to treat his Administration during the next four years, if not with that confidence which was accorded him when he first took the office, and we all thought he was going to reform politics, and put an end to the reign of the politicians, and bring in a period of statesmanship and good government, at least with a non-partisan and independent temper. On the other hand, the laudation of the Republican press is by no means of the wholesale kind of which we had so much a little while ago. The following paragraph, which we take from the Albany *Express* of the 4th instant, is very different from the "first in peace, first in war, first in the hearts of his countrymen" sort of criticism of the campaign:

"Gen. Grant was not our first choice for President—that all our readers know; but we know him to be a plain, unostentatious, well-meaning citizen, a faithful soldier, and, as we believe, an honest man. Many a worse and many a feebler man has taken the official oath before the Chief-Justice on the 4th day of March in years gone by. We have faith in President Grant. He means well. He has learned much during his first Presidential term. He may be obstinate—he may have some crude notions of his own—but we think he is honest through and through, and that he will endeavor to give to the country a wise, pacific, and successful administration."

Our own opinion of General Grant our readers do not need to be told. He has been peculiarly unfortunate in being placed at the head of an Administration which has served as a bridge over the chasm dividing the old from the new in American politics—dividing the period which found its crisis in a civil war from the period of discussion, of reconstruction, of reorganization in which we find ourselves. He has been unfortunate, too, in having been selected for this work at a time when the Executive had by force of circumstances and accident been reduced to the position of a secondary force in the Government, the Administration having come to be regarded rather as the agent of the party for the time being, than one of the three theoretical co-ordinate powers. If General Grant had been, as so many persons thought he was five years ago, a political genius, he would probably have succeeded by this time by slow degrees in elevating himself to the position of a leader in that reform movement in which we have always been told he feels such a deep interest, but which in reality he does not understand.

Nevertheless, it must be confessed that, speaking after the manner of men, the career of General Grant has been wonderfully lucky. When we remember that twelve years ago he was an utterly unknown man, and that for those twelve years (beginning with the victories at Fort Henry and Fort Donelson) he has been on the whole the most constantly conspicuous and successful man in public life in the world, having triumphed over his enemies in the field, and signally defeated his enemies in contests quite as difficult and intricate as any to which war can give rise, having accomplished everything he has seriously undertaken (for even the San Domingo scheme has ended in a way which must be peculiarly gratifying to him), and having maintained throughout his career a position of dignity and reserve which inspires even his bitterest enemies in their saner moments with respect, certainly we cannot help feeling that unpartisan pleasure which the rapid and melodramatic rise of any member of the human race to power and position always excites in his fellows. It may be, and we hope it will be, that four years hence we may have something better than General Grant; but meantime a little non-moral pleasure may be taken, even by Reformers, in the unexampled success of a man who is after all one of our own family, and whose success, though hardly the success of Reform, is certainly success of no ordinary kind.

General Grant, in fact, stands to-day in the eyes of France, England, Russia, and Germany as the head of a large and powerful people, chosen in the teeth of charges of the gravest character, affecting not only his political but his personal reputation, by a nearly unanimous vote. Besides this, he comes for a second time into office, after an unusually bitter campaign, which has worn out and disgusted the whole country, during which he has maintained a dignified and unbroken silence. He has had the good fortune—the unusual good fortune—to see the very men who were originally most opposed to him forced to his support by their own mistakes; and he comes into office for the second and last time confident that he has seen the worst of the conflict, and that however during the next four years he may offend the public, he at least will obtain at the end of his term that retirement and freedom from responsibility for which, as he quite pathetically says in his inaugural address, he so much longs.

THE FOSTER CASE.

WE have said nothing about the Foster case hitherto, because we did not know in what position it stood, or what Governor Dix had done or proposed to do about it. What, at this writing, he is asked to do, but we hope and believe he will not do, is to commute the sentence to one of imprisonment for life; and the point in the affair to which we think the public attention ought to be especially directed is the fact that this result,

if reached, will have been reached through a process which amounts substantially to a retrial of the case, before a new tribunal which acts not simply on legal considerations, but on considerations of all kinds. Foster, late one night, while riding on the front platform of a Broadway car, behaved in a very insulting manner to a lady passenger, by keeping the door open and staring her out of countenance. Her escort, Mr. Putnam, remonstrated two or three times, with vehemence, and was then told by Foster that "he would ride as far as he did," and "give him hell" when he got out. He accordingly did ride in silence and apparently in waiting, for sixteen blocks, or three-quarters of a mile, and on Mr. Putnam's assisting the lady to alight, seized the car-hook and struck him with it on the back of the head with such violence as to fracture his skull and kill him. The prisoner was duly tried and found guilty of murder in the first degree, but was recommended to mercy by the jury. His case was carried to the Court of Appeals upon the usual profuse bill of exceptions, and all the points made in his favor, especially the objections to the Judge's charge, were solemnly reviewed by that tribunal and decided against him. An application was then made to the Governor to commute his sentence, and, should the Governor comply, the criminal will, owing to the peculiar way in which the petition is supported, have to all intents and purposes the benefit of a new trial, and this before a tribunal unknown to the Constitution and the laws.

The Governor, it would appear, inclines to the opinion that Foster ought to be hanged, so he is asked practically to relegate the matter to the judgment of a body of persons made up in this way: the widow of the murdered man; eleven of the persons who formed the jury in the trial, but each separately in his own home; a man named Hoffmann, who knew one of the jurors, now deceased, and had a talk with him before his death; William M. Evarts, a leading lawyer, practising at the bar; a judge of the Court of Appeals; a late Commissioner of the Court of Appeals; three lawyers in active commercial practice at the bar; a judge of the Supreme Court; an ex-District-Attorney and divers other lawyers; thirty men in various callings who knew the prisoner for various periods; a clergyman who "knew him familiarly from his childhood"; the prisoner's family physician; the clergyman whose church the prisoner's family attend; a gentleman who knew him "since he was a boy"; another who was a playmate of the prisoner when a boy; a man who was once Sheriff of this city; the president of a bank; ditto of a savings-bank; the publisher of a weekly paper; the wardens and other officers of the City Prison; a surgeon who thought Putnam might have recovered if he had received more prompt attention, and a surgeon who first saw him after the blow. We ought to add that this is only a portion of the court, but it is the principal portion. Not one of these persons, except those who served on the jury, professes to have been present at the trial or to have heard the evidence. They are all satisfied, however, that the prisoner is only guilty of murder in the second degree, and some think only of manslaughter. Most of them reach this conclusion through their knowledge of Foster's previous character, which was "mild and inoffensive." In fact, all of them, except one, represent him as a very estimable young man, almost as unlikely to commit murder in *the first degree* as Dr. William Adams or Mr. Peter Cooper. A few confess that he *might* have killed a man, but not with premeditation. Some curious light is thrown on their deliverances, however, and especially on those of the clergymen, by the admission made by Mr. Godfrey Gunther of the fact, which was well known after the crime was committed, but which the public has now forgotten or the friends of the prisoner are trying to cover up, that Foster was "wild, reckless, and independent," or, in other words, a dissipated man, who followed no regular occupation, and who, sooner than ask assistance from his father, got a place as conductor on a street-car. This fact is of considerable importance in two ways. In the first place, it shows how disingenuous is the surprise expressed by the ministers that Foster should have been out at night and quarrelsome; in the second, it shows that the car-hook was to him a familiar weapon, and not something snatched up in a hot impulse. *Moreover, it was shown in evidence that he went out and ascertained that the hook was there before Mr. Putnam prepared to leave the car.* The passage in Dr. Tyng's letter on this point is very discreditable. The plain truth is that Foster's antecedents were such as to render this close to his career not improbable.

Now, if it is proper for the Governor, on the verdict of a body thus composed, to set aside the result of a trial in the Supreme Court as of no value, these among other questions will, we hope, present themselves to everybody's mind: What is the use of trying murderers in the Supreme Court at all? The rule of law which requires the judge, jury, witnesses, and counsel to conduct the investigation in public, and in the presence of each other, is plainly of no value if the case can be sifted, and even the degree of the prisoner's guilt fixed, just as well by an indeterminate body of persons out of doors who have never heard the evidence, or the arguments, or the charge. What, too, is the use of keeping the jury together from day to day, and obliging them to act under the instruction of the Court, if they can revise or explain away their verdict two years or any time afterwards in their own homes, orally or by letter, and if even a dead juror can have his explanation sent in by a surviving friend? What is the use of the judge who tries the case, and of the Court of last resort which passes on his rulings, if both can be effectively revised by volunteer lawyers not charged with judicial functions at all, or acting under none of the ordinary guarantees of judicial fairness and independence? If, for instance, Governor Dix must not mind what Judge Brady said, but ought to mind what Mr. Evarts or ex-Commissioner Leonard says, what is the use of Judge Brady?

What, also, let us ask, is the use of rules of procedure, if the opinions submitted to Governor Dix justify him in changing a case of murder in the first degree to one of murder in the second degree? The same warrant would also justify him in making it manslaughter in the first, second, or fourth degree, and commuting the punishment of death to one month's imprisonment. If a promiscuous crowd of persons outside can change the effect of a verdict at all, they can change it indefinitely. Moreover, the rules of evidence under which cases of murder are tried are very stringent. The things which either prosecutor or prisoner is allowed to prove or disprove are very carefully marked out, either by statute or precedent, with the view of guarding the minds of the jury from every influence likely to divert their attention from certain points declared by law to be the only points in the controversy. No prisoner, for instance, would be allowed to produce his mother or wife, and cause her to make an impassioned appeal to the jurymen, because this would be an admission that a man's legal responsibility depended not on the possession of the power of distinguishing between right and wrong, but on his capacity or that of his friends for moving the feelings of his judges. The law holds, or has held hitherto, that a man with a wife and "four interesting children" is as much bound to refrain from theft or homicide as a bachelor or a widower. But what is the use of these rules if the prisoner's case can at any time before sentence be submitted to a crowd, and his fate be decided by every conceivable consideration—his early piety, the character of his family, the feelings of his old playmates, the thinness of his victim's skull, and so on? If these are valid considerations for Governor Dix now, ought they not to have been brought forward in court; and, if they affect now his action, is not this the real trial which is now going on in the newspapers, and was not that which took place two years ago in the Oyer and Terminer a ghastly farce?

But we shall be asked, Ought not the Governor to pay heed to the jury's recommendation to mercy? That depends; a recommendation of this sort is an appeal to executive discretion, and this discretion ought to be exercised with due regard to the public welfare as well as to the facts of the case. The practice of making these recommendations took its rise under a state of things which has no parallel here. It arose when murder was not classified as it is

with us, and when a recommendation to mercy was therefore the only mode of marking the jury's estimate of the degree of the prisoner's guilt. A recommendation to mercy attached by a New York jury to a verdict of murder in the first degree, with the view of procuring the punishment of the second degree only, is an absurdity which no governor ought to heed. It is like the verdict of "not guilty—but don't do it again." His answer to it is simple enough. "If you meant murder in the second degree, you ought to have said so. If what you seek by your recommendation be, as I suspect, to make me the instrument of satisfying the scruples of some of you as to capital punishment for wilful murder, you must look elsewhere. I shall not play any part in a subterfuge of this kind; as long as the law stands as it does at present, I shall carry it out." There is one other reason, and not less strong, why these recommendations do not deserve as much attention as some people think, and that is, that the "mercy" they were originally aimed at is unknown in the United States. A governor's "mercy" is not the king's "mercy" of the common law. The king's mercy was pure prerogative—that is, it was grace flowing from the royal breast as from a fountain, which the sovereign was not bound to justify or give reasons for, and which he might exercise without the slightest reference to the public welfare. To this a jury might appeal in pure compassion or caprice; but Governor Dix possesses no such faculty or endowment. He is the minister of the law and the creature of the law, and if he commutes he is bound to give the reason why; and that reason should either be that the public safety does not need the example, which is, unhappily, not true in the present case, or that, though the murder was wilful, there was behind it strong provocation, which, unhappily, is also not true in the present case.

As regards the stress laid by Foster's friends on the requirement of the law that "the killing shall be done with intent to murder," it is proper to say that there are only two ways of getting at a man's intentions—through his declarations and through his actions. We presume our Sentimentalists have not yet got quite so far on their road as to ask us to accept as proof a man's own account of his motives in committing a homicide. If Foster's threats, his silent waiting, and his subsequent use of an iron bar, with the existence and power of which his calling had made him familiar, to strike his victim on the head stealthily, do not furnish proof of intent to kill, then such intent can rarely be proved, and the great majority of homicides committed in this city will escape with slight punishments. Mr. Evarts's extraordinary bit of technicality about the exclusion of the car-hook from the class of "deadly weapons," if accepted by courts and juries, will simply make it necessary to use a cart-rung, an iron pot, a stone pitcher, or a pickaxe, or any *unusual* weapon, in the work of slaughter, to reduce all homicides to the second degree. The young fellow who was hung the other day in Brooklyn for running out of a tavern and beating a policeman's brains out in drunken frolic with sticks and stones, had no such pleas produced on his behalf.

Finally, we would warn the Governor that Foster's "drunkenness" was a condition in which a very large proportion of the roughs of this city pass their evenings all the year round—that is, a condition in which just drink enough has been taken to excite their quarrelsomeness, diminish their caution, and inflame their lust, but not enough to weaken their wills or diminish their muscular power. In this condition they rove about the city from one place of entertainment to another, breathing out threatenings and slaughter. If the Governor of this State shall, in the Foster case, make public proclamation that he considers a man's deliberate entrance into this condition sufficient to secure him even partial release from legal and moral responsibility, then we say deliberately that a great blow will have been struck, not simply at individual security against violence, but at the very foundations of public order. We still have confidence that he will not do this thing, that he at least has preserved intact the healthy moral and mental perceptions of a better time, when thieves ran away from the police, and when murderers did not seek refuge in jail, when the bench was a terror to evil-doers, and when there were limits to what an advocate would do to save a scoundrel from his deserts.

THE LOUISIANA DEBATE IN THE SENATE.

WASHINGTON, March 8.

ON the whole, this Crédit Mobilier business has left a very depressed feeling behind it among the sagacious men of the Republican party. As one of them said to me: Whether the party can survive what has happened already, I do not know; but I am sure it cannot survive another such thing. And I fear there are worse things in store for us." It is not only the rottenness of the concern which has thus become apparent, but it is the utter inability of the party to deal with such matters. The Crédit Mobilier Committee of the Senate, presided over by Mr. Morrill of Maine, has indeed surprised everybody here by doing its duty. But nobody believes that a resolution to expel Mr. Patterson can pass the Senate, and it would seem almost absurd that it should when a report whitewashing such a character as Senator Clayton, of Arkansas, is at the same time presented to the Senate. Everybody feels that things are entirely out of joint, and that something new must come. And as the average politician in and out of Congress lives and moves and has his being only in his party, he looks into the future with a sort of distressed stare, and in the meantime staggers to and fro as a gust of wind from this or that side may strike him.

Another symptom of impending dissolution appeared in the Senate when the Louisiana case was up. The majority of the Committee on Privileges and Elections under Mr. Carpenter's lead had reported in favor of ordering a new election in Louisiana under the direction of the Federal authorities. While the report was illogical in its conclusions—for it admitted that the McEnery government is the government *de jure* in that State, which would preclude a new election under Federal authority as a new act of usurpation—it was at the same time remarkably fair and candid in its statements of fact. It denounced Judge Durell's interference as gross usurpation, as utterly subversive of all constitutional principles, and the Kellogg government as a palpable fraud, without a shadow of legal existence. Mr. Morton dissented from the majority, and insisted upon the recognition of the Kellogg government, fraud or no fraud, usurpation or no usurpation. Mr. Trumbull, according to the logic and the law of the case, advocated the recognition of the government headed by McEnery. The President sent a message to Congress inviting action in the case, and declaring at the same time that he would continue to sustain Kellogg unless otherwise instructed by Congress—one of those demonstrations of blind obstinacy so characteristic of this Administration. This message and the threatening news from Louisiana induced Mr. Carpenter to insist upon the immediate consideration of his report and bill. He made a very brilliant speech in its defence, attacking the Durell usurpation and the Kellogg fraud, and thundering at Mr. Morton and that class of extreme partisans led by him in so effective a style as to create the impression that some good might possibly still come from Mr. Carpenter. The debate lasted a whole day and night, and when finally a vote was reached, Mr. Carpenter, in the face of his brilliant invectives, voted for an amendment introduced by his colleague, Mr. Howe, by which the same Kellogg government which he had denounced as a fraud and usurpation with such indignant eloquence was virtually recognized. This tergiversation decided the fate of the bill. The amendment was adopted by Mr. Carpenter's vote, and the bill lost the votes of those who would not under any circumstances recognize the Kellogg government, and failed.

This debate revealed several interesting things. There had been an impression that Mr. Morton was a little inclining to the Liberal side. On this occasion he marched out again under his old colors as the advocate of the extremest and most reckless partisan measures, and the champion of the Administration through thick and thin, and Mr. Schurz saluted him as such in the opening of his speech. Mr. Morton's status may now be considered as fixed for an indefinite time. Mr. Conkling displayed himself on the same side, and he may with safety be classed in the same category. Mr. Carpenter has sometimes good impulses, and occasionally obeys them; but his intellectual vagaries are such that many people doubt whether he has any convictions; if he has, he certainly does not stick to them. He has shown himself capable of making a brilliant speech, then voting against his own argument, and having a good laugh over it. Mr. Edmunds distinguished himself in the Louisiana debate by an earnest, fearless, and very able speech in support of the theory that, McEnery having, in point of form, been legally elected, he was *prima facie* entitled to recognition by the Federal Government under the Constitution. It is rumored that the party managers are very much dissatisfied with him, that they begin to distrust him, and are going to watch him. If Mr. Edmunds is equally distrustful of them, and vigilant in watching them, he may

render very valuable service to his country, and it is to be hoped that he will. We may now consider it as certain that Messrs. Morton and Conkling, supported by Cameron, Chandler, and Frelinghuysen, will wield the party whip in the Senate, and that Messrs. Edmunds, Carpenter, and Logan will occasionally refuse to obey orders. The party whip was cracked by Morton and Conkling for the first time this session in the Louisiana case. They carried their point, in having the matter laid upon the table, by a single vote; but I am informed they would certainly have failed had the Senate not been overwhelmed by the press of business to be disposed of before the 4th of March. The Louisiana case will have to be taken up again by the Senate immediately after the 4th of March, in deciding the contest of the Kellogg and McEnery candidates for seats in the Senate, and we may expect to hear more from Messrs. Edmunds and Carpenter.

In the House, Mr. Butler will attempt to take the reins. His old competitors have been so seriously damaged by the Crédit Mobilier investigation that a man who is not embarrassed by any sort of delicacy will have a great advantage over them. If he should succeed in defeating Mr. Blaine for the Speakership, the latter will be essentially weakened; and, if Mr. Blaine is elected, Mr. Butler may still expect to rule on the floor, especially as there will be an unusually large number of new members in the next House, who, unaccustomed to Butler's thunders, will look up to the terrible Benjamin with awe and fear. Thus it is by no means improbable that Butler will be the standard-bearer of the Republican party in the House during the next Congress, which, looking at the party in the light of recent events, is not altogether in conflict with the eternal fitness of things. Is it not equally characteristic that to-morrow Wilson will take the chair in the Senate just vacated by Colfax, and that he will proceed to swear in for a new term Morton, Cameron, and Conkling, and, as new senatorial ornaments of the Republican party, Patterson from South Carolina, Conover from Florida, and Jones from Nevada? And is it not also a sign of the times, that about half-a-dozen Federal judges are ripe for impeachment, one of whom has been taken in hand already?

ENGLAND.—THE SCHEME FOR A NEW IRISH UNIVERSITY.

LONDON, Feb. 21, 1873.

THE Parliamentary campaign has begun in earnest, and Mr. Gladstone's strategy has once more won general admiration. I do not mean to say, indeed, that the scheme for Irish education satisfies everybody, or even that it satisfies anybody; but nobody can deny the extreme cleverness with which it is adapted to the exigencies of the situation. Whether the bill will provide anything like a final solution of the question may be exceedingly doubtful; but few people can doubt that it will pass, and pass triumphantly. The impression which it made has indeed been decidedly modified. The day after Mr. Gladstone's exposition of his scheme, I happened to meet one of the most extreme Radical members of the House. He was in ecstasies. Gladstone, he said, has given us all that we could wish. Substantially, his scheme is nothing more than an expansion of Fawcett's plan for throwing open Trinity College. The government of the new university will be practically in the hands of Trinity men, who will be the best qualified competitors for its examinations; and, meanwhile, we shall have given to the Catholics all that they can fairly demand by enabling them to obtain degrees, and compete for a fair share of endowments. The satisfaction expressed by my friend was chiefly due to the fact that the Radicals had dreaded some direct concession to the Roman Catholic priesthood, in pursuance of a tacit bargain with Cardinal Cullen. The bill bore no marks of any such arrangement upon its face, and the Radicals were proportionably delighted. A few days' reflection made a considerable change in their tone. Another Radical friend, whom I encountered soon afterwards, gave me the opposite view of the question. Substantially, he said, the bill is a concession to the Catholics of all that they ask—or will, at least, pave the way for such a concession. The government of the new body will practically be in their hands. Protestants will naturally go as of old to Trinity College, and the new university will be left for the Catholics. After a short time they will form a majority of the governing body; they will then come to Parliament with a new grievance, and ask to remove the restrictions which are designed to give it an unsectarian character; and then it will appear that we have, in fact, been merely taking the first step towards a direct endowment of a Catholic university. This last opinion seems to be gaining ground amongst the Radicals; but, though objecting to the scheme more decidedly than at first, they have little hopes of seriously impeding its progress. Even if it be a concession to the Catholic demands, it is perhaps such a concession as we are bound in fairness to make. Ireland is after all a Catholic country; and it is a difficult problem to be thoroughly tolerant and, at the same time, to make no concessions to the religion of the great majority. The scheme, too, is so skilfully contrived to give something, in appearance, to every party, that any united and successful opposition seems to be out of the question. The Catholics will complain noisily of the injustice, if only that they may be entitled to ask for greater concessions in future; but they will take good care not to endanger a measure which will put them in a better position for demanding concessions. The Radicals may grumble; but the proposal to found a secular university is, superficially at any rate, too much in accordance with their views to allow of any effectual opposition. And thus, although the bill may be considerably modified in its passage through Parliament, there is every reason to suppose that it will be passed without vital injury, if not in its present form.

One provision has been universally condemned, and, as matters stand at present, seems to be the most likely to provoke a lively discussion. The new university will, of course, have no theological faculty; and in order to keep dangerous topics at the greatest possible distance, it is also to give no instruction in philosophy or in modern history. The examinations, also, are to be so arranged as to give no advantage to the members of either of the hostile creeds. The expedient of thus maiming a university in order to keep it out of mischief is certainly a melancholy offering to religious prejudice. How far it can succeed in securing that object is a question which I cannot answer. Mathematical teaching, I believe, is neither Protestant nor Catholic, now that the earth is allowed by all parties to go around the sun. But, as soon as we venture beyond that comparatively safe region, there is abundant room for anybody who likes it to introduce heretical opinions under the cover of science. Prof. Huxley, I imagine, could succeed in making some remarks which would be very disagreeable to the Pope, whilst confining himself strictly to physiology; and ancient history, which is arbitrarily cut off from modern, affords the most ample opportunities for preaching republicanism, socialism, atheism, or any other kind of "ism" that may be most offensive to the orthodox. There are provisions, indeed, to prevent the professors from insulting the prejudices of any one; but doctrines dexterously or even unconsciously insinuated are quite as effective as doctrines ostentatiously avowed; and if the professors of the future university really desire to introduce some infectious poison, I imagine that they could carry out their diabolical designs without much expense of ingenuity. In short, the poor university is to be in fetters from the day of its birth, and thus may be expected to become intolerable. If passions are so keen as to render such precautions necessary, they are probably keen enough to render them ineffectual. Such, at least, are the reasons which lead many people to distrust the working of Mr. Gladstone's policy, whilst admitting the admirable dexterity with which he has met the conflicting demands of the hostile parties. Indeed, it would be difficult to speak too highly of his abilities in that respect. Whenever his adversaries suppose that he is driven into a corner, he extricates himself with surprising ingenuity, and absolutely revels in devising and expounding the most complex schemes for satisfying everybody. His opponents, of course, maintain that he does not effect a final conciliation, but only adjourns the inevitable conflict; that these elaborate schemes involve arrangements too intricate to be really stable; and that the most laborious efforts to frame an eclectic policy will result in our having ultimately to take one side or the other. The scheme for English primary education was welcomed with equal enthusiasm at first, and was to reconcile everybody. Its practical results have been the expenditure of large sums of money, the education of a very small additional number of children, and an increased bitterness between the rival sects which struggle for the command of the schools. Indeed, the battle between secular and religious systems of education which is raging over Europe generally, as well as in this country, corresponds to passions far too bitter and profound to be set at rest by any judicious compromises; and one can hardly doubt that we are at the beginning, rather than at the end, of a campaign which will last for a period beyond our powers of calculation. This, however, does not prove that Mr. Gladstone has not introduced the best measure which has any chance of being carried at the present moment. We must be content to move forward very slowly on a path beset by so many obstacles, and perhaps a series of judicious compromises may be the best mode of advancing; though we cannot but wish that we had simpler issues to meet, and could meet them more courageously. Meanwhile, as far as this session is concerned, the indications are that Mr. Gladstone will disappoint the predictions of those who expected him to break down under this last trial, and will add one more victory to those already won during his period of office.

Another great measure was introduced in the House of Lords on the same night. Lord Selborne is evidently anxious to justify the expectations of those who see in him the reforming chancellor, so long desired and so slow in appearing. I speak with fear and trembling of anything connected with law-reform, knowing only this, that I know nothing of legal mysteries, and am only too likely to talk sheer nonsense if I attempt to express any opinion

upon the subject. This much, however, I may venture to assert, that Lord Selborne's speech pointed to a scheme of much greater boldness than has hitherto been proposed for the consolidation of our courts of justice, and the fusion of law and equity. The bill is not yet published, and any discussion, even were I capable of discussing the matter satisfactorily, would be premature. Looking at the matter from a purely political point of view, I have merely to say that these two bills are to provide Parliament with its chief occupation during the coming months; and neither of them is likely to lead to any very bitter party struggles. There is, indeed, no want of topics for the benefit of ambitious orators. Two or three little skirmishes have already taken place, in which Mr. Vernon Harcourt has been the most conspicuous figure. A rather amusing scene took place in the discussion of Mr. Ayrton's delinquencies. I have already had occasion to speak of the strange series of bungling attempts at regulating the right of public meeting in the parks. Mr. Ayrton, who appeared to be the chief culprit, has succeeded in attracting so much dislike for various reasons that he is probably the most unpopular man in the House. Everybody was therefore very willing to see an effective assault made upon him, and Mr. Harcourt, who has a fine capacity for treading upon the toes of his neighbors, and who has lately put himself forward as a conspicuous advocate of the rights of man and the liberties of the British subject, had a very fair opportunity of carrying the House with him in treating Mr. Ayrton to a little insolent invective. Unfortunately, Mr. Harcourt is with a very large number of members scarcely more popular than Mr. Ayrton, and consequently the House cared comparatively little which got the worst of it. Their slaughter was so earnestly desired, that whether Harcourt trampled on Ayrton, or Ayrton administered severe punishment to Harcourt, the result would be equally gratifying. Accordingly, when Harcourt failed to do as much execution as had been expected, the House was disgusted, and when Mr. Ayrton replied by some effective sarcasm, it was thoroughly delighted. The House of Commons looked on as brutal spectators look at a prize-fight, with a sincere desire that there might be plenty of blood and bruises, but with a fine indifference as to who might be the victim. Mr. Harcourt, however, is indomitable. He had the worst of the round with Mr. Ayrton, and a short time before he had received a severe punishment from Mr. Lowe; but within a day or two he was again delivering a lecture of an hour and a half upon the necessity of economy in the public expenditure. He said one or two good things, as for example that our present system is to spend enormous sums to prepare ourselves to fight, and then to spend large sums to buy people off from fighting us; but, on the whole, the lecture was dreary, and was received with signal coldness. In fact, the assertion of such general propositions is not calculated to excite very lively enthusiasm. From all which, it might appear that Mr. Harcourt has not made a very successful opening of the session. And yet he is a man who is likely to succeed by sheer force of cleverness and self-assertion. He has an imposing presence and plenty of ability, though his manner is pompous and his oratory apt to rise into the regions of platitude. Though he takes the line of extreme radicalism, nobody imagines that his radicalism lies very deep, or that he would be one of the irreconcilables in case his ambition clearly pointed in the opposite direction. He is not much more popular than Mr. Ayrton, but he has the faculty of pushing his way and keeping himself before the public. Whether by speeches on the hustings or by letters on international law to the *Times*, he somehow succeeds in making his voice heard, and I fancy that is the first condition of rising. Under favorable conditions, he might make a career after the pattern of Mr. Disraeli; but he is likely at any rate to fill a considerable space in the parliamentary future, and to force his way over the heads of equally able and honest men who are hampered by the foolish vice of modesty.

Correspondence.

NOT MINATORY BUT MONITORY.

To the Editor of the Nation:

Sir: The letter from me which appears in the *Nation* of this week was written, as you were informed by Messrs. Sheldon & Company, at their suggestion and request, and referred to what may be called a purely business matter. Will you allow me to say a word for myself, although at the risk of taxing your patience and that of your readers?

My mention of the fact that I had revised but not corrected the passage expressing my respect for the tone and aim of the *Nation* was not meant to be in the least "minatory." Its purpose was merely to bring to mind that, notwithstanding the many provocations to small wrath which had been given me, I had not thought even of such a retaliation as the mere omission of that paragraph, much less of making a change in its terms. If, indeed, the *Nation* had taken a course that is too common, and refused or stinted the reparation due to my publishers, then my "yet" might have foreshadowed a change in opinion which your course shows that you would regard as justified; but of that significance you have entirely voided it by the fulness and frankness of your amend. If journalists did but know how much they gain, instead of losing, in strength as well as in respectability by a frank acknowledgment of error!

But what I wished to say for myself is this. You have twice referred to the eleventh chapter of 'Words and their Uses' (on the form "is being done") in terms which imply that I have been regardless of what you call "the frequent exposures of its fallacy," and that I remain stolidly indifferent to the fact that it has been "exploded." If that were the case, I should be quite unworthy of any literary confidence. I have read, I believe, every word that has been written against that chapter. In particular, I have twice gone attentively through Dr. Hall's article, which I believe is regarded as the ablest that has appeared on the opposite side of the question; and I did so with the purpose, I might almost say the hope, of finding occasion for the modification of my judgment. I found, on the contrary, not a single point brought up which I had not carefully considered before, as could be shown if the chapter and the article were printed side by side. Dr. Hall reaches one conclusion, I another. I venture to say that this is possible without my being arrogant or unwise. It is not the first case in the annals of literature in which arguments thought to be overwhelming by those on whose side they were used were regarded as not at all so by those against whom they were directed. Let abler and more learned men than I decide this question—say, for instance, George P. Marsh. Mr. Marsh has denounced the phrase in question as "the clumsy and unidiomatic continuing present of the passive voice," which originated "not in the common-sense of the people, but in the brain of some grammatical pretender"; and he gives six pages to its condemnation. Now, I agree that if Mr. Marsh will say of my eleventh chapter that, in his opinion, Dr. Hall, or any one else, has exposed its fallacy, or has exploded it, I will not only revise and correct it, but improve it off the face of my book.

Apropos of this view of the case, there is a good passage in the "Essay on Criticism":

> "'Tis with our judgments as our watches, none
> Go just alike, yet each believes his own."

The *Nation*, with calmness and catholicity of tone, seems to remember this on some subjects, but to forget it on others.

Your obedient servant, R. G. W.

New York, March 8, 1873.

THE DANGERS OF RESUMPTION.

To the Editor of the Nation:

Sir: Will you permit a few remarks in reply to your article of February 27th, entitled "Public Opinion and the Currency"? Without differing from you in the least as regards the importance of a return to specie payments, I still think you do not attach sufficient importance to the objections so often brought forward against the measure, more particularly by the Western people. Your simile about the plunge into cold water is only so far correct as it relates to a perfectly healthy man, for certainly no one would recommend such a proceeding to a sufferer from smallpox, scarlet fever, or any other disease. I would argue, therefore, that a return or even an approach towards specie payments may be made the cause of far more suffering to the people at large, if attempted when the finances of the country are not in a healthy condition, than a depreciated and fluctuating currency can possibly be.

In preparing to take such a step, the first and most important question to be asked is: What will be the effect upon the business community? Now, every one will admit that a decline of fifteen per cent. on the value of all merchandise, which is after all the meaning of a return to specie payments, is a very serious matter for merchants to contemplate; but this is not all they would have to bear, for, unless the condition of trade happened to be in a peculiarly fortunate state, the mere prospect of declining markets would be sufficient to so reduce the demands of consumers that a stagnation in business, culminating in a financial panic, would be the inevitable result.

Since the close of the war the mercantile community have been passing through a very severe ordeal. As if the ordinary business risks were not sufficient, they have had to contend against all the evils of a fluctuating currency, against the most reckless proceedings on the part of Congress with regard to the tariff, and against singularly bad management of the Treasury Department. That these have not been without their effect, I think no one familiar with the workings of commerce will for a moment deny, and

that the merchants as a whole are in a more precarious condition to-day than they have been at any time during the past ten years, is a fact which most business men are forced to acknowledge.

Hence it seems to me that if the question of specie payments resolves itself into a contraction of the currency and a sudden decline in gold, then the present time would be a most unfortunate one to choose in which to make the experiment.

But is there no way of attaining the desired object without all this attendant chaos? Cannot the country be put upon a specie basis even without resumption on the part of the Government? I think it can, and that without legislation of any kind. What would be needed to put the plan into active operation would be united action on the part of merchants and the banks to encourage the buying and selling of merchandise for gold instead of currency. If what is now done in this city on a small scale could be gradually extended all over the land, there can be no doubt that specie payments would not, as now, be a constant terror to the people, but could be discussed with the calm deliberation so important a subject requires. Once succeed in getting merchants to transact their business on a specie *basis*—for it is, after all, not necessary that the specie should be actually handled—and I believe opposition to resumption by the Government will speedily vanish. Gold being then the *par* and greenbacks at a discount, it will become the interest of the very men who are now most outspoken against specie payments to encourage any measures that will tend to enhance the value of the paper money.—Respectfully yours,

MERCHANT.

MARCH 3, 1873.

Notes.

J. B. LIPPINCOTT & CO. will reprint 'Walks in Florence,' by the Misses Horner; and have also in press 'Our New Masters,' by Thomas Wright; 'Political Portraits,' by an "Eminent Journalist," who may possibly be Mr. John W. Forney; and a novel, 'Her Majesty the Queen,' by John Esten Cooke. ——Porter & Coates announce 'The American's Hand-book to Vienna and the Exhibition,' by C. W. De Bernardy, illustrated, in two styles; and 'Men of the Third Republic,' sketches supposed, say the publishers, to have been written by a prominent English statesman.——'The Best of All Good Company,' in four parts, telling of a day with Dickens, Scott, Thackeray, and Jerrold, will be published by Shepard & Gill, Boston.——Martin's 'Statesman's Year-Book' for 1873 (New York: Macmillan) adheres closely in plan and substance to the editions of former years, while showing in all its parts that it has been more or less worked over and brought up to date. Thus, under the United States the new Congressional apportionment and various revenue changes are inserted. Under Europe, the recent censuses of Germany and France are given, the latter showing a falling off in population since 1866 amounting to 1,964,273, of which, however, 1,597,219 stand for Alsace-Lorraine. The first Indian census ever taken is also given, and there are several other new features.——The New York Hungarian Society commemorates "the day of Pesth" (March 15, 1848) by a festival and ball at Irving Hall on Friday, the 14th instant.——A writer in the Boston *Transcript* enquires after the true orthography of the name of the author of 'Smoke,' 'Liza,' 'On the Eve,' etc. The variations—Tourgenieff, Turgénieff, Turgeneff, Turgenef, Toorgenef, Turgenew—are due to the various attempts in different languages to copy the sounds of the Russian original. Another distinguished member of the family (the late Nicholas T.), having made himself a Frenchman by residence, used to write his name Tourgueneff, as may be seen at the end of a communication from him on p. 237, of Vol. I. of the *Nation*. Giving the Italian value to the vowels, this would be more simply written as Turgenef. There being no ambiguity, in English, in the pronunciation of the final syllable (*ef*), the doubling of the final *f* is not necessary (as it is in Gortchakoff, for example), but of course is not wrong.

—Mr. Sabin, bibliopolist, and of very high authority in such matters, says that too much has been said in the newspapers about the loss inflicted by the fire in the late Mr. Forrest's library. He remarks concerning Mr. Forrest's copy of the "first folio" Shakespeare, that by no means was it worth $5,000, the price set upon it by the reporters. Mr. Forrest bought it from him thirteen years ago for $375, and its value now cannot be more that $500, if so much. It was a "made-up" copy—that is to say, its title-page and last leaf were printed in facsimile, the originals of those pages having been wanting. We suppose Mr. Sabin's doubts about the damage done by the fire may be somewhat overstrained. He observes that books do not burn easily, and that it is "somewhat remarkable that $20,000 worth of books should be destroyed by a fire which was put out by 'a fireman and a policeman.'" But a Philadelphia correspondent of the *Athenæum*, who himself examined the library after it was burned, corroborates the newspapers as to the thoroughness with which the fire did its work, though he makes no estimate in money of the loss sustained. He however leaves the reader inclined to believe that the loss in Shakespeariana was in no sense irreparable, though, of course, much to be regretted.

—Mr. William F. Poole's essay on 'Anti-Slavery Opinions before the Year 1800,' has been converted into a handsome book by Robert Clarke & Co., Cincinnati, enriched by copious notes and addenda, and a fac-simile reprint of Dr. George Buchanan's anti-slavery oration of 1791, of which a copy, it will be remembered, was preserved in Washington's library and led to Mr. Poole's researches. In its present form this essay gives perhaps not a complete, but certainly a just view of the state of public opinion on the subject of slavery at the close of the last century, especially at the South, among men prominent in laying the foundations of the Federal Government. It establishes beyond question the fact that before the glittering generalities of the Declaration and the Constitution had lost their glitter, it was possible to speak, write, and organize at the South in opposition to slavery; but it does not show a single Southern name that ranks with Franklin, Rush, Jay, or Hamilton—to mention no other officers of Northern anti-slavery societies—associated voluntarily or on request with an organization which seriously contemplated emancipation. This was already forbidden by the very conditions of society in the planting slave States of that day; and while the humane and even fervid expressions of Washington, Jefferson, Henry, and Mason could be tolerated—"all Europe" still having its eyes on the glittering generalities—a practical alliance with downright abolitionists would have been regarded and treated as treachery to their order. However, the planter's endurance of incendiary speech and doctrine still remains something wonderful, and Mr. Poole uses it to give the South its due for carrying on anti-slavery agitation long before it took the shape of the *Genius of Universal Emancipation* or the *Liberator*. For this curious chapter of our history, his book will serve as a most useful source of condensed information. There is, in a foot-note on page 5, an *obiter dictum* touching the "questionable morality of Gen. Washington's motto" (which he took from his ancestors) that perhaps calls for remark in the interest of the Father of his Country. The classical *Exitus acta probat* can hardly be said to be tinctured with a "Jesuitical association," or to be correctly translated by "the end justifies the means." Mr. Lossing, adopting this version, praises the motto, on the grounds that the aims of the Washingtons were lofty and sought by legitimate means. It was enough for them, however, merely to assert their own independence of character, trusting to the result to vindicate actions regarded before the event as rash, impolitic, or singular.

—The first five numbers of the new daily evening paper, the *Graphic*, lie before us as we write, and furnish, we imagine, a fair measure of the aims of its conductors and of the artistic capacity of their new photo-lithographic process. The illustrations occupy the first, fourth, fifth, and eighth pages—what would technically be called the "outside form"; half of the eighth page being given up to advertisements, which are, however, treated like the pictures in being printed at one impression from stone and not from metal types. The inside pages are printed in the usual way, and contain the editorial articles, news of the day, and other reading departments of the paper. The pictures fall into three classes—original designs, etched probably on a photographic plate; reproductions from woodcuts; reproductions from lithographs. These are all exhibited side by side on page 5 of No. 2 of the *Graphic*, the effect being decidedly incongruous. None of the copies of wood engravings are so good as the originals, and it is safe to predict that they never could be made so by this process. They are, however, when not marred by imperfect distribution of the ink, good enough to make the *Graphic* a serious rival to the weekly illustrated newspapers in the field of reproduction from foreign sources. The etchings are more successful and more interesting, though here also experience will doubtless bring about some improvement. They are chiefly caricatures, some of which show clever draughtmanship. Current events have been illustrated in pictures of the inauguration festivities—including street scenes, portraits, views of buildings, interiors, etc.—in a single police incident, and one view of a fire (from a lithographic drawing). These indicate that the process is not yet equal to the task of reproducing photographs from nature, but only from black and white; and apparently we have still to wait for Herr Albert, Mr. Woodbury, or, in this city, Mr. Rockwood, to perfect their processes to suit the needs of a daily publication. That this perfection will be reached we have as little doubt as that the attainment of it would ensure absolute success to an enterprise like the *Graphic*. Success this paper very likely has met with already. It is readable, its news department has improved since its first issue, and to a great many families it can hardly come too often in coming once a day.

—Prof. Brewer's letter on North Carolina usages of speech has brought us a cloud of interesting communications, for which it is quite impracticable to find room. Some of our correspondents are at pains to show that the peculiarities noted are good old English words, still heard as provincialisms in the mother country, and not excluded from Webster's Dictionary. This is true, but their survival in North Carolina is none the less curious. Others point to the fact, also pretty well known, that North Carolinians who have migrated have carried their favorite locutions with them. Southern Illinois and Southwestern Indiana were settled by the "refugees," as they call themselves, from the Carolinas, Tennessee, and Kentucky; and as the district lies between the northern railroad routes, on the one hand, and the Ohio River, on the other, they have remained unmixed and uncontaminated. Here they always speak of "them *mollasses*"; use the adjective *pretty* as a noun—as, of a handsome watch, "Let me look at your pretty"; mean soda-biscuit when they say *bread*; use *grocery* to designate a place where liquor is always sold, generally in connection with a small amount of staple articles—idiomatic for a "saloon"; call any collection of household chattels and utensils *plunder*, etc., etc. If this suggests a theory that there are what might be termed "isothermal" lines in our American usages of speech, it should not be forgotten that a very large proportion of Prof. Brewer's examples are, or were not so very long ago, as familiar in Southern Pennsylvania as in North Carolina (Scotch-Irish Presbyterians being colonists in both these States); and that a smaller but still considerable portion (like *rense* for rinse, etc.) are common throughout the United States. "The fact seems to be, that our inter-State migrations, the late war, and the newspapers have spread our dialect vocabulary so evenly over the country, that one who should now find a true provincialism that is not national, or semi-national, would be entitled to rank as a discoverer." At least one might say so, remembering the confusion of *shall* and *will* even in New England, and the extent to which one hears *like* used with a verb for *as* in the Middle States.

—It remains to be seen whether any act of the late Forty-second Congress will cause it to be remembered more gratefully, or by a greater fraction of mankind, than will its "Act revising and amending the laws relative to the mints, assay offices, and coinage of the United States," which was passed and approved last month. In a communication last week to the New York Chamber of Commerce, Mr. Samuel B. Ruggles had the pleasure of reporting the entire success of his endeavors—in which he had the cordial support of the Chamber itself and of the National Board of Trade—to bring about a metric assimilation of our silver coinage with that of Europe. The act whose title has just been quoted discontinues the coinage of the silver *dollar* as a part of the currency of the United States, but internationalizes the silver *half dollar* "by fixing its weight at 12½ metrical grammes, so that two half dollars will be precisely equivalent to the five-franc silver coin of Europe and its equivalents, and will circulate by their side on terms of perfect equality in all the nations of the world using the franc system." "The wide diffusion and popularization of this international coin," continues Mr. Ruggles, "extending through nearly one hundred and fifty degrees of longitude, from the Golden Gate on the Pacific to the mouth of the Dardanelles, will moreover exert an efficient and beneficial influence in hastening the necessary reform in most if not all of the other silver coinages of the world." That it is also a most important step towards the eventual unification of the different coinages of gold, cannot be doubted; and "the friends of international coinage may now reasonably indulge the hope, that the enlightened nations of the European world will all unite, ere long, in carrying into practical effect the memorable and emphatic declaration at St. Helena, by the first Napoleon, more than half a century ago, that 'among the civilizing agencies most needed in Europe was *a common money*.'"

HAZARD'S SANTO DOMINGO.*

THE merits of this book may be summed up in a few words. It gives a condensed history, borrowed from a great variety of sources, of both parts of the island of San Domingo; and it describes in a readable manner the author's experiences of travel there in 1871, on the heels of, and partly in company with, the United States Commissioners. The illustrations are of a really helpful sort, many being reproduced from rare and curious works; there is a tolerable map of the island (not so minute or so distinct, however, as that which accompanies Redpath's 'Guide to Hayti'), and a copious bibliography, in which we may note, in passing, the insertion of James Montgomery's poem, 'The West Indies,' and the omission of Miss Martineau's 'Hour and the Man'; and, finally, the appendix contains sundry documents and statistics which decidedly heighten the value of the book for purposes of reference. Read merely for entertainment, it will disappoint in the historical portion by a want of clearness, and in the narrative by a certain awkwardness of style and grammatical carelessness, of which the following passage will serve as an example (p. 174):

"For here it might truly be said that *the aspect of nature* is beautiful and grand, and, seen in all its magnificence of luxuriant tropical vegetation that reaches to the very mountain-peaks, is *the place where* apply those hymn lines so familiar to us all—

'Where every prospect pleases, and only man is vile.'"

When we inform our readers that Mr. Hazard is a warm advocate of annexation, they will readily infer from the line of poetry quoted by him (and they will not be mistaken) that he is frank and honest. But if we would be the same, we must add that he formed a much better opinion of the Dominican of to-day than is expressed in Bishop Heber's verse, which, for the rest, he repeats to himself on shipboard before landing. To the *bon naturel* of the population he constantly bears witness, without concealing aspects of their character and daily life which hardly invite a closer acquaintance and political alliance with them on the part of the people of the United States. Thus, near the capital, he visits a village school (p. 223):

"Between each pupil I was astonished to find a gamecock attached to a sort of perch; and on my asking the children for an explanation, they said, 'Oh! they belong to the schoolmaster, who fights them on Sunday.' This functionary was out, but I afterwards met him, and found him to be an intelligent colored man, highly amused at my surprise at such new means of education, he explaining by a shrug of the shoulders and the remark, 'Cosa Dominicana.'"

Before he left the city, Mr. Hazard's surprise was somewhat tempered by the following adventure (p. 229):

"As we desired to satisfy our curiosity with a view of the Dominican cockpit, we paid a visit there in the early afternoon. The place was crowded, the pit being only a small place or circle of about fifty feet radius, much humbler than those of its Cuban neighbor. We mounted up to the top seat by means of a ladder, for a standing place; but on Damion Baez, the brother of the President, perceiving us, he very kindly offered us seats below in the select part; but, as we only wished to stay a few moments, we declined his offer."

At the church in Cotuy our author is again shocked, though somewhat differently (p. 299):

"As showing the utter simplicity of the religion of these people, we noticed there was placed in the curtained niche of an alcove a wax figure, nearly life-size, of Christ bearing the Cross, which of itself was horrible; but in the midst of other decorations, of bits of gold paper and paper flowers, a highly-colored gorgeous label had been taken from a vermicelli box and pasted at the foot of the figure of Christ. If this label had been in some foreign tongue, it might be supposed that it remained there in utter ignorance by priest and people of what it was; but there it was in Spanish, as fine an advertisement as I ever saw, that Farrell & Son, Barcelona, made fine vermicelli for soups."

A portrait of President Baez—the ruler, by the way, of a state having about the area of Ohio, with fewer inhabitants than an eighth or tenth-rate city in the United States—is given on page 215, and he is further described as "a courtly, pleasant man, of medium height and agreeable appearance," who impresses Mr. Hazard "as a perfectly upright man, and that seems to be generally the impression made." His integrity, however, has survived some strange mutations; for, being already in exile, he forsook his country during the Spanish occupation (1861–65), took the oath of allegiance to Spain, and was made a General of Division; then turned patriot once more, combining with Cabral (who had executed a like tergiversation) to offer Geffrard, of Hayti, part of the territory of San Domingo in return for aid in expelling the Spaniards; then, when Cabral had come uppermost, and had, in his distress for money, offered to lease the Bay of Samaná to the United States, denounced him (1868) in a revolutionary manifesto for proposing "the sale of your country"—"to sell you to the foreigners, Dominicans!" Being made President again, he at once prepared to sell out his country to the same foreigner, and, failing in his negotiations with the Government of the United States, in which a severe moralist might detect some obliquity but for Baez's imperfect familiarity with the English language, he has at last, in a wholly unprecedented manner, sold out the substance of Dominican nationality to a company of traders, speculators, and philanthropists, who are doubtless particularly impressed by his uprightness.

If Mr. Hazard were a mere advocate, which he is very far from being, he would have suppressed those passages in Dominican history which exhibit the periodic attempts, during the past quarter of a century, to attach the island to some power, American or European, strong enough to deliver the inhabitants from themselves. The "Republic" was but five years old, and Baez had just been elected President for the first time (in 1849), when, as is

* 'Santo Domingo, Past and Present; with a Glance at Hayti. By Samuel Hazard, author of "Cuba with Pen and Pencil."' Maps and numerous illustrations. New York: Harper & Bros. 1873.

stated in Chapter XIV., "he was waited on by a deputation from the Cibao district, bearing a petition signed by the most prominent men of all classes, asking him to open negotiations with the United States for the purpose of annexation." This measure was opposed by Baez, on the sufficient ground that the United States was a slave-holding country. His successor, Santana, in 1856, endeavored to lease the Bay of Samaná to the United States, and a treaty was actually prepared by the agent of President Pierce; but this measure excited so much discontent that Santana retired to make way for Baez again. When the latter was driven into exile, Santana reappeared at the head of affairs, and, "suddenly and almost without consultation, either of the people of Dominica or their rulers, threw himself into the arms of Spain, giving up to its authority, in May, 1861, the entire possession of the Spanish part of the island." Spain was not, however, his first choice. "Santana seems to have been really desirous of annexing the island to the United States; but in this, it is said, he was frustrated by the threats and opposition of the French Consul-General at Port-au-Prince, Maxime Raybaud. He then offered it to France, and finally to Spain." When the offer was accepted, he called the district commanders together, and instructed them "how they were to treat the people in regard to securing their votes." The people, after making the desired plébiscite, naturally found themselves deceived and "betrayed," *more Latino;* and then began a dreadful conflict between tyrants and rebels, before the termination of which, as we have seen, Baez and Cabral were planning to make a Nice-and-Savoy exchange of a valuable province for a military saviour. A few years later, Cabral, denounced by Baez, again put up the Bay of Samaná in the United States market; and a twelvemonth later still, Baez, denounced by Cabral and Luperon as an infamous traitor, exercised the same authority for identically the same end. Here are seven distinct attempts in twenty years to alienate the territory or to sink the nationality of the Dominicans, government all the while succeeding government with the rapidity with which sharks' teeth are renewed, in "the way governments are made in this famous island. A few hundred people gather together, and shout 'Vive Cabral!' 'Vive Polanco!' and the fortunate chief declares himself the government."

As Baez kept the country districts advised of the coming of the United States commissioners, it would not have been difficult for him to manufacture "public sentiment" as Santana had done before him. It would, nevertheless, have been quite unnecessary, to judge by the glimpses which Mr. Hazard gives of their procedure. Always declaring their official character, being treated as national guests wherever they moved, and travelling as rapidly as the miserable state of a tropical country without roads permitted, they courted deception even if they avoided it. That they did not avoid it —that they were deceived themselves as to the nature of their mission—is to us perfectly clear from Mr. Hazard's interested account. This is what took place at Cevico—"a congregation of thatched huts around an open space called a plaza; and the statistics of the town are complete," says Mr. Hazard, "when I state there are fifteen houses and seventy-five people." The narrative continues (p. 283):

"Orders were immediately given to gather the people of the village together before our departure in the morning, in order that the Commissioner might hear their views. Bright and early, therefore, next day came a perfectly black negro with more clothes on than most of those we had seen. He informed the Commissioner that he was the 'Commandante.' . . . Seating himself in a hammock, he, in an extremely consequential manner, was proceeding to give us an idea of his great importance, when he was abruptly cut short, and told to allow the people to come in, as the Commissioner wished to see them and not the dignitaries. A number of all classes then came in, to whom Mr. White made an address, and they showed themselves very enthusiastic at the idea of *having perpetual peace given them*, some being affected even to tears," etc.

It would be singular if any "people" in a similarly distracted condition should not weep at the prospect of such a gift; but it is not a little surprising that the Commissioner should have felt himself authorized to promise it, or considered it his mission to do aught else than ask questions with the view of ascertaining how widespread and genuine a desire for annexation *already existed*. We might suspect Mr. Hazard of giving, in the phrase we have italicized, rather his own equivalent for "annexation" than an exact summary of Mr. White's eloquence; but elsewhere (on p. 334) he speaks of Mr. White's sense of the "responsibility" resting upon him, as if it were responsibility different from that of a trusty reporter, and gives an abstract of an address in which he "spoke feelingly of the wealth and happiness that would be produced naturally by their alliance with some strong power; and *he hoped, for their sakes, it would be with the United States.*" This, we submit, was not exactly the neutral attitude of an enquirer after facts; nor was "explaining fully the nature of our Government," however kindly an act, one required by the duties imposed upon the Commissioners. The "one cry" which Mr. Hazard heard, "Give us peace and safety, and good roads," was doubtless answered satisfactorily by declaring that the United States would furnish all these desiderata; but it is not manifest that any power capable of giving the same assurances would not as soon be the object of a longing for annexation.

Peace, we need not remark—especially "perpetual peace"—is by no means one of the blessings which the extension of the United States' authority to San Domingo would bring in its train. The acquisition of the island has been termed by President Grant "an adherence to the Monroe Doctrine," and that doctrine is worthless if it does not mean a resort to war in case its application is resisted. It would be much more correctly predicated of the seizure of Cuba, and that this would not be one of the consequences of the occupation of San Domingo, furnishing a new base for filibustering, no man can foretell. The United States and their new citizens must therefore prepare for naval warfare with Spain, and also border warfare with the Haytians, who, stimulated by Cabral and Luperon, would doubtless not readily relinquish their claims to the upper course of the Artibonite. Not only must new forts be built and old ones repaired for the defence of what would become one of the weakest strategical points in the American Union, but so long as the island owned a divided allegiance, the occupation of San Domingo must needs be a military one, of which the burdens and the active service would certainly interfere with cockfighting and the cultivation of plantains. More or less clumsily we should have to ape the "imperial" system of colonial administration, and how well fitted our civil service is for this sort of business, is unfortunately not conjectural. In place of Spanish pro-consuls and carpet-baggers, we should have Northern, Western, and Southern—the South might probably experience a temporary relief. We should have violations of the Haytian frontier, smuggling in both directions, and inevitable collisions. Sooner or later we should overrun the western end of the island, annexing a still more degraded population, a depreciated paper currency ($400 to $1), and a debt to France. Mr. Hazard, indeed, says "God forbid," as "it will take years of missionary enterprise and instruction to prepare the Haytians for the blessings of civil liberty as enjoyed by us"; but he and the Commissioners expect the annexation of San Domingo to "develop among its dusky neighbors a desire to share in the blessings and advantages which it is the boast of Americans that American institutions bring."

There would be no end to the objections that might be raised against annexing a people which has thus far shown itself incapable of self-government—the *sine qua non* of a healthy expansion of our political system; and we shall only direct the attention of our readers to the curiously complicated land tenure, which would open up such a fine field for gentlemen of the legal profession. It is, apart from the difficulties it presents to rapid colonization, a very profitable study of the way in which one Latin race has evaded the equal division of property, to which the French with their *partage forcé* have succumbed. We conclude our review by expressing our conviction, fortified by the reading of Mr. Hazard's work, that the annexation movement has been most powerfully promoted in this country and most heartily seconded by persons peculiarly susceptible to the charms of natural scenery, and that what they are anxious to annex is not rather indifferent mineral deposits, or a convenient naval station, or a hundred and fifty thousand creoles and negroes of all shades, but the superb landscape of the "Vega Real." The vista of annexation which this principle of selection opens up to us is so formidable that we may congratulate ourselves on having few "venerable cosmopolites," like Dr. S. G. Howe, who, on receiving a serenade from some Dominicans, said (p. 494):

"People too often overlook or forget the good they have, and think only of their sufferings and wants. Since I have been here people have been talking continually to me about the disadvantages under which they labor—of the convulsions, and civil wars, and oppressions, and all that. *There is another side of the picture. I find myself in danger of having my reason carried away by my senses.* All my senses are, as it were, subjected by the surroundings. I find the most beautiful island I have ever seen. The balmy atmosphere, the mild, even temperature—everything addresses itself to my sense *de bien-être*. My eyes are dazzled by the beauty of enchanting scenery. My sense of taste is gratified by the luscious and abundant fruits that are everywhere around us; and now comes your music, and so charms away my sense of hearing that I find all my senses enlisted and carried away in your favor; and although I may not say what I shall advise my countrymen to do on the subject of annexing the Dominican Republic, I feel strongly inclined to annex myself and my family to this beautiful island."

MILITARY AND RELIGIOUS LIFE IN THE MIDDLE AGES.*

THE amateurish sort of people, the dilettanti who prize their picture-book just as the infant does his primer, may thank with rather uncommon ardor their benefactor, the Bibliophile Jacob, for adding his 'Vie Militaire et Religieuse au Moyen Age' to those former beautiful works of his,

* 'Vie Militaire et Religieuse au Moyen Age et à l'Epoque de la Renaissance. Par Paul Lacroix (Bibliophile Jacob).' Paris: Firmin Didot Frères. New York: F. W. Christern.

the 'Arts au Moyen Age,' and the 'Usages et Costumes au Moyen Age.' The luckiest collector, he who tenderly keeps in his best inlaid cabinet a few brilliant vellums, can show but specimens of a style; but this author and his publishers exhibit the selected proofs of historical fact, a sum of real evidence and testimony whose style is but an incident, and whose documentary value is what makes collecting a respectable pursuit. The present work seems to be even more rich and attractive than the 'Arts au Moyen Age'; the publishers have filled it with curious booty from the richest libraries of Europe, most minutely and expensively reproduced. They have turned loose into the commonwealth of literature the choice of such miniatures, carvings, and illuminations as are treasured in ancient capitals and locked up by kings. To copy even faultily such curious records would be to piece out the usefulness of a limited and perishable kind of material; how perishable, we are reminded by the explanation to one of the pictures here given, an ancient view of the Place de Grève at Paris, with Notre Dame before the loss of the central spire, and a Procession of the Host—a picture now perpetuated only by this engraving, the original having been given by M. Ambroise Firmin Didot to the city of Paris and involved in the burning of the Hôtel de Ville in 1871. But the reproduction is by no means faulty, being managed by Messrs. Firmin Didot Frères with all the art of modern color-printing. Chromo-lithography, in the hands of Paris artists, lends itself to counterfeiting old painting in minium and gold with a cunning that takes away all the vulgarity from an art formerly known by its infelicities only; and the woodcuts, repeating old etchings and block-work, assume the guise of the middle ages with absolute fidelity. Cuts requiring such enormous care as Dürer's "Knight and Death," for example, are boldly grappled with, on a reduced scale, by the wood-engraver; not with perfect success, indeed, for a comparison shows "Death" to have lost the vague ideality of Dürer, and "Sin" its sublime unconsciousness of good, but still with a kind of wholesale and general transference. We wonder how many hundreds this single print would cost an American publisher, at the hands, say, of Mr. Linton. The chromo copies are still more elaborate, and only yield their assumption of smooth faultlessness on a pitiless confrontation with their sources. We apply, for example, one of the photographs brought over by any tourist of Orcagna's "Triumph of Death," at Pisa, to its colored imitation in this work. It would not do to say that the strange intellectual attraction of the fresco, a grand picture-poem executed before the introduction of oil-painting in Italy, is quite to be found in this miniature; the faces are tame and cast in a feeble mould, the Amazon queen who leans upon her hand is wanting in the fine reverie of Orcagna's heroine, the hermit is less earnest, the horses are less expressive, the skeleton shrinking from the worm is tame in movement; but we should consider the reduced scale and the prosaic vehicle, and not expect Orcagna's epical quality in mechanical work, which does, after all, satisfy us beyond the photograph in matters of color, neatness, and convenience of multiplication. In wood-engraving, the transfer of so critical a masterpiece as Holbein's "Dance of Death" is very ably carried out. The chromos themselves are much less inadequate than some with a higher aim in other volumes in which Paris bookmakers have tried to convey to us, by a process of forcing the Genie into the bottle, the splendors of canvases from the Louvre. The frontispiece to the work is a bewitching bit of lithography, a prim and delicate portrait of Queen Anne of Brittany, from her *Heures;* a brilliant chromo is an "Embarkation of Crusaders," from a fourteenth century Neapolitan miniature; another most refined in color is that from the Psalter of René of Anjou, representing the king humbly walking in the streets of Aix after the Sacrament; one of "Angels presenting the Elect" (who stand on the angelic shoulders) is a curious rapture of Memling's; one unmatched for simplicity shows the Chevalier of the Gray Arms, Noble Heart, disputing in a tournament at Basle for the immaculateness of Mary's conception—finally unseating his adversary, and thus proving the dogma to the satisfaction of both; a very careful one, filled with figures, is the copy of part of Fra Angelico's "Paradise," the same picture which Mr. Arnold, covering it for a momentary purpose with an excess of irony, has libelled with so ludicrous a description: "The elect," says the ex-professor of poetry, "are going round in a ring on long grass under laden fruit-trees; two of them, more restless than the others, are flying up a battlemented street—a street blank with all the ennui of the Middle Ages." One cannot be cruel to angels and their brother, the Frate, with impunity, and the faces, even in this lithographed copy, strike a terror into the spirit, making a man afraid lest he be in their sight merely cultured and blasé and literary.

We may not indicate with even a word the riches of the book in mere curiosities, the havoc of many a collection. There is the curious *grafita* from Rome, the earliest representation, in fact, of the Crucifixion, showing the Christian Aleximenes adoring a horse-headed caricature on a cross; there is the true semblance of Prester John, after Cesare Vecellio; there are Christopher Columbus's own sketches, in scrawls representing his ships and his discovery of the Antilles; there are the direful-looking giants constructed in the sixteenth century to scatter arrows or overrun an army; likenesses of the Virgin, whether by Saint Luke, who shows her like a Roman priestess, or by the Byzantine panel-painters, who show her like a mulatress; the strangest of portraits, exhibiting Godefroy of Bouillon overwhelmingly crowned with the instruments of the Passion, and passively cantering to his oriental throne like a market-woman of Brussels, where the picture was invented; the veritable Inscription on the Cross, as found by Helena; and many more such rarities, here brought to the eye in one sweeping harvest, by images often quite as authentic as the so-called originals, treasured with infinite jealousy in many an odd corner of the world.

The volume will be oftener skimmed for its relief of embellishment than penetrated for its chain of argument. It is, however, an able and superlatively neat and shapely arrangement of facts bearing on mediæval history. It shows the genius of the Middle Age at its divine task, rearranging a world of ruin, correcting pagan profligacy by its religious spirit, and pagan insubordination by its military spirit, and ordering both through its two great faculties of fidelity and strength. It is not here that we shall see, as we seem to see in Mr. Lecky and in some of the materialists, the Church presented as crushing civilization. M. Lacroix, in a more tranquil estimate, shows her as she really was, the placid envelope and fosterer of science in times of shock. At the fated overflow of the North and East across the Roman Empire, the powerful Church was able to carry art and letters into her retreat, and hide them there, not cut off, but suspended. It is a pity, though—for it repels at once whole classes of his readers—that M. Lacroix has thought it his duty to make his presentment so very official. With him the Papacy is the blameless Hind of Dryden. The "réformation prétendue" is only a sum of villanies. Calvin, of course, is a sanguinary recusant, murderer of the physician Servetus and the poet Gruet. Luther's Reform is disposed of in the chapter called "Heresies," and while there are many pictures of Protestants torturing Catholics, there are none of Catholics punishing Protestants. The Huguenots, in power at Angoulême, are pictured as starving Romanists until they bite one another. "Even Protestant writers" (the example being Mr. Cobbett) are cited as condemning the "violences inouïes" of the filthy rebel Henry VIII. The Spanish Inquisition is treated as a wholly political institution, a system rebuked by Rome; yet M. Lacroix, with a little inconsistency, boasts of the institution thus condemned by the Church as being blessed with complete success: "The purpose, quite political, of the Spanish monarchs was carried out; for the maintenance of religious unity"—a rather soft phrase, that, for the torments of the office—"saved this kingdom from the bloody wars which at the time were desolating France and England. . . . In the Netherlands," adds the writer, safely, "the Inquisition had not the same success." The Low Countries, on their setting up for themselves, "surpassed Spain in the refinement of cruelties invented against the Catholics"; and a print is given of John Jerome of Edam, in the hands of the "gueux de Hollande," his belly lacerated by tortured dormice. As for Luther, the engraving of him, like those of all the Reformers, is supernally ugly, giving one the impression that the devil must have returned the inkstand upon the monk's own countenance; and his literary labors are thus described:

> "The indefatigable, the inexhaustible Luther, by turns a Demosthenes, a Petronius, a peasant of the Danube, a beer-pot comrade, has diluted, through the course of fifteen thousand folio pages, the inanity of Protestant views—a chaos of eloquence, poetry, visionary passions, evident truths, daring lies, gall, hate, jealousy, and mire."

There is surely a little too much feeling here. It is very well for the Bibliophile Jacob, writing in France a national and a partially educational work, to uphold the national religion. The Church is half his subject, and the Church he might properly defend amid the profound courtesy of such Protestant readers as will use his work for reference. But if he could have taken the philosophical, rather than the merely orthodox, aspect of his theme, his chance of living as a reputable authority to the end of the century would be better. Opinions, even balanced and studied opinions, are dying around us, in this sharp age, like locusts in a storm; but opinions on the Infallible Past of the Immutable Church are rather specially of the nature of ephemeras, and flutter down to the ground before we can singe them, particularly when they are winged with the modern eloquence we should expect from a feuilletoniste writing in the back office of M. Veuillot's *Univers*.

Proportional Representation; or, The Representation of Successive Majorities in Federal, State, Municipal, Corporate, and Primary Elections. By Charles R. Buckalew, late U. S. Senator from Pennsylvania. With an Ap-

pendix, by John G. Freeze, Counsellor-at-law. (Philadelphia: John Campbell & Son. 1872. 8vo, pp. 300.)—Ex-Senator Buckalew, of Pennsylvania, is one of the very few among our public men who look upon politics as a science which needs to be studied—not a mere scramble of empirical usages; and, what is better, who has not merely studied carefully, but actually succeeded, by his own personal influence, in introducing political reforms—on a small scale, it is true, and in a narrow sphere, but of genuine value, and whose future power may be exceedingly great. The volume before us consists of his reports, speeches, and addresses. It is no disadvantage—although it may be a little misleading—that the scope of the book is less wide than its title. It is not a complete discussion of Personal Representation, but only of that one form of Personal Representation known as the cumulative vote, which is especially associated with Mr. Buckalew's name.

It must, after all, be admitted that, in spite of the theoretical perfection of the Hare plan, and the many advantages of the "Free List," or Geneva Plan, it is the Cumulative plan that the American people have decided to try first; everything which can make its theory complete, and help to elucidate its workings, is therefore to be welcomed as the most timely contribution to the discussion. In regard to the theory, we will here simply call attention to the felicitous term "Successive Majorities" used by Mr. Buckalew. The average voter, who has firmly fixed at the bottom of his political creed the doctrine that "the majority should rule," is somewhat repelled, or, at least, indifferent, when one proposes the representation of the minority; he has to be argued into recognizing its justice, and even then he suspects a concealed trick. Mr. Buckalew says nothing about representing a minority, but shows that when the bare majority has obtained one member, it is just that the next member should be returned by the majority of those that remain unrepresented; and so on in successive steps. This is an argument that will reach many minds that are obtuse to Mr. Mills's and Mr. Hare's reasoning.

The most interesting part of the book, however, to those at least who are already familiar with the discussion, is the chapters which give the statutes already in operation in Pennsylvania and Illinois, and especially which describe their workings in practice. It is easy to point out—as we have ourselves done—the theoretical objections to the Cumulative plan, and to show that it still renders possible an undue representation of the majority and even of the minority. But, after all, we must confess that when any community has gone so far as to recognize the evils of the present methods, and set seriously about amending them, such a community is likely, in this very process, to develop a political morality which will demand fair play; and we must confess further, that with political morality a bad system will work well, and without it the best system will fail. So far as it has been tried, the Cumulative system appears to have worked very well, both in Illinois and, especially, in Pennsylvania. On this head we get some very interesting facts. It is, by the way, not generally known that the "Bloomsburg plan" has been applied, by a general statute, to all the boroughs in the State. In an election in Bloomsburg, April, 1870, there was a simple majority vote for President of Council, in which the successful candidate had 11 majority: of the six councilmen, the Democratic party (the majority) obtained 3, the Republican 2, and an irregular "People's" ticket obtained the sixth by cumulation. At a second election, in October, all offices but one were to be filled in pairs. Consequently, it was quickly recognized that they were to be divided between the two parties, and the only contest was upon a single auditor, in which the Republican was elected—"showing," says the author, "that, under the old plan of voting, the party ordinarily in the minority would have swept all the offices voted for except one constable"—a very popular officer, who received a very large vote. This experiment is satisfactory, as far as partisanship is concerned; it does not give us any clue, however, to the character of the officers, and there would certainly be room, where a party was sure of electing its men, for careless or corrupt nominations. To meet this point, we have an election in the same month in Northumberland borough. Each party nominated three candidates; but one of the Republican candidates was considered to have got his nomination unfairly. The friends of the disappointed candidate bolted the regular nomination, voted a "plumper of six votes for their friend, and carried him through the contest triumphant" (p. 252).

So far, we have everything as satisfactory as could be desired; and in the "Columbia County Rules of Nomination" we have the same principle applied to the caucus. These rules are given at length, p. 257, and appear to be excellent. As they were adopted two years ago, they must be already in operation, and we wish that the volume contained an account of their practical workings. This is quite as important as the other, for in nine cases out of ten it is the caucus, not the election, that determines our rulers. Of course, a few experiments, when a system is new, cannot be taken as a criterion of its future workings, but we have every reason to be encouraged by those instanced.

THE FORTNIGHTLY REVIEW,
At Six Dollars a Year, or 50 Cents a Number.

CONTENTS OF JANUARY NO.—The Principle of Authority, by F. Harrison.—Grote's Aristotle, by J. S. Mill.—Mr. Stephens's Introduction to the Indian Evidence Act, by H. S. Maine.—Memorial Verses on Théophile Gautier, by A. C. Swinburne.—Ibsen, the Norwegian Satirist, by E. W. Gosse.—Forty Years of the House of Lords, by F. B. Graves.—The Eustace Diamonds, Chaps. LXXIII. to LXXVI., by A. Trollope.—Critical Notices: 'Middlemarch' and 'Love is Enough,' by F. Colvin.

CONTENTS OF FEBRUARY NO.—Causes of War in the Existing European Situation, by Emile de Laveleye.—A Conversation with Marcus Aurelius, by W. W. Story.—Louis Napoleon: 1851 and 1873, by Albert Venn Dicey.—Class Legislation, by Henry Crompton.—The New Cure for Incurables, by Lionel A. Tollemache.—Forty Years of the House of Lords, by F. Bowen-Graves. Conclusion.—The Eustace Diamonds, by Anthony Trollope. Conclusion.—Critical Notices: Murray's 'Manual of Mythology,' 'A Concise History of Painting,' 'Memoir of Nathaniel Hawthorne,' 'The Red Flag and Other Poems,' by Sidney Calvin.

Owing to misunderstandings incident to the beginning of such an enterprise, the January and February numbers were not ready as early in the month as there is every reason to hope later ones will be.

RECENT EXEMPLIFICATIONS
OF
FALSE PHILOLOGY.
By Fitz Edward Hall, M.A., Hon. D.C.L., Oxon., formerly Professor of the Sanskrit Language and Literature and of Indian Jurisprudence in King's College, London.
1 vol. 8vo, limp cloth, $1 25.

From the New York Daily Times.
"It is a criticism of some of the language critics, and aims to show that there is a great deal of English philology put off upon the public in these days which is essentially 'false,' founded upon a very insufficient basis of learning, of reading, and of taste, and apt to be confident and dogmatic in the inverse ratio of its soundness."

Send for a Specimen Number. Price, 20 cents.

THE WEEK IN TRADE AND FINANCE.

MARCH 10, 1873.

THERE is no change to report in the condition of the money market. Borrowers on stock collaterals have paid as high as seven per cent. per annum, and one-eighth per cent. commission in addition. These rates softened for a time after the Comptroller's call, for a statement, showing the condition on the 28th of February of the national banks, was published; but the softening was temporary, and the close of the week saw the rate quite up to one-eighth per cent. per diem.

The report that $44,000,000 legal tenders would be reissued caused considerable comment on the Street. We are glad to say that the proposition receives little favor from business men in this city. Beyond the fact that an inflation of the currency is in itself an unsound measure, and of doubtful legality, the idea prevails that any relief afforded to the money market would be ephemeral and more than offset in its benefits by the increased cost of all productions. We sincerely hope that all the talk about a "right" of the Secretary of the Treasury to inflate the currency at pleasure is merely for the purpose of justifying Mr. Boutwell in what he has already done, and, if any "right" really exists, that he will look further into the propriety of such inflation than he has apparently yet done, and will cease listening to the clamorous voices of men imprudently expanded in their business, and now, when in trouble, rushing to the Government for aid. It is really time that the Treasury Department adopted a policy and lived up to it; and, as the present Administration has another four years' term before it, and all parties admit that return to specie payment is desirable, it is certainly useless to seek to accomplish that result by giving the people any more irredeemable paper.

The weekly statement of the city banks is favorable, mainly so on account of the decrease of their deposits. The national banks, which are obliged by law to hold 25 per cent. in legal tenders and specie against their liabilities, are in better condition actually than the statement would show, because this also includes the reports of the largest State banks.

The total liabilities of the national banks are $200,474,300, against which they hold $51,242,300 in legal tenders and specie, or $1,123,725 in excess of the arbitrary amount required.

The following is the statement of the New York City banks for the weeks ending March 1 and 8:

	March 1.	March 8.	Differences.
Loans	$281,344,900	$280,351,300	Dec. $993,600
Specie	16,370,500	17,149,600	Inc. 779,100
Circulation	27,601,300	27,801,200	Inc. 199,900
Deposits	202,066,100	199,508,700	Dec. 2,557,400
Legal tenders	40,724,000	39,473,000	Dec. 1,251,000

The following shows the relation between the total reserve and the total liabilities:

	March 1.	March 8.	Differences.
Specie	$16,370,500	$17,149,600	Inc. $779,100
Legal tenders	40,724,000	39,473,000	Dec. 1,251,000
Total reserve	$57,094,500	$56,622,600	Dec. $471,900
Circulation	27,601,300	27,801,200	Inc. 199,900
Deposits	202,066,100	199,508,700	Dec. 2,557,400
Total liabilities	$229,667,400	$227,309,900	Dec. $2,357,500
25 per cent. reserve	57,416,850	56,827,475	
Deficiency in legal reserve	322,350	204,875	

The following table shows the relative condition of the National and the State banks:

	Loans.	Specie.	Legal Tenders.
State	$38,583,100	$1,541,700	$3,838,600
National	241,768,200	15,607,900	35,634,400
Total	$280,351,300	$17,149,600	$39,473,000
		Net Deposits.	Circulation.
State		$26,792,600	$43,000
National		172,716,100	27,758,200
Total		$199,508,700	$27,801,200

The leading features of the week in the stock market were the recovery in Panama, the fluctuation in Pacific Mail, and the rise in Harlem. Panama opened at 106¾ on Monday, rising to 113. On Thursday it touched 119, and on Saturday the closing quotation was 122½ bid, after selling at 123½ during the day. The stock of the Pacific Mail Steamship Company early in the week made a still further decline to 49, which proved "hard pan." The necessities of the leading operator in the stock caused the selling of a large amount at low prices, which, at the decline, passed into the hands of stronger parties, and at the close of the week the price was 56¾. Harlem advanced on Saturday to 139 from 127 on Monday. The speculation in this stock during the latter part of the week was quite active, especially so on Saturday, when the prices fluctuated between 133¾ and 139. The general market has been fairly active, and the feeling generally in favor of higher prices, especially for the better class of stocks, like Central and Hudson or Lake Shore. We see no reason why the general market should go higher under existing circumstances. It may be that in the Vanderbilt stocks something is going on, at present unknown to the public, likely to increase their value, but what incentive people have to buy such trash as "C. C. and I. C.," Boston, Hartford, and Erie, and Union Pacific, we can't imagine. Pacific Mail and Western Union are enormous foot-balls to be knocked about, and as they pretend to have some intrinsic value, and the former has recently declined about 54 per cent., it is not to be wondered at that people buy them. Taking prices as they are, and looking at the condition of the money market, the gold market, and the amount of foreign credit loaned to Wall Street, our advice to those outside of speculation who contemplate entering it is, "don't do it," at least not now.

The following shows the highest and lowest sales of the leading stocks at the Stock Exchange for the week ending March 8:

	Monday.	Tuesday.	Wed'day.	Thursday	Friday.	Saturday.	Sales 8h's
N. Y. C. & H. R.	101¾ 102¾	101⅝ 103¼	102⅞ 103⅝	102⅞ 103⅝	103⅜ 104½	104¼ 105½	141,100

The report of the president and directors of the Chicago and Alton R. R. Co. has been published. The following statements of the earnings for the past three years is given in the report:

	1870.	1871.	1872.
Gross earnings	$4,849,404 89	$5,278,910 23	$5,156,325 71
Expenses	2,786,105 85	3,080,824 77	3,277,178 27
Profit	$2,063,299 04	$2,198,085 46	$1,879,147 44

"The gross receipts from traffic were $122,584 52, or about $2\frac{3}{10}$ per cent. less than those of the preceding year. The net receipts were $318,938 02, or about 14½ per cent. less than those of the preceding year.

"The operating expenses of your lines (exclusive of taxes) amount to 61 per cent. of gross receipts; including taxes, $63\frac{6}{10}$ per cent. During 1871 the operating expenses were $56\frac{13}{100}$ and $58\frac{36}{100}$ per cent. respectively.

"The causes that have produced this unsatisfactory result may be mainly traced to the 'Chicago Fire,' and are, therefore, exceptional. During the greater part of the year, owing to the destruction of warehouses, it was impossible to obtain storage for grain arriving at Chicago on your line, without resorting to very expensive expedients, the cost of which was charged in the account of Operating Expenses. For a considerable portion of the year storage could not be had at any cost. Traffic in grain to Chicago ceased, and was forced by different channels to other markets."

The above explanation of the unsatisfactory results of the year's business will answer for that of other railroads running westward from Chicago, all of which have been more or less affected by the want of storage accommodation, since the fire, for grain brought to the city.

The Treasury programme for the month includes the purchase of $1,000,000 5-20s on the 5th and 19th and $500,000 on the 12th and 26th. On Wednesday, the 5th, the offers of bonds to the Assistant-Treasurer amounted to $3,097,250, at prices ranging between 113.53 and 114.15. The million was taken at 113.60 and under. The price of gold at the time the awards were made was 115⅛. The market for Governments has remained steady during the week both here and in London. Prices have changed but little, and the list has presented no interesting features.

The Treasury will sell during the present month $1,000,000 gold, on each alternate Thursday, making $4,000,000 in all to be sold. Just now the gold market is in a very peculiar position. The price has been advanced to a point at which it actually pays to ship coin from abroad to this country, and the operations of the "clique" engaged in advancing the premium will be watched with interest. The "clique" are reputed to hold $20,000,000—their control of a large amount being clearly shown on Saturday, when, by withdrawing a portion from the loan market, they were enabled to force borrowers into paying $\frac{1}{8}$ and $\frac{3}{16}$ per diem for its use. Fortunately, the mercantile community are not largely short, having very generally purchased, when they needed coin for their business operations, at current quotations. The "clique" is said to be under the leadership of Jay Gould. During the week the price has ranged between 114¾ and 115¾.

The total shipments of specie from this port since January 1, 1873, amount to $11,067,800, against $3,168,100 for the same time in 1872, $9,833,900 in 1871, $5,946,700 in 1870, $7,258,500 in 1869, and $14,087,700 in 1868.

The Nation.

NEW YORK, THURSDAY, MARCH 20, 1873.

The Week.

MR. DAWES has been defeated by Mr. Boutwell, who becomes Vice-President Wilson's successor in the Senate. Mr. Dawes's defeat is due to various causes, but he made so good a fight after the affair was generally supposed settled in Mr. Boutwell's favor that it appears as if but a very little more weight in his scale would have turned the beam in his favor—perhaps it would have been enough if he had kept himself out of the Crédit Mobilier business and had not equivocated when McComb's memorandum came out. If so, his failure is another reading of the lesson that a little thin-skinnedness, where personal honor and delicacy are concerned, may sometimes turn out as valuable to a public man as the most pachydermatous toughness. Mr. Bayard, for example, makes no bad showing beside Mr. Colfax, even regarding the thing as one of good policy alone. Some friends of Mr. Dawes, who adhered to his cause to the end, felt from the beginning that his record in the matter was badly against him. Every member from Massachusetts west of Worcester County, and about half the Worcester County members, voted for him, giving him half the total number of votes that he obtained. But a line drawn through Charles Street in Boston is said to divide the population of the State into two parts nearly equal, and the east of the State was strongly for Boutwell. Suffolk gave Dawes but 15 to Boutwell's 35; Middlesex stood 10 to 35, and Essex 11 to 22. Mr. Boutwell goes out of the Treasury with all the respect due in these days to a man who has remained pure and above reproach under no ordinary temptations.

Mr. Boutwell having passed the Senate, the vacant place in the Treasury Department has been filled, in spite of divers rumors about other gentlemen, as was anticipated, by Mr. Richardson, the Assistant Secretary. The objections to him are that he is an obscure man, who has not as yet given evidence of ability in any department; that he is a friend of General Butler; and, although last not least, that he holds firmly to the theory that the Secretary of the Treasury has the right to expand the currency of the country to the extent of forty-four millions of dollars, in his discretion. He carried out this theory to a limited extent last fall, and for so doing was severely reproved by a Committee of the Senate in language which public opinion found none too strong, and which ought to have rendered his further tenure of even the subordinate office he then held impossible. In appointing him therefore to a seat in the Cabinet, the President not only disregards the opinion of the Committee of the Senate but public opinion on this important matter, and adopts the Richardson doctrine.

Mr. Boutwell and Mr. Richardson have themselves shown their disregard of the report of the Committee by issuing two or three millions of greenbacks within the last fortnight to meet appropriations made by Congress, and hold, we believe, that where any doubt exists as to the right to do this, it is to be presumed that the Secretary possesses it. The Forty-second Congress, which had time enough to vote itself "back pay," had not time enough to settle this most important question, and Mr. Richardson goes into office armed with a power over the property and contracts of the people of the United States such as nobody but a despotic ruler in the worst times of European or Asiatic history has ever claimed. We see in this, in spite of the separation of the executive and legislative branches of the Government, the necessity created by the increasing complications of modern life for thorough knowledge, on the part of the President, of human experience on great economical problems.

Mr. Richardson was for some years a judge of probate in his native State, and in his own and Mr. Boutwell's county of Middlesex, and we do not know that he had held any other office till Mr. Boutwell called him to Washington to be Assistant Secretary of the Treasury. This place and his judgeship he continued to hold at one and the same time, in spite of public comment on conduct felt to be somewhat indecent, Massachusetts being still tender on the subject of judicial dignity as well as judicial probity. At length somebody introduced in the Massachusetts Legislature a resolution which, if we recollect right, was passed, enquiring whether any judicial officer of the State, etc., etc.; whereupon Mr. Richardson sent in his resignation of his judgeship and kept his secretaryship. In this latter position he is best known for his connection with the famous Syndicate affair, in which, however, he acted as the agent and messenger of his chief.

The last week or two has finished a chapter in the history of civil-service reform which we shall sum up without note or comment. When the Surveyorship of this port was vacated by the resignation of Mr. Cornell, Mr. Benedict, who has filled the Deputy-Surveyorship for a great many years, was nominated by the President, and all the leading papers warmly applauded this adherence to "the rules," and the Administration organ called attention to it as an illustration of General Grant's fidelity to his promises. While Mr. Benedict's name was before the Senate, the members of the New York Ring began to proclaim that he would never be nominated, and finally one of them declared positively that the President had promised to withdraw him. A week later, he did withdraw him, which at first looked badly, but cavillers and doubters were silenced by the announcement that the place would still be filled "under the rules," inasmuch as the next best man for it would be selected from the other Custom-house employees by a committee of examination consisting of Messrs. George William Curtis, Jackson S. Schultz, and Collector Arthur. To an arrangement of this sort it was impossible to refuse confidence, so we waited patiently. No examination or report by the committee, however, was heard of, and last Friday Gen. Sharpe, the Marshal of this District, and an active politician, was nominated for the place. On Monday morning there appeared in the *Tribune* a letter, evidently written by Mr. Curtis's authority, declaring that the committee "had never, to the knowledge of Mr. Curtis, taken any action in the premises whatever"; and that if they had done so, "it was without consulting him, and against a specific promise of one of them"; and that "if 'Marshal Sharpe had been apointed in violation of the rules,' it was without his [Mr. Curtis's] knowledge or consent," and adding significantly that "men do not willingly consent to be thus publicly snubbed." The Postmaster here has resigned, too, and his place been filled by a Custom-house officer.

The rule under which this odd performance has taken place prescribes that, when a vacancy occurs in the Surveyorship, "the Secretary of the Treasury shall ascertain if any of the subordinates in the customs district are suitable persons qualified to discharge efficiently the duties of the office to be filled, and if such persons be found, he shall certify to the President the name or names of those subordinates, not exceeding three, who in his judgment are best qualified for the position, from which the President shall make the nomination to fill the vacancy." If no subordinate be found qualified, or the nomination be not confirmed, the place can be filled at the discretion of the President. The general impression left by the whole affair is that the Ring has got complete control of the patronage in this city, and laughs heartily at "the rules" over its "poker."

The civil-service news from New Orleans is not very cheerful either. Casey the Collector, who has been one of the main insti-

gators of the trouble there, and to whose gross misconduct in office we have made frequent allusion in these columns, was "investigated" by a Committee of Congress last year, and a very damaging report made on his performances. The report was withheld for a good while, apparently in the expectation that he would resign, and a rumor was spread abroad that he had resigned. If he ever sent his resignation in, however, he withdrew it, and went back to his post from Washington with unblushing front, and he has just been reappointed for four years more. Mr. John M. G. Parker, Mr. Ben. Butler's brother-in-law, has been appointed Surveyor of the port. Parker was one of five "arbitrators" recently appointed to settle the terms on which the city should purchase certain water-works from a private corporation. They fixed the price at $2,000,000, and recommended the purchase, which was accordingly made. Soon after, they made a demand for compensation for their services, which the city refused to pay, and they thereupon sued it, and it was brought out by the evidence of the president of the water-works corporation that he had paid them $15,000 at the close of the negotiations. The plaintiffs then meekly and calmly discontinued their suit.

Governor Dix has, as we anticipated he would, disregarded the decision of the extraordinary tribunal described by us last week on the degree of Foster's guilt, and has refused to commute his sentence. We trust Foster's fate will be a warning to all roughs. We will take the liberty of adding that we hope his case will bring wisdom to a large body of clergymen, lawyers, and kind-hearted persons generally, who are in the habit of signing petitions for pardon. To the ministers in particular who mix themselves up in these matters, we would say that their conduct is very mischievous. In the first place, their letters and petitions are not candid and truthful, and hardly can be, when the writers are acting as pleaders, and this brings discredit on their profession. In the next place, they help to create distrust of the law and its administrators, and to confuse the moral notions of the poor and ignorant, by the notorious fact that the cases in which Protestant ministers and members of the wealthier class generally display their interest and "work" for pardons, are usually cases in which the offender has had every advantage, in the way of money and education, and is blessed or cursed with wealthy and "influential" relatives. Witness the Ketchum case, and the Foster case, and—we hope we shall not have to say—the Stokes case. On the other hand, when a poor devil who has had no teaching of any kind, and whom poverty and all its temptations have followed from the cradle, kills somebody, he is left to his fate without a murmur. No lawyers overhaul the statutes for him, no ministers pray for him or weep for him, no editorials rend the air on his behalf.

We would also advise all sensible men and women who have sympathy to spare, to pour it out in all murder cases first of all on the unhappy victim who has been taken off without a moment's warning, next on his poor family, and finally on the millions of decent men and women who throng our streets day and night relying on the law for security, their pockets filled not with "deadly weapons" but with the tools of honest trades and the hard earnings of honest toil, and their heads filled with dreams of affection and the plans and schemes of useful industry and economy. We cannot watch over them too carefully, and feel for them too tenderly; and it is only after doing our whole duty to them that we ought to go to the Tombs to save the men who have been cracking their skulls or shooting them down. We are told that the murderers now in the Tombs, who have for the last fortnight been very cheerful, became very "silent and thoughtful" when the news of Governor Dix's refusal in Foster's case arrived. This is very singular if it be true, as we are assured, that murderers dread imprisonment for life more than hanging; or more singular still, if, as we are also assured, they do not care when they commit murder whether they are hanged or not.

The contest between the people and the railroad corporations assumes novel forms in the West. In Illinois and Iowa, local organizations, known as Farmers' Clubs or Granges, are said to have been formed, and to have succeeded in making the railroad question more prominent than any which has occupied public attention since the close of the war. Large public meetings are held, and resolutions of the most emphatic character are passed, affirming the right and the duty of the State to control freight and passenger tariffs. There are many practical difficulties, however, in the way of this. Illinois has passed laws fixing maximum rates on all of the leading railroads, and forbidding discriminating rates for freight, on penalty of forfeiture of charter; but in the only case which has come to a decision in the Supreme Court of the State, the court has virtually declared the law worthless. It recognizes the right of the State to prohibit "unjust charges," but puts upon the plaintiff the burden of proof to show that given charges are unjust. The decision has called forth violent denunciation of the judge who gave it. As he is soon to be a candidate for re-election, his decision will probably cost him his position.

That the people have reason to complain is evident. It costs more to carry goods from Chicago a hundred miles into the interior, than from New York to Chicago, or from Pittsburg to Chicago. Wherever competing lines cross each other, or come in close competition, freights are cheap. Shippers of through freight to the East often save money by shipping *westward* forty or fifty miles to some competing point, and paying the local tariff on freight which repasses them on its way to the East. The "fast freight" companies, particularly the "Red" and "Blue" lines, are largely owned by stockholders of the road, and the local business of the towns is neglected to give preference to the favored lines, which are thus able to compel shippers to pay extra rates or to suffer vexatious delay. Meanwhile, abundant corn harvests are burned as fuel, and it costs farmers living east of the Mississippi the price of three bushels of grain to place one in New York. Wages are still high, and the habits and expenses of the people are still based upon the inflated scale which war prices made common. The distress in many communities is great, and never since the commencement of the war has money been so tight. This state of affairs is said to be producing its natural result in threats of violence, embodied in the Farmers' Clubs' resolutions. Parties of farmers tender the legal fare, and compel the railroads to take it. The "bloated Eastern aristocrat" is much abused, and members of the Legislature have been even forced to give up their railroad passes.

The operations of the Memphis, El Paso, and Pacific Railroad afford a good instance of the International Swindle. This road was incorporated by the State of Texas in 1853, and its history to the present time may be summarized as follows: 90 miles of track graded, 3 miles laid, and "loose rails dropped along the track a few miles further." Ten locomotives imported from France, and various lots of railroad iron seized in New Orleans and New York for nonpayment of duties and for debt. Stock issued, $40,000,000; bonds and land certificates, about $13,000,000; total length of road, three miles; total debt, $53,000,000. In 1866, General John C. Fremont began to take an interest in the enterprise, and a large number of bonds were sent to Paris for sale. By a judicious manipulation of the market, fraudulent representations that the bonds were guaranteed by the National Government, and a forged certificate that they had been admitted to the New York Stock Exchange, which was indispensable to secure their admission to the Bourse, some five million dollars' worth were sold to some "three thousand French peasants." The road then passed into the hands of a receiver, and the bonds are admitted to be worthless unless they are shouldered by Mr. Thomas Scott, who needs the Memphis and El Paso road as part of his Southern Pacific, which it is needless to say is a great transcontinental railway.

The New Hampshire election returns show that the reaction against the Republicans has evidently not set in as yet with great violence. Last year, when much stumping was done in that State, the sum of the Democratic and Republican votes was rather more than 75,000; this year it is (unofficial, partly estimated, but fairly reliable) 59,000. The falling off from last year's vote is, in the total, 16,345. But of this decrease of rather more than 8,000 apiece for each of the two great parties, the Democratic half is rather the heavier, and there was a lighter loss in the Republican districts than in those strong for the Democracy. And if the vote is compared with that of two years ago, the showing is still less unfavorable to the Republicans, for then they lost all three of the Congressional districts and now they have won back two of them. A heavy snow on the ground, bad roads, and stormy weather are sufficient to account for the lightness of the vote, and it appears reasonable to think that whatever Republican abstention and apathy there may have been—and it is necessary to believe that some there must have been—it was pretty evenly matched by apathy and abstention on the part of the Democracy, who are admitted to have been inactive. Apparently, however, they, in conjunction with an unusually large number of scattering voters of the Temperance and Labor Reform parties, have defeated at the polls the Republican candidate for governor; but a Republican House and Senate will elect him. On the whole, it is for the Republicans somewhere near a drawn battle, and, under the circumstances, not discreditable to their discipline.

The news of the defeat of Mr. Gladstone by a small majority, and his consequent resignation, arrived last week just as we were going to press. The interval which has since elapsed has been passed in efforts thus far fruitless to find a successor for him, both Mr. Disraeli and Lord Derby having declined to form a Cabinet, and for the best of all possible reasons—the impossibility of securing a good working majority, and Mr. Gladstone has again agreed to stay in. The fact is that Mr. Gladstone still possesses, in a probably greater degree than any other man, the general confidence of the House. On Thursday, the day after the vote, notice was given of a motion that the vote on the University Bill was not, and was not intended to be, a vote of want of confidence. The University Bill we have discussed elsewhere. It appears to have fared worse out-of-doors than in the House of Commons. Every sect and party condemns it. The Catholic bishops, who are enraged by its offering no endowment for the Catholic University, while Trinity College, the new university, and the Queen's Colleges are handsomely provided for, have passed resolutions condemning it; Trinity College and the Queen's University are equally hostile; and indeed not one of the institutions it affects has shown any disposition to accept it except a small Presbyterian theological seminary in Londonderry. Protestants generally are of course opposed to it from its concessions to the Catholics, and the dread that the new university would eventually pass into Catholic hands; while the Catholic clergy hope for a still more favorable settlement of their claims by the endowment of their university.

Just before the retirement of the Gladstone ministry, the *Pall Mall Gazette* brought against the Treasury the charge of "nobbling the press." To nobble is not to bribe; the process is much more indirect and subtle. A newspaper is nobbled when its support is gained by furnishing it with information. A Liberal Press Agency is set agoing, for instance, in London, to supply intelligence to independent provincial journalists, etc., the Government furnishing funds for the undertaking. Something of this sort the *Pall Mall Gazette* intimates has been done, and as the *Gazette's* article has been called to the attention of the Treasury by the *Times*, it seems probable that there was something in it. There are a large number of Christian statesmen all over the world, who think that nobbling the press—or, for that matter, bribing it—is one of the legitimate weapons of Government, just as there are a large number of financiers, railroad men, agriculturists, shippers, mine-owners, and others interested in commerce or industrial or money enterprises, who believe in "rigging the market." These practices, though admitted to be, in the forum of private morals, wrong, are defended on the broad utilitarian ground that unless they are resorted to the Government, the party, the mine, the railroad, the cargo, or the crop, will suffer. On political grounds, one of the chief objections to nobbling is that in these days the competition between newspapers is so great, and their scent for news so keen, that the nobbler is generally found out, and nobbling once exposed loses more than half its charm.

The British and Russian Governments are reported to have come to terms on the subject of the Afghan boundary on the north. The Ameer is allowed to push his frontier to the Amu as far down as Khodja Salih, a small place within about 100 miles of Bokhara, which gives him Badakhshan and Wakhan, and makes a very respectable "zone" between the two empires. This line was proposed by Earl Granville and accepted by Prince Gortchakoff, the understanding being that England will use her influence to restrain the Ameer within the limits thus laid down, and induce him to refrain from all aggression, and Russia is pledged not to make the occupation of Khiva permanent. Vámbéry has written to the papers, recommending as a definitive settlement of all questions pending between the two empires the permanent possession not of Khiva only, but of Bokhara, by Russia, in the interest of civilization, and the strengthening of Persia on the northern frontier, so as to put an end to the incursions of the Turcoman hordes and the accompanying slave trade.

The report of the Committee of Thirty in the French Assembly has recommended that the present Assembly should not separate until it has regulated the organization and transmission of legislative and executive powers; has provided for the creation of a second chamber, and has settled the limits of the "pays légal," or in other words the qualifications of voters. But it appears that it is the Government, or in other words M. Thiers, who is after all to draft and submit the bills which are to do all this work. In short, M. Thiers has managed in spite of everything to have his own way on all essential points. The Extreme Right is dissatisfied with the report, because it proposes to make a settlement which may interfere with the establishing of a monarchy, and it is accordingly reported to have broken with the Centre, which is more practical, and is willing to deal with problems as they arise.

The news from Spain continues to be conflicting. Successes and defeats of the Carlists are reported in about equal numbers. The fact of most importance, and best supported by evidence, is, however, that the Federalist Republicans are gaining ground. Of the political vitality of the provinces, and of the strongly-marked differences between them, there is no sort of doubt. But the opinion grows that this vitality and these differences are so great that a Federal union would be the weakest possible bond, and that if attempted Spain would disappear rapidly from the list of nations. It appears to be still plainer that the national credit, at all events, if such a thing can be said to exist, would be killed by it at once, and it would render the maintenance of a national army impossible. The uncertainty as to their future, resulting from this state of things, is naturally producing its effect upon the troops, whose adhesion to the Government is apparently becoming more and more doubtful. To meet the dangers thus created, the ministers are resorting to the desperate expedient of "arming the people" with breech-loading rifles. Considering the wide diversity of opinion which prevails among the "people" concerning even the basis of a social organization, there is a fair prospect, by the time everybody is armed, of an anarchy which will make the Parisian Communists pale with envy. The Carlists, in the meantime, are trying to raise a loan in London, and are levying taxes all through the Northern districts, and promise the Government a "lively time" as soon as the spring opens. Conscription has been abolished, and the army is to consist hereafter wholly of volunteers.

THE MINISTERIAL CRISIS IN ENGLAND.

THE fate of the Gladstone Ministry can hardly be called very important politically, inasmuch as if Mr. Disraeli or any other Conservative should undertake the task of forming a Cabinet, which at this writing seems very unlikely, he would have nothing new in policy or principle to propose. There is not now, and has not been since the passage of the last Reform Bill, any difference between an English Liberal and Conservative which is capable of detection or appreciation by a looker-on from a distance. In fact, it might be almost said with safety that a Liberal is simply a man who hates Disraeli, and a Conservative a man who hates Gladstone, and that Gladstone as a legislator differs from Disraeli in having a more fertile and constructive mind. With relation to what is called "progress" they stand in about the same position. The spirit of change has secured a sufficiently strong hold on the English mind to make it impossible for any minister to stand still. Disraeli would move and alter and tinker as well as Gladstone, but he would do it with less "effusion" and with a less solemn air of responsibility.

But the Gladstone Ministry has been overthrown on a question with which, however little general interest it may have, the Conservatives are honorably associated. They were the founders of non-sectarian education in Ireland—perhaps the greatest boon conferred by English legislation on that unhappy country. The foundation of the "national schools" (common schools) opened in 1831 to all children, was the work in large part of the late Lord Derby. When it was felt necessary to complete this work by founding a university on the same principle, it was Sir Robert Peel who undertook and carried it through by the establishment of the Queen's University, with its three colleges of Cork, Galway, and Belfast. This university was at first accepted by the Catholic clergy with more or less cordiality, as its foundation (1847) was coeval with the prevalence of considerable liberality in the Papal policy, and preceded the ascendancy of the Jesuits and the initiation of what is commonly called the "Ultramontane policy" in all parts of the Catholic world. By the time the new colleges had got into working order, the liberal Catholic archbishop, Dr. Murray, had passed away, and his place had been taken by Cardinal Cullen, who was bred at Rome, and was apparently sent to Ireland with the express mission of pushing the claims of the Catholic prelacy against the state to their last limits. The tolerant, kindly, loyal, enlightened, and somewhat secular tone assumed by the bishops and priests after the Emancipation was laid aside for one of arrogant and menacing hostility, and the Government was speedily given to understand that, on the subject of education, there could be neither compromise nor co-operation between church and state. The Queen's Colleges were dubbed "godless," and denounced fiercely, by synodical address and Papal rescript, as places which no Catholic youth could frequent without danger to faith and morals, and the prelates went to work to raise funds for a purely Catholic university, to be managed by themselves, at the head of which they put John Henry Newman, and began to press the Government for a charter for it, and have contrived ever since to wage vehement and relentless war on the whole system of non-sectarian education, by all the arts known to a clergy exercising complete sway over a large body of ignorant, excitable voters.

Now the Liberal party have always been pliant to the point of weakness towards the Catholics. Their political conscience is undoubtedly tenderer than that of the Tories; they have been far more deeply impressed with the responsibility of England for "the wrongs of Ireland" than the Conservatives have ever made any pretence of being, and have always been ready to accept the Catholic clergy as to all intents and purposes the public of Ireland. Accordingly, the clerical abuse of non-sectarian education has gradually told on them, and they have been led, little by little, at the very time when nearly every other state in Europe is placing more and more stringent restraints on Papal pretensions, into a course of concession which, as everybody who knows anything of Papal history knows perfectly well, can have no limits. There *are* no limits to the demands of a Catholic theologian, except the government of the community itself by a board of bishops.

Accordingly, the crusade against the Queen's Colleges produced little direct effect on them. In so far as it injured them, it injured them by working on the mind of the public, and exciting doubts as to the permanence of their organization. The number of students increased steadily until 1851-2, when the Catholic Synod of Thurles officially denounced them. It then declined, but only for a year or two, and rose steadily during the bitter warfare which followed until 1856-7, when as a result of this warfare a Royal Commission was appointed to enquire into their condition. The report was very favorable, and the number of students increased more rapidly than ever until 1864-5, when the Government gave way partially to the clamor by granting a supplemental charter to the Queen's University, enabling it to affiliate sectarian colleges, and grant degrees on examination to non-resident students. Some of the graduates thereupon raised a fund by subscription, and filed a bill in chancery, and obtained an injunction prohibiting the senate to accept the supplementary charter. During this process the attendance declined, and continued to decline until 1870, under the influence of continued apprehension of fundamental changes in the Irish universities. That these apprehensions were fully justified the bill lately introduced into the House of Commons shows. A more extraordinary measure has rarely been submitted to an enlightened legislature, as it really involves a sweeping surrender of the principle of unsectarian education, at the demand of the most arrogant and bigoted body of priests in Europe; at the very time, too, when Germany, France, Italy, are devising means to tie their hands, and narrow the sphere of their meddling.

The new bill abolishes the Queen's University, and substitutes for it a new one, of which Trinity College, Dublin, is to form the nucleus. Twenty-eight persons named in the bill are to form the Council of the new organization, and this Council, after performing certain preliminary duties, is in 1875 to assume complete control, ousting the Provost and Fellows of Trinity College for that purpose. It then enters on a second stage, by receiving into the Council representatives from certain colleges named in the bill, and in addition to this it will begin to affiliate such other colleges, denominational or not, as may ask for it, and will receive from each of such colleges one member of the Council if it contains fifty matriculated students, and two members if it contains one hundred and fifty. Now, the question which not only all Protestants, but all friends of non-sectarian education, are asking themselves, not in Ireland only but in England, is, how long would it take before the new university, including not only the Queen's University but Trinity College, with its "just and old renown," passed completely into the hands of the Catholic hierarchy? Not very long, everybody believes who knows of what sinful games those reverend gentlemen are capable when the interests of the Church are to be promoted. There are in six Catholic colleges in Ireland already about 1,250 students. Out of these, it is estimated, eleven colleges might be made, having each 150 students, and thus entitled to twenty-two representatives in the Council, or they might be made into thirty-five colleges of fifty students each, with a representation of thirty-five members in the Council; and that funds and "matriculated students" would be wanting to increase the number to any extent that might be necessary to give the Church the control of the Council, no thoughtful man believes. It is no wonder, not only that Trinity College, which has just thrown all its honors and emoluments open to all creeds, and the Queen's University, which has, in spite of all opposition, enjoyed the steady support of the Catholic laity, but that men of all classes who believe that the battle of free education and free thought has to be fought out with the Jesuits, not merely in Ireland but everywhere, and might as well be fought first as last, are opposed bitterly to a scheme of this sort, and that they have combined to defeat it, no matter at what cost.

There is one feature in it, however, which will probably, in the eyes of all lovers of learning and of free enquiry, reflect more dis-

credit on Mr. Gladstone's reputation than his other compliances towards the Irish prelates. To please them, he has actually provided that the new university shall give no instruction in mental or moral philosophy or in modern history, and that no examiner "shall attach any disqualification to any candidate in any examination by reason of his adopting in modern history, moral or mental philosophy, law, medicine, or any other branch of learning, any particular theory in preference to any other theory." The object of this is, of course, not only to avoid offending the Catholic bishops by teaching anything of which they are not likely to approve, in some of the most important fields of research, but to furnish them with the imprimatur of a great university for those peculiar views of the foundations of belief, and the basis of legislation, and of the great events of the last three centuries, which are taught to Catholic "seminarists" by their spiritual instructors. Fancy an examiner accepting as good the answers of a young priest, taught under the superintendence of Cardinal Cullen, to questions on the rise and origin of the "Subalpine Kingdom" or of the German Empire! Moreover, a university without philosophy is of course in our day a monstrosity. One of the greatest of living thinkers has said that the sole use of a university is to keep philosophy alive, and even those who are not prepared to accept this high standard must admit that a seat of learning which banished from its curriculum the consideration of the laws of the human mind and of the tests and sanctions of right living, would be an institution for which in our time it would be hard to find a place. The day for that sort of compromise has, fortunately or unfortunately, passed away.

THE SUBSTITUTE FOR HANGING.

THE prevalence of murder in this city, and the exceeding difficulty of getting anybody brought to justice for it, as illustrated in three such glaring cases as those of Foster, Stokes, and Scannell, is causing more than the usual amount of discussion about capital punishment, and is strengthening what is really the strongest argument of its opponents—viz., the impossibility of making its infliction certain. Their other arguments really have thus far had very little weight. The experiment of doing without it has never been tried long enough in any community of lawless habits to make the result of much value. As a matter of fact, the objection to it on the part of the public is found to be strongest in those countries in which respect for human life is lowest, although of course its enemies are found in greater or less force in all countries. Moreover, some of the facts occasionally produced against it—such as the occurrence of murders in spite of the hanging of murderers—really tell against all punishment for murder in an equal degree, inasmuch as we presume nobody doubts that, in this State for instance, murders would occur if every murderer who was caught was sure to be imprisoned for life.

Our present object, however, is not to discuss the propriety of hanging murderers, but to impress once more on the opponents of capital punishment the desirableness of providing a substitute for it before they do anything more to disturb the public mind about it. They have thus far confined themselves to denouncing it as unwarrantable, and cruel, and ineffective; but this is simply demagogue's work. The reformer is bound to go further, and when he declaims against one form of punishment—provided he believes in punishment at all—to say what it is he proposes to put in its place, and to give his reasons for thinking that the substitute would prove efficacious. The result of their labors in this city, and the only result that we can see, is the creation of a mental and moral confusion about the crime of murder, which has not only transferred popular sympathy from the victim and his family to the murderer and *his* family, and has made it all but impossible to get juries to convict in capital cases, but has rendered the public indifferent and blind to the importance of regular and efficient judicial procedure or healthy and rational judicial habits. What better proof of demoralization could be offered than the efforts made to save Foster from the gallows—consisting as they did of a kind of rehearing of the case by a large crowd in the street? If that had succeeded, the propriety of having murder cases tried by "the people," through the newspapers, and the verdict rendered by ballot on a separate ticket at the November election, would have been a fair subject of consideration.

We would now beg to inform those who thought Foster ought to have been imprisoned for life, and that all murderers ought to be treated in the same way, and that if they were, murders would be much rarer, that there is really no such punishment as imprisonment for life in this State, or in any other in the Union; and that if the punishment they propose to substitute for hanging be what passes under the name of "imprisonment for life" in this State, they are either talking about what they do not understand, or are asking the community to make an experiment of a most serious kind without explaining its nature. In other words, anybody who maintains that, when General Dix commutes a murderer's sentence to "imprisonment for life," the murderer will remain shut up in jail till he dies, is either deceived himself or is trying to deceive others. We have pointed out more than once that the average duration of a life sentence in Massachusetts, in which prison management is perhaps better than in any other State in the Union, is seven years. Let us now look at the experience of some other States on the same subject. We have before us a medical report made in 1868 on the Auburn State Prison, which has for fifty years been one of the glories of New York. Between 1818 and 1868, 214 persons were committed to that prison under life sentences. Of these, 34 died from natural causes; 8 went mad; 2 committed suicide; 1 escaped; and 10 were transferred to other prisons; leaving 159 to be accounted for. Well, of these 159, twenty-five remained in the prison at the date of the report, and 134 had been pardoned. Perhaps, however, they were pardoned after long years of suffering, and were discharged when age or confinement had made them harmless? Nothing of the kind; their average period of servitude was six years and six months. In other words, when a man is sent to jail for life in this State, he has over sixty-three chances in one hundred of liberation inside seven years. This experience is very much that of all the States. In Massachusetts, 50 per cent. of the life prisoners are pardoned; in Pennsylvania, 13½ of the whole number imprisoned for all periods; in Ohio, 40 per cent. of the life prisoners; in Wisconsin, 33 per cent. In short, we repeat that imprisonment for life is, to all intents and purposes, an unknown punishment in this country, and the machinery for inflicting it does not as yet exist. When we are asked to agree, therefore, that what is called by this name shall be substituted for hanging as a protection against murder, we are really invited to try whether the desperate scoundrels by whom we are surrounded in all our great centres of population will not be deterred from knocking us on the head by the chance of having to serve six years in the State prison.

What, in point of fact, is the effect of this sentence on the mind of criminals now? What is its value as a deterrent against the commission of other offences? On this point weshall quote ano ther report, not yet printed, now lying before us, and we ask for it the attention of all thoughtful men:

> "The unanimous testimony of the wardens of the State prisons is that the hope of pardon is well-nigh universal among convicts. This occupies their thoughts by day and fills their dreams by night; to the attainment of it their best energies are given, as well as the greater part of the money they can earn by overwork, or can command, for the race of pardon-brokers is not yet extinct. . . A person convicted of murder in the second degree, attended by the most aggravating circumstances, who has powerful friends, and is plentifully supplied with money, has tenfold more chance of pardon than a poor wretch found guilty of petty larceny."

If Dr. Dimon had had Foster's or Stokes's case in his mind when he wrote this last sentence, he could not have said anything more strikingly applicable; so that the argument of uncertainty which is so strongly urged against capital punishment can be urged with still greater force against imprisonment for life. Against the former, the prisoner has the chance of escape from arrest, and that of the failure of evidence and of the disagreement of the jury; but if he is hanged, there is an end of him. Against the

latter, he has not only all these chances, but the chance of pardon or escape during a series of years, which is worth tenfold as much as the others put together. The influences which now operate, even after conviction, to save a murderer from the gallows, do not cease with the commutation of his sentence. The money and affection which were used to save his life, would be used just as energetically to get him his liberty. Lawyers would be got to split hairs, clergymen to entreat, Sunday-school teachers to pray and bless, just as fervidly, if Foster were in jail under a life sentence as if he were waiting for death. The pity of his case would be full as great. It would surely be as great a shame to shut a pious, inoffensive, modest youth up in a dungeon during his whole life for having, while slightly intoxicated, struck a hot and impulsive blow, as to hang him by the neck till he was dead; and this estimable though misguided citizen would be back among us in 1879 once more, the pride and admiration of his pastor and his old playmates.

A life sentence, too, it ought to be said, would have no great advantage on the score of humanity over a death penalty. If it is certain, or if the criminal can be got to believe that it is, it is terrible. On this point the reports tell a dismal tale. Insanity is fifteen times more prevalent among life convicts than among the others. Death or insanity, it is estimated, disposes in four years of twenty-seven per cent. of life cases. If you put 100 men in jail for life, and took away all hope, the statistics warrant us in believing that in fifteen years there would not be a man of them left; so that our much-sought-for "commutation," if it were really what it professes to be, would be the substitution of death by slow torture for death at one stroke.

No one should lift up his voice against capital punishment, or "work" for commutations for murderers, without thinking on these things. The question of punishment for the graver offences against the person or property is a question which becomes daily more serious. It is not solved by erecting fine jails, as we all thought thirty years ago, or by shutting a man up for life, as some of us think now. It is no great gain to humanity to drive a man mad instead of hanging him, and no great gain to security or morality to threaten him with any penalty which he has one chance in two of escaping. For it ought not to be forgotten that the tendencies of our day help to rob all penalties of their terrors which require prolonged periods of time for their infliction. As we see in the delays which attend our murder trials, the reluctance to inflict any penalty at all increases with the distance of the crime in point of time. A fortnight after a man has been slaughtered, everybody is willing to have the assassin executed; in two years, a large proportion of the community would be willing to "let him run." So also, if he is imprisoned for life, carelessness as to whether he is kept in or not, and even doubts as to whether he ought to be kept in or not, grow as the years roll on, and under precisely the same influences; and though the public gets lukewarm, friends and relatives do not tire. The effect of the democratic experiment of the last forty years, besides depriving the thoughtful class—that is, the class which looks farthest back and farthest forward—of much of their influence on politics, has through its system of short terms, numerous elections, and want of responsibility to determinate bodies of persons, promoted indifference to remote consequences in an extraordinary degree, and stimulated the tendency to live from day to day, and let the devil take the hindmost. That some of the worst effects of these things are seen in our administration of criminal justice is not to be wondered at. No art is more difficult and delicate, in none are the results of any policy slower in showing themselves, and on none of the affairs of the state do the happy, prosperous, and well-to-do, as long as they are not themselves put in serious peril, bestow less attention.

Let us hope that one of the great results of the reform movement which is now spreading over the country like a flood, will be a calmer and more serious investigation of the best mode of repressing crime than it has yet received. We trust that the Constitutional Commission now sitting at Albany will not separate without drawing up some plan of rendering the conviction of criminals more certain, and making punishment something more like the action of society defending itself with inflexible will, than of a mob roused to passion by a repulsive spectacle.

FAILURE OF THE LEGITIMIST FUSION.

PARIS, February 28, 1873.

ALL hope of a fusion between the two branches of the royal family of France must now be abandoned. This reconciliation has been tried somewhat against hope. The principles of the Bourbons and those of the Orleans have never been the same; many memories rise like phantoms between the representatives of the divine right and the representatives of the Revolutions of 1789 and of 1830. But after the terrible misfortunes of France, a sort of conservative instinct inclined many to try to bring revolutionary France back to its old traditions. Many who had hardly allowed themselves to think of the Comte de Chambord, remembered that his ancestors had conquered the provinces which France had just lost; they remembered that what is now called France had been, so to speak, constructed by that family which first seized power in Paris, many centuries ago, in the Isle de France, and slowly and patiently destroyed all the forces of feudalism; they remembered that sixty princes of this noble house died on the battle-field. There was in this movement towards what was called a *fusion* something almost poetical. And this was well seen on the 21st January, when the Princes of Orleans went to the chapel erected in memory of Louis XIV.; many witnesses were in tears, and an old gentleman approached the Princes and said: "Thank God! France will now be saved."

Alas! there is little poetry in life, and especially in politics. A correspondence has just been published which shows that the Comte de Chambord is not animated by other feelings than the last Stuarts were, and that he will make no sacrifice to his pride and to what he considers as his right. In order well to understand this correspondence, you must be aware that the tricolor flag has been denounced by the Comte de Chambord as the flag of the Revolution; and that, to all the overtures made to him by friends of the Orleans family, the Comte de Chambord has always answered that he could enter into no negotiations of a political character till the Comte de Paris had made him a visit and recognized him as the head of his family and as his king. "Unconditional surrender" was his motto, not only with regard to his cousins, but with regard to France. The Comte de Paris said that he had come back to France determined to accept the decisions of the majority of Frenchmen; that he was not himself a pretender, and, in case the constitutional monarchy was restored, he would consider the Comte de Chambord as the only representative of this monarchy. The Duc d Aumale, at the same time, had made at the tribune of the Assembly a declaration in favor of the tricolor flag. It seemed easy enough to arrange these differences, as the Comte de Paris really made a great sacrifice in not bringing forward his claims as son of the king of 1830; some ingenious people had discovered that at one time the king had his own flag and the army another.

The union in the Parliament between the Right and the Right Centre—that is, between the Legitimists proper and the Orleanists—had become very close; these two fractions together formed a strong majority, and checked completely the policy of M. Thiers's last message, which had assumed, notwithstanding the promises of Bordeaux, a decidedly republican character. A commission of thirty members was named at the end of last year, in order to reorganize the relations between the executive and the legislative powers. This commission was almost wholly composed of members of the Right and of the Right Centre. It had very vague and indefinite powers, and its mission could easily have extended even to the preparation of a definitive constitution. The history of its discussions would appear rather futile to an American mind, but it must always be understood that the commission was really speaking and discussing against time; the negotiations for a fusion were meanwhile going on, and the final resolutions of the commission depended on their result. What this result was will clearly be understood if I cite a few lines of a letter addressed by Bishop Dupanloup to the Comte de Chambord on the 25th January:

"When one has received from Providence the mission and the duty to save a people, and when under one's eyes this people perishes, I believe, and many of your friends believe with me, that in a question of fusion there are reciprocal duties. For this question of a fusion is not only between the Princes of Orleans and your person, it is between France, them and you. This is the truth; and it means that in this question all have their duties and their responsibilities. And if ever a forlorn country has asked from the man whom Providence had reserved as its supreme resource kindness, clear-sightedness, all possible sacrifices, it is France, sick and dying. To err on such a question, to construct for one's self, even from a noble sentiment, impossibilities which before God would not be impossibilities, would be the greatest of misfortunes."

This was noble and patriotic language, which loses much of its pathos in

my translation; it was also the language of reason. If, as the Bishop said, a son of Henri IV. had come to France, sick and dying, and exclaimed: "Here I am, I come from a long exile, I am not impatient to wear a crown which could only be a crown of thorns, but if I can be of any good to my people, if you believe that my name is still a force, use me, use me as you like. I will sign with both hands any constitution which may be offered to me by the National Assembly"—this attitude and this language would probably have touched a people which has generous instincts and has never been insensible to whatever has a poetical and imaginative aspect.

On the 8th February, the Comte de Chambord from Vienna wrote to Bishop Dupanloup a letter in which he expresses his regret not to be able to follow the counsels dictated to the Bishop by his patriotism. "You seem to attribute to chimerical scruples, of which God will ask of me an account, the non-success of the efforts so often tried in order to procure a fusion of the two branches of my family." The Comte says that his pretensions have never been an obstacle to such a reconciliation. He has no prejudice against persons, but his duty is to preserve in its integrity the hereditary principle: he is the guardian of this principle. He assumes the situation of the head of a family in a patriarchal state; he evidently looks upon the Orleans princes as insubordinate members of the family; he would have them not only pay him homage but take his orders in everything. Under the old régime the king had an absolute power over the members of the royal family; they were in a more subordinate condition than vassals before their lords. But they had their own domains, their places of surety, their own regiments, and many of them fomented civil wars and made alliances with foreigners. Surely, such a state of things cannot be restored and ought to belong to the past. All traces of feudalism are now effaced, and the civil law does not give any authority to the eldest branch of a family over the younger branch. The hereditary principle which the Comte de Chambord represents, gives him no moral authority over his cousins, and, as the Bishop well says, it would be idle for him to be reconciled with his cousins if he was not reconciled with France. But he does not propose to himself to become reconciled with France; he says again that he will not adopt the tricolor flag, and calls it the symbol of the revolution. "I have, therefore," he says, "no sacrifices to make nor conditions to receive. I expect little from the power of men and much from the justice of God. When the trial becomes too bitter, a look on the Vatican reanimates courage and fortifies hope. It is at the school of the illustrious captive that one can learn firmness, resignation, and peace; that peace which is assured to whoever takes his conscience as a guide and Pio Nono as a model."

This declaration places the Comte de Chambord out of the horizon of vulgar politics, on the top of a Sinai. He is more Catholic than the most Catholic of bishops, more French than France. The *émigrés* of 1815 were often accused of being more royalist than the king; but I defy any Legitimist of our time to become the subject of this criticism. The Comte de Chambord has taken dogmatic and theological views of his own position; he is the absolute head not only of a family but of a nation; and to all that is said to him he replies "*non possumus.*" This formula can be understood in intellectual and religious matters, but the relations of the executive and legislative powers, of the king and the parliament, belong after all to the category of worldly things. Monarchy is a human contrivance, or, if it can be considered as divine, it is not in any other sense than a tree or a flower or anything else.

I am not, I confess, of those who admire this extraordinary absoluteness —I don't know if I may use the word—of the Comte de Chambord. I cannot help suspecting calculation in this affectation of simplicity. A courage which destroys the hopes and expectations of thousands of honest and faithful partisans is not the sort of courage I admire; I see nothing noble in the attitude of a man, whoever he may be, who says to a suffering people, "Ask for pardon, and I will see if I can grant it." I make every allowance for the natural affections of a man; I know what dreadful memories the Comte de Chambord can find in the history of the last hundred years; but is there one man now living who had any part in the execution of Louis XVI., in the assassination of the Duc de Berry? And if the Comte de Chambord cannot forget this blood, let him remain in exile, and abdicate. But to keep his rights simply not to use them, as the key of a forbidden treasury, is conduct which is neither generous nor just. On a subject which is so grave, I almost hesitate to tell an anecdote which presses itself on my memory. During the Terror, several men were carted away in the famous *charrette* to the guillotine. They were all quiet and silent, except one, who wailed and screamed and was in a terrible excitement. He became so noisy that one of his companions turned round to him and said, "You don't like the guillotine—well! I understand that; but you should not disgust others with it! (il ne faudrait pas en dégoûter les autres!)" The Comte de Chambord does not mean to rule over France, but he stops the way for those who would have been willing. The Republic will naturally profit by it; it will first be M. Thiers's Republic, and there is just now a sort of an enlarged *constitution Rivet* made for his own personal use. After a personal Republic, will the day of a real Republic ever come? This is a question of which the solution depends on so many elements that it is hard to answer it. M. Thiers is a curtain which conceals an unknown future. Under the name of republic, the Conservatives will endeavor to establish a sort of constitutional monarchy, in which the king will be elective, and not wear a crown. Self-government, federalism, are conditions which exist in America and in Switzerland, the only two countries where there are real republics. France is centralized, and centralization will for a long time to come give a monarchical character to all its institutions, even if the word Republic is painted on all its monuments.

Correspondence.

IMPROVED BANKING FACILITIES BETWEEN THE UNITED STATES AND CHINA.

[House Document No. 159 consists of a letter from Secretary Fish covering one from Mr. David H. Bailey, United States Consul at Hong-Kong, on the above subject. It is too long for us to print entire, but the following extracts are a fair summary of its views, which Mr. Boutwell has pronounced "of great importance," particularly worthy the attention of American bankers:

"At present, all the vast sums of money passing between America and Asia are paying enormous tribute to London. . .

"We have thus: 2 per cent. London banking commission; ½ per cent. to 1 per cent. profit or charges of the banks in China and India; ½ per cent. to 1 per cent., at least, additional expense on treasure; say from 3 to 4 per cent., at the very lowest, which our importers and consumers of Eastern produce pay to England for negotiating American bills drawn in China, India, etc., on London. I think, however, that, on an average, 4 per cent. is nearer the mark than 3. . . .

"If a banking profit has to be made on exports to the United States, American banks and bankers can and ought to make it, and do the business more cheaply than it can be done by way of London. . . .

"The plan that suggests itself is for a powerful American bank or company of bankers to establish branches at all the chief places of trade in the East, and issue credits and buy drafts direct on New York, San Francisco, and other centres, and thereby get the control of the American-Asiatic trade. . . .

"As a corollary to the banking or exchange question, I may suggest the great importance of a coinage by the Government to meet the requirements of the Asiatic trade, or more especially that of China."

On this scheme and the reasoning which supports it, a valued correspondent furnishes the subjoined comments, to which we would call the careful attention of all Congressmen and other persons who have been giving any heed to the views and opinions of our Secretary of the Treasury or our Consul at Hongkong. Since his letter was written Congress has ordered the coinage of a silver trade dollar, weighing 420 grains, and exceeding the Mexican dollar in value by 27-100ths of one cent.—Ed. Nation.]

To the Editor of the Nation:

Sir: Mr. Bailey's letter, while indicating his zeal to serve his countrymen, is founded on misconceptions so palpable that he cannot live six months in Hongkong without discovering for himself the futility of his suggestions. If the officers of the Government to whom he wrote had taken the pains to refer to the New York Chamber of Commerce, or to any merchant of general experience of foreign trade, the useless printing of the letter would have been saved.

His proposition is, in simple words, that English capitalists insist upon furnishing the money to American merchants for the silk and tea required for the United States; that they charge about 4 per cent. for doing so; and that American merchants tamely submit to this arbitrary treatment, "because it is the way in which the business has been done for years."

The actual facts are these: A New York merchant wishes to buy teas in China. His first care is to provide the wherewithal for buying. He finds at the moment there is no merchandise that will sell in China without a loss greater than the current rate of exchange. He finds further that if he sends out silver, the loss in freight, interest, and insurance is also more than the loss by exchange. Perhaps, being an ardent American, he then enquires for some fellow-countryman in China who has ready money in that country, and will be willing to receive it back in New York when the teas reach home. He discovers that no American capital goes to China for such purpose, and that his fellow-countrymen there are all in the same box with himself, and all

want money. He enquires what they do, and learns that some of the English residents have surplus funds, and that the American (as well as other English) buy of them at rates of exchange which rise and fall with the scarcity or abundance of such surplus, as anywhere else in the commercial world. He then does likewise. Mr. Bailey would here say that he knows all that (though his letter by no means intimates that he does), but that his point is that if American bankers would "issue credits and buy drafts," then there would be American capital in China ready for this national demand.

To follow that idea: One cannot issue credits and buy drafts to much effect unless he sends hard cash to the desired point to buy with. To send hard cash to China and purchase drafts involves going without interest for eight months (voyage out one month, waiting upon the market one month, transit of mail home one month, issuance of drafts on New York, which must be five months to match the six given on London), besides insurance and freight out, at the least 1 per cent. The lowest interest at which American capital could be procured for the business is 7 per cent. Therefore, the loss by interest and expenses to be made up by the buyer of the money is 5⅔ per cent. The English money in China is mainly from the sale of imports, and not only lies there ready for use without charge of interest, but has, to the other side of the account, the saving in insurance and freight home, amounting to 1 per cent. At home there is to the seller six months' loss of interest from the usance on the bills, which are at six months' sight, at the rate of 5 per cent. a year, say 2½ per cent., from which deduct 1 per cent., and loss to be made up is 1½ per cent. The English competitor for furnishing money would therefore be in the field on a basis 4 per cent. better than Mr. Bailey's powerful American bank, and it will be allowed at once that the patriotism of the most ardent American would not stand the test of such a difference.

Owing, however, to the demand for money to pay for the tea and silk to England and America (the first fivefold the latter), the rate of exchange ranges higher than the simple loss on sending home money derived from the sale of imports, and in point of fact the average of the year leaves a small margin over the cost of importing silver itself from California and Europe. That the margin is very small is shown by the fact that silver is actually shipped to England from China in the same years in which it is exported. The well-known facts of the case are: that exchange fluctuates greatly at those distant points; that the rate sometimes shows a profit on importing silver from England or California, sometimes a loss; that the condition of the import market for cotton fabrics and for opium affects it beyond the possibility of calculation; that the English banks, for the chance of an exceptional rate, are always ready to import silver at a very small margin on cost, counting interest at 4 to 5 per cent. If an American bank undertook to supply the funds needed for purchases of exports over and above the amount provided by sales of imports, which is what Mr. Bailey advocates, in the increased competition for bills which would follow it would at once have to face the 4 per cent. disadvantage above stated.

The simple explanation of the whole matter is, therefore, that England has an abundant surplus capital, and is willing to lend it to the United States to move across the ocean the Eastern products which she needs. That she does so at rates of interest and charges of commission which make it quite impossible for American capital to compete, if any offered for the purpose. That none offers for the purpose, if only for the other reason that the United States is only too happy to have some one else furnish the funds for the great Eastern trade, as she needs all her own money at home. Probably there are not many even here who object to a little British gold to aid their industrial enterprises.

I am able to prove beyond dispute the fact of the charges being low. When I first lived in China, 20 to 25 years ago, the prominent houses, notably one American, did a flourishing exchange business; that is, they acted as intermediaries between less-known houses and British capital, by buying the drafts of the former on London, giving them currency by their endorsement, and then selling them to the holders of British hard money. There was then but one English bank, and its business was often less than some one of the mercantile houses in its own department. Free trade, however, greatly increasing the volume of commerce, attracted cheap capital, and more and more banks established themselves, always cheapening rates, until the mercantile houses were entirely pushed from the business, the remuneration not being sufficient to pay clerk hire, except on a very heavy business.

With regard to shipments of silver from California direct instead of via England, as it is nearly all English money that comes to China from *either* place, it is a matter which concerns the English more than it does us. But it may console Mr. Bailey to learn, as he can if he enquires, that the English are already alive to the saving, and, as far as the complicated affairs of commerce allow, do now avail themselves of it. Mr. Bailey's view, that it is a monstrous thing that when the United States is already in debt to England every year for direct transactions, she should add $50,000,000 to that debt for her Eastern purchases, is specious but shallow. For of course it is only mutual advantage that could lead to such an otherwise unnecessary proceeding.

His second suggestion is, that the United States should coin a dollar of the same value as the Mexican. This step, well managed, might lead to valuable results. It has been several times considered in England, and rejected on account of the cost. It is quite useless to expect the least aid from the Chinese Government. It has not the power, if it had the will; for a Government which cannot establish a coin of its own can do nothing for a foreign coin. In lumps of silver the Chinaman finds a surety of value not to be had in anything endorsed by his Government. If, however, the United States will issue an unexceptionable dollar of uniform standard and value with the best Mexican, and sell them, with the loss of all expenses for ten years or so, and something below the value of the pure silver in them for the first five, very likely they will become current in Chinese outports, to the great convenience of every one there. It would cost the country a million or two of dollars, perhaps, and all the first would be melted up on arrival in China, but it would at last bear fruit to some one, if faithfully carried through.

EDWARD CUNNINGHAM.

Notes.

THE *Publishers' Weekly* has a useful department called "Index to Book Reviews," in which the classification is by publishers, and British journals are marked with an asterisk.——'Rouge et Noir,' from the French of Edmond About; 'The Hemlock Swamp, and a Summer at the White Sulphur Springs,' by Elsie Leigh Whittlesey; and a complete edition of Swedenborg's works, are among the announcements of Claxton, Remsen & Haffelfinger.——George Gebbie will publish shortly the fifth edition of a 'Biographical History of the Fine Arts,' by S. Spooner, M.D., with a supplement.——The March number of the *American Naturalist*, besides much interesting matter, contains Prof. O. C. Marsh's description of the "Fossil Mammals of the Order Dinocerata," with two plates of the curious skull of an animal which to the lay mind suggests a cross between a walrus and a rhinoceros, which carried three pairs of horns with tusks to boot, and which in other respects would be classed with the elephant and mastodon.——Petermann's *Mittheilungen* No. 2 of the present year gives a map of the disputed boundary in the San Juan or Haro Archipelago; and, to show the insignificance of the subject-matter of a quarrel between two great nations, adds for comparison a map of Malta on the same scale, the relative area being as 8 to 5.——G. P. Putnam's Sons add to their announcements of spring publications the following: 'Tylney Hall,' by Thomas Hood; 'Modern Magic,' by Prof. M. Schele de Vere; 'Facts and Fancies,' by Miss Sedgwick; 'Rejected Addresses,' by Horace and James Smith, illustrated; and 'The Vicar of Wakefield.'

—Mr. E. Steiger, the well-known German publisher and bookseller of this city, has devoted himself to the preparation, for the Vienna Exposition, of a complete collection of American periodicals, accompanied by an explanatory catalogue showing the characteristics of each periodical represented. As if this labor of love were not sufficiently arduous, Mr. Steiger has concluded to append to his catalogue a list of Original American Works (including translations, but excluding all reprints) and an index "in which the subject-matter of each will be found registered, so that on looking for any special subject one would be referred to the various publications treating of the same." Accordingly, he offers to furnish publishers and authors who wish their works so entered with the necessary blank forms, to be filled up and returned to him. We infer from a circular of his that our publishers have been rather indifferent to this gratuitous advertising, and that if the authors themselves do not come forward, his scheme stands in danger of being thwarted. We need not say that this would be greatly to be regretted. Mr. Steiger may have the poor consolation of knowing that Mr. Leypoldt has been equally unsuccessful in his endeavors to get complete returns from the publishers of their current issues. It is one more argument against the common notion that self-interest and self-seeking are distinctive American traits.

—Mr. C. F. Adams, jr., of the Massachusetts Board of Railroad Commissioners, has recently made an argument on behalf of the Commission before the Legislature of that State, in favor of the purchase by the State of what may be briefly described as the Fitchburg and Hoosac Tunnel lines of road. The purchase would include the Vermont & Massachusetts and the unfinished Massachusetts Central. His argument is this: The experience both of this country and of all others shows, in the words of Stephenson, that in

industrial enterprises "where combination is possible, competition is impossible." Railroads furnish the best illustration of this economical law, and the rate at which railroad combination all over the country is going on we all know. The only way in which the principle of competition can be introduced is by the ownership and management of part of the railroad system of a state by the state itself. This experiment has been tried in Belgium with great success, the effect of the economical official management on the minds of the managers of the private roads having proved very beneficial. To quote from a recent report on the subject: "The state, though always acting on a footing of equality in matters of rates, facilities, or purchase, has been able to lead or drive the companies to adopt its principles without putting in force parliamentary powers, or having recourse to anything but the moral influence of its position. For in spite of the hostility and criticism of its opponents, the state has been able to carry through its measures, and has made a fair financial success, inasmuch as the present year (1872) will probably show a net return of six per cent. upon the invested capital." This system the Massachusetts Commissioners wish to see adopted, and they think it far preferable to the present system of State supervision or regulation. Under this system (now in vogue throughout the United States), the State first gives the railroad to a number of private individuals, and then undertakes to regulate the profits. Now, the inevitable effect of this separation of ownership from supervision is that the corporation soon finds out that it must control the supervising power—the legislature; in other words, the supervising power left in the hands of the State is very soon regarded by the corporation much as an outstanding encumbrance, which must be bought up. Hence the lobby and many other iniquities.

—If, however, the ownership and the supervisory power were united in the same hands, Mr. Adams thinks there would be no more trouble; and he points to the case of local water-boards, where the water-supply is controlled by the local government itself, and asks, Who ever heard of a water-board lobby? The objection that governments have no business to meddle with private enterprises is disposed of very easily. Mr. Adams admits the principle, but says that there are exceptions to it. Whenever any business becomes at once a monopoly and an unendurable monopoly, he thinks the state justified in interfering. This is the present case of the railroads. One difficulty with the experiment Mr. Adams does not seem to have considered, and that is, that in case of the assumption by Massachusetts of one or two roads, and a really honest attempt at railroad reform, through a railroad board, the other unpurchased lines would at once attempt a combination with the board itself; they may not do this in Belgium, but they would in Massachusetts. Still, the principles of the argument are sound, and, in view of the history of the Hoosac Tunnel, the Hartford and Erie scandal, and the Marginal Freight business, any experiment commended to the public by so much ability and study as this Commission has given is worth trying.

—In the death of Dr. John Torrey, on the 10th inst., New York lost its most eminent man of science. He was born here, in the year 1796, has been connected with its institutions of science and learning from his earliest manhood, and here, in quiet perseverance, nearly all the work of a long and most industrious life has been done, and well done. His earliest publication —a catalogue of the plants inhabiting the vicinity of his native city—was almost the work of his boyhood, and of a time when good botanizing ground was found as low down as Canal Street. He lived to see his choicest botanical stations near home covered with brick and mortar, and to extend his investigations, first through the Northern States east of the Mississippi—producing, in the precious years which intervened between the taking of his medical degree in 1818 and his call to professorial duties in 1824, a volume which placed him at the acknowledged head of American botanists; then, in elaborating Dr. James's collections made in Long's expedition, he opened up the botany of the Colorado Rocky Mountains, to the highest peak of which a grateful pupil and ardent explorer has since affixed his name; and in due time, annexing Texas and California scientifically before they became politically ours, he bore the foremost part in the development of the botany of the continent. We need not here enumerate his writings, a large part of which are in the scattered papers, reports, etc., in which discoveries are first recorded; but the complete and elaborate 'Flora of the State of New York,' in two quarto volumes, and the unfinished 'Flora of North America,' should not pass unmentioned. Nor should it be forgotten, in estimating his labors, that, although from botany came his earliest honors and an enduring fame, his livelihood came from chemistry, which he pursued, if not with equal devotion yet with genuine love. Science is a jealous mistress, in our days more so than in former times. The highest peaks are single, and one must choose which to surmount; but the high table-land from which they rise may be more widely traversed. The circumstances of the time and situation prescribed, all but imperatively to Prof. Torrey, as to most of us, his line of duty, and required that the larger portion of his time and energy should be given to the work of instruction and to the practical applications of science. In the year 1824, soon after his marriage, he accepted the Chair of Chemistry, Mineralogy, etc., at West Point; in 1827, he was translated to that of Chemistry and Botany in the College of Physicians and Surgeons in this city, to which, a few years later, were added the duties of a similar chair at Princeton College. About twenty years ago he relinquished the latter, upon an urgent request from the then Secretary of the Treasury (who knew his value) to take charge of the Assay Department in the Government Assay Office. After this he soon gave up his duties at the Medical College, but was made a trustee of Columbia College, of which the Medical School became a department, and to which he gave not only invaluable services, but also his vast botanical collections and choice library. To these useful and needful services he gave his days—his nights to botanical researches quite to the last. Up to a few weeks ago, his light could be seen until near midnight in the herbarium of Columbia College. Up to Monday week, as we are told, he signed, although with feeble hand, the official report of the daily work at the Assay Office, faithful to every duty and every detail to the last; and then, at set of sun, and as peacefully, he went to his final rest. He was not only an eminently useful, but an eminently good man; and it is pleasant to know that his simple, unpretending, and spontaneous goodness was appreciated, had some of its reward even in this world, and so verified the Scriptural warrant—not, indeed, in houses or lands, or other worldly goods, for which he cared too little, but in that "good name which is better than riches," and in the esteem and affection of all who knew him. Never was man more entirely loved. Indeed, if only those to whom he has been helpful, even those upon whom he has lavished precious time and disinterested service, could gather this day (March 13) at his funeral, there would be a large concourse of mourners.

—The death of James Savage at Boston on the 8th inst. brings forcibly to mind the extent and value of his work as an antiquary. The more active part of his life was passed before the memory of the present generation begins. Born July 13, 1784, graduated at Harvard in 1803, admitted to the bar in 1807, chosen to deliver the Fourth of July oration in 1811, a member of the Legislature, Councillor, etc.—these are dates hardly associated with one whose greatest work appeared in 1862. Mr. Savage, however, was a man of amazing vitality, and at fourscore his heart and brain were as healthy and vigorous as at twenty. The numerous tributes to his memory which have appeared are full of testimony to the fact that for more than sixty years he impressed his individuality strongly upon all who met him. Honest, fearless, truthful, earnest, all of these great words were rightfully applied to him. His literary career more properly concerns us here. Mr. Savage had always a scholarly turn. He contributed papers to the *Anthology*, the *North American Review*, and other magazines. Some fortunate chance turned his energies to historical subjects, and he became the editor and annotator of Winthrop's 'History of New England.' The work was the corner-stone of New England history; the method of the editor was an example and incentive to all later students. Still later, he commenced giving form to his chief work, which was a genealogical register of all the settlers in New England before 1690, tracing their descendants for three generations. The book was finally published in 1860-1862 in four volumes, containing 2,500 pages 8vo. Such a work is without a rival. It is true that the materials were ample and the subject lay within unusually well-defined limits. The records of the early colonists were carefully preserved, and every facility was cheerfully given to the investigator. Still the patient labor, the unfailing energy required, the mere persistence for twenty years in the daily collection and arrangement of facts, were enough to hinder ordinary students. Mr. Savage was exceptionally brave in undertaking the task, as he was unusually fortunate in living to complete it. His work was of national value, for he traced the beginning of the most powerful section of that English race which has indelibly stamped its features upon the country. It is useless to say that the work of preparing the register was well done, for there has been no dissenting voice on this point. Mr. Savage did alone for the entire population of New England that service of classifying and preserving its ancestral records which a score of writers in other countries have done for a section of the aristocracy. As a literary feat in this branch of letters, it can best be compared with Dr. Johnson's Dictionary when contrasted with the work of the French Academy. A single author has succeeded in doing the work of a multitude.

—In one of Dr. Büchner's recent letters to the *Gartenlaube* written from this country, there is an amusing example of what to the unscientific mind might appear as one of the chief dangers of careless scientific observation. He is speaking of an evening party at which he noticed that the ladies in the round dances moved with a more gliding step than do their sisters in Germany. And this fact he explains by those laws of race which

gave the Indian his crafty, silent footfall as he approached the slumbering village in order to murder the innocent inhabitants. In the same way, might not the supper at parties in this country be an unconscious imitation of the orgy with which, in all probability, the victorious red man diverted himself after his victory? In the same letter the distinguished writer gives indication of almost equally acute political insight. He says of the Massachusetts Congressmen that they are, as a rule, among the most intelligent and advanced members of that body. This letter should be translated for the benefit of the inhabitants of North Easton and other places in that State.

—Mr. Tobias Lear, of Portsmouth, New Hampshire, was an early specimen of that class of New England youths who carried their education and thriftiness to the South, seeking and finding their fortunes. In 1783 he graduated at Harvard College, and at the age of twenty-three and after graduation returned to Portsmouth, where his father was a shipmaster, and afterwards a well-to-do farmer. At this same time General Washington was in want of a private secretary, who should also be the tutor of Mr. Parke Custis's two children, and he applied to General Lincoln for assistance in the matter. Lincoln, with the Rev. Dr. Haven, of Portsmouth, selected young Tobias Lear, who at once took up his residence with Washington's family, and became in all respects one of them, marrying for his second wife a niece of Mrs. Washington, and retained Washington's entire confidence during his life. Jefferson, on his accession to office, made Colonel Lear Consul-General in San Domingo, and afterwards to the Barbary powers. Coming home thence in 1812 on account of the declaration of war, he became an accountant in the War Office, and died while holding that place in 1816. What brings this old time office-holder to the surface again at this day is a letter of his recently printed by a relative, in which Private Secretary Lear gives some account of Washington's farming ninety years ago this month. "We are now enjoying the sweets of spring," he says, writing to a friend in Portsmouth, where, no doubt, the wind from the Isles of Shoals was far from being bland in the last week of March, if indeed the snow was not white upon the ground. "My General," he says, "is one of the greatest farmers in America; and I don't think I should be much out if I was to say in the world. . . . The General possesses in one body, where we live, near 10,000 acres of land. We employ upon it constantly upwards of 250 hands. We raise none of that pernicious weed called tobacco, but follow the more rational employment of providing for man and beast. . . . We are obliged to live at so great an expense" [although the General employs no overseers, and the farms are every day, "unless it is absolutely stormey," visited by the General himself] "that it brings in no profit. The negroes are not treated as blacks in general are in this country; they are clothed and fed as well as any laboring people whatever, and they are not subject to the lash of a domineering overseer—but still they are slaves." Mr. Long's note to the Boston *Transcript* adds that "Lady Washington" gave to Mrs. Lear some of her own and Washington's hair, with which, after the fashion of that time, Mrs. Lear wrought on a sampler of black satin these inscriptions:

"*This is worked with our illustrious and beloved General George Washington's hair:*

"Which covered his exalted head,
But now enrolled among the dead,
Yet wears a crown above the skies,
In robes of bliss which never dies.

"*This is worked with Lady Martha Washington's hair, relict of our beloved General.*

"I pray her honored head
May long survive the dead,
And when she doth her breath resign,
May she in heaven her consort join."

—A late *Athenæum* contains a story which ought to seem entirely incredible, but which, unfortunately, will not seem so to anybody conversant with the official mind in its lower forms of development. To the end of the world people will kill other people by pointing "unloaded" guns at them, and will fling into the fire, or store in leaky garrets and dripping cellars, records and books and pictures almost priceless. When the government of India was assumed by the Imperial Parliament, the Honorable East India Company's old quarters in Leadenhall Street were at once swept clean of the records there stored. No less than three hundred tons of these documents are said to have been sold to a paper-making firm, and vast quantities of history were at once converted into pulp; for instance, the whole history of the Indian navy perished in this way—and it was a formidable fleet that once sailed under "John Company's" flag, and one which habitually gave a good account of itself. From one of the cartloads of these records on their way to the tanks, an old leaf happening to blow down was picked up by a gentleman, who has laid it before the editor of the *Athenæum*. It is a brief letter written by the famous and infamous Villiers, first Duke of Buckingham, the favorite of James I., the companion of Charles, and the victim of Lieutenant John Felton, and is addressed to "My very loving friends, the Governors and Company of the East India Merchants." These gentlemen endorsed upon it the date of its writing and of its receipt, "November 28, 1619," and "December, 1619"; and further made a note of its contents: "My Lord of Buckingham about resigning his interest in my Lord of Warwick's goods." It runs as follows:

"After my heartiest commendations. Whereas his Majesty by his former letters, about the beginning of the last summer, signified unto you that he was pleased to bestow upon me that part which belonged to him out of the forfeiture incurred by the Earl of Warwick: Yet since he hath likewise been pleased to write also in my Co (*sic*) (Cousin?) of Warwick's behalf, I have thought fit to signify unto you that I do willingly remit to him likewise all my interest and . . . that I had therein by his Majesty's said warrant. And so I rest, your very loving friend,

(Signed) "G. BUCKINGHAM.

"NEWMARKET, 28th November, 1619."

The cousin referred to was, as we suppose, the Sir Robert Dudley, self-styled Earl of Warwick, who fled the country with his mistress, and a part of whose confiscated estates Buckingham, then in the height of his power, of course secured. This same Buckingham—not as yet a duke, however—also figures in another newly unearthed document which, as it happens, is mentioned in another part of the same journal. The "Addenda" to the 'Calendar of State Papers' (domestic series) for the period between 1580 and 1625 gives us a glimpse into Buckingham's house by means of a list of payments made by Mr. Endymion Porter at his lord's command. Among the sums disbursed is one of £303 "to the Lady Marquis." Another entry is "Alex. Brett, for pearl, £30 10s.; another sets down £1,000 to Sackville Crown for house expenses; another, £10 to a musician who presented a set of books; another, no less than £500 to Sir John Suckling, the poet; another, £200 to Lady Purbeck; and the list concludes rather provokingly with a mutilated entry: "given to Vandyke, the picture drawer—" ——.

—We find in the Shanghai *Budget* an account of a new Chinese periodical after the European model, called the *Ying-hwan-so-ke*, or *Monthly Magazine*. It consists mainly of reprints from the daily paper from whose office it is issued. In the second number, the subjects treated take this order: (1) comparative physiology; (2) the building of the steamer that first carried the telegraph wires from England to America; (3) humorous sketches from Japan; (4) ten sketches illustrating various phases of European and Chinese life; (5) five articles on Chinese literature, religion, customs, etc.; (6) two dissertations on style, etc., etc. The contents occupy 50 pages, and the magazine sells for 80 cash (about 7 cents) a copy. Japan, however, by far outstrips China. Twenty-four books were published in Yedo last year, of which nearly all were translations. "With one exception," says the *Japan Gazette*, "they relate to what were once foreign subjects. Seven are translations of foreign elementary works on chemistry or physics, four on geography, two on American history, and three on civil law." One gives the Japanese text of all the treaties of Japan with foreign countries; another, a full list of all Japanese officers above a certain grade; and a third is on the "Principles of Freedom." Meantime, the old-rags industry has sprung up, those now cast off being largely from stuffs of foreign make, whose coloring presents no obstacle to bleaching; and alongside of the hitherto exclusive manufacture of paper from mulberry bark, rice-straw, and similar fibres, the production of paper from rag pulp is now being tried under native auspices. A Japanese resident in London has begun the issue of an illustrated paper printed in Japanese (*Tai Sei Shimbun*, or *Great Western News*), designed to reflect, for the benefit of his countrymen at home, the opinions of those who have seen the world and learned European languages.

NEW WORKS ON BIBLE REVISION.*

ONE of the few creditable actions of James I. was the patronage he gave to the preparation of the Authorized Version of the Scriptures. It appears that this Solomon among kings was partly moved to this step by offensive expressions respecting popular rights contained in notes of the Geneva Bible, which was then in common use. The fact that the progress of philological study and changes in the English language imperiously call for another revision—for King James's Version was only a revision—is now practically acknowledged, even by the conservative class; and a British and an American committee, in co-operation with one another, are fairly at work on this important undertaking. Dr. Schaff has brought together valu-

* 'The Revision of the English Version of the New Testament. By J. B. Lightfoot, D.D., Canon of St. Paul's, etc.; Richard Chenevix Trench, D.D., Archbishop of Dublin; C. J. Ellicott, D.D., Bishop of Gloucester and Bristol. With an Introduction by Philip Schaff, D.D.' New York: Harper & Brothers. 1873.

able essays having relation to it from three of the most eminent English scholars, Lightfoot, Trench, and Ellicott, and has introduced them with an extended, instructive preface from his own pen.

On one point the plan of the present revisers will be conceded to be wise. They do not propose to make a new translation, but limit themselves to the correction of the old. The merits of the Authorized Version are too great to justify changes of a wider scope; while any rule less sweeping would leave untouched a portion at least of its grave and manifest defects. Two things are essential to a good translation. The first is an adequate acquaintance on the part of the translator with the languages which he has to employ in his work. This is the philological qualification. The second is that sympathy with the very life of the book to be rendered, by which one reproduces, so to speak, its living essence. The old English translations of the classics, even when they are grossly incorrect, often have this latter excellence in a most remarkable degree, and are in striking contrast with not a few accurate but colorless and lifeless products of more recent scholarship. Professor Goodwin did wisely in correcting the old version of Plutarch's Morals, instead of making a wholly new one. The idiomatic, racy flavor of that early translation, full of blunders though it was, is something almost impossible to produce at the present day. It is a style full of marrow and blood. There was a ferment, a profound religious agitation, in the sixteenth century, which discloses itself in all the literature of that day, and out of which grew the inimitable excellences of the translation of Luther and of the old English versions of the Bible. This peculiar pith, naturalness, and idiomatic life it is possible to preserve, at the same time that advantage is taken of the great advance made since in textual criticism and in the grammar and lexicography of the original tongues.

Of course, an enterprise of this kind has to contend against strong prejudices. Jerome, when he was preparing the Vulgate, was assailed, as Dr. Lightfoot shows, by the same objections which have been alleged lately against any alteration of the English Bible. It was said that common people would be perplexed by the variety of renderings, and their religious views would become unsettled. Even so great a man as Augustine participated in these scruples. Here we may indicate what we conceive to be the principal danger that besets the learned bodies to which this business has been committed. They will have to resist a pressure, emanating in part probably from some of their own number, to retain forms of expression which are known not to represent truly the original, but which have attracted to themselves, from long association, a sentiment of attachment. The plain duty of the revisers is to eliminate errors of every kind, wherever they are discerned. If the decision of all questions were left to the scholarly authors of the essays before us, in particular to Dr. Lightfoot, we should have no apprehension on this point. Nothing can be more sound and judicious than his exposition of the rules that should govern in the cases referred to. But there may be reason to fear that a majority even of the English committee may not be always found willing to abide by these principles. We will take a strong example in order to illustrate our meaning. The doxology attached to the Lord's Prayer (Matt. vi. 13) is acknowledged by competent critics to be an interpolation. This is the view of Lightfoot (p. 44) and of Ellicott (p. 122). It is a liturgical phrase that probably crept into the text from the margin. The revisers are manifestly bound to leave it out, and must do so if they would be faithful to their own professed canons. Yet we can easily conceive that objections may be raised to the omission of a phrase so identified in the popular mind with the Paternoster.

Dr. Lightfoot presents a convenient classification of the changes which the revision will effect. The first head is that of False Readings. The very defective character of the *textus receptus* will necessitate numerous changes having their origin in this cause. Some of these, as will be seen from the instance just given, are important. Most of them make no material alteration in the sense. The pericope of the woman taken in adultery (John i. 8–11), and possibly the close of Mark's Gospel, are, as Dr. Lightfoot wisely judges, cases to be treated by themselves. They are so incorporated with the literature in all languages which has grown up in connection with the Bible, that for this, if for no other reason, they cannot well be utterly dropped. The best course may be to include them in brackets. Possibly the doxology in the Lord's Prayer might be dealt with in a similar way. This, however, appears to us hardly necessary. The doxology is wanting in the other Evangelists; and how many of those who are accustomed to pray for the forgiveness of their "trespasses" know that they are taking a term, not from King James, but from the Prayer-Book? It is a curious sign of the strength of Anglican conservatism that in the Prayer-Book the phraseology of the earlier translations has been retained where it is not conformed to the Authorized Version. This, however, is not a more curious mark of ecclesiastical inertia than the erroneous printing of the Nicene Creed in the same manual of devotion; the epithet "holy" being omitted from the Nicene phrase, "one holy Catholic Apostolic Church." At first, probably, an error of transcription or of the types, it has been perpetuated; perhaps because an act of Parliament might be required to correct it.

From the consideration of textual errors, Dr. Lightfoot passes to the artificial distinctions created in the Authorized Version. The same Greek word is rendered, not unfrequently in the same verse or chapter, by different English terms. Examples are afforded by the use of "pity" and "compassion," in Matt. xviii. 33; "children" and "sons," in Matt. xx. 20; "separate" and "divideth," Matt. xxv. 32; "everlasting" and "eternal," Matt. xxv. 46. In all these, and in numerous other instances, an identical word is represented by several English words instead of by one. This strange proceeding serves to perplex the ordinary reader, by suggesting distinctions of idea where none exist. The reason which is given by the authors of our present version for pursuing this course is even more singular than the fact which they attempt to explain. They say that to adhere to one English word in such circumstances would savor "more of curiosity than wisdom," and that they might be charged (by scoffers) with some unequal dealing towards a great number of English words, if they took one to the exclusion of another. To us it would seem that the course which they adopted, arbitrary and misleading as it is, is much more adapted to excite "scoffers" than if they had given a correct and uniform rendering to the original text. The same rendering of different words, by which real distinctions are obliterated, is an equal blemish in the present version. In John x. 16 the same word *fold* stands for two Greek words, one of which signifies *flock*. The point of the passage, which depends on the distinction between many *folds* and one *flock*, is hence entirely lost. The confounding of the Greek words *to be* and *to become*, which pervades the translation, is not only an infelicity, but in many cases materially affects the sense. Faults of grammar, which are very numerous, can generally be corrected with ease. The ignorance of the translators with regard to tenses is one of the most conspicuous features in King James's Version. The failure to discern the precise meaning of the aorist, and the confounding of this tense with the perfect, is a fruitful source of confusion. The argument or train of thought of the sacred writers is, in some cases, hopelessly obscured from this cause. Examples are Romans vi. 1 seq.; Col. ii. 11 seq. Another striking instance is 2 Cor. v. 14. "If one died for all, then were all dead," says the received version. The Apostle says: "If one died for all, then all died"; that is died—potentially, or in idea—when He died: and this rendering is required by the context. Rom. v. 12 is, we think, a parallel instance. It should read, in the last clause: "for that all sinned"; that is, when the first man sinned, and not "have sinned," as our translators have it. There has been a world of theological discussion on original sin, which has connected itself with this verse, but the irrelevancy of which is seen the moment the signification of the aorist is perceived, and its distinction from the perfect. The neglect or mistranslation of the definite article, and the want of discrimination in the rendering of prepositions, will afford to the revisers an important field for the introduction of improvements. In lexicography the errors to be eliminated are fewer in number, although some of them are quite serious. In the treatment of proper names and official titles there is great room for revision. As Trench observes, how much more vivid is the impression made in the reading of Matt. xvii. 10, if in the room of *Elias* we substitute *Elijah:* "Why then say the Scribes that Elijah must first come?" It was the old prophet himself whom they expected to reappear. Our English Bible, as is well known, being not a fresh translation, but the product of a revision—as the title-page says, "with former translations diligently compared and revised"—presents the English language in the state in which it was at a still earlier day. Hence the number of archaisms to be weeded out is proportionately large. The substitution of a single word for another that is obsolete in the sense required will, in many instances, dispense with the need of a commentator's note. One benefit of the revision, it is humbly hoped, will be its tendency to shorten commentaries. Put *urgently* for *instantly*—which no longer has the meaning wanted—in Luke vii. 4, "They besought him instantly," and the true sense of the passage is at once visible. "Strain *at* a gnat," for "strain *out* a gnat," is a typographical error which has kept its place, no one being authorized to remove it, even if the majority of readers had so desired.

In these remarks we have confined our attention to the New Testament, to which alone Dr. Schaff's volume relates. The problems to be solved by the Old Testament Committees of Revision are, in some respects, quite different. They have more mistakes and blemishes to remove, but they are saved from much labor in the way of textual criticism; since unhappily, the materials for such an undertaking, however desirable it would be, do not exist.

RECENT POETRY.*

IN his new poem Mr. Morris has given his admirers new reason to admire, and the rest of the public some reason for being thankful to him, for, superficially at least, "Love is Enough" is unlike the narrative poems of which Mr. Morris's muse has lately been so prolific. It is more elaborately constructed than anything else that Mr. Morris has done of late years, and indeed we at the moment recall nothing in the 'Defence of Guenevere, and Other Poems,' highly finished and artificially skilful as was the workmanship in that set of poems, which shows more intricacy of elaboration than this poem. It is a "story which is told by way of a morality before an Emperor and Empress newly wedded," and shows forth the history of a certain King Pharamond. Pharamond the Freed, the playmaker styles him, because, having left crown and kingdom to seek her love of whom he has dreamed, and having, for the sake of her love, lost both the kingdom and crown, he finds that Love alone, and Love only, is enough, and that in his servitude and that of Azalais there is perfect freedom. The Emperor and Empress are in love with each other; they sit in presence of their burgesses, who fear lest the mutual love of their lord and lady should divert from their subjects the love the Emperor had formerly shown them; two lovers, whose love is in its early summer, serve to introduce the pageant by talks about it between them as they walk into the town from the peaceful farm beyond the walls; two lovers whose love is in its golden spring enact before the company the story of Pharamond and Azalais; between the scenes Love himself enters as a sort of chorus, and the music of love-songs is played

What the play sets forth is King Pharamond's love towards his people; the love passing that of brethren borne Pharamond by Master Oliver, his best knight and best counsellor and second father; and, finally, the love with which Pharamond is inspired by Azalais, whom Love shows him in many visions, and Azalais by Pharamond, whom also Love guides in dreams.

The main story is simple and common; but our brief synopsis will serve to show that Mr. Morris has surrounded it with accessories skilfully designed, which make the poem quite a masterpiece of artful workmanship. Add that, departing from his so-called Chaucerian verses, Mr. Morris has, in "Love is Enough," adopted a loose imitation of English alliterative verse, which admirably answers his purpose of steeping the scene in an atmosphere of mediævalism—of Mr. Morris's mediævalism, that is to say; of the mediævalism of those middle ages when life was made up not as life has been in every age known to history, but quite otherwise; when it did not mainly consist of the great facts of birth, and death, and land-travel, and seafaring, and marriage, and the love of children, and the hard necessity of earning salt to one's porridge, and hope, and ambition, and disappointment, and sunshine, and rain, and affliction, and disease, and the fear of death, and the consolations of religion; but when it consisted mostly of high-waisted maidens standing about in what Alice in Wonderland calls "Anglo-Saxon attitudes"; and of knights who either traduce these maids or ride safely across the portcullis in time to save their mistresses' character; and of walled towns with red-tiled roofs; and of shaveling priests; and of granges about which

"Deep green water filled the moat,"

while, within, three sisters pine for three knights who have returned no more

"Since the *Sword* went out to sea,"

and of haubergeons, and great store of other properties.

In the essential spirit of the poetry, in the range of feeling, and the depth of feeling which it addresses and arouses, and in the amount of permanent satisfaction which it gives, 'Love is Enough' will not be found different from the other poems of its author. It is true of him, under whatever concealments of carefully wrought surfaces he works, and whether he is professing simplicity and Chaucerian naturalness, or is abandoning himself with his eyes shut to a reverie of Norse life or of Greek life, that he is nevertheless always and everywhere the same. The passion of love, or rather a tranced and languorous dream of the sexual passion, dreamt by one who as yet knows neither men nor women, nor the workings of the human heart, this is always to be found in him; the equally dreamy and more apathetic philosophizing, to call it so, about the vanity of human activity, unless "love, still love," prompts it and is its object and its end, this is equally sure to be found; and so is the pensive and melancholy acceptance of the destiny of man—

"Man that passes by
So like the gods, so like the beasts that die"—

a destiny which is never protested against, and which one is never beguiled or thrilled into forgetting. Very surely, too, as every reader of Mr. Morris knows, does one find marvellously skilful picture-painting, and with one of these pictures we shall bid good-by to the book. It is a book, we may say, which we do not profess to have read with complete satisfaction. The pleasure given by Mr. Morris's poetical skill and his highly developed taste is a pleasure of so high and so poetical an order, that at once the reader applies to him a very severe standard. We demand of a poet so well furnished for the plying of his vocation, that he shall produce in us those inspiring and delighting and elevating effects produced by the best poetry of the poets,

"Who on earth have made us heirs
Of truth and pure delight by heavenly lays."

This Mr. Morris does not do, and the reader is too apt to become ungrateful for what he does get, and to grow weary—although it may properly enough be urged that Mr. Morris has given the reader other reasons for being weary than the one which we have mentioned, and we may all be glad for everybody's sake that the narrative poems are, for the present at least, at an end. The passage which we were to quote is the one following. There are prettier things in the book, but this contains an entirely characteristic "decorative" picture, and the verse illustrates the metre chosen for the body of the poem. Azalais, walking out in the May morning, prompted by Love, who has brought Pharamond to the shores of her land, finds the King sleeping on the turf, and far spent with the toils of his wanderings:

"—Not death, for he sleepeth; but beauty sore blemished
By sorrow and sickness, and for all that the sweeter.
I will wait till he wakens and gaze on his beauty,
Lest I never again in the world should behold him.
—May be I may help him; he is sick and needs tending,
He is poor, and shall scorn not our simpleness surely.
Whence came he to us-ward—what like has his life been?
Who spoke to him last—for what is he longing?
—As one hearkening a story I wonder what cometh,
And in what wise my voice to our homestead shall bid him.
O heart, how thou faintest with hope of the gladness
I may have for a little if there he abide.
Soft there shalt thou sleep, love, and sweet shall thy dreams be,
And sweet thy awaking amidst of the wonder
Where thou art, who is nigh thee—and then, when thou seest
How the rose-boughs hang in o'er the little loft window,
And the blue bowl with roses is close to thine hand,
And over thy bed is the quilt sown with lilies,
And the loft is hung round with the green Southland hangings,
And all smelleth sweet as the low door is opened,
And thou turnest to see me there standing, and holding
Such dainties as may be, thy new hunger to stay—
Then well may I hope that thou wilt not remember
Thine old woes for a moment in the freshness and pleasure,
And that I shall be part of thy rest for a little."

Among all the books in verse which we have looked over recently—and the number of such "has increased, is increasing," etc., as fast as ever before—we believe the one best adapted to please is the unpretending compilation called 'Songs for Our Darlings.' We are glad to recommend it to all parents who have on their hands young ladies and gentlemen now just beginning to commit poetry to memory; or for whom it is designed that some such employment shall speedily be provided in the interest of peace and quietness, and lest a worse thing should befall them. There is hardly one of these pieces that is not excellently fitted for its purpose, and the quantity of them is bountiful. Many old favorites we observe in turning over the pages, but also many new ones drawn from recent English and American writers, such as Miss Marion Douglas, the author of 'Lilliput Levee,' and the numerous other writers for children who have been so successful in their task, that we are constrained to admit that while we think Cowper's rose,

"Just washed in a shower
Which Mary to Anna conveyed,"

ought to be in every family, we are persuaded, too, that room should be made for these scores of new-comers also. It is not a painfully pious collection, we may add, but good-natured, and playful, and spirited. Yet the parent will find in it a very good body of morality on such subjects as that of fighting the cat; of stealing jam; of being greedy about tarts, and afterwards suffering from pain in the stomach; of being generous with your plum-cake, and consequently saved from the not dangerous but painful complaint just mentioned; of untidiness in dress; of unwillingness to put one's doll to bed, and be dressed for "company tea"; of precipitancy in bringing home pies from the baker's and breaking the pie-dish; of assaulting and slapping one's smaller sister; of waking the baby; of crying because one's face is to be washed; of playing truant, and coming to the county jail at last; of rudeness to old ladies, and of many similar topics, all of which are handled freely and forcibly.

Here is an apostrophe to chastity, from a poem entitled "The Vendetta," which is the work of Mr. Thomas B. Peacock, a Western poet, who

---

* 'Love is Enough: or, The Freeing of Pharamond. A Morality. By William Morris.' Boston: Roberts Brothers. 1873.
'Songs for our Darlings.' Boston: J. E. Tilton & Co. 1873.
'Poems. By Thomas B. Peacock.' Independence: Kansas Democratic Publishing House. 1872.
Rhymes Atween-Times. By Thomas MacKellar.' Philadelphia: J. B. Lippincott & Co. 1873.
'Garnered Sheaves: The Complete Poetical Works of J. G. Holland.' New York: Scribner, Armstrong, & Co.

appears to reside far inland, in Missouri, but whose poetry deals much with the ocean and pirates:

"Chastity! thou that long hath held
The World's existence on in Virtue's modest cheek,
Man owes to thee in heart, joy knell'd,
For little pure that's saved from Vice—Corruption's wreck—
Warm thanks to surface ever gurgling up,
As o'erflows th' boiling sparkling chaldron cup."

Here is a much warmer passage, taken from the same poem, descriptive of the person of the Countess Inez Galvo, afterwards mistress of the sea-rover "Gonzailes":

"Ah! here's what allures—here's what entices—
Leads man to virtue or deep into vices—
No sylph nor nymph more graceful could be
Than Inez th' beautiful Pearl of the Sea.
A pearl she was if perfection implies,
Her lips were carmine, dark lustre her eyes;
With brow as fair as lily which blows,
Or airy flake on the mountain's repose;
Carnation cheek, smile of love, teeth of pearl,
A being look'd she from Heavenly world.
Hair hue 'twixt hyacinth and raven's plume—
From Paradise an angel stray'd—Fate's doom!
Like a pearl she was found on the dark rolling sea,
And the only one saved from the wreck of the *Bee*."

'Rhymes Atween-Times' is a formidable three hundred pages of verse, written "in the between-times of a busy life," by Mr. Thomas MacKellar, and which, "yielding to the suggestion of his long-known, large-hearted friend, Mr. George W. Childs," Mr. MacKellar now collects and publishes. He mingles with these some poems which have appeared already before, in book-form, for in the course of his life he has published several volumes of poems besides this one. We make no mistake, however, when we say that one poem of Mr. MacKellar's is better known than all the many others put together, for Mr. MacKellar is the author of the song beginning, "Let me kiss him for his mother," a performance of which the authorship is perhaps known to one in twenty-five thousand persons who have heard the music. This is a literary fate with which we should think Mr. MacKellar might well enough rest content; though we confess we have read only a hundred or so of his pieces, and something fine may be laid up for whoever explores the rest. Here we give a fair specimen of Mr. MacKellar's productions:

"'Twas pitiful the girl
Lay in a pauper coffin:
Her cheeks were like the pearl,
For tears had wash'd them otter.
Ah me! her lot was sad and wild,—
A fallen mother's hapless child.

Some children seem, when dead,
As though they are but sleeping;
Her eyes, so woe-bestead,
Were sunken, as if weeping
Had emptied out the fount of life
In streams of agony and strife.

Her fingers were as thin
As starving want could make them;
Mere bones encased in skin,
The feeblest strain might break them;" etc.

'Garnered Sheaves' is the title under which Doctor J. G. Holland has collected all his poetical works, from the latest back to 'Bitter-Sweet.' Many years it is since the late Mr. Edward Everett's commendation, printed in the back of the volume, we think, induced us to read that poem; and what with the commendation of such a man, and what with the native fitness of the poem itself to please the taste of some readers, we were pleased with it in a degree which we have not found equalled as we meditated it a second time in these pages before us. But the book sells; and after that there is nothing more to be said about it—except that the charge of platitude has been known to be brought against the thinking in it, and of falseness and feebleness against the sentiment. A middle-aged district schoolmaster in school-hours its thinking will always suggest to some persons; and to these the sentiment will perhaps continue to suggest the same gentleman after school-hours, when some of the larger girls are to be reasoned with. 'Kathrina' remains the least pleasing of this author's works, and 'Daniel Gray,' and one or two of the shorter and later poems, the best. These latter have a genuine merit as character sketches, well felt and well expressed, and they are not weighted down as the more ambitious pieces are. A steel engraving of the poet adorns the front of the volume, which many of his readers will be glad to look upon, and there are half-a-dozen other illustrations.

MANUALS OF LITERATURE.*

PROFESSOR HART'S "Manual" he has made to cover the whole field of English literature from the "Brut" and the "Ormulum" down to the London *Times* and Tennyson. He designs it as a text-book for use in schools and colleges, and also as a book of reference for the common reader. It appears to us to be fairly well adapted to serve both purposes, and we should be unwilling to say more than fairly well. A reader turning to the general index may perhaps look up the title of 'The Ring and the Book,' and be referred to p. 512. There he will find 'The Ring and the Book' mentioned at the end of a list of the poet's works, and thus remarked upon: "The poem last-named is his largest work, and the one in which all his qualities, good and bad, are most strongly marked." The whole notice of Browning which the school pupil is expected by the author to learn is as follows: "Robert Browning, 1812—stands conspicuous among the poets of his day, being inferior to Tennyson only." Then for the more advanced reader there is this notice of Browning's "Career": "Mr. Browning was educated at the London University. He was married in 1846 to the poetess Elizabeth Barrett, since which time he has lived on the Continent." Next we are told that his first publication was 'Paracelsus,' that the critics commended it, but that it met with little popular favor; that it was followed by the tragedy of 'Strafford,' which somehow did not succeed, though good judges thought it should, and though presented on the stage by so eminent an actor as Macready; that "so has it been pretty much with all Mr. Browning's works," which a few persons ardently like, but which repel the many by their studied obscurity. The list of the poet's works from which we have quoted is then given, and the sketch closes with six lines of critical remark quoted from Mr. E. P. Whipple, and embodying the fact that in the belief of Charles Dickens "'A Blot on the Scutcheon' is the finest poem of the century." This, it will be seen, is neither an extremely good nor an extremely bad account of Browning. A few more dates will be asked for by those who want a book of reference and somewhat less of excessively commonplace criticism taken from all kinds of sources; while as for the pupils who are to use the manual as a text-book, it is not plain that their coarse print is going to give them anything at all to carry away, nor that they will be much the better for what some of them may get from the fine print intended for their elders.

Uncontemporary authors, especially the more important, and those about whom there has for some generations been common consent and settled opinion, of course fare better at Mr. Hart's hands, and the book becomes more satisfactory the further back one goes. It is evidently proper that the young man should be taught that Jonson was called Rare Ben, and that Jeremy Taylor was the Shakespeare of Divines, whatever we may think of his learning, that, in the opinion of Mr. Theodore Tilton, "swords have not keener edges nor flash brighter lights than the sudden similes drawn by Mrs. Barrett Browning." And of this useful and well-established information the six or seven hundred pages of Mr. Hart's volume contain a vast deal, tolerably well condensed and arranged. We should add that one or two features of the work are unusual in such compilations, and for that and other reasons valuable. Thus, there is a good history of English hymnody, and a full account of the origin of the English Bible and Book of Common Prayer and of the Assembly's Shorter Catechism. Divines and theological writers are very profusely enumerated, though the sketch is apt to be bald enough in individual cases, and the enumeration to include writings which once were, rather than now are, parts of English literature. A volume of the size of this may easily be at once much too full of this kind of matter, and not nearly full enough. Indeed, the general criticism to be passed upon the book in all its departments is that there should be either a great deal less or a great deal more of its minute comprehensiveness; and, quality considered, less would have been preferable to more.

If Mr. Hart's 'Manual of English Literature' suffers from what may be called the obviousness of its criticisms, Mr. F. H. Underwood's 'Handbook of American Literature' is now and again open to another and opposite objection, the editor's comments being occasionally marked by a certain vivacity which gives summons to the reader's sense of the becoming. Occasionally they are of an absoluteness of statement which would not be out of taste in an inspired writer—Isaiah or King David; still it is not to be denied that they entertain. Speaking of Mrs. Stowe's works, for example, Mr. Underwood remarks of 'The Minister's Wooing' that "the scene is laid in Newport in the last century, and that the characters (excepting Aaron Burr, whom the author, very properly, did not know much about) are among her finest productions."

'The Normal Debater. Designed for the use of all Common Schools, Academies, and Colleges; as well as a Guide for Teachers' Institutes and Business Meetings in General. By O. P. Kinsey.' Cincinnati: J. Holbrook. 1872.

'A Manual of American Literature. Designed for the use of Schools of Advanced Grades. By N. K. Royse.' Philadelphia: Cowperthwait & Co.

'English Literature: a Historical Sketch of English Literature. By Richard Malcolm Johnston and William Hand Browne.' University Publishing Co.: New York and Baltimore. 1873.

'A Manual of the Art of Prose Composition, for the use of Colleges and Schools. By J. M. Bonwell, D.D., President of the Wesleyan Female College, Macon, Ga. Louisville, Ky.: John P. Morton & Co.

This approval of the lady for keeping away from evil communications and bad companions is a stroke which it would not have occurred to most persons to make, however desirous of being civil to Mrs. Stowe. Burr, by the bye, comes in for another pat from Mr. Underwood. When Mr. James Parton's biographies are up for discussion, Mr. Underwood remarks of the 'Life of Burr' that "not even Mr. Parton's plausible art can satisfy those who know the history of the last century that Burr was not a thoroughly depraved man." Henry Clay, Daniel Webster, Alexander Hamilton, Thomas Jefferson, are other historic personages whom Mr. Underwood evidently regards with some liveliness of feeling, and in contemplating whom he perhaps would find it both difficult and distasteful to maintain that philosophic calm which confers such gravity upon the pages of Hallam, and which makes it, for some people, reposeful even. Mr. Underwood is of another creed: "It is especially true in Boston," he says, "and perhaps in other cities, that there is a tendency common to literary, pictorial, and musical art as well as in the manners and speech of 'society,' which controls the taste and shapes the manners of the time. This is the spirit which pronounces any direct and manly utterance vulgar, and prefers the *etching in* of a thought by some soft-voiced stammerer." In New York, on the other hand, a little more of self-restraint and cultivation would be good for us. We like pictures of large patterns, and are far from "the spirit which induces young authors to strive for concrete prettinesses and affectations, and to consider a sentence beautiful only when, as Turner said of Guido's Mater Dolorosa, it is polished to inanity."

With most of Mr. Underwood's opinions the opinion of the better educated half or three-quarters of our reading public will be in general agreement. The best quarter of this public will probably not feel under greater obligations to him than those under which he has put them by making a full selection of specimen passages taken from a majority of eminent and respectable American authors. This he has done with success. Every one will miss some pieces which he, had he been the compiler, would have inserted, and will wonder over the admission of some authors and the exclusion of others. We for our own part should not have admitted the late Alice Cary, if her sister Phœbe was to be excluded. Nor, if Mr. Grenville Mellen, Mrs. Prescott Spofford, Dr. Orville Dewey, and General Henry Jackson are to be included, should we know how to leave out some account of Mr. Bronson Alcott, Mr. Allibone, Dr. Hosea Ballou, Dr. Jacob Bigelow, who has written some very good and well-flavored things; H. H. Brownell, the battle-poet; George Calvert, Caroline Chesebro, Moncure D. Conway, F. J. Child, Asa Gray, W. D. Whitney, General Dix, Mrs. Follen, Horace Greeley, H. C. Lea, who has written one or two of the few American works creditable to our scholarship; C. G. Halpine, Richard Henry Lee, Madison of the *Federalist*, surely an important writer in American literature; Dennis Mahan, Lindley Murray, C. E. Norton, Schoolcraft, Dr. N. B. Shurtleff, William Swinton, J. H. Trumbull, Robert Kelley Weeks, Francis Wharton, William Wirt, Theodore Winthrop, and a dozen others, great and small, but any of them as worthy of a place in such a compilation as the late Alexander Everett or Mrs. Elizabeth Akers Allen—to take two names at random, without disparagement to the persons bearing them.

This volume, let us say, is one of two, the former being a 'Handbook of English Literature,' as this of American.

Mr. O. P. Kinsey, who has prepared a work called 'The Normal Debater,' says that he did so because he saw that there was great need of it. "It is painful," he says, "to behold how little the greater number of professed scholars, even graduates, know of the machinery of business meetings." In their literary societies and debating clubs they have been accustomed to a set of routine by-laws and rules, drawn up to meet the special demands of some particular organization, but these, says Mr. Kinsey, seldom have any points of harmony with the practice and demands of general custom. It appeared to him very necessary, then, that a body of rules should be provided, by a brief study of which any artisan or farmer called on to preside at a public meeting should know how to conduct its business as moderator, chairman, speaker, or what not, and, if not called on to preside, should be able to maintain his rights as a member, and prevent himself and his fellow-citizens from being duped. We confess to being in a condition something like that deprecated by Mr. Kinsey and those friends of his who urged him to publish 'The Normal Debater'; but so far as our judgment goes we should say that he has made a book which will be helpful to a good many persons. There is less than a hundred pages of it.

'A Manual of American Literature,' by Mr. N. K. Royse, is a good-natured book, which, on its twenty-second page and the two or three preceding gives brief characterizations of our "prominent poets—Longfellow, Bryant, Whittier, Poe, Holmes, Lowell, and Saxe"—saying of Poe that "even 'Annabel Lee,' his sweetest poem, is sadly marred by the fault-finding and despairing tone which pervades it," and passing similar undeniable judgments on Poe's companions. A foot-note to the twenty-third page adds to these names the thirteen following, as those of our best-known later poets: T. B. Aldrich, J. G. Holland, E. Hopper, S. W. Patten, T. B. Read, Theodore Tilton, R. G. White, Bret Harte, J. J. Piatt, Walt Whitman, G. D. Prentice, G. W. Cutter, and A. Pike—a not very Archilochian catalogue, but as Archilochian as the rest of the book. The selections, which are from Mr. Royse's "prominent writers" rather than other writers, make the volume a volume of good reading, although some of it seems a trifle antiquated.

Messrs. Richard Malcolm Johnston and William Hand Browne have made a modest "historical sketch of English literature from the earliest times," which we are disposed to think would be a good text-book in schools and academies for youths and young ladies. It is certainly a cleverly planned and well written sketch, not too compendious, level with good current criticism, not dry, nor goody nor dull, and seems to us very well suited to the end which was had in view—namely, to furnish "a faithful if meagre outline map of the wide and fair domain awaiting students who have just reached the point where they begin to take a genuine interest in the reading that enlarges knowledge and stimulates thought, an outline not difficult to fix in the memory, and serving to locate and elucidate subsequent irregular or desultory reading." We believe we should have enlarged the volume by making a freer use of quotations; but the teacher will know how to make some of the scholars' other pursuits supplement the text in this respect, and the text itself will sharpen the thirst as well as the relish for good literature.

Of the old-fashioned kind of "composition and rhetoric"—the treatise which begins by teaching the uses of punctuation and proceeds to teach the nature of the sentence, and so goes on to letter-writing and prosody, and the composition of invitations to dinner—we have in Dr. Bonwell's 'Art of Composition' a very favorable specimen. It covers all the field that such works as 'Quackenbos' used to cover and much more, and covers it much better. It begins humbly and at the very beginning, among the rudiments; and that is where such books should begin, even when they are to be used in nine-tenths of our colleges; it goes on with great fulness and with plentiful provision for extemporary and other exercises, so as to be a text-book for a two-years or three-years course if necessary; and at the end, and in its more difficult parts, it consists of an amount of logic and rhetoric which will make it a useful introduction to the more elaborate treatises, such as those of Campbell and Whately.

English of the XIVth Century, illustrated by notes, grammatical and philological, on Chaucer's Prologue and Knight's Tale. Designed to serve as an introduction to the study of English literature. By Stephen H. Carpenter, A.M., Professor of Rhetoric and English Literature in the State University of Wisconsin. (Boston: Ginn Brothers. 1872.)—The running title of Professor Carpenter's 'English of the XIVth Century' promises, perhaps, a little too much; but when we read the title-page we find out exactly what it is; and it is a book which we are glad to see. It is a new evidence of activity in the philological study of English, and a new help to the study. It offers to our schools a neat edition of the Prologue to Chaucer's Canterbury Tales and the Knight's Tale; with a life, grammatical introduction, notes, and etymological glossary.

The notes are the special merit of the book. They are very numerous. Morris's notes are full, compared with anything we had before on Chaucer, and they answer very well; yet they make about 35 pages, while Professor Carpenter gives us 160. They are not merely explanatory, but discuss the words at liberal length, after the manner of Craik's English of Shakespeare, telling us interesting facts about the derivation, changes of meaning, historical suggestions, and the like, of the words in Chaucer and any of their kindred. There is a great deal of good work in them. Professor Carpenter has brought together a store of good things in philology from Trench, Marsh, Müller, Craik, and Abbott, and illustrative passages from old English writers, many of them taken with due acknowledgment from Tyrwhitt and Morris, but in great part the fruits of original study of other parts of Chaucer, Gower, Piers Plowman, the Wycliffite translations, and less-known authors. There are also frequent explanations of obscure idioms and other grammatical matters, by references to the Anglo-Saxon. Students who know little literature and less philology, and who will not give their days, much less their nights, to the study of scientific grammars and dictionaries, may here find plenty of attractive philological matter served up in such a way as to tempt their taste without much tasking their patience.

There is occasional indefiniteness of statement which might mislead beginners, and which we the rather notice because we have known that the examples of it in the first note have made an unfavorable and unjust impression about the book on casual examiners. The note is on *whan*, and reads:

"Adverbs of time, place, and manner are derived from the pronominal roots, and therefore have a conjunctive force; *e.g.:*" (Examples follow, and then) "Adverbs of *place* are derived from the A. S. dative (locative); etc." A few adverbs are so derived, and some of them have a conjunctive force; and some of the pronominal adverbs of place are from locatives, though *hence, thence, whence,* which he has just enumerated, are not.

We hope the book may be widely used, and brought to perfection by many editions. Every one who speaks English ought to study Chaucer.

An English Grammar and Reading Book, for lower forms in Classical Schools. By the Rev. O. W. Tancock, A.M. (New York: Macmillan & Co.)—Mr. Tancock's book contains a brief historical grammar, something more than a hundred pages of extracts for reading and study, and a full etymological glossary. The subjects treated in the grammar are well chosen, the method good, the language clear and concise. But prosody should be added, since many of the extracts are verse, and there is no topic on which the common grammars are more deficient. So far as we have tried the glossary, it is good with one exception. In obedience to the "bull of the illustrious and infallible Pope Freeman" and the *Saturday Review, Anglo-Saxon* is banished. That was to be expected in a book of the Clarendon Series. But Mr. Tancock does not even avail himself of Mr. Freeman's permission to speak of *Old English*. He calls all words from Beowulf onwards simply *English;* so that he gives us a glossary in which varieties of French and Old French are carefully discriminated, while Anglo-Saxon, English, and all the intermediate dialects make one promiscuous crowd.

The extracts for reading are of the best. One by one we recognize them as specimens of that which the critical judgment of England most cordially commends. There are selections from Longfellow; we notice none from any other American. As we glance through the book, we read or remember the extracts with unfailing pleasure; but when we lay it down, and recall our American Reading Books, we recognize in it a peculiar depressing tone and quality. These monotonous cadences of Morris with their dying fall, and these exquisitely finished verses of Tennyson wailing over the vanished life and heroes of Old Time, which run through the book and give its pitch, have a death in life in them, have about them the halo that hovers round decay, and they make a most striking contrast to the breezy, exultant, prophetic lyrics and orations on which Young America is fed.

Words and Places: or, Etymological Illustrations of History, Ethnology, and Geography. By Isaac Taylor, M.A. Third edition, revised and compressed. With maps. (New York: Macmillan & Co. 1873.)—This excellent work, which in England "has already been adopted by many teachers, and is prescribed as a text-book in the Cambridge Higher Examinations for Women," deserves to occupy a similar place in this country. Acquaintance with it might properly be made a condition of admission to teach in any school where geography is studied, and it ought to form part of the school furniture along with the atlas and the globe. Tracing the origin of the names of places from common nouns, and, conversely, the derivation of common nouns from names of places, leads into so many fields of learning that it is of itself almost a liberal education. However, 'Words and Places' may be enjoyed in quite another way than as a text-book (in which use of it, by the bye, the teacher will do well to be as undogmatic as the author). As desultory reading it will prove abundantly entertaining. There are numerous notices of names in our United States geography, with some very just remarks on the "barbarous character" of a large proportion of them, as "utterly inappropriate, and fulfilling very insufficiently the chief purposes which names are intended to fulfil." One of the worst features of our nomenclature—the endless repetition of the same name—might be mitigated by combined action on the part of our State and our Post-office authorities; the former refusing to recognize any new town name already to be found in the gazetteer, and the latter withholding postal facilities till the name was exchanged for one which would not give rise to confusion. To make this action of the Post-office retroactive would probably be regarded as impracticable.

Chapter XVII., on the principles of name-giving, is followed by two very useful lists of some of the chief adjectival and substantival components of local names, duly classified. The seventh adjectival head is "Configuration," under which are instanced *Trebizond* and *Montevideo*, the two occurring side by side. We have had the curiosity to trace out both these names in the profound analysis to which Dr. Egli has subjected his 'Nomina Geographica'—a work of sufficiently different scope to be a desirable possession in addition to 'Words and Places.' They occur nearly eighty pages apart, and under different grand divisions, so to speak, affording a good illustration of German thoroughness:

a) INHÄRENZ: 1. Eigenschaften; B. Sondereindruck; II. Apriorisch; *c)* Raum; *β)* qualitativ: 'Form.' I. Körperformen; A. total; 2) bildlich; *b)* nach Kunstobjecten—*Trebizond.*

c) RELATION: 1. Räumliche Relation; B. Lage; II. Horizontal; *b)* Physisch; 1) standfrei; *a)* formell; IV. nach Bergen—*Montevideo.*

The Great Events of History from the Creation of Man till the present time. By William Francis Collier, LL.D., Trinity College, Dublin. Edited by an experienced American teacher. (New York: J. W. Schermerhorn & Co. 12mo, pp. 377.)—Mr. Collier's 'Great Events of History' will serve very well as a complement to Mr. Freeman's 'Outlines of History' lately noticed by us. It does not aim, like Mr. Freeman's book, to give a complete continuous history, but to present "a series of pictures" which shall fix in the mind of the learner the knowledge of the most important events. This is a desirable thing to accomplish, and it is very well done, in an interesting style—if frequently too rhetorical—and with considerable picturesque detail. The peculiar and most valuable feature is the assignment to each chapter of a "Central Point of Interest" about which the events are grouped. These are generally well selected, but, on the whole, we would rather have history group itself about great men than great events; would rather, for example, give William the Silent than the siege of Leyden, Gustavus Adolphus than the battle of Lützen.

The author shows good judgment in omitting British history in a book designed for English schools, in which, of course, the history of England is studied in detail, and we wish the American editor had shown equal judgment. It was very well, perhaps, to add the Franco-Prussian war at the end; but seeing that Mr. Collier had chosen to begin at the Christian era, we see no reason for prefixing twenty-nine pages of earlier history, of which fourteen are devoted to the people of Israel, about two-thirds of a page to Greece, and less than half a page to Rome. And there is certainly as good reason for excluding American history as British. The pupil will perhaps be rather bewildered by coming upon King Philip's War, illustrated by a passage from one of Everett's speeches, sandwiched in between the Fall of Granada and Luther's Reformation. Neither is this American part so well done as to justify its insertion. On page 314, we have a succession of eleven steps in the progress of the sentiment of disunion, the third of which is, "Mr. Quincy was here called to order by Mr. Poindexter."

Of Mr. Collier's false rhetoric we have already spoken. A few other defects may be mentioned. He asserts gravely, p. 58, that Julian the Apostate was prevented from rebuilding the Temple of Jerusalem by "balls of fire bursting again and again from the earth." On the next page, Theodosius is, by implication, commended "for having put down by rigorous laws the last remnants of Paganism and the Arian heresy"; for Mr. Collier goes on with a "but" to condemn his massacre of the Thessalonians as "a dark blot upon his fame." There is no intimation, by the way, either in text or chronological table, that Theodosius united the entire empire under his rule. On p. 56, the curials are called "men high in the magistracy," instead of the hereditary governing aristocracy of the towns; p. 359, Lorraine is said to have taken its name from the Emperor Lothaire, instead of from his son.

The book contains some very good chronological tables, lists of distinguished men, and a geographical appendix, one of its best features.

The Historical Geography of the Clans of Scotland. By T. B. Johnston and Col. James A. Robertson. (Philadelphia and New York: Geo. Gebbie.)—This is a thin quarto containing a large colored map of the Scottish clans, with the possessions of the Highland proprietors according to the acts of Parliament of 1587 and 1594—a period when, as is stated in the explanatory text, "most of the clans held their original positions, as the encroachments and oppressions of the stronger ones had not been fully effected." "The rotation and the numbering of the clans have been made exactly as they occur in the Acts of Parliament," and the map is offered to the public as the first and only properly authenticated one of its kind. The letterpress consists besides of statistics of the strength of the Highland forces in 1715 and the badges and war-cries of the clans. Then follows an itinerary of Prince Charles, the Pretender, from the time of his landing to his flight from the country, and a detailed account of the three important and decisive battles of his campaign on Scottish soil—Prestonpans, Falkirk, and Culloden, illustrated by plans of each engagement and a general map showing the routes of the contending armies. And finally, the Act of Parliament of 1746, for disarming the Highlands and restraining the use of the Highland dress, is reproduced in full. This work, therefore, has a decided value for the student of English history in connection with his other reading. It is handsomely printed and bound, but the punctuation has been surprisingly neglected.

Fine Arts.

THE KENSETT RELICS.

THE quantity of work left behind him by the late J. F. Kensett is a matter of honest astonishment to the public, considering the apparent hesitancy of the supply when he lived. It was not an easy thing to obtain a specimen from Mr. Kensett. Intending purchasers were often disappointed, and the dealers who approached him with never so pathetic appeals knew well what it was to descend empty from the studio. The products of his toil thus kept an appearance of preciousness and rare estimation. People supposed that the flow of his art was difficult, as it was exquisite and pure. But what the living Kensett gave so sparingly, the dead Kensett gives in a cataclysm. A few dozen or a hundred posthumous works might perhaps have been expected by his admirers. But the collection at the Academy numbers vastly more than that. On the night of the private view, from which our impression is taken, the catalogues were not finished, but the paintings cannot fall far short of seven hundred. It is not easy to see why Mr. Kensett kept by him all these pictures, now filling to repletion our largest gallery. We must fancy that the painter, trying to adjust his work to the temperament of the purchaser, found in each case some incongruity which forbade his allowing the canvas to be borne away, though that seems strange, as occurring in a thousand cases; or else, that in every picture some keystone to bind the whole composition together was felt by his sensitive intelligence to be lacking. No lack, however, is apparent to the ordinary eye. The pictures will be called fair specimens of their delightful artist, most of them being as fresh in appearance as if painted yesterday, while only a few are sketches. They are a good deal alike, showing a kind of aristocratic recoiling from melodrama, while they exult in their keen, delicate relish for out-of-doors—a relish they have the faculty to impart. They never fail in expressing the limpidity of air and the severity and uncontaminated freshness of the sea. They are the pages of a rather wide painter's itinerary, ranging from Switzerland and Italy to England and home; with mountains in New Hampshire and in Colorado; banks of the Hudson and the Missouri; and our sea-coast from Maine to Connecticut. Occasionally there are views of famous places; among the best of these are the "Niagara Whirlpool" (400), the "Niagara" (227), and the "Rapids" (90), as they pour out of the horizon. Such a subject as Niagara the artist treats without forsaking his calm, like a cultured elocutionist who declaims the most impassioned text, never losing his high-bred balance. So his "Valley of Valmont, Colorado" (283), with a line of distant snow-peaks flashing like a pennon against the uttermost blue, is lofty and dignified, but not in the least dizzy. He is never oppressed by his subject. Artist-like, too, although he sometimes concedes to the public their favorite Murray's guide-book topography, and spares them an occasional Windsor Castle or View of Amalfi, he is not happiest in such scenes *à grande orchestre*. His virtue comes to him in those works where Nature is caught arranging her artistic motives, and which a man who knows what he is about finds almost anywhere. Nothing among these studies is better than his dark rocks threaded with veins of cataract in deep transparent shadow, such as 275 and 387; his plumes of palpitating birch and aspen trees, like 87, 264, and 267; or such a placid stretch of the Sound as this (100) seen from near his atelier at Darien, where the water is pallid with mist, and the horizon defined by one triangle of leaning sail. These, and many other such as these, show an interpreter looking at Nature in his own way, with perfect unconventionality, and with a sort of fearless gentleness. They remind us now and then of some fine period from Addison. Hung beside his own pictures are the little French landscapes he bought from time to time—a cloudy Troyon or a crisp Rousseau—and which seem in such a company to have something strangely rich and real about them, showing as humming-birds would show in a collection of cameos. The foreign pictures, it appears, are offered to the Metropolitan Museum of this city, in case a purchase equal to their value is made from among the Kensett paintings; but the published estimate of the European collection is not borne out by the specimens on exhibition. We shall be glad of any arrangement, however, which secures us a permanent gallery of Kensett's chaste and tender art.

GERMAN AND FRENCH.

HOLT & WILLIAMS,

25 BOND STREET, NEW YORK,

Publish most of the

TEXT-BOOKS

used at YALE, HARVARD, and many other prominent American Institutions. Correspondence is invited from educators and students.

HARPER'S CATALOGUE. The attention of those designing to form libraries, or increase their Literary Collections, is respectfully invited to Harper's Catalogue, which comprises a large proportion of the standard and most esteemed works in English Literature—*comprehending over three thousand volumes.*

Librarians, who may not have access to a trustworthy guide in forming the true estimate of literary productions, will find this Catalogue especially valuable for reference.

The Catalogue is arranged alphabetically by the authors' names, anonymous works by their titles. The index is arranged by the titles of the books, besides having numerous appropriate heads, each general head being followed by the titles of all works on that subject.

Harper's Catalogue sent by mail on receipt of six cents.

Address HARPER & BROTHERS,
Franklin Square, New York.

LENTEN READING.

REV. DR. DIX'S LENT LECTURES.

THE TWO ESTATES: That of the Wedded in the Lord, and that of the Single for the Kingdom of Heaven's Sake. 12mo, cloth, red edges, $1 25; paper, 50 cents.

STUDIES IN THE CHURCH. Being Letters to an Old-fashioned Layman. By the Right Rev. H. C. Lay, D.D. 12mo, cloth, $1 25.

THE SUFFERINGS OF JESUS. Composed by Fra Thome de Jesu, of the Order of Hermits of St. Augustine, a Captive of Barbary, in the Fiftieth Year of his Banishment from Heaven. Translated from the original Portuguese by Rev. E. B. Pusey. 2 vols. 12mo, $2 50.

A GUIDE TO PASSING LENT HOLILY. Translated from the French of Avrillon. Edited by the Rev. E. B. Pusey. 1 vol., cloth, $2.

Post-free on receipt of price.

A SELECTION FROM MACMILLAN & CO.'S LIST

OF

Valuable Educational Books.

SCIENTIFIC CLASS-BOOKS.

*LESSONS IN ELEMENTARY ANA*tomy. By St. George Mivart, F.R.S. With upwards of 400 illustrations. 18mo, cloth, $2.

*LESSONS IN ELEMENTARY CHE*mistry. By Prof. H. E. Roscoe. 18mo, cloth, $1 50.

OWENS COLLEGE JUNIOR Course of Practical Chemistry. By Roscoe & Jones. 18mo, $1 25.

*LESSONS IN ELEMENTARY PHY*sics. By Balfour Stewart, F.R.S. 18mo, $1 50.

*LESSONS IN ELEMENTARY PHY*siology. By Prof. T. H. Huxley. 18mo, $1 50.

POPULAR ASTRONOMY. By G. B. Airy, Astronomer-Royal of England. 18mo, $1 50.

*ELEMENTARY LESSONS IN AS*tronomy. By J. Norman Lockyer, F.R.S. 18mo, $1 75.

*ELEMENTARY LESSONS IN LO*gic—Deductive and Inductive. By Professor Jevons. 18mo, $1 25.

*POLITICAL ECONOMY FOR BE*ginners. By Millicent Garrett Fawcett. 18mo, $1.

MATHEMATICS.

*BEASLEY'S ELEMENTARY TREA*tise on Plane Trigonometry, with Examples. Crown 8vo, $1 50.

THE CAMBRIDGE COURSE OF Natural Philosophy. By Snowball & Lenod. Crown 8vo, $1 75.

*ELEMENTS OF PLANE AND SPHE*rical Trigonometry. By J. C. Snowball, M.A. Crown 8vo, $2

*PUCKLE'S ELEMENTARY TREA*tise on Conic Sections and Algebraic Geometry. With numerous Examples and Hints for their Solution. Crown 8vo, $2 50.

SOLID GEOMETRY AND CONIC Sections. For Use in Schools. By J. M. Wilson, M.A. Extra fcap. 8vo, $1 25.

MR. TODHUNTER'S MATHEMATICAL WORKS.

EUCLID FOR COLLEGES AND Schools. New Edition. 18mo, $1 25.

MENSURATION FOR BEGINNERS. With Examples. New Edition. 18mo, $1 25.

ALGEBRA FOR BEGINNERS. With numerous Examples. New Edition. 18mo, $1 25; Key, $2 25.

*TRIGONOMETRY FOR BEGIN*ners. With numerous Examples. New Edition. 18mo, $1.

MECHANICS FOR BEGINNERS. With numerous Examples. Second Edition. 18mo, $1 50.

*ALGEBRA FOR THE USE OF COL*leges and Schools. Fifth Edition. Crown 8vo, $2 25; Key, $3.

AN ELEMENTARY TREATISE ON the Theory of Equations. Second Edition, Revised. Crown 8vo, $2 25.

PLANE TRIGONOMETRY. Fourth Edition. Crown 8vo, $1 75.

*A TREATISE ON SPHERICAL TRI*gonometry. Third Edition. Crown 8vo, $1 75.

A TREATISE ON CONIC SECTIONS. With Examples. Fourth and Cheaper Edition, Revised. Crown 8vo, $2 25.

*A TREATISE ON THE DIFFEREN*tial Calculus. With Examples. Fifth Edition. Crown 8vo, $3 50.

A TREATISE ON THE INTEGRAL Calculus. With Examples. Third Edition. Crown 8vo, $3 50.

*EXAMPLES OF ANALYTICAL GEO*metry of Three Dimensions. Second Edition, Revised. Crown 8vo, $1 50.

A TREATISE ON ANALYTICAL Statics. With Examples. Third Edition. Crown 8vo, $3 50.

RESEARCHES IN THE CALCULUS of Variations. Principally on the Theory of Discontinuous Solutions. 8vo, $3 50.

ENGLISH.

A SHAKESPEREAN GRAMMAR. An attempt to Illustrate some of the differences between Elizabethan and Modern English. By E. A. Abbott, M.A. Globe 8vo, cloth, $1 75.

*HISTORICAL OUTLINES OF ENG*lish Accidence. By the Rev. Richard Morris. Globe 8vo, $1 75.

LONGER ENGLISH POEMS, for use in Schools. With Notes, Philological and Explanatory, by J. W. Hales, M.A. Globe 8vo, $1 75.

WORDS AND PLACES; or, Etymological Illustrations of History, Ethnology, and Geography. By the Rev. Isaac Taylor, M.A. Globe 8vo, $2.

ON THE STUDY OF WORDS. By R. C. Trench, D.D., Archbishop of Dublin. Fcp. 8vo, $1 25.

ENGLISH, PAST AND PRESENT. By Archbishop Trench. Fcp. 8vo, $1 25.

CLASSICAL WORKS.

*A GRAMMAR OF THE LATIN LAN*guage, from Plautus to Suetonius. By H. J. Roby, M.A. Part I. Crown 8vo, $2 50.

AN INTRODUCTION TO GREEK and Latin Etymology. By John Reile, M.A. Crown 8vo, $3 50.

JUVENAL'S THIRTEEN SATIRES. Text, with Notes, by John E. B. Mayor, M.A. Vol. I. Crown 8vo, $2 50.

CICERO'S SECOND PHILIPPIC. Edited by J. E. B. Mayor, M.A. 12mo, $1 25.

CICERO'S ORATIONS AGAINST Catiline. Edited by A. S. Wilkins, M.A. 12mo, $1 25.

DEMOSTHENES ON THE CROWN. Edited by B. Drake, M.A. 12mo, cloth, $1 50.

THE NARRATIVE OF ODYSSEUS. Homer, Odyssey IX.—XII. With a Commentary by J. E. B. Mayor, M.A. 18mo, $1.

*SYLLABUS OF LATIN PRONUN*ciation. Prepared at the request of the Head Masters of Schools, by H. A. J. Munro and Edwin Palmer, of Cambridge University, England. 8vo, swd., 15 cts.

MISCELLANEOUS.

THE HOLY ROMAN EMPIRE. By James Bryce, D.C.L. Third Edition. Revised. Crown 8vo, $2 50.

THE HISTORY OF TACITUS. Translated by A. J. Church, M.A., and W. J. Brodribb, M.A. Crown 8vo, $2 50.

*A HAND-BOOK OF MORAL PHIL*osophy. By the Rev. Henry Calderwood, M.A., Professor of Moral Philosophy at Edinburgh. Crown 8vo, $2.

*A MANUAL OF POLITICAL ECON*omy. By Henry Fawcett, M.A., M.P., Professor of Political Economy at Cambridge. Crown 8vo, $3.

CLARENDON PRESS SERIES.

PHYSICAL SCIENCE.

*ELEMENTS OF NATURAL PHILO*sophy. By Professors Sir William Thomson and P. G. Tait. Part I. 8vo, cloth, $3 50.

AN ELEMENTARY TREATISE ON Heat. By Balfour Stewart, F.R.S. Cr. 8vo, cloth, $2 50.

DESCRIPTIVE ASTRONOMY. A Handbook for the General Reader. By G. F. Chambers. 8vo, $8.

CHEMISTRY FOR STUDENTS. By A. W. Williamson, F.R.S. With Solutions. 12mo, $2 50.

ENGLISH LANGUAGE AND LITERATURE.

SPECIMENS OF EARLY ENGLISH. Edited by Rev. Richard Morris and Rev. W. W. Skeat. Part II., A.D. 1298–1393. $3 50.

*SPECIMENS OF ENGLISH LITE*rature. From A.D. 1394–1579. Edited by Rev. W. W. Skeat. 12mo, $3 50.

*THE PHILOLOGY OF THE ENG*lish Tongue. By Rev. John Earle, M.A. Extra fcp. 8vo, $2.

CHAUCER. The Prologue, The Knight's Tale, The Nonne Priest's Tale. Edited by R. Morris. $1.

SPENSER'S FAERY QUEENE. Books I. and II. Edited by G. W. Kitchen, M.A. Each $1.

SHAKESPEARE. Select Plays. Edited by W. G. Clark, M.A., and W. Aldis Wright.

The Merchant of Venice, 40 cents; Richard II., 60 cents; Macbeth, 60 cents; Hamlet, 75 cents.

POPE'S ESSAY ON MAN. Edited by Mark Pattison, B.D. 50 cents.

POPE'S EPISTLES AND SATIRES. Edited by Pattison. 75 cents.

DRYDEN'S SELECT POEMS. Edited by Christie. $1 50.

GREEK AND LATIN CLASSICS.

NEW VOLUMES.

CICERO. Select Letters (for Schools). Edited by C. E. Prichard and E. R. Bernard. $1.

PLINY. Selected Letters. Edited by C. E. Prichard and E. R. Bernard. $1.

HOMER. Odyssey. I.–XII. Edited by W. W. Merry, M.A. $1 50.

CÆSAR'S COMMENTARIES. The Gallic War. Edited by C. E. Moberly. $1 50. Part II. The Civil War. 75 cents.

PERSIUS. The Satires. Edited by Conington. 8vo, $3.

LIVY, BOOK I. Edited by Prof. Seeley. $2 50.

XENOPHON, Selections from. Edited by J. S. Phillpotts. Part I. Fcp. 8vo, $1 25.

LEXICONS.

A GREEK-ENGLISH LEXICON. Compiled by Henry G. Liddell, D.D., and Robert Scott, D.D. Sixth Edition, revised. 4to, half bound, $2.

*LIDDELL & SCOTT'S GREEK-*English Lexicon. Abridged (for Schools). Half bound, $3.

Full Descriptive Catalogues on application.

MACMILLAN & CO., 38 BLEECKER STREET, NEW YORK.

VALUABLE EDUCATIONAL WORKS.

NEW ARITHMETICS.

SANFORD'S ANALYTICAL SERIES.

COMPRISED IN FOUR BOOKS.

THE SCIENCE OF NUMBERS REDUCED TO ITS LAST ANALYSIS.

Mental and Written Arithmetic Successfully Combined in Each Book of the Series.

BY SHELTON P. SANFORD, A.M.,

Professor of Mathematics in Mercer University, Georgia.

I. FIRST LESSONS. Illustrated $0 35
II. INTERMEDIATE ..... .50
III. COMMON SCHOOL $0 90
IV. HIGHER 1 50

"I think that Sanford's Arithmetics are the best books on the subject ever published; and I trust it will not be long before they will be introduced into every school in our State. In my judgment they are the very perfection of school-books on arithmetic."—PROFESSOR B. MALLON, *Superintendent in the Public Schools of Atlanta.*

CUTTER'S PHYSIOLOGIES. FOR COLLEGES, ACADEMIES, AND FAMILIES.

BY CALVIN CUTTER, M.D.

NEW SERIES.

First Book of Analytic Anatomy, Physiology, and Hygiene, Human and Comparative. With 164 Illustrations. 12mo, 90 cents.

Second Book of Analytic Anatomy, Physiology, and Hygiene, Human and Comparative. With 186 Illustrations. 12mo, $1 50.

New Analytic Anatomy, Physiology, and Hygiene, Human and Comparative. With 194 Illustrations. $1 60.
With Questions, 60 pages additional, $1 70.

OLD SERIES.

Human and Comparative Anatomy, Physiology, and Hygiene. By Mrs. E. P. Cutter. Illustrated. 12mo, 50 cents.

Cutter's First Book on Anatomy, Physiology, and Hygiene. Illustrated. 12mo, 80 cents.

Cutter's Anatomy, Physiology, and Hygiene. Illustrated. 12mo, $1 70.

*** Accompanied by a Series of Anatomical Charts.

CHAUVENET'S MATHEMATICAL SERIES.

BY PROF. WILLIAM CHAUVENET.

A Treatise on Elementary Geometry, with Appendices containing a Copious Collection of Exercises for the Student, and an Introduction to Modern Geometry. By Wm. Chauvenet, Professor of Mathematics and Astronomy in Washington University, St. Louis. 12mo, extra cloth, $2.

"It is the only geometrical text-book which is based on true principles."—C. H. JUDSON, *Professor of Mathematics in Furman University, Greenville, South Carolina.*

A Treatise on the Method of Least Squares; or, The Application of the Theory of Probabilities in the Combination of Observations. From the author's Manual of Spherical and Practical Astronomy. By Wm. Chauvenet, Professor of Mathematics and Astronomy in Washington University, St. Louis. 8vo, cloth, $1 75.

Plane and Spherical Trigonometry. By Wm. Chauvenet. New and Revised Edition. 8vo, cloth, $1 75.

☞ For sale by Booksellers generally, or will be sent to any address, carriage free, upon receipt of the price by the Publishers. Books for examination and introduction at special rates. Catalogues furnished on application. Address

J. B. LIPPINCOTT & CO., Publishers, Philadelphia.

CASSELL'S PRACTICAL DRAWING BOOKS.

1. LINEAR DRAWING. 150 Engravings. Price $1.
2. PROJECTION. The Development of Surfaces and Penetration of Solids. $1.
3. SYSTEMATIC DRAWING AND SHADING. $1.
4. BUILDING, CONSTRUCTION, AND ARCHITECTURAL DRAWING. 130 Engravings. $1.
5. DRAWING FOR CARPENTERS AND JOINERS. 250 Engravings. $1 75.
6. PRACTICAL PERSPECTIVE. 64 Engravings. $1 50.
7. DRAWING FOR MACHINISTS. 140 Engravings. $2.
8. DRAWING FOR STONEMASONS. $1 50.
9. MODEL DRAWING. $1 50.
10. GOTHIC STONEWORK. $1 50.
11. DRAWING FOR BRICKLAYERS. $1 50.
12. DRAWING FOR CABINETMAKERS. $1 50.
13. DRAWING FOR METAL-PLATE WORKERS. $1 50.
14. ARMS AND AMMUNITION. $1 25.
15. COLOR. By Professor Church. $1 25.

MARK GILDERSLEEVE.

A NEW NOVEL.

BY JOHN S. SAUZADE.

12mo, pp. 379, price $1 75.

PUBLISHED BY

G. W. CARLETON & CO.,
Madison Square.

THE AMERICAN BIBLIOPOLIST,

a Monthly Literary Register, and Repository of Notes and Queries.

"This publication furnishes a large amount of curious and entertaining information for all lovers of literature. It is not the mouthpiece of any set, and its criticisms of catalogues and books are refreshingly independent and piquant."—*Nation.*

Subscription, $1 per year. Send stamp for specimen number.

J. SABIN & SONS,
84 Nassau Street, New York.

SPECIAL NOTICES.

FOR SALE.—A Complete File of the *Nation*, unbound, but in good condition. Address, J. W. R., Box 74, Westminster, Md.

WANTED, as Assistant in an Architect's Office, a Boy or Young man who desires to work his way up. Every facility in the study of perspective and free-hand drawing offered to students. Enquire of "Architect," office of the *Nation.*

A TEACHER, *for many years Professor* in a State Institution, goes next summer with his family to (South) Germany, for the education of his children. Would like to take charge of a *very limited* number of Pupils. They will find a home in the noblest sense. For particulars as to expense, etc., address "Professor N. N.," *Nation* Office.

DE VEAUX COLLEGE, *Suspension* Bridge, N. Y., near Niagara Falls. Church School for Boys. Cadet organizations. Registers with full details.

S. AGNES' SCHOOL.—*The fourth* year will begin, God willing, the third Wednesday of September next. Pupils are received whenever there is a vacancy Application for admission should be made to Sister Edith, S. Agnes' School, Albany. New York.

OUR WORLD SERIES OF GEOGRAPHIES.—*Two Books.*

OUR WORLD, *No. II.*; or, Second Series of Lessons in Geography. By Mary L. Hall.

From LOUIS AGASSIZ, LL.D., Professor of Zoology and Geology, Harvard University.

CAMBRIDGE, January 1, 1873.

MY DEAR SIRS: I welcome 'Our World,' No. II., as a valuable contribution to the modern method of teaching geography. It is a very commendable and successful effort to add to the daily improving means of making geography more attractive in the school-room.

From Hon. GEO. S. HILLARD, LL.D.

MY DEAR SIRS: I think Miss Hall's work one of great merit. It invests the study of Geography with the attractions that properly belong to it. It gives prominence to the facts, distinctions, and attributes which are permanent, and the work of nature, and does not burden the memory with those dry details of political geography which are variable and accidental.

From GEORGE B. EMERSON, LL.D.

GENTLEMEN: I have never seen a school-book which satisfied me more entirely. Its descriptions of regions and of states are admirable, clear, and characteristic, at once philosophical and picturesque, giving just what a child will rejoice to know and will easily remember.

From Prof. A. P. PEABODY, D.D., Harvard University.

CAMBRIDGE, January 8, 1873.

GENTLEMEN: I have examined Miss Hall's 'Second Series of Lessons in Geography,' and am prepared to pronounce it, in plan, in method, and in execution, very far superior to the school geographies previously in use. Its introduction would convert geography from the driest and dullest of school-studies into one of constantly fresh and vivid interest.

GET THE BEST.

WEBSTER'S UNABRIDGED

DICTIONARY. 10,000 Words and Meanings not in other Dictionaries. 3,000 Engravings. 1840 Pages Quarto. Price $12.

"With the etymologies and definitions of Webster's Unabridged Dictionary I am much pleased."—*President Garnett, St. John's College, Maryland, June, 1871.*

"Etymological part surpasses anything by earlier laborers."—*George Bancroft.*

ETYMOLOGY.—"In English, all the older authorities, like Richardson and Webster (in his earlier editions), are simply to be thrown away as rubbish, or worse; *nor is the latest Worcester very much better;* whatever of good there may be in it, it is on the whole untrustworthy, liable to mislead as often as it guides aright. In the last edition of Webster, however, is included *the best body of brief English etymology, by Dr. Mahn, of Berlin, that has ever been put together*—thoroughly and consistently scholarlike."—*N. A. Review, Oct.*, 1872.

A necessity for every intelligent family, student, teacher, and professional man. What Library is complete without the best English Dictionary?

ALSO,

WEBSTER'S NATIONAL PICTORIAL DICTIONARY.

1,040 Pages Octavo. 600 Engravings. Price $5.

"The work is really a *gem of a Dictionary*, just the thing for the million."—*American Educational Monthly.*

COLGATE & CO.'S CASHMERE BOUQUET Toilet Soap.

DR. WILLIAM SMITH'S ANCIENT ATLAS.

AN HISTORICAL ATLAS OF

Ancient Geography, Biblical and Classical. Compiled under the superintendence of Dr. William Smith and Mr. Grove.

It will be published in Five Quarterly Parts. Subscription price, $7 each Part.

The present work, which has been more than fourteen years in preparation, has been undertaken to supply an acknowledged want, as well as in illustration of the Dictionary of the Bible and the Classical Dictionaries.

The Maps are drawn on a large scale, and have been executed by the most eminent engravers in Paris and London. They contain the modern names along with the ancient ones. There is also a series of smaller Maps, in illustration of each country at different historical periods. To each of the larger Maps a full Index of Names and Places is appended. Thus the present part contains Indices to the Maps of Gallia and Italia. The Index to the Maps of the Holy Land will be given with the part which contains the southern division of the country. The Classical Maps have been prepared by Dr. Carl Müller, the Editor of Strabo and the Minor Greek Geographers, under the superintendence of Dr. William Smith. Those of the Holy Land and Mount Sinai include the recent observations and positions obtained by the officers of Royal Engineers employed in surveying them, and have been constructed under the superintendence of Mr. George Grove.

The Maps are of the same size as those in Keith Johnston's Royal Atlas of Modern Geography, with which the present Atlas will range.

The last Part will contain an account of the Authorities employed in constructing each Map. The Maps are numbered in the order in which they will be finally arranged.

Part I. now ready. Part II. ready in a few days.

Special Discount to Clergymen.

FROTHINGHAM'S WORKS.

THE RISE OF THE REPUBLIC

of the United States. By Richard Frothingham. 8vo, cloth, $3 50.

"A glorious work, building for the author an undying reputation."—*George Bancroft.*
